In the dispute—still pending—between the Porte and the court of Russia, Sir Stratford Canning—or rather Viscount Stratford de Redcliffe (for he was raised to the Peerage under this title, April 24, 1852)—has given to the Porte the full extent of the moral support at his command, without in any way compromising his Government beyond the point to which his instructions would warrant him. When, in May last, the Foreign Secretary of the Porte consulted him, in common with the representatives of France and Austria, in reference to the ultimatum of Prince Menschikoff, the reply was one leaving the Ottoman Government free to adopt and declare its own line of policy; but that line of policy once adopted, and announced to the British Ambassador, the latter did not hesitate to express his approval of it, and to promise the friendly offices of his Government; and if the result be not fully in accordance with the spirit of that promise, if there be any falling off in the active co-operation of an ally who has so much at stake in common with the independence and integrity of the Ottoman Power—it will have been no fault of our eminent and honest-hearted representative. Those who have seen Stratford Canning at work—not alone from sunrise till sunset—but often from candle-lighting till candle-lighting again, can alone judge of the intense and enduring industry which he brings to bear upon all his duties. No delay—no

PORTRAIT OF VISCOUNT STRATFORD DE REDCLIFFE, G.C.B.—FROM A PHOTOGRAPH TAKEN AT CONSTANTINOPLE.

hesitation—occurs in his proceedings. A courier, perhaps, arrives at midnight with important despatches. Till midnight next Stratford Canning is engaged upon the matters referred to in them, and preparing a despatch on the subject; and often does the Queen's messenger receive notice to take a few hours' repose, and be ready by three or four the next morning but one, to start with a despatch in reply, or in reference to the one just received, almost the whole interval being devoted to the subject, by a Minister, regardless, when occasion requires, alike of toilette and of repose. Of his promptitude on occasions of unexpected emergency—of his impatience of anything like neglect of duty, or unfair dealing, there are many who can speak; yet all can bear witness to the dignity and considerateness of conduct with which he meets the difficulty, whatever it may be. All Constantinople is yet amused and edified with the recollection of how one fine morning a change of Ministry was announced in the Government *Gazette*—(a change worked very quietly and cleverly by Russian intrigue)—and how all the troops were drawn out to do honour to the new functionaries; when, hey presto! Lord Stratford came down in his caique from Therapia to the Seraglio; and just as everybody was preparing to greet the new functionaries, a proclamation came forth remitting the troops to their quarters, and announcing that the old functionaries were retained in office.

Independently of the more important political questions bearing upon European relations—to which Sir Stratford Canning has never been blind, and of the part which he has taken in transactions connected therewith too numerous for us to mention—there have been very many occasions on which he has been the means of promoting the ends of humanity, religious freedom, and intellectual progress. Owing to his successful representations, the infliction of torture was prohibited in the Turkish dominions; to him is due the abolition of the penalty of death, formerly inflicted upon renegades—that is, Christians who, having once embraced the Mahomedan belief, reverted to Christianity; to him is due the appointment of the Mixed Courts for the trial of civil and criminal causes in which Europeans are concerned, and the reception therein of the testimony of Christians upon an equal footing with that of Mahomedans; he also procured in 1848 a firman for the establishment of the first Protestant chapel in the British Consulate at Jerusalem; and within the present year another firman, establishing the religious and political freedom of all descriptions of Protestants throughout the Turkish Empire—for which he received a memorial of thanks from the congregation or fraternity of Independent Protestants a few weeks ago.

To scientific discovery he has also lent his valuable aid. In 1845, when Layard could not find a Government, or scientific body, or public to second his aspirations for the discovery of ancient Nineveh, Sir Stratford Canning authorised and enabled him to proceed upon his researches at his own risk and expense. In 1847 those interesting relics the Budrum marbles, being (as supposed) the remains of the mausoleum erected at Halicarnassus, by Artemesia, Queen of Caria, to her husband, Mauso us, were obtained by Sir Stratford, by firman from the Porte, and presented by him to the British Museum.

Viscount Stratford de Redcliffe married, first, in 1816, Harriet, the daughter of Thomas Raikes, Esq., Governor of the Bank of England (who died 1817); and secondly, in 1820, Elizabeth Charlotte, daughter of James Alexander, Esq., of Summer Hill, near Tunbridge, and niece of the Earl of Caledon.

THE SUMMER PALACE OF THE BRITISH EMBASSY AT THERAPIA.

THE Summer Residence of the British Ambassador at Therapia (all the Embassies are called "saraïs," or palaces, here) is beautifully situated on the European shore of the Bosphorus. This spot is nearly opposite to the famous Bay of Unkiar Skelessi—where the camp for the accommodation of the troops forming the Egyptian contingent has been erected. It also immediately faces the channel of the Bosphorus into the Black Sea, whence cooling and grateful breezes prevail during the greater part of the summer. The mansion is spacious, though of simple, unpretending style of architecture; but the gardens, with their terrace-walks rising one above the other, all covered and crowded with luxuriant flowers, shrubs, and hanging plants, form a delicious retreat. Their condition does great credit to Lord Stratford de Redcliffe's gardener, who, we believe, is an Englishman. On certain evenings in the week these gardens are, by his Excellency's generosity, thrown pretty freely open to all respectable persons who feel inclined to visit them; on which evenings a band—composed chiefly of Italian and German refugees—plays in an elevated orchestra of goodly dimensions, a short distance from the house. From this spot the sketch was taken after which our Engraving has been executed.

SUMMER PALACE OF THE BRITISH EMBASSY AT THERAPIA, ON THE BOSPHORUS.

THE ILLUSTRATED LONDON NEWS.

No. 647.—VOL. XXIII.] SATURDAY, OCTOBER 1, 1853. [PRICE, WITH A SUPPLEMENT, SIXPENCE.

SOME EFFECTS OF THE GOLD DISCOVERIES.

THE estimated value of all the gold in Europe and America, in the year 1848 (before gold was discovered in California), was £550,000,000; and the value of the annual produce of all the gold mines of the world, except those of Japan and China, was then estimated at £10,000,000. Both these estimates are probably too large; and it is quite certain that the latter is not too small. There is no reason to be surprised, therefore, that the statesmen who attend to such subjects felt considerable alarm lest the value of gold should be depreciated when California — in which gold was discovered in 1848 — added, in 1850, £8,000,000 to the annual supply, and not less than £12,000,000 in each of the following years. When gold was discovered in Australia — which added in nineteen months (from May, 1851, to December, 1852) nearly £20,000,000 more to the supply — the alarm was considerably heightened. From these two new sources we estimate the increase to the supply of gold, above the amount obtained in 1848, at not less now than £30,000,000 a year; or the annual supply, which, prior to 1848 was not more than £10,000,000, is now £40,000,000, and is increasing every year. The Government of Holland, alarmed at the probable depreciation of gold, ceased to use it as the standard of its money, and adopted silver. Five years have now elapsed since the discoveries were made, the quantities are increasing every year, and hitherto the effects have not been what the alarmists anticipated. At present, indeed, there is a very considerable rise in the prices of many things, especially of food, suggesting a depreciation in the value of gold; but this is so obviously the consequence of great consumption and comparatively insufficient supplies, that at most only a small part, if any—for how much cannot be known—can be the consequence of a depreciation in the value of gold. In the autumn of 1850 a very considerable rise began in the value of silver, principally caused by the Government of Holland substituting silver for gold as the money of that country; and, though checked, it continued to rise, and was as high-priced at the beginning of 1851 as 61½d. per ounce for standard silver. Last week the price was 61½d.; and it has remained permanently, since the rise in 1850, something more than 1d. per ounce dearer than the average price for a considerable period prior to that time. This is the only evidence we yet have of the gold discoveries having led to a depreciation in the value of gold; and the permanent enhancement in the price of silver is as likely to have been caused by the substitution of silver for gold in Holland, and by the demand for silver in India (where the use of gold as money is unwisely prohibited), as by the great abundance of gold.

A still more remarkable circumstance, according to common apprehension, than the small depreciation of gold, is the fact that money has latterly become dearer, or the rate of interest has been raised, as the great additions have been made to the money of the world. Last year money was scarcely worth 2 per cent; now the minimum rate is 4½. The discount agents or brokers in London, who continually borrow large sums of money "on call," to lend again (that is, they will return the money to those who lend it on three days' or a week's notice), would not, last autumn, borrow at any price, and refused to receive on loan the money offered them. When they received it they gave only 1 or 1½ per cent for it, and discounted the best bills at 1¾. At present they give 3¾ per cent for money on call, and no bills can be discounted at a lower rate than 4½ per cent. Since last autumn, therefore, the rate of interest has been raised more than 2 per cent; and money, notwithstanding large and continued importations of gold, is so much dearer now than it was then. In the present year, in fact, the mines of California and Australia have been more productive than they were last year. To the end of August in the present year the quantity of gold carried to the American mints from California was 38,644,416 dollars, against 32,045,598 dollars in the same period of 1852; or, 6,198 818 dollars more in the first eight months of 1853 than in 1852. There has been imported into England, to the end of July in the present year, no less than £12,920,000 of gold; while in 1852 £16,080,000 was imported; making together in the nineteen months £29,000,000, or three times as much as was annually procured from the whole of Europe and America prior to the Californian discoveries. In the teeth, however, of all these large supplies, the rate of interest has risen both here and in America, and continues to rise. Lest it should be supposed that this is only the recovery from the great depression of last year, caused by the sudden increase of gold from Australia and California, we must add that the present rate is nearly one per cent above the average rate of several years; and that before the gold discoveries — namely, in 1844 — there was as low a rate of interest as at any time last year. Thus money, as it has become plentiful, or as it has increased in quantity, has become dear — an apparent contradiction and a contravention of experience; for commodities, as the rule, become cheap as they become abundant.

The explanation of this circumstance is to be found in the double meaning of the word money. It is plain that the descriptions given of the quantities of gold obtained from the mines, or imported into the country, apply to the gold itself, as a commodity,

MARBLE STATUE OF THE LATE SIR ROBERT PEEL, BY GIBSON, R.A., JUST PLACED IN WESTMINSTER ABBEY.— (SEE NEXT PAGE)

before it is coined into money, just as similar descriptions would apply to so much wheat or so much iron. But wheat or iron, when obtained, is consumed or used, and disappears, or is applied in some way which precludes any application of it in another. The gold, however, remains; and when coined becomes as money the instrument of exchange, the means of buying and selling all other commodities, and the representative of all the wheat, iron, cloth, &c., in the world. Gold has two very distinct characteristics. It is a commodity of which the quantity and value are measured and described as so many pounds sterling; and it is itself the pound sterling—the instrument for measuring the value of all other commodities. It is both a measure and the thing measured; and the confusion which prevails concerning it—the apparent contradiction noticed—arises from not discriminating between gold as a commodity and gold as money.

As a commodity, it is measured by itself as money; and the new supplies being a large addition to previous stock, we describe it as abundant or plentiful. But as money—as the instrument for exchanging commodities—it is abundant or scarce in proportion as there are few or many exchanges to make. Amongst pastoral tribes, where each family lives on the produce of its own herds, and is clothed by the skins of its own cattle or the wool of its own sheep, spun and woven at home, and where, consequently, no exchanges are made, a single piece of gold is an abundance of money: it is more than can be used, for there is nothing to be bought or sold. In a community like ours, where no family produces the chief part of its subsistence or its clothing, and where many families, though very usefully occupied, produce directly no part of their own subsistence, and where, consequently, the whole community is sustained by exchanging the produce of one for another, a great deal of money is required. In proportion to the whole wealth of the commercial world, and to all the exchanges made in it, the total amount of gold is a small sum. All that has ever yet been washed from the sands or dug from the mine, or found or gathered, and that now exists, were it melted into one lump, would go into a very small barn. The total amount produced every year is not of greater value than our own wheat crop, and that is only a very small portion of the annual produce of the labour of this one community. The quantity of gold in the world, or annually produced, is, therefore, a mere trifle in proportion to the vast amount of wealth to be exchanged, and it is much more the activity of trade than the quantity of gold found, which decides whether it shall be considered scarce or abundant. We buy clothes to wear and food to consume it, and land to make a profit by it. We use these things in possessing them. But we use money only when we part with it. Persons labour for money, or borrow it, or steal it, only to buy other things with it. It is exclusively wanted as an instrument of exchange; and while gold, as a commodity, is abundant or scarce, as a few pounds' weight are obtained; as money, it is abundant or scarce, as the quantities of other things to be exchanged are great or small, and as exchanges are numerous or few. The scarcity of money, therefore, indicated by the present high rate of interest, is not caused by a small supply of gold, but a wonderful activity of business.

Now let us direct our attention to the influence of the gold discoveries in increasing the business of Europe. They gave a sudden and an unexpected addition of a new commodity to the value of £30,000,000 to the wealth of the world. It was not before known, nor possessed by any one, nor could it be produced like a web of cloth or a crop of oats, by regular and fore-planned labour. The new gold was an addition to all the commodities that before existed to be exchanged. The fortunate finders were eager to buy other things with it. Its uses and value are well known; it is much coveted, and easily exchangeable for all other things; and other men were as eager to get it as the finders were to part with it for other things. Hence, as is well known, the gold discoveries have increased trade very much, and have excited great activity throughout the manufacturing world. More wine, and brandy, and clothing, and implements were required in California and Australia than before; goods of all kinds were sent thither. More food, and more commodities of all kinds were required by the persons who produced these goods. More ships were needed; more labourers and more productions of all descriptions were required. Except the electrical suddenness of the consequence of the discoveries, results precisely similar ensued from setting trade free. The wheat of America or Poland suddenly acquired a value it did not before possess in Manchester and Birmingham: there were actually more commodities to exchange, and more exchanges took place—there was increased trade, and increased exertion.

The great point, therefore, now to be ascertained—the great problem which is doubtful and to be solved—is whether this increase of business be less or more, or precisely equal, to that increase in the instrument of exchange which ensued from the new gold discoveries. At first it was supposed that the increase of business would be far less, and that the instrument for effecting exchanges would be increased beyond the exchanges to be effected. Experience hitherto shows us that this is not so, that the instrument in fact is less increased than the amount of business, and hence it is really more required than before. Notwithstanding the large imports of gold mentioned, money is more than 2 per cent dearer, or the rate of interest more than 2 per cent higher than at the beginning of the year.

In such an increase of activity as that arising from the gold discoveries, all the industrious classes desire to share. The manufacturer wants more raw materials to work up, more machinery, and more labourers. The merchant wants more goods to import and export, and more ships to carry them. More food is required by the additional hands employed; more of everything men use or consume is in demand. The increased competition makes all willing to give more for what they want, including more money; and hence money, as the means of obtaining other things, is very much sought after. The increase of price which ensues is already operating to make men produce more of all the things that are required; and the supply of such as can be augmented by art and industry will soon be commensurate to the demand. Food and clothing will probably, ere long—though at present the former, from an inauspicious season, is rising—fall in price, as they have fallen successively in former years; but land—which cannot be augmented—and cattle, and commodities which require long periods to increase them, will for some time rise in price; but we may not with certainty calculate from the increase in the supply of gold on a universal rise in price. So many elements enter into into this question of relation between the precious metals used as instruments of exchange, and all other commodities which are bought and sold, that it is very difficult to form a judgment on the subject, and very hazardous to express an opinion. We shall content ourselves by saying, in conclusion, that such a vast increase of business has ensued, and is likely to continue, from the increase in the annual supply of gold; and the new-born activity pervades so completely the whole commercial world, that it seems likely to require, absorb, and use all the gold that can be procured. It is so plain that the appetite or the activity of trade grows with what it feeds on, that in the end, probably, there will be no gold too much.

GIBSON'S STATUE OF SIR ROBERT PEEL, IN WESTMINSTER ABBEY.

In the midst of the painful excitement which the lamented death of England's Free-trade statesman occasioned, and the enthusiasm of the country at large to do honour to his memory, Government came forward and procured a vote of £5000 for a statue to be erected in Westminster Abbey. It was, perhaps, a pity that the commission for executing the national order was not thrown open to competition, as has recently become the fashion in regard to public works of this character, and as was the case with the numerous testimonials to the lamented statesman spontaneously undertaken in all parts of the country. The public taste may not always be right in "working men" every day of his useful and glorious life) to have studied the various conceptions of artists of so great a subject, and to have united their suffrages in favour of him who came nearest the simple truth of the original. This course, however, has not been taken; the public money having been voted, the commission was at once given by the Government to Mr Gibson, R.A., an artist who has long been residing at Rome; and who, however great his talent in his profession generally, can certainly have had few opportunities of studying the simple, earnest oratory of the British Senate, and more especially the peculiarly simple but manly bearing of our great social reformer. The consequence, we fear, is, that the public will be disappointed when they come to view the statue which has just been set up against a pillar in the north transept of Westminster Abbey, nearly opposite Flaxman's fine sculptured tribute to Lord Mansfield, and not very far from the statue of Pitt.

The artist has intended to represent the statesman in the act of addressing the Senate; and marking the emphasis by striking the palm of his left hand with a roll of paper which he holds in his right hand; the right foot and leg being slightly elevated, as in the act of advancing, or springing forward. The face is certainly a failure; it could not be mistaken by any one who had seen the original, or even good portraits of him; and an expression of considerable earnestness is realized in the compressed lips and the watchful piercing eye. But, at the same time, the likeness and the expression are not flattering—not worthy of Peel in those moments of enthusiasm when, warmed with his subject and the plaudits of the Commons of England, he propounded some grand point of national policy. The aspect and expression are more those of an advocate arguing a point of special pleading; and therefore unworthy of Peel who, even when discussing a small matter, did it in a grand and confident manner. Neither can we approve of the propriety of draping such a man as Peel the very ideal of an eminently practical statesman—in the conventional flowing robes of the Roman forum. It adds to the unrealness of the whole production; whilst it must be added that the manner in which the cloak or robe is made to hang upon the shoulders is uncomfortable, and not very graceful.

With all these faults as a portrait-statue, which candour obliges us to point out, the production is one which, viewed abstractly as a work of art, is of great merit, and will find many admirers. There is great life and energy about the pose of the figure and the action of the limbs; and admirable executive finish throughout, which shows the hand of an accomplished master in his art.

The statue, which is carved out of a block of marble of the purest white, measures 7 feet 6 inches in height; and the pedestal is 5 feet 6 inches high.

LORD PALMERSTON AT PERTH AND GLASGOW.

Lord Palmerston was on Monday morning presented with the freedom of the city of Perth, in the presence of two thousand people assembled in the City Hall. His speech in reply was very discreet—his topics being the political progress of the country, the diffusion of the principles of constitutional freedom throughout Europe, and the suppression of the slave-trade. The following is the only quotable passage in his address:—

Gentlemen,—It ought to be satisfactory to every Englishman to know that the conduct of our foreign relations is now in able hands; that Lord Clarendon—my noble friend Lord Clarendon, who is now at the head of that department, has penetration to see where the interests, and the honour, and the safety of the country are to be sought: that he has sagacity to discover the proper means for preserving and maintaining those interests, and that he has firmness and energy and perseverance to pursue the right course to arrive at a successful and perfect result. (Cheers). If my noble friend Lord Clarendon receives as I am sure he will the cordial, the generous support of the country, you may depend upon it that he will not disappoint the just expectations of his country men (Loud cheering).

His Lordship was afterwards made a burgess of guild at the Guildhall, in the presence of a large number of brethren. The honour was conferred in consideration of his "manly, firm, and independent spirit and conduct" in the management of the public affairs of the country to which he had been called. He received "stone and lime" of the city, according to ancient usage; and, having become "solemnly bound" to discharge every civil and religious duty which the office legally implies, said:—

My Lord Dean of Guild, I beg to return you my most sincere thanks for having thus completed my creation (Applause and laughter). Imperfection is the lot of human nature; but, to be an imperfect citizen of Perth, would indeed be a great mortification to me, or anybody else who esteems as highly as I do the people who inhabit this most distinguished city (Cheers).

Lord Palmerston addressed the remainder of his speech to the subject of Free-trade.

On Tuesday the freedom of the city of Glasgow was conferred on the noble Lord. The ceremony took place in the City-hall, in the presence of 3000 ladies and gentlemen. His Lordship was accompanied on the platform by the Lord Provost and magistrates; Sir Hastie, M.P. for Glasgow; Sir James Anderson, M.P. for Paisley. His reception was most enthusiastic.

The Lord Provost, after a brief speech, presented the burgess-ticket, which was contained in a valuable gold box, bearing the city arms.

Lord Palmerston returned thanks in pleasing terms. In regard to the course of his own public life, he would merely say that he had simply endeavoured to do his duty as Foreign Secretary; he had endeavoured to extend to all our fellow-men as every inmate of the globe the protecting arm which their country was enabled to extend. His Lordship did not make the slightest allusion to the present state of our foreign relations.

Lord Palmerston has since arrived in London.

THE WEATHER IN THE HIGHLANDS.—In the last ten days there has not been a shower of rain in the Highlands of Scotland. At Balmoral—which is the highest table land in the north—the temperature at noon has ranged from 76 degrees to 90 degrees in the sun. The Court has thus enjoyed a delightful season; and, should the present fine weather continue, it is expected that the Royal Family will remain as long as they did last year—viz., till the second week of October.

FOREIGN AND COLONIAL NEWS

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The journals of the Government teem with the most rapturous accounts of the reception of their Imperial Majesties at the different stations on their northern tour. Making due allowances for the source whence these florid descriptions are drawn, the journey seems to be, in the main, highly satisfactory.

On the 23rd Louis Napoleon and the Empress arrived at Lille, where they were greeted with considerable enthusiasm; and, despite the torrents of rain which fell with little intermission, the streets—most of which were illuminated—continued to be crowded till a late hour of the night. In the evening the Imperial guests, with their suite, attired in full dress and brilliant uniforms, attended the theatre. The Imperial box, constructed in the centre of the principal gallery, was surrounded with a dais of ruby velvet, lined with white satin, and permitted the audience on all sides a view of its occupants. The performance selected was "La Fille du Régiment;" but as, unfortunately, the company was but ill got up in the piece, the execution *laissée à désirer* to a painful degree. The will, however, was taken for the deed; and *leurs Majestés* did what they could to encourage the performers, by staying to the end of the representation.

On the following day the Emperor, accompanied by the *Préfet*, the *Maire*, and a considerable suite, visited the hospitals, where he left various sums for the relief of their occupants, and several of the most important *fabriques* of the different articles of commerce for which this city—the Manchester of France—is celebrated. From thence he proceeded to inspect the admirable establishment of Marquette, instituted by MM. Scrive frères for the amelioration of the condition of the workmen; and, finally, to the Bourse, where preparations are being made for the erection of a statue of the Emperor Napoleon I. On entering, Louis Napoleon received the Prince de Comany, Lord Lucan, the Marquis of Worcester, Lord Bingham, and Colonel Dupuis; who accompanied him to the review, to which he proceeded on horseback, the Empress and her suite following in open carriages.

From Lille, the Imperial cortège went by rail to Roubaix, where they visited various manufactories of the beautiful stuffs for which the town is remarkable; and where a handsome tent, containing an exhibition of the best specimens of these materials for their inspection was erected.

At Tourcoing they performed a similar tour, and were particularly pleased with the magnificent specimens of carpets, the produce of the place.

At ten o'clock, after the celebration of mass by the Archbishop of Cambrai, the Emperor and Empress proceeded to St. Omer; and thence to the Camp at Helfaut; where they were received by the Prince Napoleon, who had arrived the previous night, and under whose directions preparations had been made to greet them. The violent rain and wind, which continued almost without intermission the whole day, greatly incommoded both the troops and the guests. The review was, however, passed by Louis Napoleon; after which the party returned to St. Omer, where a grand ball was offered them by the town. Prince Napoleon returned to Paris on Tuesday morning.

It now seems to be certain that the generally accredited report stating that the Ulémas had given the Sultan the option of declaring war or abdicating, is a fiction; though no doubt exists of the inflammatory nature of their discourses and sentiments. It may not be uninteresting to some of our readers to be told that the Ulémas are not, properly speaking, a class of the clergy; as, according to the doctrines of Mahomet, every Musulman is capable of performing the ceremonies of his religion; but, as the Koran is in Arabic, and as it is forbidden that it shall be translated—that being considered a profanation—it is necessary, as that language is not generally known, that the Faithful should have some guide in the execution of their duties. The Ulémas, therefore, are instructed in the mysteries of this tongue, and recite the prayers aloud in the Mosques. As they, also, are the interpreters of the Koran, and as this forms not only the religious, but the civil, code of the Mahometans, they thus become the depositories of the law in general; and their chiefs (of whom the head is named the Scheik-ul-Islam—have, as may be imagined, an influence among all classes as difficult to combat as to limit.

The camp at Satory was broken up on the 24th, by the General Levasseur, who delivered a speech expressive of the satisfaction the general conduct of the troops has excited. A part of the body composing the camp has returned to the garrison of Paris. Other portions are gone into the provinces; but, previous to their departure, they were employed in levelling the works erected for their accommodation, and restoring the plain of Satory to its former state. Nothing remains but the circus, which is to stand.

The *Courrier de Marseille* and the *Moniteur du Loiret* have received official *avertissemens*—the former for an article on the part de la Joliette, calculated, says the document, to depreciate the said port, and the ground surrounding it; the latter for publishing false intelligence respecting certain insulting manifestations said to have occurred at Paris and at Satory, towards the busts of the Emperor and Empress.

The works of the new wing of the Louvre advance with the utmost rapidity. A new street is to be opened on the sites of the Hôtels du Timbre and the Archives du Ministère des Affaires Etrangères, communicating between the rues Neuve des Capucines and Neuve St. Augustin; and the fountain of the Porte St. Denis is to be placed in the Marché St. Martin, which will tend immensely to improve the entrance of the Faubourg St. Denis, at present encumbered with this and other erections, which are also to be removed.

The autumnal meeting for the races of Chantilly is fixed to take place on the 8th and 9th of October. Eight prizes are to be distributed—four each day.

At the Odéon, "Guzman le Brave," a drama in verse, from the well-known pen of M. Méry, has a great and merited success. The subject, as the name expresses, is taken from the old Spanish chronicles of chivalry, and is full of stirring interest. The verse of M. Méry is of first-rate excellence: rich, flowing, heroic, full of vigour, and of fine and high qualities; though at times a certain diffuseness, and tendency to digression and descriptiveness, tends, it must be confessed, to mar the effect, by introducing *longueurs*, which, in some degree, weaken the action of the piece. This defect apart, the work is one of high and sterling merit. At the Théâtre Lyrique is being represented a charming little operetta, in one act, entitled "Bonsoir Voisin," in which but two personages, M. and Madame Meillet, appear. Nothing can be lighter, more sprightly, more amusing, or more effective than this little piece; the music, by M. Poise, is original, harmonious, and sparkling; the dialogue *spirituel* and entertaining; and the execution all that could be desired. It is not improbable that the Théâtre Lyrique may engage Mdlle. Nathalie Fitzjames—who possesses, in a high degree, the double talent of singing and dancing—for the representation of a series of opera ballets, a style of performance which can hardly fail of proving most attractive. The Grand Opéra are giving a new ballet-pantomime by MM Mazilier and Henri Potier, entitled "Elia and Mysis." The ground selected is nothing less than that of classic Rome.

The approaching reception of M. Berryer, as member of the French Academy, is creating quite a sensation in the Legitimist circles in Paris. Yielding to some scruples of conscience, the Legitimist orator hesitated

to make the usual speech in which it is the custom to pronounce a eulogium on the head of the Government. On the other hand, the dignitaries of the Academy remarked that the hesitation lasted rather too long, and that a delay of two years is sufficient to reconcile him to his task. The friends of M. Berryer are pressing him to get rid of the obligation; and remark that M. Chateaubrind did not hesitate to present himself during the Empire, although blaming that form of Government. M. Berryer has, it is said, consented to present himself in December.

At the season of the year, the shopkeepers in the provinces usually commence the purchase of their winter stock. Few orders, however, have as yet been received in Paris from them. Money is still abundant in the trading circles, but the repeated alarms produced by the Eastern question induce them to limit their transactions and to confine their purchases to what is strictly necessary for present purposes. All trade connected with building are in a state of more than ordinary prosperity. The contractors find some difficulty in procuring sufficient hands, and they have been compelled to submit to a considerable rise in the price of all descriptions of building materials, such as timber, stone, and iron. The ironmasters have such extensive orders on hand that they refuse to accept any new ones, and their prices are generally from 25 to 30 per cent higher than they were last year. Fears are consequently entertained that the new lines of railway lately conceded cannot be completed within a reasonable time, unless the Government authorise the companies to import rails and locomotives from England to France on payment of a moderate duty.

The prevailing opinion at the corn-market is that the highest prices have been reached. The immense arrival of foreign wheat begins now to produce an effect. In Paris the price of wheat is from 40f. to 42f. the 100 kilogrammes. The prices of rye, oats, and barley are well maintained, with a slight advance. The price of butchers' meat in Paris has not been so well maintained since the publication of the Imperial decree, reducing the duty payable on the importation of cattle in France. There has not been much business transacted at the wine-market of Bercy during the last week. Dealers are waiting the result of the approaching vintage, of which the accounts vary.

SPAIN.

Letters from Madrd, proceeding from persons not unfavourable to the new Cabinet, do not express any confidence in its stability. At their meeting on the 28th September the first act of a Ministry, whose president is a member of the press, and who has often carried his opposition to the most violent pitch, was to order the seizure of two journals—the *Diario Espanol* and the *Tribuno*. There is a rumour of the probability of a reconciliation between M Sartorius, the head of the new cabinet, and Marshal Narvaez. The latter is said to be not indisposed to such a step. It is not considered probable that the Marquis of Vilmna will remain at his post as Ambassador in Paris. Should that be the case, and the reconciliation alluded to be effected, Marshal Narvaez would in all probability be the new Ambassador. If the Marquis of Vilumna remain, Narvaez would be offered the Vienna Embassy. The fears of the long-rumoured *coup d'état* appear to have subsided for the present. The stability of the Cabinet may depend a good deal on the favour it may find with the Court "favourite.'

The *Gazette* of the 22nd September published an organic decree relative to admission into the administrative functions. In virtue of the decree, which was well received by the public, the Government officers are hereafter to be chosen from among men of real capacity. The Cabinet intended also to enact several other equally wise measures, such as the suppression of the Transatlantic Council, the regulation of military accounts, the augmentation of the pay of the troops, &c.

ITALY.

Under the provisions of the new Tuscan criminal code, a young Scottish lady has been arrested, and conveyed to the Penitentiary at Lucca, on the charge of disseminating Protestant tracts in a village near the Baths of Lucca. The lady in question is Miss Margaret Cunninghame, of Thornton, near Kilmarnock, Ayrshire, who, with her mother and sister, were to have left Tuscany on the 14th of September, for the purpose of continuing their travels towards Rome and Naples. A friend of the family, Sir William Miller, of Barskimming, made an immediate but ineffectual effort to have the whole matter quashed by going directly to the Grand Duke, who, however, would not record him an interview. Sir William, with his friend the Rev. Mr. Gordon, then proceeded directly to Florence, and laid all the circumstances of the case before the Hon. Mr. Scarlett, now acting as Chargé d'Affaires, in the temporary absence of Sir Henry Buller Mr Scarlett was seconded in his representations by the American Chargé d'Affaires; but the Grand Duke was inexorable, and declared that justice must take its course. The Grand Duchess expresses regret for the situation of Miss Cunninghame, but refuses to interfere The individual dispositions of the members of the Ministry are, however, said to be more favourable. Miss Cunninghame will be tried on the charge of having infringed the 127th article of the new criminal code, which declares that "whoever shall circulate works hostile to the Roman Catholic faith, with the view of seducing any member from that communion, shall be condemned to the hou-e of correction, and subjected to hard labour, for a period of not less than five, or greater than ten years." She is charged with having given to some peasants an Italian Bible and an Italian translation of the "Pilgrim's Progress ;" and both these books fall under the criminal category. The young lady is said to be a lineal descendant of John Knox.

The Florence correspondent of the *Christian Times* states that the persecution rages with unabated fury in that city against the Tuscans:—

On Sunday fortnight the gendarmes broke into the house of Natale Lippi, a baker, in the Palazzuolo and there arrested him, and Piero Cieri, also a baker, and Alessandro Barli, a tailor, on a charge of meeting and reading the Scriptures in the version of Diodati. The house was searched, and the Bibles found in a press. All three were then committed to prison. Barli and Cieri have since been released; but Natale Lippi will either have to stand his trial for offences against the religion of the State, or, more probably, be condemned without trial, by the Council of Prefecture, to such a term of imprisonment as they may choose to award. Meanwhile, upwards of fifty Italians have been summoned before the delegates of the different quarters and cross-examined, in the hope of eliciting some connexion between Italian Protestantism and English Propagandism.

HOLLAND.

The first chamber of the States-General, on the 23rd September, adopted the Address in reply to the Speech from the Throne. On the following day the Minister of Finance presented to the Second Chamber of the States-General the budget for 1854. The expenditure is estimated at 70,216,837fl. 71g., and the receipts to 71,789,702fl. 51½g.; leaving a balance of 1,572,814fl. 80½g. Compared with 1853, this is an increase in the expenditure of 131,268fl. 32½g., without, however, including the expenses for the Roman Catholic Church for 1853, and which are estimated at 470,546fl 18½g. The various measures adopted since 1850, with a view to the reduction of the National Debt have effected an annual saving of 850,000fl. Further measures, having the same object in view, are computed to increase this saving to 1,100,000fl.

AMERICA.

By the *Atlantic*, which arrived at Liverpool on Wednesday, we have advices from New York to the 17th of September.

The first turf of the European and North American Railroad was turned at St. John's, New Brunswick, on the 14th, by Lady Head, assisted by the Lieutenant-Governor, in the presence of a vast assemblage.

The yellow fever was still on the increase at Mobile, and on the decrease at New Orleans.

The latest accounts from Washington state that the missions to France and China still remain open.

Mr G. M Dallas was at Washington, and it was rumoured that he would get either the mission to China or France.

The rumour that Jefferson Davis was going to leave the Cabinet was considered to be unfounded

The Washington correspondent of the *New York Herald* says, all the rumours of a rupture between Secretary Marcy and the President are false. Marcy has the entire confidence of President Pierce. The Cabinet had a long sitting on the 12th at which foreign affairs were discussed, and it was determined that Captain Ingraham should be sustained in the Koszta affair. After it was ascertained that the President not only justified but applauded the course of Captain Ingraham, the Republican Committee from the various associations in New York assembled for the purpose of preparing some testimonial of admiration for this officer

The Austrian manifesto is regarded as a very feeble affair. It is thought that neither by the law of nations, nor by the usages of civilised life, could Au tria under any pretext deprive Koszta of his liberty The tendency of the American mind at the present moment to intervention in European affairs is no longer a matter of doubt. It is reported in New York, "on the best authority," that when the Emperor of Russia heard an account of the Koszta affair from the Austrian Ambassador, who asked his opinion about it, he said, "Tell the Emperor of Austria that the sooner he drops the matter the better for him; the Americans will get over here fast enough without being invited."

The accounts from Albany, Buffalo, and Oswego, state that the Western dealers were bringing forward immense quantities of breadstuffs to the sea-board markets. The *New York Herald* says, "The supply of the staff of life appears to be abundant, and unless there should either be a dearer or some prospect of a partial famine in Europe, it is hardly probable that the price of flour will go beyond the present rate for some time to come."

CALIFORNIA.

(From our own Correspondent.)

San Francisco, August 15, 1853.

There is no foreign subject of more paramount interest to the citizens of California, at the present time, and no topic engaging more earnest consideration by thinking men in this city, than the progress of the revolution in China. Its Christian character; its influence upon commerce—and the probability of its breaking down the restrictions upon intercourse with the interior of that country, render it, without doubt, the greatest political event of the century, and pregnant with vital results to England, the United States, and to California especially. By recent advices we learn that the rebels seem invincible: they number 80,000; are well equipped and disciplined; they have never yet failed to carry a point they attempted—city after city, province after province, has fallen into their hands: Nankin is theirs; and we now learn that Amoy, Woosung, Suchow, are captured; and, by last accounts, they were threatening Canton itself, which apparently must fall, as it is cut off from all succour from the Emperor. The Imperialists appear paralysed, and retire before their victorious opponents without striking a blow. Tien-Teh, the representative of the Ming dynasty, and the ostensible head of the rebellion, has been set aside by another leader, who aspires to the Imperial throne.

Europeans are kindly treated in the captured cities, and promises are held out that free and unrestrained intercourse with the interior will be allowed. The United States sloops-of-war the *Portsmouth* and the *St. Laurence* have arrived here from the Sandwich Islands, and bring the disastrous intelligence that the unhappy natives are being cut down like grain before the reaper by that dreadful scourge the small-pox. As was anticipated, it has spread like wildfire all through the Islands. The districts in which it has thus far made its appearance do not, probably, contain more than 50,000 inhabitants; and yet 735 cases of the disease were officially reported up to July 1st. During the past twenty-five years vaccine virus has been introduced several times, and many were vaccinated; still, large numbers remained unprotected, and the disease found them predisposed for its attack. It cannot be concealed that the native population, from this and other causes, is fast fading away; and but a few years will elapse before the white race has undisputed control of the islands.

The ships of war above mentioned also report that a French fleet, consisting of eleven vessels of war, is on this coast, and probably destined for the islands. This seems to confirm the report that the sudden departure of the American fleet from the coast of South America was in consequence of orders from head quarters to protect the Hawaiian Government against the aggressions of the French. If the latter power should make any hostile demonstration, the Government of the United States, we imagine, would desire nothing better, as it would serve as a pretext to run up the American flag over all the islands. The Hawaiian Government is at present in a very helpless and exposed condition—its finances are low, and the expenses of the current year will exceed the revenue full one half; yet agriculture is greatly prospering, and new vigour is constantly being imparted to it by the demand for this market. The grape, rice, wheat, barley, sugar, coffee, tobacco, and corn of the finest quality, can all be raised.

We have still to report favourably of the mines of this country—remunerative returns reward the miner both north and south, and occasionally new and important discoveries of rich deposits are made. The placer that was discovered at Santa Cruz, which we spoke of in our last, has not realised the expectations that at the time were formed of it; but the discoveries in Oregon, near Crescent City, are most fully confirmed, and the richness of their yield recalls to remembrance the best days of California. Crescent City is rapidly increasing in size, from the immense flood of emigration that is setting in from all quarters, and bids fair to be one of the largest and most important in the territory of Oregon.

In this state the cities continue to augment in size in a really wonderful manner. Not only San Francisco, but Marysville, is adding most considerably to the number of its brick structures. The onward progress of San Francisco is unparalleled in the history of the world, and her future promises to be even more brilliant than her past. Within a single year her taxable property has increased from 19,000,000 dollars to 30,050,478 dollars, full sixty-four per cent. For the past two years and a half we have escaped those dreadful fires that have so often laid our city in ashes: this has arisen partly from the durable character of the buildings since that time erected; partly from the supply of water in the numerous cisterns scattered all over the city; and largely, from the admirable efficiency of the honorary fire department, of which we shall take an opportunity, in a future letter, of speaking more in detail. We may safely predict that we shall never have another fire of any extent in San Francisco. An ordinance is now in operation forbidding the construction of wooden buildings within very extensive fire limits, and the Mountain Lake Water Company will bring a perfect flood of water into our midst. This company will bring its water from a lake about four miles from the city, in the hills near the sea, and about 100 feet above our level; the supply is said to be without limitation. Along the line of route numerous workmen are engaged sinking shafts and tunnelling; and the work, it is said, will be completed in January next. The day, indeed, will be a glorious one when we have a rush of water in San Francisco.

The *strikes* that we spoke of in our last amongst some of the working men have extended to all, and all have been successful in obtaining their demands—carpenters, blacksmiths, masons, &c., &c.; in fact, all skilled working men are now getting from eight to ten dollars a day, and labourers—men who carry the hod, &c.—are getting six dollars. These rates will continue till winter, when numbers will leave the mines for the cities, and then, in spite of the associations now formed, the influx of competition must bring prices down a little. Still, for a long future, California must be a land of promise to the labourer; so much work requires to be done, and so much must and will be done: and the corn, in the shape of the "golden dust," is being every day in the year harvested to pay him—that to all sober, honest, and industrious working men, who are care-worn in the old world, who can come here, and who have a steady will and a strong determination, we say *come* and participate in these benefits.

In the theatrical world we go on as usual:—the Germans enjoy their tragedy, the Spanish their drama, the French their vaudeville, and the Americans enjoy a mixture of all, together with some excellent music from Philharmonic concerts, under the direction of Mr. George Loder. The orchestra is good, and the chorus surpassingly good. Mieka Hauser is still playing, and Mrs. Sinclair still acting. Lola Montes the notorious is in the mines. By a recent letter from Grass Valley we hear she has been rusticating amongst the quartz veins. M.

MEXICO.

The steamer *Texas* has arrived at New Orleans with advices from the city of Mexico to the 6th, and Vera Cruz to the 5th inst Santa Anna had already raised an army of 50,000, the finest ever seen in Mexico Large numbers of troops were being sent to the frontiers, ostensibly to repel the Indians. Santa Anna still continued his high-handed measures, and executed all persons against whom suspicion was entertained without warning. It was believed that another revolution would follow this tyrannical and arbitrary course.

THE OVERLAND MAIL.

By the Overland Mail we have dates from Calcutta to the 20th, from Bombay to the 30th, and Hong-Kong to the 6th, of August.

British India was quiet throughout. Famine still prevailed in Rangoon, and cholera was raging in many places. Much sickness prevailed among the British troops there. General Godwin had returned to Calcutta, and the second Burmese war may be considered at an end.

The north-west frontier is in a very disturbed state, and the Kobat Pass is still closed. It is said that a letter of Dost Mahomed has been intercepted, regretting that he is unable to assist the frontier tribes against the English this year, but promising to do so next year.

Cholera continues fearfully prevalent in the north-west provinces, and several British officers have died of it.

Notwithstanding Sir Charles Wood's assertion that an inquiry had been ordered into Mr. Lusrd's case, that gentleman continues to demand one in vain from the heads of the local Government of Bombay

The last fortnight's news from China is rather uninteresting. The Imperialists have made another unsuccessful attempt to re-capture Amoy, and from the accounts received of the spiritless behaviour of the Tartar troops, both on this occasion and also Chin-Keang-Foo, it is now evident that all is up with the Manchoo dynasty.

The movement of the insurgents into the Kiangsi province seems beyond a doubt, and they had taken possession of the principle city, causing alarm in the Mooning and Moyune neighbourhood, the seat of the tea districts. It was reported they had evacuated Nankin, for a time, for the rich province of Kiangsi, to provide supplies—being run short of rice and other food; and this had originated a report that the Imperialists were again in possession of Nankin.

The mercenary fleet blockading Chin-Kiang-Foo consists of eight English and American square rigged vessels, between thirty and forty Portuguese armed lorchas, and about twenty junks. With the single exception of the flag-ship, *Sir Herbert Compton*, all the European vessels are small. The English commander of the fleet is of opinion that nothing can be done against Chin-Kiang-Foo without the effectual co-operation of a land force; and there is no chance of any such being rendered by the Tartar troops now before the place.

Sir George Bonham has at last issued a proclamation, apprising all British subjects of the illegality of engaging in warlike operations in China without the Queen's license; and warning all such that he will strictly enforce the penalties provided in the Act 59 Geo. III., cap. 69, against such offences.

The Government at Pekin is in the greatest distress for money. On its having announced that a paper circulation was to be issued and forced into currency, all the bankers shut their shops, and though this project has been given up they have not again opened them. The Emperor had ordered that all should pay the next month's rent into his Treasury instead of to their landlords: but this measure would afford a trifling and very temporary relief.

A scarcity of grain was beginning to be felt in Pekin, owing to the districts by which the capital was principally supplied being now in the possession of the rebels. The circumstance of the left column of the rebels having been allowed to advance so quietly to the Yellow River may probably be attributed to the Tartar troops having been withdrawn from their front, and concentrated before Nankin. The establishment of a rebel force on the Yellow River ought of course to compel the Imperialists to retire from Yang-tse-Kiang to the more northerly line of the Yellow River, but as the Imperialists have not yet learnt to fight by rule, and have, moreover, a fleet to rest on, they will probably stand fast until it suits the insurgents to march out of their lines to slaughter them.

Abbas Pacha had issued an order prohibiting the exportation of grain from Egypt from the 26th of September; but, on the representation of the Consuls, the prohibition may be delayed until the 30th of November.

THE CAPE.

The *Indiana*, General Screw Company's Mail-Packet, arrived at Plymouth on Wednesday, with dates from Table Bay to the 20th August.

The 50-ton emigrant ship was lost at Carnouiers Point on the 12th of July: crew and passengers saved.

Affairs continue tranquil at the Cape. The Galkas and Kreli have fulfilled the stipulations imposed on them at the end of the war. Any sudden diminution of the troops would, in the opinion of the colonists, be followed by fresh outbreaks.

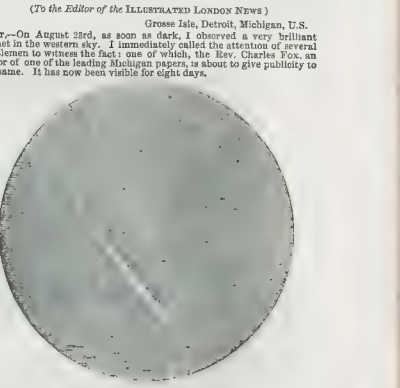
The commerce of the Cape is daily increasing, and the Constitution has given a full sense of security.

APPEARANCE OF THE COMET IN THE UNITED STATES.

(To the Editor of the ILLUSTRATED LONDON NEWS *)*

Grosse Isle, Detroit, Michigan, U.S.

Sir,—On August 23rd, as soon as dark, I observed a very brilliant Comet in the western sky. I immediately called the attention of several gentlemen to witness the fact: one of which, the Rev. Charles Fox, an editor of one of the leading Michigan papers, is about to give publicity to the same. It has now been visible for eight days.



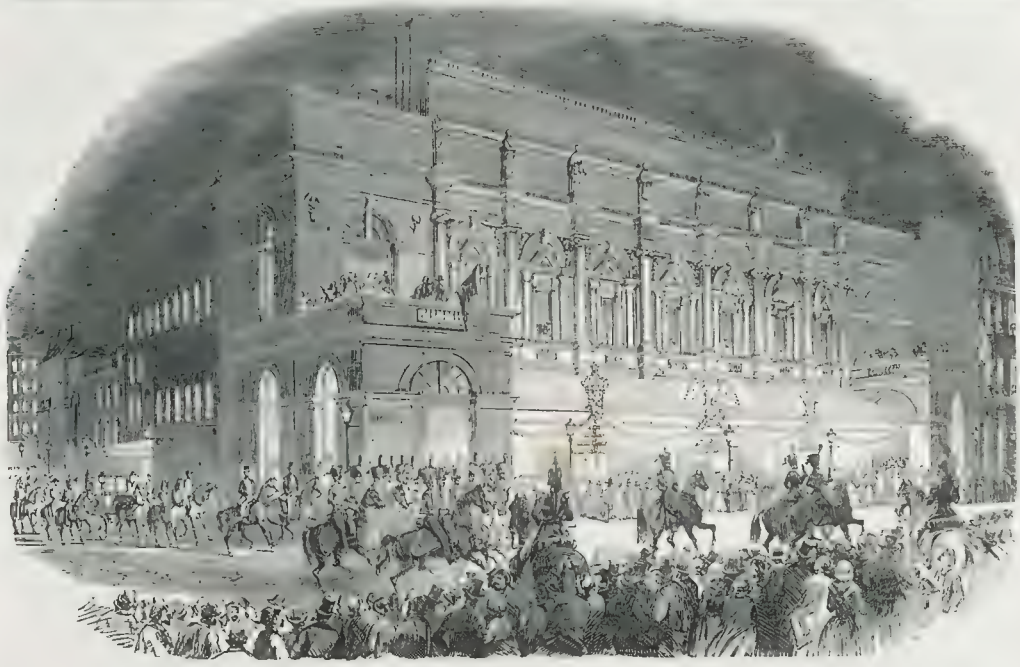
To describe its position, I must state it forms an inverted equilatern triangle, with Dubbe and Arcturus, the nucleus equalling the brilliancy of Sirius. I have enclosed a rough sketch of its position in the sky, should you deem it worth while entering it in your columns; and, although so far away, with pleasure subscribe myself your constant reader,

M. W. BIDWELL EDWARDES.

[NOTE BY THE EDITOR.—From the drawing it seems that the Comet was seen with considerable splendour in America, with a tail extending to a length of 23 degrees nearly. In its general form, it is very accordant with its appearance as seen from this side of the Atlantic.]

A YACHT FOR AUSTRALIA.—Last week, the Duke of Marlborough's fine schooner yacht of 365 tons, the *Wyvern*, left for South Australia. She takes out a general cargo, consisting of sheet-lead, shot, nails, clothing, boots and shoes, hardware, toys, wines, ale, cider, &c.; the whole valued at £5000. His Grace's second son, Lord Alfred Churchill, goes in her on a voyage of pleasure, and acts as supercargo. When the *Wyvern* arrives at Melbourne, the cargo will be sold, and also the vessel, if a suitable offer can be procured.

INCREASED VALUE OF SHIPS.—Some idea may be gathered of the increased value of this species of property from the fact that a gentleman from the south approached on Montrose the other day, and offered some of the shipbuilders an advance of 35 per cent [illegible] if he were furnished with an or[illegible] [illegible]. The offer, in consequence of pre-engagements [illegible] to those who advocate the cau[illegible] to know that [illegible] present the two most valuable fields of [illegible] ships and [illegible]



THE EMPEROR AND EMPRESS OF THE FRENCH LEAVING THE GRAND OPERA, PARIS

THE GRAND OPERA AT PARIS.

THE Emperor and Empress attended the first representation of the new ballet of "Ælia et Mysis," at the Grand Opera, on Wednesday evening week. Queen Christina and the Duchess of Alba were also present, occupying a box opposite to that in which their Imperial Majesties were seated. The house was brilliantly attended, and the success of the ballet complete. It is difficult to trace the plot of chorographic compositions in general, and that of "Ælia et Mysis" forms no exception to the rule. *Ælia* appears to be the daughter of a Roman consul, *Massala*, who projects a marriage between her and an Armenian potentate, *Tigranes*. Undutiful daughters were, it seems, as common in Rome at the time depicted in the ballet, as in the present degenerate era; and *Ælia*, who has a *penchant* for a certain *Enolio*, entertains a strong objection to the match. This objection she communicates to her sire, who storms and rages as indignant stage fathers under such circumstances are wont to do. Hardly has he disappeared when *Enolio* enters—comes, as the printed analysis informs the spectator, "to rehearse with the fair *Ælia* her part in the Attellana," just about to be celebrated. Whether that grotesque festivity is one of the pastimes in which the daughters of patricians in ancient Rome were wont to indulge, is a question scarcely worth considering. Historical accuracy has never been a *belle* requisite, and the rehearsal affords the lovers an opportunity of expressing their mutual passion and lamenting their hard fate in expressive pantomime. At length *Ælia*, finding her father inflexible, yields to his entreaties, and consents to marry the Armenian Prince. As the auguries, however, prove unfavourable, the nuptials are postponed, and *Ælia* is sent to pass a few days with the Vestals in their sacred grove. *Enolio* accompanies introduces him into the sacred precincts and obtains an interview with the mistress, but is discovered by the Vestals, a proceeding which he has expiated in his worldly days. The vengeance on his head, and quits the sacred precincts. The troop of consecrated virgins is heard approaching, and his situation becomes critical, but, with his "fidus Achates" he is concealed by *Ælia* from their eyes. The goddess angered at the presence of men in her sanctuary, manifests her indignation by a series of prodigies; the waters of the "aquarium" are changed into liquid fire, the trees lose their verdure, a lurid glare overspreads the stage, and lastly, the sacred fire goes out. The culprits are discovered, and are about to be put to death by the enraged Corybantes, but at last their life is spared. As they depart, however, they are fatally inanimate, and the curtain drops. There is some excellent dancing in the ballet, particularly on the part of Mdlle. Priora and Mdlle. Guy Stephan, the *prima ballerina*. The scenery is admirable throughout, and nothing can be imagined more poetically beautiful than the grove of Vesta, with its electric (moon) light. The parties are MM. Desplechin, Cambon, and Thierry. The music is by M. Potier, and M. Mazilier is the chorographer.

Our Artist has depicted the above effective scene of the ballet; and has added a sketch of the exterior of the Opera-house at the moment when their Imperial Majesties are leaving, attended by the usual strong escort of Guides and Cuirassiers.

SCENE FROM THE NEW BALLET OF "ÆLIA ET MYSIS," AT THE GRAND OPERA, PARIS.

MONUMENT LATELY ERECTED UPON THE BATTLE FIELD OF CHILLIANWALLAH.

THE BATTLE-FIELD OF CHILLIANWALLAH.

The scene of this "sanguinary battle" remains, after four years, almost exactly the same as on the 13th of January, 1849, and, from the nature of the ground, it will probably be long ere the peaceful plough softens down its sternness. Within a few miles of the small Goojur village of Chillianwallah, the river Jheylum cuts through a long low spur of the Salt Range, leaving the mass of hill standing boldly up on its right bank, and the severed spur lying on its left. This spur is crowned by the village of Russool, which, from a precipitately scarped cliff, overhangs the river on one side, and looks over the field of Chillianwallah on the other. From these heights, as far as the eye can follow the downward course of the Jheylum, the country is an undulating surface of jungle and ravines for many miles inland. In this jungle it was that the Sikh and British armies met. The Sikh position extended from Russool on the left to Moorg, another high village, on the right; but their line of battle was pushed forward far in advance of their camp, to the edge of a long, low hollow, which traverses the country. On the opposite side of the hollow runs a line of high villages, of which Chillianwallah is the centre; and behind these villages, towards Dingah, the country becomes clear and comparatively open. It was in this direction that the British army advanced towards Chillianwallah on one side, while the Sikh line lay in wait in the jungle below it on the other side—so that this village had every right to give its name to that memorable battle.

We leave the description of the fight itself to history; and only aim at presenting to our readers a faithful picture of the spot where it occurred. It is, indeed, a wild and striking one: its mournful interest has been added to by the erection, during the last year, of a noble monument to those who fell on the British side. It is an obelisk of red stone, from the adjacent hills, seventy feet high, which stands in a walled cemetery on the summit of the Chillianwallah mound, where the majority of the British killed were buried. The bodies were laid in long trenches, which have now been vaulted over with masonry; truly a "common grave" for the brave who died a common death. On the base of the obelisk the following inscription was being chiseled when our Sketch was taken:—

Around this Tomb was Fought the sanguinary Battle of Chillianwallah, 13th Jan., 1849; between the British forces, under Lord Gough, and the Sikhs, under Rajah Shir Singh; on both sides did immortale Warriors pass from this life, dying in mortal combat. Honoured be the graves of those heroic Soldiers! To the Memory of those who fell in the ranks of the Anglo-Indian Army, this Monument has been raised, by their surviving comrades, at whose sides they perished: comrades who glory in their glory, and lament their fall.

The Monument (of which the accompanying is a faithful representation) was designed and erected by Captain Harley Maxwell, of the Bengal Engineers; and the Inscription was written, it is said, by the late Sir Charles Napier. It is a fine thought, finely carried out—when we reflect that Sikh workmen quarried, squared, and carried every stone, and then piled them one by one over the graves of the conquering Saxons.

LAUNCH OF "THE CONTEST" CLIPPER-SHIP.

This fine specimen of naval architecture was launched from the building-yard of Messrs. Barr and Shearer, at Ardrossan, on Friday, the 16th ult. The weather was beautiful, the day being one of unbroken sunshine. The vessels in the harbour displayed their colours in honour of the occasion; and a large concourse of people, many from a considerable distance, were present. On the platform were the Earl and Countess of Eglinton, the Earl and Countess of Buchan, E. H. J. Crawford, Esq., M.P.; besides a great number of ladies and gentlemen from the surrounding country.

The arrangements being completed, the vessel glided majestically into the water, amid the shouts of the spectators; the name of *The Contest* being given by Mrs. Captain Jennings as she broke a bottle of wine on the stem of the vessel. She is destined for the Australian goods and passenger trade, under the command of Captain Jennings. Her owners are Messrs Henry Moore and Co., of Liverpool.

After the launch, a large company of gentlemen, by the invitation of the builders and owners of *The Contest*, sat down to a sumptuous dinner in the Eglinton Arms Hotel. Provost Barr, of the firm of Barr and Shearer, occupied the chair; and Major Graham, of Glenny; Mr. Arthur Moore, of Liverpool (one of the owners); and Mr. Shearer, discharged the duties of croupiers.

The Contest is the largest ship which has yet been built in Scotland. Her measurements are—Length of keel and fore-rake, 184 ft; breadth of beam, 35 ft. 3 in.; depth of hold, 22 ft 8 in. Her registered tonnage is 1119 tons; and, from her fine model and complete equipments—which comprise the most recent improvements—*The Contest* bids fair to reflect the greatest credit on her enterprising builders.

THE CONTEST, CLIPPER SHIP, AT ARDROSSAN

THE CHOLERA, AND MEASURES OF COUNTERACTION.

The returns of the mortality in Newcastle and Gateshead show that the violence of the epidemic is rapidly abating. For Tuesday, in the former town, 37 deaths from cholera and diarrhœa are reported; for Sunday, 47. In Gateshead, on Tuesday: cholera, 20; diarrhœa, 1.

The total number of deaths from cholera and diarrhœa in Newcastle during the present outbreak has been about 1200. In the same period (viz., the first 39 days) during the prevalence of epidemic cholera there in 1831-32, the number of deaths was 191.

The total number of deaths from cholera and diarrhœa in Gateshead, up to the last return, has been about 320. During the like period (viz., 18 days) in 1831-32, the deaths amounted to 130.

The system of house to house visitation is becoming more complete. It has been found impossible to induce people in the worst districts to leave their filthy abodes for the tents which have been pitched.

In South Shields, Sunderland, Durham, Hull, and Manchester, there have been isolated cases.

On Friday week a case of Asiatic cholera occurred in White-street, Moor-street, Cork, and during the same day, and part of the next, three deaths occurred. The unfortunate woman, a widow of large size, was carried on Tuesday, Mr. Dyson, the medical man, thinks, from a severe vomiting of rice-water, but without success. The husband of the deceased had just recovered from a slight attack. The house in which they lived is very clean, but in the immediate neighbourhood there are several cesspools overflowing; and there is a great want of sanitary measures in the entire district.

On the same day the first fatal case of cholera which has occurred in Lambeth, took place in Yorkshire-road, Vauxhall. The deceased, whose name is Michael Fleming, resided, with his family, opposite the London Gas-works, and was attended by Mr. Arthur, the parish surgeon. All efforts to arrest the disease proved ineffectual, and the deceased died after a few hours' distressing suffering

The General Board of Health has issued special directions and regulations for the use of local bodies, officials, and the public in general. The document has been written in the circuitous official style; but its purport is briefly as follows:—

"Union and parish guardians are to make out, from medical and other information, lists of places where diseases lately prevailed, or at present prevail; and then to direct the medical officer to examine the health of the people in these places. The guardians are also to superintend the cleansing of public ways and places; to cleanse them themselves if the proper authorities fail; to direct individuals to cleanse particular nuisances near their respective dwellings; to visit dwellings in parishes or unions where there is no 'governing body;' to remove nuisances themselves where the occupiers are too poor to do so, or to do so slowly; to provide medical visitation, from house to house, wherever an epidemic is present or imminent; to provide hospitals for poor sick people; to provide general medical superintendence into the health of people in workshops, common lodging-houses, and schools, and to treat, by himself or others, all cases of diarrhœa in those places; to report to the guardians all nuisances; to report any unusual amount of diarrhœa, and any case of epidemic and contagious disease, to order the separation of the inmates, or other necessary measures in schools, workhouses, or lodging-houses, where any disease may break out; to cause the removal of patients from crowded rooms; and to speedily remove, from the rooms of the living, corpses of persons who die from contagious or epidemic disease. All medical men are desired to report cases of death from epidemic or contagious disease to the medical officer of the district."

The instructions for the general public are simple. Occupiers of houses shall, when directed by the guardians or medical officers, continuously cause the places adjoining their houses, and remove nuisance. Any person present at a death from epidemic disease, not attended by a medical man, is to notify the same to the registrar of the district.

The above directions relating to nuisance equal by apply to "any matter injurious to the health of any person." In the washing of streets, persons are directed to use substances for preventing the escape of noxious effluvia during the operation

Applications are made nearly daily to the police magistrates for directions as to how to proceed in the suppression of nuisances. The following is a useful summary of what should be done:—

When you have to complain of any particular nuisance, go to the Inspector of Nuisances for your district and obtain from him a proper form of notice, which, in addition to your own, must receive the signatures of two householders, or of the Union medical or relieving officer of your district. This notice you must deliver to the Board of Guardians. They have powers in ordinary cases on twenty-four hours' notice, and in extraordinary cases without notice at all, to inquire into the nuisance and lay a complaint before a justice of the peace. This justice will order the removal of the nuisance, and the offender will be fined 10s a day for disobedience. In case the nuisance continued, the guardians should themselves take the matter in hand, and cause the nuisance to be removed at the cost of the offender. In addition to all this, we find the sweeping clause that "the Local Board may make and enforce the regulations of the General Board of Health." The Board of Guardians, however, are entrusted solely with other powers. These are enumerated as follows:—1. Medical inspection of houses by house visitation. 2. Certifying unwholesome houses or nuisances. 3. Directing what is to be done where they find epidemic disease, or the premonitory symptoms of it. 4. Providing, where necessary, for house to house visitation. 5. Providing for the accommodation of necessitous cases. 6. Providing for the removal of the sick, or of other occupants of the same premises.

A report on interment in the City has been presented to a committee of the Common Council by their indefatigable medical inspector. Mr. Simon recommends a cemetery of a hundred acres of proper soil, not less than six miles from the City, near some railway, and, as far as possible, secured from the approach of habitations within two hundred years. Fifty-four acres would be quite sufficient for the entire mortality of the City, burying only one body in one grave, allowing it twenty eight square feet, and a tenure of twenty years. But space for non parishioners, for family vaults, and single graves in perpetuity, for carriage-drives, for grass-ornamental buildings and gardens, cannot be obtained without a hundred acres. Mr. Simon also recommends an additional fee of 5s. if the interment be postponed eighty hours after death.

Many remedies have been proposed. We append a few:—

A correspondent sends the following, which he received from a Baptist missionary in the West Indies:—

Two table-spoonfuls of salt and mustard, to produce vomiting; then, from ten to twenty grains of calomel, in an hour's time, followed by a dessert-spoonfuls of castor oil, and one of spirits of turpentine. Should symptoms of congestion of brain appear, apply a blister to the back of the neck. When symptoms of collapse first appear, administer turpentine, laudanum, and camphorated spirit

Another instance of the use of chloroform has been made public. Mr. A. J. Smith, surgeon, of Sheerness, was called to attend a child for paroxysms of cramp, fearful to witness, and quite uncontrollable by the usual remedies, put him (with the sanction of his neighbour, Dr. Reid) to inhaling under the influence of chloroform. At half-past twelve a.m. he awoke from a state of drowsiness, expressing himself greatly relieved, and desiring to have a fresh dose. From this period up to five a.m. the paroxysms of cramp became less severe in degree, and less frequent in their recurrence. On each return of the spasms, however, a pair ful dose of ch oroform was administered with beneficial effect. In the course of five hours, the chloroform was given six times, and two ounces of chloroform, by measure, were consumed. At three p.m. the first bilious evacuation was obtained from the bowels; and, from that time, with the exception of the usual visceral derangements, the case progressed favourably

Another medical gentleman has addressed the following to the papers:—"I was summoned to Shooter's-hill yesterday afternoon to see a patient who was suffering from nausea, intense cramps in the abdomen, and *his tongue was thickly coated*. I gave him an emetic, and when the vomiting ceased, ten grains of calomel, followed, in an hour's time, by a draught composed of twenty grains of rhubarb, thirty grains of sulphate of potash, a little tincture of ginger, and peppermint water. In the evening I was asked to visit a woman, a native of Bermuda, who was complaining of violent cramps, coldness of the extremities, retching, nausea, purging, &c.; and the tongue was much coated. She had taken "lots" of brandy to cure the complaint, and was consequently half drunk. I prescribed for her an emetic, ten grains of calomel, and a rhubarb draught. Both these patients are now well.—I challenge the General Board of Health to send me to the infected districts, and I will prove that—Epidemic diarrhœa and Asiatic cholera are perfectly curable diseases when treated on rational principles, founded on a sound knowledge of the," &c. &c. FRED. W. DICKINSON, M.R.C.S., Surgeon to the Royal Kent Dispensary. High-street, Woolwich, Sept. 26, 1853."

PRAYERS FOR DELIVERANCE FROM THE CHOLERA.—On Sunday last, the 25th inst., in accordance with the threatened visitation of the cholera, services were held up in the [illegible] ...ioses of worship of the various Nonconformist Dissenters, and in the Roman Catholic chapels, throughout the metropolis. In the parish churches and chapels of the Established religion, the ordinary prayers for deliverance from sickness were read and fervently repeated. The congregations at morning and afternoon services were extremely numerous

THE LATE LIEUT.-COLONEL JAMES NISBET COLQUHOUN.

(From a Correspondent.)

THIS officer, whose death was recorded in our Journal of last week, leaves behind him a high reputation as a practical engineer. His achievements in chemistry, mechanics, and all the elementary sciences of artillery, have often been noticed by the press. But his eminent qualities as a soldier in the field do not seem to be so generally known. This may be accounted for by the circumstance of his having exhibited those qualities in a service which did not enlist the national sympathy, but, on the contrary, was the subject of more political controversy, hostile criticism, and misrepresentation than any warlike operations which have occurred in our time—I allude to the service in Spain in the years 1835—37, under Sir De Lacy Evans.

It is stated, in some notices of his life, that Colquhoun served in those years under Commodore Lord John Hay. This is not quite correct. He obtained leave of absence, like other able officers, from the British Army, and took a commission from the Queen of Spain. He continued in the legion of General Evans until the latter end of 1836, when he returned to England, and resumed his place in the Royal Artillery. He returned to Spain, in command of a detachment of artillery from Woolwich, and acted nominally under the orders of Lord John Hay; but, in fact, under the command of Lieutenant-General Evans, with the exception of the action at Bilboa, on the 22nd of December, 1836.

Some incidents relating to Colonel Colquhoun in the action of October 1st, 1836, were then recorded by the present writer at the time. The lines of General Evans had been attacked at daybreak, and the pickets driven in. There were cannon permanently stationed on the lines, but the field-pieces were at San Sebastian. To get these to the hills, over broken and wet ground, and under fire, was no light task. The horses which dragged the guns were up to their hocks, and plunging at every step more deeply into the clay—the drivers spurring and whipping—the gunners working with levers to move the sunken wheels. "There, now, my good fellows," Colquhoun would say, dismounting from his horse, and assisting with his own strength, "that's the way; don't mind soiling clothes now; down with your shoulders; this way—here goes!" An officer of artillery having been observed galloping from point to point somewhat undecidedly and hesitatingly, although his guns did little execution, and Evans having desired Colquhoun to ride across the enemy's fire to the ground where those guns were stationed, to ascertain why they were so ineffective—he did so. The position of the enemy's 1400 yards, heavy columns of the enemy were advancing between a wood and a house towards the line of engagement. Colquhoun examined the shells, measured the distance with his eye; and, turning to the gunners, called attention to the columns of the enemy. "You see you house?" "Yes, sir." "The enemy?" "Yes, sir." That shell should take effect within six yards of the north corner of the house about the height of the men's heads—fire!" A volume of smoke, a tremulous shaking of the air, and the shell, faithful to science, exploded about the spot to be observed, at six yards from the north corner of the house, at about the height of the men's heads. Colquhoun, when he saw the disaster and confusion it caused among the enemy, said, "There's no difficulty in doing that—now go on!" While he yet spoke, a lieutenant of artillery was mortally wounded from the fire of the Carlist Chapelchurris, and several private men were killed and disabled. Taking no notice of these incidents, except to chastise those who thus had him within their range of musketry, he proceeded to the other guns on that position, took his measurements and observations, and gave directions, amid the killing fire of enemy, as coolly as if he had been in the innocent campaign of Chobham Common

When Colquhoun returned to his own position, Evans, it was said, rode up to him and asked his opinion of the Carlist artillery, which was doing more mischief than it usually did. "They must have fresh gunners," said Evans; "I wish you would get into position to silence them." "I know who it is," rejoined Colquhoun, "I shall give him what he deserves for being there," or words to that effect. He alluded to a deserter from Woolwich, a clever gunner, who had joined the Carlist service. Colonel Colquhoun brought his heaviest metal to bear upon the ground road and shells so vigorously and pointedly at the battery, that it was silenced, the magazine blown up, the gunner slain, and the Carlists in its vicinity in confusion, in a shorter space of time than a civilian would readily believe—in not more, probably, than fifteen minutes.

On one occasion, during the temporary suspension of hostilities, when the lines of pickets and field works of the opposing armies were divided only by a river and the valley which it watered, the enemy came within range of the English artillery, and commenced a series of labours for the construction of a redoubt. "These people must not be allowed to work there," said Colquhoun. He quickly discharged a shell, by way of trying the range. It fell short upon which the enemy's workers shouted in derision. In such a case, the continued, they shouted as before, and gesticulated derisively, in a manner not to be described. "Let them have another for amusement," said the Colonel. Another was discharged purposely wide and short. They were more insolent than before; and were seen elevated on the parapet of the redoubt, repeating their gestures of contempt. "Now let them know that we have given them warning to go away, and are not to be trifled with longer." So saying, a shell fell in the midst of them; throwing some out, some into the redoubt; and sending all who were not disabled off in an inglorious scamper. After a time, some were seen carrying away the killed and wounded. Another shell would have dispersed them; but Colquhoun said, "Don't; they have had enough for the present. Let them take their wounded men; they don't let them resume their work."

It became necessary to fire from different points along those lines for similar purposes three or four times a day, or as often as once an hour on some days. An English soldier, when Colquhoun was present on one occasion, directed the ordnance into a certain ditch underneath the muzzle of the guns, where a working party were employed. Thinking the gun was not to be fired, from a delay which occurred in taking observation, he raised his head from his employment at the moment that it was blown to atoms. A superior officer present threatened every man of the party with "two dozen" if by disobedience another soldier lost his life in like manner. Having said this, he rode away. Colonel Colquhoun, addressing the working party, spoke thus: "You hear what the Brigadier-General says he will do; listen to what I have done. I have given orders to stop your extra allowance of wine for this day (when working at the batteries or on any engineering labour, they had an extra ration of half a pint of wine), because I saw that unfortunate man exposing his life and did not prevent him. If any one of you remains in danger, when ordered to retire, the whole shall lose the entire of your wine for three days." Some readers may smile and doubt; but it is a fact, and Colquhoun knew that the instant stoppage of wine, and threat of withholding it entirely for three days, was a punishment which the men paid more regard to than a threat of being served with two dozen lashes from the provost.

I could add many more columns of characteristic anecdotes of Colonel Colquhoun, but the foregoing are sufficient to prove what kind of soldier he was in the field. The following shows him engaged in that species of engineering which attracted so much attention at Chertsey and on Virginia Water, in the late Chobham exercises. An action had been fought on the 5th of May, 1836, when the Carlists were driven from their positions. The heights to which they retired were to be attacked on the 28th

Early in the morning all was in readiness. The Urimea was the line of division between the armies. It is from one to three hundred yards wide, has a strong current, and is fordable only where widest, and at low water. Its bridge had been destroyed by the Carlists before our arrival. Colonel Colquhoun was charged with the duty of throwing pontoons across for the transport of our cavalry and artillery. But first he had to clear the opposite banks of the enemy by opening a fire, under cover of which, the infantry of the Legion could cross in safety at the command to advance; the Lieutenant-General (Evans) in his plain uniform, the most simply-attired officer there, surrounded by the more showily dressed brigadier-generals, aides de-camp, and field-officers of regiments their red and white plumes waving—their burnished steel and brass, and gold, glittering in the sun, which is but ten minutes risen—their impatient chargers prancing ——

Stop! who is that General Evans has sent for?

It is Colonel Colquhoun. For a moment his charger feels the spur, the next, it has carried its rider to the General's side.

"Colonel, are you ready?"

"All ready, General."

"Now then, General Chichester, advance with your brigade. Colonel Colquhoun, open your fire."

He disappeared; and presently was seen riding, or darting, or flying—by his head you might not tell which among the moving, trotting, galloping, wheeling, whirling artillery carriages. They halted. The next moment the guns were dismounted; the gunners unlimbered; men stepped forward and backward—some handled ammunition, and some rammed it home; fuzees and matches were the care of others; and, at a signal known to all, the men, whose thumbs were on the touch-holes, gave place to the match-men, and a volley—thirty pieces of cannon at once—went off in a thunder-burst, which shook the coast of Spain from the sea to the hills.

Over the river, in mid air, the shells quivered in dun specks; then falling beyond with indiscernible velocity, they plunged, some deeply into the ground, to explode, and heave stones and earth around in a hundred death-blows; others—the greater number—exploded over the thickets of human heads, their fragments flying as if Death had gone mad. But we have watched the effects of that volley of thirty great guns, fired as one, the gunners had again charged; and now each cannon blazed and roared on its own account, all as fast as they could be served.

The columns of infantry advanced, wheeled; took the water, and splashed, knee-deep, hip-deep, breast-deep; the short men holding by the tall; the tallest, shortest, all floundering in the tide as the enemy's bullets played amongst them—they unable to do more than hold their ammunition-pouch and muskets above their head to keep them dry.

The units of the *Tweed* steamer, with engineers and artillerymen under direction of Colonel Colquhoun, now ran a strong cable across the Urimea. From this some carried anchors up the stream to sustain it at the time; others down, to sustain it when the tide rolled up. Others brought the pontoons (large wooden boats), laid them in hundreds alongside of each other, fastened by their head to the cables; while other detachments of men laid longitudinal planking on these, and above it transverse planks, to form the roadway for cavalry and artillery. The time in which this bridge was thus finished—at least, sufficiently constructed for the passage of cavalry, field guns, and stores, was something less than an hour—about half the time occupied at Virginia Water and Chertsey in 1853. But the credit of this difference, instead of being ascribed to soldiers, was earned chiefly by the crew of the *Tweed*. Where a strong tide runs, as in the Urimea, sailors are the best qualified to construct pontoon bridges.

Colonel Colquhoun, after the campaign, was employed on the coast of Syria with Admiral Stopford, and Sir Charles Napier.

A. S.

STRANGE VESSEL—STRANGE CAPTAIN—STRANGE CREW

(From the New York Herald).

At the end of Pier No. 5, North river, is moored rather a strange-looking vessel, which might excite curious conjectures in the minds of strangers unacquainted with her history or mission in our ports. One side of this vessel is painted jet black, reminding her visitor of those "long, low black schooners" so frequently spoken of in those bloody narratives of the ocean, with still blacker hulks of piracy, known as the "Pirate's Cave, or the Cruiser's Revenge," the "Dreaded Buccaneer," with another name, the very thought of which is enough to make—

Each particular hair to stand on end,
Like quills upon the fretful porcupine.

The other side of the vessel, however, would puzzle the most astute clipper, even Jack Bunsby himself, with his "chunks of wisdom," to classify her. Jack would most probably come to the conclusion that there was a house afloat, for the hull is painted in imitation of the best Philadelphia brick. The whole history of this mysterious-looking craft lies in a nutshe.l.

Her captain and owner is a wealthy Englishman, who chooses to circumnavigate the globe, with a vessel built and manned, and painted, according to his own fancy. When he meets a traveller upon the boundless deep, he can turn aside and, in the shadow of a house upon the ocean is an object of wonder to the wayfarer. When cruising in the eastern Archipelago—where pirates most do congregate—he can put forward the false side of the vessel, and be safe on undoubted, as one of the fraternity.

Her name, *Euphrosyne*, is very appropriate, being indicative of her ways. In this vessel is at about sixty tons burthen, rigged, and was built in 1847, in England. She has just arrived in our port from a visit to New London, the first harbour entered on a cruise from the Sandwich islands. Captain Barris, a young man, who has in view only his own amusement; although, by way of giving employment to his crew, he takes cargoes from port to port, and thus pays the way of the vessel. He has been to New Zealand, to the Society and Sandwich islands, and is now loading for England with rice, oilcake, and rum. The *Euphrosyne* is strongly built, is a fast sailer, and an excellent sea-boat. Upon her arrival in port the captain gives the crew the sights, and leaves the vessel in charge of the crew, to unload and reload for the next port. Captain Barris spent four years of his time in sailing about the Eastern Archipelago, and in trading between Calcutta and Japan. He has been to Australia, to most of the islands of the Pacific, to the chief ports of India, and the other principal places of the world.

The most curious feature in the history of the *Euphrosyne* is the harmonious amalgamation of most of the nations of the earth, as manifested in her crew. Captain Barris has not only brought all sorts of human beings together on board, but a whole family "mounted upon rabbits, cats, dogs—all eating, and feasting, and eating together on terms of able easy, social, and democratic." The crew, numbering about thirty, of men, women, and children, are Japanese, Malays, Mozambiques, Chinese, Ballynese, Bengalese, Sandwich Islanders, English, Irish, &c. The Japanese, five in number, have their wives and families on board, and the whole crew of men, women, and children, harmonise, eat, drink, and sleep together with the utmost happiness and satisfaction. The captain and mate are the only two who occupy the cabin of the ship, and live in any way excluded from the general mess of the little isolated community within the bulwarks of the *Euphrosyne*. As a proof of the contentment of such "happy family," the captain mentioned that they have often been tempted to desert Captain Barris, but they have always been proof against every inducement offered. They have all lived for years together in the manner we have described, and nothing could induce them to forsake their ocean home. They are well paid, and well treated by the captain, who exercises a sort of patriarchal and parental rule over them while at sea, and visit to their families, some time ago, when they were left to their own inclinations, as usual; and although nearly all the ships in port were deserted by their crews, yet the *Euphrosyne* lost not a single man, notwithstanding many inducements were offered them to leave.

This is certainly something new in maritime history, and is deserving attention of nautical writers. Captain Barris has set an example to the world of more free and liberal ideas of a seaman's life. It is something uncommon for a Jack tar to lay a crew on board, and send his babies in a calm. The women are privileged on shipboard, and some of them help their husbands to take in sail, &c., when the gale, said the best seamen on board); some cook, others tend the children, and do the sewing, &c. The mate, Mr. Constantine D'Esouza, a native of Penang, India, has been with Captain Barris since their voyage began. A very intelligent and gentlemanly officer. We are under obligation to him for these facts in regard to this interesting visitor.

CONFLICTING INTERESTS.—A good deal of inconvenience and loss of time is occasioned on the opening day of the Central Criminal Court, in consequence of the Westminster sessions being fixed for the same day. The circumstance was remarked upon by the Recorder last week, when the notorious Mr. Charles Hanbury Tracy swore the business of the Court. The learned Judge stated that he had caused the attention of the Middlesex magistrates to be directed to the subject, with a view to altering the present arrangement, but nothing had been done.

METROPOLITAN EVENING CLASSES.—The fifth year's report of the Metropolitan Committee for establishing Evening Classes for Young Men in London has just been issued from the press. It is cheering to find that these classes "are steadily increasing as well for their moral and religious influence as for their intellectual advantages—may at last consider themselves one of the permanent institutions of the metropolis. Most gratifying is it to find, that no fewer than 1,000 young men of London have availed themselves of the opportunities so offered.

RAGGED SCHOOLS.—One of these excellent institutions has recently been established at the extreme western district of Paddington, called subject hereafter Hamilton Terrace. The building is extremely neat. Opportunities are also afforded for healthful recreation by the erection of gymnastic poles, &c., in the grounds attached to the premises.

PUBLIC HEALTH OF BRISTOL.—The public health of this city is in a satisfactory state, and the returns of even of simple diarrhœa are scarcely above the average. The local authorities, however, have not let themselves pushed in qui tly sitting down, but have taken, and are taking most energetic measures to remove all predisposing causes to cholera

DESTRUCTION BY FIRE OF FARM PRODUCE.—On Saturday afternoon last fourteen ricks of corn and other produce were destroyed by fire on Aldershott Court Farm, near Basingstoke, the result of childish thoughtlessness in making a bonfire in the road, from which the burning straw was blown into the farm yard. Although the proprietor was insured, he will be a great loser by this unfortunate conflagration.

Literature.

Lives of the Queens of Scotland and English Princesses By Agnes Strickland. Vol. IV. W. Blackwood and Sons.

This volume contains a portion of the history of the beautiful and unfortunate Mary, Queen of Scotland, whose sad fate has been so frequently narrated by friend and foe. She has an earnest and eloquent defender in Miss Strickland, whose elaborate researches have thrown very much additional light on the protracted controversy; but, as we have only a fragment before us, it is not our purpose to enter upon the merits and demerits of this able vindication. Our fair authoress has penetrated deeply into what she terms "the black mysteries of the Scotch correspondence, preserved in the State Paper Office;" and observes "that neither M. Mignet nor M. Dargaud, the recent French biographers of Mary Stuart, has examined that mass of diplomatic wickedness," which she continues, "may well account for the hasty conclusions formed by the one, and the perplexities confessed by the other, in regard to her real conduct and character. A solution to all that appears enigmatical and inconsistent in her, may be found in the tangible proofs of the guilty confederacy between the members of her Cabinet and the English sovereign." It is on the evidence furnished by these documents and vouchers, that this version of the life of Mary is mainly founded; and the marginal reference on every page bear witness to Miss Strickland's industry. This very minuteness, however, renders the volume somewhat heavy reading, for it is as copious in details as the report of a modern trial. No doubt, fidelity is the first duty of an historian, but something more is required than a dry reprint of letters and papers from old archives. We want the summing up of a judge as well as his notes; and were we to venture any criticism on what, as a whole, has been so admirably executed, we should say that Miss Strickland would have succeeded even better than she has done, had she brought her reflective faculties into more extended action, and given us the philosophy of history as well as its facts.

This volume takes up the life of Mary Stuart, on her return to Scotland from France, at the moment she undertook the management of public affairs; and describes the struggles she had to encounter with her turbulent nobles, and the intrigues in which she was meshed by the hollow friends-hip of Queen Elizabeth. The characters of Randolph and Morey are strongly painted; and the implacable hatred of John Knox against his Sovereign. Mary's real love for Darnley is feelingly depicted, and his follies and ingratitude are justly reproved. The murder of Rizzio is described with tragic effect; and very strong evidence is given that the assassins intended to slay Mary on the very night the unfortunate Italian was so ruthlessly massacred. Miss Strickland has, we think taken a just view of the character of the ambitious and unprincipled Earl of Moray, but, as we have already remarked, we can form no general conclusion on a fragmentary volume, which is, of course and necessarily—confined to a limited portion of a most interesting epoch.

Les Œuvres de Rembrandt reproduit par la Photographie. Par M. Charles Blanc—Choix d'Ornements Arabes de l'Alhambra offrant dans leur ensemble une Synthèse de l'Ornementation Mauresque en Espagne. By MM. Bisson Frères.

There is a striking difference in the progress of Photography, as applied to ornamental and useful purposes, in this country and in France, which it is very difficult to explain. In England, Mr. Talbot, some years since, published some views, &c., under the title of the "Pencil of Nature," and last year "The Photographic Album" made its appearance; but, we believe, two or three numbers only have been issued. In France, in addition to the beautiful views of the remains of ancient Egypt, Greece, and Rome, there have been published photographs of the most interesting scenes in Europe, particularly artistic delineations of the more remarkable example of Middle-Age architecture. Beyond this, the sciences have been greatly aided by the application of photography to natural history; and the publication, at an exceedingly cheap rate, of copies of fossil remains, and specimens of existing animals. On these, M. Milne Edwards has lately made an elaborate report to the Imperial Academy of Sciences, and their value as helps to the student cannot be too highly estimated. The exquisite delicacy of many of the plates published, which bear the application of high magnifying power with advantage, displaying the delicate texture of every surface, and the infinite minuteness of detail in every part, render these specimens amongst the finest examples of the photographic art. In the publications which we have named at the head of the present article, we have other examples of the zeal with which the French are availing themselves of the Photographic processes which are peculiarly English. The art of reproducing the choice and rare etchings and engravings of Rembrandt is a valuable one. These wonderful works have been open to but a select few; but now they are made available to all. There is no other system of reproduction in which we can be assured of the fidelity of every line; of the correctness of every light and shadow; and the delicate gradation of the middle tints. We hope to see the series of artistic photographs extended to the works of the other masters of art; and let us earnestly urge some of our professional friends, or rich photographers, to undertake in England some such publication which may do honour to that class of photographs which originated amongst ourselves. It must be be remembered that the original photographs of these etchings are obtained by mere superposition. As many negatives can thus be secured, and each one equally perfect, it becomes an easy matter to produce at a rapid rate the positives for publication.

Artists will greatly value the selections from the ornamental portions of the Alhambra, which will, when the work is complete, form a most valuable addition to Owen Jones's splendid work on the Moorish Palace in Spain.

The plates are disposed, with that feeling of strong nationality by which they have ever been distinguished, to embrace every photographic process under the general title of Daguerréotypes. Daguerre, be it remembered, was the discoverer of a beautiful photographic process on silvered plates. The principle of such drawing belongs to Mr. Wedgwood; and the first paper processes of any value, and the Calotype process in particular, are Mr. Henry Fox Talbot's. By these, and by the Collodion process, which is by consent divided between Mr. Archer and Mr. Fry, our Continental friends are now at work, to the almost entire abandonment of their own Daguerréotype. It now rests with our own photographers, by a zealous effort, to prove that they can produce results of as practical a character as those work to which we have alluded, which are executed by processes entirely English.

Constructive Greek Exercises, &c.; with Greek Reading lessons and copious Vocabularies. By John Robson, B.A., London, &c., Author of Constructive Latin Exercises. Walton and Maberley.

With but one exception, this valuable book is constructed on the same principles as the "Latin Exercises" previously framed by the same author. The exception consists in here omitting some of the more general and more elementary explanation of the terms and of the inherent laws of grammar, which would be proper in a work destined as a first introduction to that study. In this country a work on the Greek language cannot be so intended or so used; since Greek is hardly ever begun by the learner until some progress has been made in Latin. Much, then, of this rudimentary and fundamental knowledge is assumed to have been acquired; and in that point of view, this parallel, or pendent, or concomitant book of instruction is of a slightly more advanced character than its Latin counterpart. Of course, in the structure itself of the two cognate languages there is, notwithstanding their strong and pervading affinities, sufficient diversity to project some difference into the scholastic productions which undertake to impart them. But that is nearly the whole amount of the dissimilarity. For the rest, the present publication is designed to take the place of Allen's "Greek Exercises," the principles of the two works being in general identical; always reserving the immense advantage which those who follow in labours of th e kind have over those who precede.

We may add that, while the scheme of this book resembles that of the Latin Instructions, yet the arrangement is more commodious, the "Reading Lessons" being here printed each in its proper place, at the end of the respective exercises; while the vocabularies are furnished nearer to where they are really wanted. Such are those minutiæ, inestimably useful and practical, modifications which are due to the hints of progressive experience.

We need not enlarge on the advantages which Mr. Robson's system possesses in itself, or on the prodigious results which he attains by his constant combination of theory and practice. The method proves its own virtue, and standing—as it stands—up in the most solid merits, is sure of the daily-increasing esteem and encouragement of all who are interested in the cause of education. Mr. Robson is an able labourer in one truly important department of this great intellectual vineyard.

Oakfield; or, Fellowship in the East. By Punjabee. Longman and Co.

We may describe this book as a protest against modern conventualism. It is thoughtful, earnest, and pervaded by a religious spirit. Though it assumes the form of a novel, it is really an ethical treatise, the moral end at which it aims being conveyed in dialogues. Edward Oakfield, the hero of the tale, realising by his conduct and actions the doctrines he seeks to inculcate. Various characters are introduced, and each is sketched with a firm and discriminating hand. The style is easy and flowing, without any straining at effect, and we may predict a favourable reception for these two volumes, especially in pious circles.

Edward Oakfield is the eldest son of a clergyman, intended to follow his father's profession. While at Oxford, he certains doubts as to the orthodoxy of the thirty-nine articles, and ultimately determines to enter the military service of the East India Company. He is sent up to Hajeepoor to do duty with the 81st Regiment of Native Infantry, where he experience of India society begins. At the mess to an officer named Cade, coarse in his feelings, vulgar in his manners, offensive in his language; but the idol of his regiment, precisely on account of his excessive blackguardism. Oakfield is shocked at the depravity he witnesses, and quits the mess, for which he is shunned and ridiculed. Here the trial of his virtue commences; and, in a letter written by him to his friend Stanton, a cavalry officer, his senior in years, he thus expresses his sentiments:—"My ideas of a soldier is—and I think you will allow it is the true idea—a Christian, a man, and a gentleman—spreading downwards, but including all three. Society, unhappily, differs so far as to this idea as to insist upon the gentleman, be rather particular about the man, and consider the Christian a little superfluous; in fact, rather a force than otherwise. I cannot at all give into society." Oakfield is soon ordered to join the 90th Regiment at Allahabad, and starts in a steamer for his destination. Among the cabin passengers is a Mr. Middleton, of the civil service, who becomes a prominent character in the tale, and with whom our hero forms a close friendship. During the voyage, the subject of their conversation is the civilisation of India, on which Mr. Middleton proposes several problems for solution. "First and foremost to ascertain what is the point at which the European and native mind begin to diverge;" then, quoting the proverbial saying, "that an Englishman leaves his morals at the Cape," the question is raised, "why is English society in this country so woefully behind all European society elsewhere?" The woman of the Church of England on board the vessel, who insists that the panacea for all evils is the establishment of the church to which he belongs through the length and breadth of Hindoostan—"the church, the one true church of England as legally appointed in this country, with its three essential orders of bishops, priests, and deacons." To this Mr. Middleton strongly objects, as well as Oakfield. The former gentleman observes: "To preach Christianity to the natives of India, is to begin at the end. Physical improvement first, then intellectual, then spiritual—that seems the natural order of things; and if it is the natural order of things, that is to say the true one, fixed by the laws of the universe, then whole universities and missionaries will not alter it." The whole of the chapter from which we have made these short extracts is worthy of a careful perusal, but we can only indicate the tone and spirit in which the conversation is conducted.

Oakfield lands at Allahabad, and his regiment is ordered to march from Meerut to Ferozepore. The 90th is very different from the 81st, being a crack corps, and it is very humorously described, and leads to many moral comments. The mess here all is not as it should be, because they attempted to rival the Queen's regiments in expenditure and display. In spite of the climate, "red jackets in all seasons were compulsory at mess; they even went so far as to ignore the native languages, in imitation of the universal ignorance prevalent in the Royal army, considering it *infra dig.* to understand that damned black lingo." Attached to this regiment was a Lieutenant Stafford, a bully and a duellist. He purposely insulted Oakfield, calling him a hypocrite and a coward. Oakfield appealed to his commanding officer for protection. It was not accorded, and he left the room. An officer named Perkins went to Oakfield's lodging, and offered his services as second, in what he believed to be an inevitable duel; but Oakfield refused to fight; and here the martial of his principles is put to a severe test. Not challenging Stafford, Stafford challenges him; and Oakfield horsewhips the officer who delivered the message, because he executed the errand in an insulting manner. Then follows a court-martial, by which Stafford loses some steps in regimental rank, and Oakfield is reprimanded for the horsewhipping. The battle of Cullianwallah follows, in which our hero displays undoubted courage, and rescues the colours of his regiment from the enemy, thus removing himself from the suspicion of cowardice; and the moral aim of the book is accomplished.

We are told in the preface that "there is nothing throughout the book intended for personal allusion. Cade and Stafford have no more actual existence than the 81st and 90th Regiments of Native Infantry;" but it is added, "a class of men of whom Cade is a fair type, is found in Anglo-Indian society like the 81st Regiment, I have certainly seen too frequently; but nobody is meant by the one, no corps hunted at in the other."

Oakfield dies young, of consumption, and is buried in his native village in Cumberland, and in his last hours derives strength and hope from his principles.

Handbook for Travellers in Southern Italy. By Octavian Blewitt. John Murray.

This is an excellent guide both for the ordinary travellers and the classical scholar. It is the result of three visits to Naples, as the author informs us in his preface; and fully describes that city and its suburbs Pompeii, Herculaneum, Vesuvius, the islands of the Bay of Naples, and that portion of the Papal States which lies between the immediate Contorni of Rome and the Neapolitan frontier. The volume contains several maps, and there is also a detached map of Central and South Italy, of the island of Sicily, and of the States of Sardinia. This is an invaluable *vade mecum* to all who visit this interesting portion of Europe, and those who are unable to make the tour may read its instructive pages with delight by their own firesides. Every student of classical antiquity should add this book to his library.

Mabel Trevor, or the Pearl Necklace, a Sequel to "How to Spend a Week Happily." By Mrs. Burbury. Darton and Co.

This is a child's book by the author of "Florence Sackville," which is likely to be a favourite among the rising generation, as the story is interesting, and the style fresh, flowing, and natural. Mrs. Barbury particularly excels in dialogue. The boys talk like boys, and not like little old men; and her heroines are not paragons of perfection.

The story is of two cousins, their fortunes and misfortunes, their schooling and their pleasures. The heroine, Mabel, will certainly become a favourite with our young lady readers. But from so short a tale, it would not be fair to make extracts.

MUSIC.

The Universal School of Music. By Dr. Adolph Bernhard Marx, Professor of Music at the University of Berlin. Cocks and Co.

Two didactic writers on Music divide between them the palm of merit awarded them by the whole musical world of the present day. These are Gottfried Weber and Adolph Bernhard Marx. Their various works are adopted throughout Germany as the best and surest guides to a sound knowledge of the Art; and their unequalled value is already recognised both in England and in America. Gottfried Weber's "Theory of Musical Composition" first appeared in an English dress in the United States; an able translation of it, by Mr. Warner, having been published at Boston about ten years ago; and an edition of the same translation, with additions and improvements, has recently been produced in London. Dr. Marx's "School of Composition" was first published in English in the course of last year, translated and edited with much skill and judgment by Mr. A. H. Wehrhan.

These two great works really supersede all the previous productions of their class, and abundantly supply every want of the musical student. Both the authors are original and independent thinkers. They have departed from the old, exploded, and beaten track, and have opened a path to knowledge much more smooth, plain, and agreeable. There is no "Royal road" to music any more than to other branches of science or art. The best road demands toil and perseverance; but the modern student, with guides like these, is relieved from many obstacles and stumbling-blocks, many profitless deviations from the onward route, caused by the pedantic and operose systems of the older teachers. Both of them are useful, each in his several way. Weber is the richer in details and the more copious in illustrations; Marx lays down general principles with the greater breadth and simplicity: so that the work of Marx will be found an excellent preparation for the more minute and laborious study of Weber.

The book before us—the title of which is placed at the head of this notice—is a new treatise of Dr. Marx, designed as subsidiary to his greater work. Though recently published, it has already gone through five large editions in Germany; and it is now, like the greater work, clothed in an English dress by Mr. Wehrhan. Its design and objects are new, and it will be found highly interesting and valuable to every musical student.

"The Universal School of Music" is addressed to those who cultivate the Art either as a profession or as an accomplishment, and who, having acquired a certain degree of practical attainment, desire to enter more deeply into its study. The perusal of this work, therefore, ought to precede that of the author's "School of Composition," or Gottfried Weber's great work already mentioned. The author, in his preface, states his objects to be these:—

"Firstly, to give general information on all those elementary matters which every musical student ought to know, and to prepare the way for the special and highest branches of study; secondly, to awaken in the mind a consciousness of all that is sublime, eternally true, or morally and spiritually elevating, in art; thirdly, to incite all to the most earnest and general reflexion on the subject of musical instruction and the method of teaching." These objects are most ably and satisfactorily accomplished.

The first portion of the work consists of a general view of the elements of music; its notation, the principles of melody and harmony; the nature and properties of the voice and other organs or instruments of musical sound. In this portion, of course, there can be nothing positively new—its merit being in the clearness and precision with which everything is explained. Thence the author proceeds to the "artistic forms" of music, describing the *construction* of the various kinds of vocal and instrumental pieces—the recitative, air, chorus, cantata; the sonata, overture, symphony, concerto, &c.; and the different ways in which music is employed in connection with poetry and other arts—as in the oratorio, the opera, and the ballet—then he treats of the *performance*, and makes many admirable observations on the delicacies and refinements of musical execution, whether by a single performer or by an orchestra. What he says about the qualifications and duties of an orchestral *Conductor* is most important; for it is upon the competency of this functionary that the effect of all our great musical performances mainly depends:—

Every performance by a number of co-operating individuals, in order to be successful and satisfactory, requires previous collective rehearsals; and, if the number of performers be considerable (as in a full orchestra with chorus), a *conductor* or director.

With the conductor rests the selection of the compositions, and also their perfect performance. The distribution of the parts, the placing of the *personale*, the time, the mode of expression, everything depends upon his final decision. He must, therefore, possess a perfect knowledge of all these matters; he must have considered and prepared everything; and, lastly, he must be the man to carry out his plans and arrangements. But while he is neither fully acquainted with all the resources and requirements of the ensemble performances, nor has penetrated to a complete understanding of the work to be performed, nor carried in his mind a clear perception of the manner in which it is to be executed; he who is unable by word and action to communicate his ideas and intentions to the several parts to follow his directions; who is not quick in detecting, or even anticipating and preventing, or correcting their faults; he who has not that nerve and power of will, and that quickness of eye—one might almost say omnipresence—which can keep a number of performers steadily together; finally, he who is not also armed with unlimited authority to enforce his commands—such a one may be mentioned as a musician, but he cannot claim the honour of being an efficient conductor.

But it is to the last part of this work, entitled "Cultivation of Music and Musical Instruction," that the greatest amount of interesting matter is to be found. Every line of it, indeed, is worthy of the most earnest attention. We wish to give our readers some idea of our author's way of thinking on these subjects; but, where all is so excellent, the task of selection becomes difficult. The following fragments are taken almost at random.

The author is keenly alive to the abuses of music at the present day.

We have much music, but very little real enjoyment of it! We make it a means of diversion and entertainment, which it might serve to collect and ideas and elevate our minds. Thus our fashionable operas for a moment render their admirers giddy with delight, but to others leave them unsatisfied, and to be shortly forgotten by them; so in our concerts, whose highest pinnacle of success is that most barren of all emotions—astonishment at the skill of a virtuoso; so in our public performances and musical festivals, which merely serve to furnish a pleasing accompaniment to the conversation of the audience; so in our social circles, where unmeaning exercises, or badly-executed novelties of the day, form the staple articles of musical entertainment, and which, instead of real pleasure, produce more mental distress, envy, and ennui, than people are inclined to confess, even to themselves.

We have said enough, we trust, to show that this new work of Dr. Marx is a most valuable contribution to the musical literature of the day.

COMMENCEMENT OF THE BALLYMENA AND PORTRUSH RAILWAY.

This interesting ceremony took place on Wednesday, the 22nd ult., at Portrush, and came off with an amount of éclat which we have seldom witnessed upon any similar provincial occasion. All the buildings in the beautiful little village were gaily decorated with flags of different colours and designs: and similar decorations were to be seen floating in the breeze, along the entire range of headlands from the town to the spot in which the ceremony was to take place. For several hours before the time appointed, repeated discharges of cannon from the headlands proclaimed that that was no ordinary day for Portrush and for the North, and the grandeur of the scene became still more imposing, when, a short time before one o'clock, these discharges were answered in the distance from the deck of the *Maiden City* steamer, from Derry, which was soon after seen making her way into the harbour, splendidly ornamented with ensigns, and bearing a crowd of cheering visitants from the veritable Maiden City herself. Around the spot appointed for the ceremony, ensigns were floating, bearing various devices in keeping with the occasion. On one was conspicuously inscribed, "Success to the Ballymena, Ballymoney, Coleraine, and Portrush Junction Railway;" on another, in no less splendid characters, "Dargan and Irish Enterprise;" whilst another bore an Irish harp, surmounted by a crown, and surrounded by two elegant sprays of shamrock, with the words "Long live the Queen." From an early hour carriages and conveyances of all sorts came pouring into the town; and by the hour appointed, hundreds of people had assembled on the ground. The weather was everything that could be desired for the occasion. Among those present we observed the Lord and Lady Antrim, and Lady Helen M'Donnell; Sir Edmund and Lady Macnaughten, Sir Hervey and Lady Bruce, Sir Robert Bateson, Bart.; Richard Dargan, Esq., M.P.; Wm Dargan, Esq.; T. M. B. Jones, R. S. S. Bruce, William Chains, Thomas H. Higgin, Thomas Bennett, Thos. Black, W. Wilson Campell, Esqrs., &c.

Shortly after one o'clock, all the arrangements for the raising of the first turf having been completed, the Earl of Antrim proceeded, amid loud applause, to divest himself of his coat and vest, and to make such other preparations as were necessary to give him the appearance of a regular "navvy;" and, having raised a few turfs and deposited them in a mahogany wheelbarrow, provided for the purpose, wheeled them up, and emptied them over the platform, amid deafening cheers and laughter. The example was then followed by the vice-chairman and director, and by C. Lanyon, Esq., the engineer, and William Dargan, Esq., contractor of the railway a loud discharge of cannon from the adjoining headlands proclaiming the completion of each gentleman's part of the labour. Mr. Dargan, in particular, was most enthusiastically cheered.

The Earl of Antrim then addressed the assembled crowd, expressing his gratification at the auspicious manner in which the work had been commenced, and concluded by inviting them to come and join the committee in partaking of some refreshment after their labours.

Acting on his Lordship's advice, the immense assembly then adjourned to the School-room, Portrush, in which the dejeuner had been prepared. Here at least half had been erected on the lawn outside the building; but, even with the additional accommodation thus obtained, a large number of those present were unable to obtain seats or even room to stand.

The Earl of Antrim, who occupied the chair, proceeded to propose the usual loyal toasts of "The Queen," "The Prince Albert, the Prince of Wales, and the rest of the Royal Family," which were received and drunk with enthusiasm. The noble chairman then gave as the first of the toasts of the day, "The landed proprietors who had dealt so

THE CLIPPER SHIP, "GUIDING STAR," CHARTERED FOR THE GOLD REGIONS OF AUSTRALIA.

liberally with them, and may they live long." This was responded to by Mr. W. Wilson Campbell. Sir Edmund W. Macnaughten then proposed "William Dargan, and success to the Railway enterprise," which was drunk with the greatest enthusiasm; and for which Mr. Dargan returned thanks; in the course of his address remarking, "A chance circumstance has, perhaps, occasionally thrown me into a position similar to the present; but upon this day's work I cannot look without more than usual satisfaction and pleasure (Cheers). As regards the present undertaking, I will only remark that I conceive that I may take to myself the credit for having a practised eye in such matters; and, unless that eye has now deceived me, this project has advantages which would give as great opportunity for enterprise and effort, and as productive results as any other in any part of the country (Cheers). And there is a peculiar source of pleasure in connexion with this undertaking—namely, that, if we place the proper means at their disposal, there is, among the population of this district, the energy requisite to carry them out to their proper and legitimate results."

Other toasts were drunk—such as the "Railway," the "Town and Trade of Belfast," "Derry," "Coleraine," "Ballymore," "Ballymena," the "Ladies," and the "Press;" the last one (given by Mr Dargan) being the "Town and Trade of Portrush;" for which Lord Antrim returned thanks. The company then separated, highly delighted with the day's proceedings.

THE CLIPPER SHIP, "GUIDING STAR."

This noble vessel, which arrived at Liverpool about a month since, has been chartered by the owners of one of the Liverpool and Australian lines of packets, for the sum of £19,000—an unprecedented amount, even for the best kind of ships trading to the golden regions. The *Guiding Star*, seen from a distance, presents the appearance of a large yacht, with her tall tapering spars and square yards; and it is only by being on board and viewing her proportions that we can be satisfied that she is upwards of 2000 tons burden, carpenters' measurement. She has a very sharp entrance, which is carried well aft; though her extreme length gives her a long floor, and she again gracefully sharpens towards the stern. Her hull is strongly put together, her keel and sister kelsons being of the best material and great size. She is diagonally trussed with very heavy timber for some distance at the bow as a further support to her sharp stem; while her timbers, beams, and planking are all in accordance with Lloyd's regulations for the best ships. Her 'tween decks are laid with 3-inch planks; and as the ventilators admit a good light, her great length and fine proportions are seen to advantage, as also are her accommodations for passengers—the height between the decks being 7½ feet, and her breadth affording ample space. The chief and fore cabins are placed on the main deck; the former being as a poop, while the latter is joined as a deck-house, The chief cabin is fitted with berths for about twenty passengers, baths, and every requisite to ensure comfort and convenience; while the saloon is finished with rich paneling of satin-wood and mahogany, with handsome gilt cornices; and the tapestry, carpets, sofas, settees, and lounges are on an elegant and artistic scale. The fore-cabin is also fitted with a number of handsome berths, and a staircase leads from it to the poop-deck through a smoking-room. The poop affords a promenade of 80 feet, which is extended by platforms to the top of the deck-house forward, which is appropriated to the comforts of the crew, and fitted with cooking apparatus for them and the passengers. In connexion with this part of the vessel there is room for spacious hospitals. A roomy topgallant forecastle completes her deck fittings, and this is intended as an icehouse, stock-house, &c., instead of being converted, as is usual, into berths for the crew. Her dimensions are—length on deck, 251 feet; beam, 43 feet; depth 22½ feet. The whole of her fittings are on the best scale; and, whether as regards her superior model or faithful build, she reflects the greatest credit upon her builders, Messrs. W. and R. Wright, of St. John's, to whom we are indebted for some of the fastest sailing vessels trading between this country and the gold regions. She has been chartered by Messrs. Miller and Thompson, of Liverpool, in connexion with their Golden Line of Australian packets.

COMMENCEMENT OF BALLYMENA AND PORTRUSH RAILWAY.

ADRIANOPLE.

RUSSO-TURKISH QUESTION.—VIEWS IN TURKEY.

We this week engrave three Views in European Turkey, of extreme interest upon historical grounds, and more especially at the present moment of threatened hostilities

Adrianople, in date the first, and in rank the second capital of European Turkey, is situated about twenty hours' journey from Constantinople, in Romania, on the west of the Balkan Range. It was built by the Emperor Adrian, and was taken by Amurat I., in 1360 It is advantageously situated at the confluence of the three rivers, which form the Hebron of the ancients and the Maritza of the moderns; and the facility of transport for merchandise thus afforded, renders it a place of considerable commercial importance. Amongst its productions are soap, sugar, rose-water, otto of roses, and carpets—all of which rival those of Egypt and Persia. There are several public edifices, of great beauty, amongst which the Mosque of Selim and the Bazaar of Ali Pacha are the principal. In the former are three spiral staircases, winding round each other separately, and conducting to three different galleries of the minarets. The number of the windows in this mosque is stated to be 999.

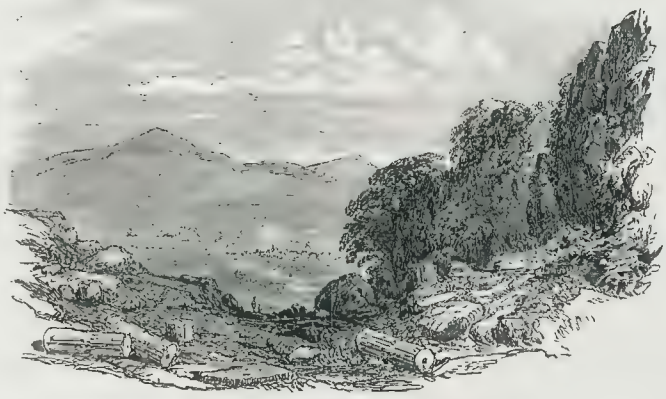
Adrianople was once a favourite residence with the Sultans, particularly Achmet III., Mahomed IV., and Mustapha; and the frequency of the visits to it of the two latter so exasperated the Janissaries of Constantinople as to lead to rebellions, in which they were deposed. It is now the chief town of an important Pachalic, and is the seat of a British Consulate. Yet, notwithstanding its trade, and the beauty of its situation, it has been of late years very much deserted as a place of residence, and the streets in many places are grass-grown.

The Russians, in the invasion of 1829, succeeded in reaching so far as Adrianople, which they occupied, and where they signed the treaty of peace with the Porte, which put an end to the war.

For this View of Adrianople we are indebted to the kindness of a gentleman who recently returned from a tour through the Balkan Range; and who also favoured us with the sketch of a Guard-house in the Balkan, given in our Supplement last week.

Shumla, in Bulgaria, called by the Turks "Ghazi* Shumla," is a strongly fortified position and intrenched camp. It is a place not only of historical interest as regards the contests between Christian and Moslem, but one of strategical importance, from its position at the head of the valley which debouches into the Bay of Varna, and its situation near the Great Pass of the Balkan, on the main road leading from Routschuk, or Silistria, to Constantinople, and, consequently, on the principal line of operations of the Russians.

The town—about two or three miles long, and one broad—is situate at the foot of a wooded mountain,



TRAJAN'S GATE, NEAR RHITIMAN, IN THE BALKAN.

NEAR SHUMLA—THE QUARTERS OF THE TURKISH TROOPS

* Ghazi—victorious.

800 or 700 feet high, forming a sort of counterfort or semicircle round it. It contains about 20 000 or 30,000 inhabitants, and has several mosques, some large barracks, magazines, and stores. The greater part of the old entrenchments no longer exist; but the mountain protecting the town, always in itself difficult of access, is now, together with the town, rendered doubly so by the construction, in every direction, of new works upon European principles, consisting of forts, redoubts, flanks, intrenchments, casemates, &c. The sites of these works have been judici usly selected, so as to cover all the ravines and approaches to the camp, and command the river and valley leading by it to the Great Pass of the Balkan, distant about thirty miles.

It was here that the Turks usually mustered their forces in their wars with their northern neighbours. At this moment it is the head-quarters of the Turkish army of Bulgaria, which appears in a high state of efficiency, and is commanded by Omer Pacha, whose experience and military reputation, together with his activity, zeal, and exertions, point him out as a fit commander for an army in the field at so important a period.

This View, for which we are indebted to Major-General Sir Charles O'Donnell—at present with the head-quarters of the Turkish forces—is taken from the Varna road, at about three miles distant from Shumla. To the left of the spectator is seen the Balkan, the principal range of which is in the extreme distance. The ground between the spot selected and the mountain is a succession of plateaus; upon one of which, nearest the town, the Russians established themselves in their former wars. Upon these are now seen the Turkish forts. Forts are likewise seen in several places, at the foot of the mountain, and on the heights to the right. The troops are encamped on various situations partly at the foot of the mountain in front, partly on the heights over the town, and sometimes in the vicinity of the forts on the plateau. These encampments are specimens of neatness and order. The mountain is beautifully clothed with wood, and, from its shape and inequalities, presents a picturesque appearance. The main road from the Danube to Constantinople passes the front of it from right to left.

THE EASTERN QUESTION.

A new but not unforeseen complication has arisen. The demonstrations of the Ulemas during the Fête of the Bairam gave rise to such serious apprehensions, that on the 14th September the Ambassadors of France and Great Britain repaired to under three French and three British steam-frigates from the fleets in Besika Bay, to proceed to Constantinople, for the security of the Christian population. The French Ambassador was the first to take the step. The state of excitement had been so great for many days previous at Constantinople, that the Government found it necessary to reinforce the garrison and augment the police force; and the crews of the Turkish vessels of war were *consigned* From 15,000 to 20,000 muskets had been withdrawn from the depôt of arms, and embarked on board a steamer for Varna.

The statement, which obtained partial credence last week, that a deputation of Ulemas had waited on the Sultan, requiring that he should either declare war with Russia or abdicate his throne, is unfounded. The fact seems to be that on the 10th September, a body of about forty Softas, or students of the Koran, presented themselves before the Council, which was then assembled, and claimed an audience. On being admitted into the Council Chamber, they produced a petition, signed by numerous Ulemas and Softas, praying for war. The petition, principally composed of numerous quotations from the Koran, enjoining war on the enemies of Islam, and contained covert threats of disturbance were it not listened to and complied with. The tone of the petition was exceedingly bold, and bordering on the insolent. Some of the principal Ministers endeavoured to reason with those who presented it, but the answers they obtained were short, and to the point. The spokesman observed, "You are the words of the Koran: if you are Musselmans you are bound to obey You are now listening to foreign and infidel ambassadors who are the enemies of the Faith; we are the children of the Prophet; we have an army, and that army cries out with us for war, to avenge the insults which the Giaours have heaped upon us." It is said that on each attempt to reason with these fanatics, the Ministers were met by the answer "These are the words of the Koran." It seems that three petitions have been presented by these Softas—one to the Sultan; one to Mehemet Ali, the Seraskier, or Commander-in Chief; and one to the Council. A deputation of Mederess, or theological students of a lower grade, have also waited on Rifaat Pacha, the President of the Council, and late Foreign Minister, and in the most energetic terms have told him that the peace party, of which he is an influential member, were betraying their country, and that there were thousands of good Mussulmans ready to defeat their machinations; that they were determined not to allow any further negotiations with infidels, but were prepared to march to battle. Having thus expressed their sentiments, and frightened the Pacha excessively, they quietly took their departure. Besides this, the police have discovered a monster petition going the rounds of the Mussulman quarters, and bearing the people of all classes, including several high officials. The petition was of precisely the same nature as that presented to the Council.

The secret of the petition for war were referred by the Council to the Sheikh-ul Islam, who endeavoured to reconcile the acts of the Ministry with the precepts of the Koran Convinced by his arguments, it was said, the Ulemas revoked their previous declarations; but his success in calming the popular fermentation seems to have been doubtful

Owing to the precautions taken, however, the Mus-ulman sacrificial feast of the Bairam passed off without disturbance. The *Niger* and the *Tiger*, with the French steamers *Alcacio*, *Mogador*, and *Moselian*, arrived at Constantinople on the 14th of September from Besika Bay. On the preceding day the feast was ushered in by salvos of artillery from every Turkish man-of-war, and from the different forts in the Bosphorus. At a very early hour in the morning the Sultan issued from his palace of Top Kapou, clothed in his Imperial costume, having on his head a tiara richly ornamented with diamonds, and surmounted by the white plumes of the egret He was surrounded by all the dignitaries of the Empire, and followed by every grade of officer, civil and military, in their official uniforms. The cortège passed between a line of soldiers to the sound of military music, and entered the mosque of Sultan Achmet. After certain religious ceremonies, the Sultan and his suite returned to the palace, where his Majesty took his seat on the throne. Each officer of the Empire then in turn approached him, prostrated himself to the earth and kissed the foot of his Sovereign, this homage being due to him as the Caliph and head of Islam. The feast of the Kourban Bairam continues four days, when the whole of the Mussulman population, in their gayest dresses, indulge in feasting and merry making. At the commencement of the feast the streets are choked with thousands of sheep, led by wild-looking armed Turcoman shepherds, who bring them to be sacrificed. Each head of a family is bound to sacrifice at least one, and thousands are distributed to the poor for this purpose.

Letters from the Principalities, dated the 17.h Sept., state that strong corps of Russians had moved up the Danube in the last few days, and it seemed to be intended to take up a more extended position more against Bulgaria. These movements seemed to be no secrets to the Turks on the opposite bank, and strong patrol parties had been sent out from Shumla in the direction of Widdin. The Russians, who had not quitted Bucharest until the 25th August, sent forward two detachments, one to Kalefat, a small fortress in Wallachia, situate on the left bank of the Danube, opposite Widdin; and the other to Giourgevo, likewise on the left bank of the Danube, opposite to Rustchuk. This town is of military importance, in consequence of the fortress by which it is defended, and which, situate in an island of the Danube, commands the river at this point. It was not easy to ascertain the intentions of the Russians, but they appeared to make Giourgevo the centre of their operations to the south of Wallachia. The Turks, on their side, were still erecting works of defence. All the exposed points on the right bank of the Danube, from Varna to Nicomedia, were fortified. The defile of Soumoudji cannot easily be approached, and is commanded by a corps of European officers, is well served. Omer Pacha is at Varna, and is well supported by his Generals. All appearances show that the Russians will find it a difficult task to cross the Danube and the Balkans. Fresh troops from Scutari have been continually pouring into Bucharest. Orders had been given for the 3rd, 4th, 5th, and 6th *corps d'armée* to march into the provinces. This will make up about 250,000 men, and even more, with the Cossacks gendarmes, &c., which always accompany a corps. It would appear to be quite decided, that the Russians do not quit these Principalities fo the winter. Their contracts for provisions and forage are made for seven and n ne months, and it is not likely this would be so were they expected to be recalled before the spring. Many Russian officers have been heard to talk disparagingly of their own troops, and in Russia they were recruiting as fast as possible—every man they could get was immediately enlisted; and at Galatz, even, they talk of raising volunteers.

It will be remembered that the conduct of the Porte in refusing to accept the note of the Vienna Conference without modification was severely censured in Paris. Yet it now appears that the French Government which also blamed that proceeding, is now of a contrary opin on. Before the modified note reached St. Petersburg, the notes of M. de Nesselrode showed to the world what the real designs of Russia were from the beginning. "These notes (says the Paris correspondent of the *Times*) have, in the opinion of the French, and I am assured of the English Government, justified the modifications of the Porte, and it has been felt that no other conduct could have been adopted except that which it has followed. England and France are said to be united on this point, as well as on the more important one of supporting the Porte in case of need recently, and I am informed that a communication to that effect has been already made to St. Petersburg; and that the same will be, if it has not been already, notified to the Turkish Government; and though, as I have observed, intelligence of the entry of the entire fleet has not reached any official quarter here, yet there are few who do not regard it as a *fait accompli*."

THE FIRST CANNON SHOT.

I.

HARK! over Europe sounding,
The first, the signal gun!
The fire has burst—the blow is struck—
A fatal deed is done!
From North to South it echoes:
From East to West afar,
Th' insulted nations join their hands,
And gather to the war.

II.

From restless slumber waking,
The thunder in her ear,
Unhappy Poland starts to life,
And grasps her broken spear.
Old Rome grows young to hear it—
There's mischief in her glance!
And Hungary mounts her battle steed,
And waves her fiery lance.

III.

Not long shall last the combat;—
Though Russia laugh to scorn,
The wrongful cause, if *up* to-day,
Is *down* to-morrow morn!
When France unites with England,
Beware defeat and shame,
Ye foes of right, who force the fight,
And fan the needless flame!

IV.

Hark! over Europe sounding
The first, the signal gun!
But when the last loud cannon peal
Shall tell of victory won,
Be sure, ye proud aggressors,
Your hour shall not be long!
They may not, shall not, cannot win,
Who battle in the wrong. M.

*** The above will be published, with Music, in the ILLUSTRATED LONDON NEWS of next week.

RUSSIAN SOLDIERS AND SAILORS.—When these gentry are again, perhaps, about to mingle among the people of other nations, whether in war or peace, it may not be amiss to recall something of their characteristics. Both are stolid and passive machines to an inconceivable extent; and, in masses, seem to be almost destitute of passions or feelings. Individually, they are not cruel; but the absence of active sympathies with their kind renders them regardless of sufferings, merciless, and inhuman. Their habits agree with these dispositions. They will stand like stocks to be mowed down by artillery, but they are inefficient for charges and attacks. Cunning is pre-eminently a trait of marked development, and yet they are nearly as great fatalists as the Turks themselves. In the French invasion (as mentioned in Jerdan's Auto-biography), their watering the gardens of their billets was regarded by their unwilling hosts as proof of a kindly nature; but they only resorted to the experiment in order to ascertain, by the ready sinking of the water, if the ground had been recently dug, and aught valuable concealed! In olden times, when a Russian squadron lay at Leith, the inhabitants of Edinburgh were surprised at the extinction of their lamps long before the usual time of the morning: a watch was set, and it was soon discovered that detachments of the sailors visited the city covertly by night, to enjoy the indulgence of drinking all the oil they could find in these luminaries, and sucking the wicks! Some whale blubber was found, and substituted for this nocturnal symposium. Such are the men on whom so much of the fate of Europe now hangs by a thread: they do not invite our love, admiration, or confidence.

THE EASTERN CRISIS.—PROPOSED METROPOLITAN MANIFESTATION IN SUPPORT OF TURKEY.—As a meeting of friends to the independence of Turkey, held at Anderton's Hotel-street, on Tuesday evening—Mr. J. A. Nicholay in the chair—the following resolution was unanimously adopted. "That a metropolitan aggregate meeting, for the purpose of electing an expression of public opinion with regard to the Russian invasion of Turkey, and the duty of this country in consequence thereof, be holden on the earliest possible day. That a sub-committee be appointed to forward the necessary arrangements, and to report to a general meeting of the committee on Saturday next, Oct. 1." The sub-committee having been appointed, the meeting adjourned until Saturday evening, at the above-named place.

IN the middle of the last century a campaign to the Crimea was regarded by the Russians with the same feelings that guided the English operations in India half a century since, as a field for conquest and plunder. That old Irish wag, Field-Marshal Lacy, was the first Russian General to make the campaign for the Empress Catherine; and his descendant, Cornet de Lacy Pierse, also an Irishman, served in the last campaign against the Turks, which closed at Adrianople in 1829. As an illustration of the horrors of warfare between the two countries, it is recorded in Cornet Pierse's Letters (published in the *United Service Magazine*) that when the Seraskier of the Turks sent to one of the commanding officers to send to him the Russian prisoners taken at Shumla, the Turkish General packed their heads into a waggon, and sent them, declaring it to be inconvenient to send so many alive!

THE AMERICAN COTTON CROP.—Some very interesting statistics concerning the cotton crop and the trade of New Orleans, have been received by the steamer *Europa*. From these it appears that the crop is the largest ever produced in the United States; while the active demand, nevertheless, caused prices to rule higher on the average than they did last year. The extreme fluctuation for middling qualities has, during the season, been 2¼ cents per lb. The weight of the bales has been on the average 455 lb. against 438 lb last year. The following table shows the product of low middling to good middling cotton for eight years, with the receipts at New Orleans, and the total crop of the United States:—

Years.	Total Crop. Bales.	Receipts at New Orleans Bales.
1845 6	2,100,537	1,041,293
1846-7	1,778,651	707,524
1847-8	2,347,634	1,163 733
1848-9	2,728,596	1,100,636
1849 50	2,096,706	797,587
1850-1	2,355,457	998,026
1851 2	3,015,029	1,429,133
1852-3 (estimated) ..	3,220,000	1,664,864

IRELAND.

VICE REGAL VISIT TO LIMERICK.—The Lord-Lieutenant and Lady St. Germans, accompanied by the Lord Mayor of Dublin, the Lord Chancellor of Ireland, the Chief Secretary, and Lord Ernest Bruce, arrived in Limerick on Monday afternoon to be present at the opening of the new float ng docks recently erected there. In reply to the address of the Corporation, Lord St. Germans said: "I have listened with great pleasure to the address. The occasion on which I appear for the first time in this city as the representative of our gracious Queen is indeed an auspicious one. I have come to celebrate with you the completion of two undertakings, both of which are calculated to call into healthy action the energies of the people—the one, by promoting the commerce, the other, the agriculture of the country. I congratulate you on the local improvements which you describe. They afford, as you justly observe, gratifying evidence of the public spirit of the city of Limerick. The manufacture of lace at Limerick has already attained to a high degree of excellence. It will, I am persuaded, attain to a greater, when the taste and skill of the manufacturer shall have received all the cultivation which the schools of ornamental art and design are capable of giving them. The recent visit of the Queen to this country was assuredly a mark of the interest which her Majesty takes in all that concerns the welfare and prosperity of its people. I acknowledge with satisfaction the assurances which you give me of the cordial attachment felt by all classes in Limerick to her Majesty's crown and person, and I offer you my grateful thanks for the wishes that you express for my happiness and that of Lady St. Germans." The day was remarkably fine, and throughout the morning every description of vehicle might be seen bringing in the inhabitants of the surrounding districts to the scene of action; and when to these are added the numbers who came by the train from Dublin, Cork, and other places, we fear that it was with some difficulty all the parties arriving could be accommodated at the various hotels in the city. Everything passed off in the best manner.

THE MAYNOOTH COMMISSION.—The Commissioners held their first meeting last week, at their offices in Dublin Castle. There were present the Earl of Harrowby, chairman; the Chief Baron, Dr. Longfield, Dr. Lewis, and Mr. James O'Ferrall; together with the two secretaries, Mr Henry West and Mr. John O'Hagan.

THE EXHIBITION.—The Committee of the Great Industrial Exhibition have announced that the building will finally close on the 31st of October.

ACCIDENT TO SIR E. BLAKENEY.—The gallant commander of forces in Ireland met with a severe accident in Portrush on Saturday night. His servant awkwardly left some portmanteaus and boxes outside his door, and on coming out of his room the General fell over them, and received a severe shock and fall.

THE WELLESLEY ESTATES.—The whole of the estates of the Earl of Mornington, situate in six of the Irish midland counties, are advertised for sale in the Encumbered Estates Court The sale has been ordered on the petition of Lord Wellesley, son to the present Earl. The Dargan estate has long since passed out of the family

ADVANCE IN THE VALUE OF PROPERTY.—The remarkable rise in the value of Irish property is shown by the fact that Loughcooter Castle and demesne, the residence of the Gore family, bought last year for £17 000, is now held to be worth more than £30,0.0; that sum having been just refused for it

BEER FROM HEATHER.—Tradition asserts that the Danes, who en Ireland, possessed the secret of making beer from heather. Very recently, however, we were shown by Mr. Harper, of Galway, a large amount of bottled beer, manufactured by a metropolitan house from wild heath.

EQUINOCTIAL GALES.

The destructive storms known as the equinoctial gales, which are gene rally experienced at this period of the year, have set in with more than usual violence. They com menced from the south-west early on Sunday forenoon; and, by the telegraphic messages received at Lloyd's, it seems that the storm has visited almost all parts of the coast Towards evening the wind veered round to the north-west, and at midnight raged with great fury.

Many disasters are announced. In the vicinity of the Downs, between the North Foreland and Dungeness, most terrible weather was encountered. Outward bound ships, which had sailed from off Deal on Saturday, were caught by the gale while making their way down the Channel, they made short work of it in running back. Some, when brought up, were driven from their anchors, and lost cable and all, besides being exposed to great peril while drifting. Several distressed vessels were, after much difficulty, got into Ramsgate harbour. No fewer than fifteen ships were blown away from their anchors from under the Foreland

The Calais mail steamer, which left Dover on Wednesday, to do honour to the Emperor and Empress on their arrival at Calais, and brought up in the Downs on Friday afternoon, has not escaped damage. The fleet, which consists of three line-of-battle ships and three steamers, with difficulty rode out the gale. In the course of the night a Dutch schooner, called the *Pauline*, came in contact with the *Jean Bart*, line-of-battle ship, and both suffered much damage. Lower down the Channel the gale is described to have been equally if not more severe.

Under the Ness light off Folkestone there were on Sunday night from fifty to sixty vessels at anchor. They ran for the Downs, except a fine barx, bound for Quebec, and laden with 500 tons of coal, lying off Sandgate, which came to anchor about a mile from the beach. As the gale increased, her position became more critical. A signal was attended with the vessel, and the captain said his wife was on board and had just been confined. The dangerous position of the vessel being noticed at Folkestone, one of the coasting tug-boats left the harbour to offer assistance. The tug got sufficiently close to hold communication, but the commander declined to accept assistance, the steamer not being compelled to run back for shelter. The inhabitants of the quiet village of Sandgate were greatly excited at the painful position of the ship, and the beach was lined with anxious groups of spectators. Fortunately she rode out the gale, and sustained very little damage

The eastern coast is also reported to have suffered much from the storm; and Barnfield and neighbouring ports are filling with vessels which have lost anchors, cables, spars, &c The mid day tide of the Thames should have ebbed at London bridge, accord ng to the tables, until nearly two o'clock on Monday; instead of which the water suddenly began to flow shortly before twelve o'clock—nearly two hours before its time. This remarkable occurrence is attributed to the circu stance of the gale driving an immense body of water up the channel and up the numerous rivers.

At Liverpool, the wreck of chimney pots, tiles, &c., in nearly every street, gave evidence of the violence of the storm. The river was lashed into fury, and all the ferry-boats were kept from their ordinary plying to and from Woodside, ceased running after seven o'clock. The bark *Intrinsic* got ashore near the Sandon Dock, and sustained considerable damage, being severely strained in the quarter, having lost rudder, &c. She still remains there. During the height of the gale two small vessels, names unknown, were seen to founder off the north west lightship; all on board perished. Many other vessels went ashore, or were seriously damaged—chiefly Americans.

THE LATE FIRE AT BALMORAL.—We gave last week an account of a fire which had occurred near the new palace at Balmoral, and mentioned the loss which many of the workmen had sustained. Immediately after the fire was reported to Queen and Prince Albert gave orders for the erection of new cottages at their own expense, and issued schedules to the workmen with instructions that each might give a statement of what he had lost that the total amount of loss, including money, clothes, watches, &c, destroyed was £318 11s. 7½d., which sum was generously paid to the workmen from her Majesty's privy purse.

GLASS FOR RAILWAY STATIONS.—The economical cost of glass, occasioned by the removal of the duty, has induced the directors of the Birmingham, Wolverhampton, and Dudley, and other railways centring in Birmingham, to have the great station in that street constructed of fluted glass; and the same covering is to be generally adopted in the railway stations between Madrid and Barcelona

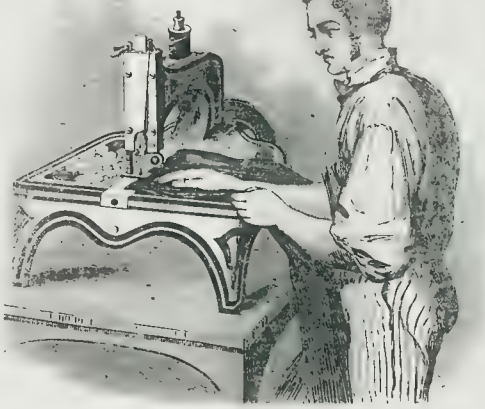
DISCOVERY OF ANTIQUITIES NEAR KIRKALDY.—A number of stone coffins have been recently discovered in the grounds of Rosehead-house, near Kirkaldy. They are, no doubt old, but they do not seem to point to a period of very great antiquity. Similar remains have been discovered in different parts of the country, some large standing stones, some of them probably memorials of victory or defeat, gained or sustained by our rude ancestors in their conflicts with the Roman power, or other enemies.

THE PAINTED WINDOW IN WESTMINSTER-HALL.—The large window at the south end of Westminster-Hall has just been completed, and filled with stained glass. The compartments represent the Royal Arms of England, from the time of William the Conqueror up to and including her present Majesty's arms. This magnificent window is of immense size; and the colours in the stained glass are so arranged and blended as to produce a most imposing effect. From the lower portion of the Hall, near to the entrance from New Palace yard, the appearance of this additional ornament to the Hall has a very beautiful effect.

THE DUKE OF CAMBRIDGE.—Several journals having mentioned that the Duke of Cambridge had arrived at Obmütz, we are enabled to state that his Royal Highness has for some days past been staying at Kew. Considering the political circumstances of the present conjuncture, we confess we are a little surprised that any of our contemporaries should have circulated so improbable a story as that of the Duke's visit to the reviews of Olmütz.—*Morning Post*.

PATENT SEWING-MACHINE.

THE production of a Sewing Machine, which for many years has been attempted wi hout success, has at length been accomplished by the Lancashire Sewing-Machine Company. The automaton may be seen in operation at either of their depôts—2, Lawrence-lane, Cheapside, London; or 35, Corporation-street, Manchester. Independently of the table upon which the machine rests, it is composed of a flat iron disc, about twelve inches square. From one side of this surface an arm rises erect, to the height of about ten inches, and then passes over to the opposi e side. From the extremity of this arm descends a moveable bar, to the bottom of which is fixed a needle, the eye being about half an inch from the point; and on the top of the arm is fixed a reel, or bobbin, filled with silk or



PATENT SEWING MACHINE.

other thread. Fixed to a main shaft is a wheel, turned by a handle (which also can be worked by a treadle or steam-engine), that gives motion to a lever within the arm, and which moves the vertical needle up and down. Beneath the vanible surface or base is a second reel of thread, supplying an other needle, which, in place of being straight, is circular, and works horizontally; and, consequently, at right angles to its stitching companion which descends from the arm. Supposing the threads to be passed through the eye of each needle, and the apparatus set to work, the process is thus performed.—The vertical needle descends, and pierces the two pieces of cloth to be united, carrying both it the thread to perhaps half-an-inch below the under side of the cloth. As the needle rises, the thread is left behind in the form of a noose or loop, through which the horizontal needle passes; the horizontal needle instantly reversing its motion, leaves a loop, into which the vertical needle descends. Both needles thus progress, forming a series of stitches; each stitch being quite fast, even should one neighbour be severed. The apparatus is stated to produce as much work as twenty skilful hand-sewers. The tightness of the thread is regulated by a screw, and as each stitch is of equal tension, a great advantage is secured in the regular appearance of the work. The length of the stitch, by turning a small nut, can be increased or diminished to any degree of fineness, and perfect uniformity secured. By a simple contrivance, which it would require too much space intelligibly to explain, the cloth is moved forward at every stitch; and the operator, by directing its approach to the needle, can cause the sewing to be straight, angular, or circular. We have stated that each stitch is independent of the one on each side of it. In this respect it differs from a French invention introduced a few years ago, in which only one thread was employed. In that case, when the thread broke, the rent extended.

We understand that a considerable number of these machines are already at work in various houses, and that their operation is entirely satisfactory.

Some early specimens of the clothing made by the Sewing Machine may now be seen in the Dublin Exhibition, where they are exhibited in the space allotted to the agents of Messrs. Nicoll, of Regent-street, London; but the sleeved cape, a new garment invented by the above firm, is the first properly completed sample of the workmanship of the machine. The material of this garment is an improvement on the blue cloth, which obtained an Exhibition Prize in 1851, and is richly lined with silk, which, with the borders, cuffs, collars, seams, &c., of the cloth, are simply but elegantly ornamented and secured by wonderfully exact and fine sewing, in which respect its chief merit is professed to exist. On a carefully-made calculation, it appears that, although the garment is free from unnecessary seams, &c., yet the extraordinary number of 300,000 stitches have been made in its construction.

It has been purposely prepared for the inspection of his Royal Highness Prince Albert, as being the first perfect result of machinery so applied; and which will, without doubt, tend to diminish, if not entirely remove the unhealthy nature of the employment of the mechanic. At the same time, it seems to be clear that, as the sewing machine will do much in the way of increased strength and appearance, at present quite out of the reach of hand-power, it will in no interfere with the numbers or immediate interests of the workmen, as Messrs. Nicoll, the employers of many hundreds, distinctly assert that they will not, in consequence of its introduction, discharge a single hand; but on the contrary, they believe it will be the medium for increasing the demand already existing in the export trade—the supply for first-class goods not meeting present demand. They expect, therefore, by the machine, to add to the numbers and comfort of their workpeople; who will, by its use, avoid the numerous ill effects of a constant sitting posture.

THE FALL OF THE HOUSE No. 184, STRAND.

The Coroner's investigation into the circumstances which caused the fall of a house, No. 184, Strand, and resulted in the death of four persons, was resumed, after two adjournments, on Monday. Several witnesses were examined. Mr. Abraham, a builder and surveyor, employed on behalf of Messrs. Smith, was under examination nearly five hours. A report was read from the surveyors, who expressed their opinion that the shores which sustained the house were insufficient, more especially as the whole area on the east side had been excavated to a considerable depth below the kitchen floor of No. 184, and was also stated in some places to be below the footing of the party wall.

"With reference to the question, 'Whether any means might have been resorted to which would have had the effect of preventing the falling of the house in question,' we are of opinion, that provided the floors of No. 184 had been shored up on the west side of the party-wall, to take off the downward pressure, and provided also additional shores had been placed under that sustained the house were insufficient, more especially as the whole area on the east side had been excavated to a considerable depth below the kitchen floor of No. 184, and was also stated in some places to be below the footing of the party wall.

"With reference to the question, 'Whether any means might have been resorted to which would have had the effect of preventing the falling of the house in question,' we are of opinion, that provided the floors of No. 184 had been shored up on the west side of the party-wall, to take off the downward pressure, and provided also additional shores had been placed under that sustained the house were insufficient, more especially as the whole area on the east side had been excavated to a considerable depth below the kitchen floor of No. 184, and was also stated in some places to be below the footing of the party wall and under-pinned to the depth of the footings of the intended new building, the accident would not have happened.

The Coroner, in summing up, said it was clear that the accident arose from one of two causes; either the shoring was not ample, or the underpinning was not amply executed. It was for the jury, upon the evidence before them, to say whether in this case there had been gross criminal neglect. It was not sufficient that there should have been an error of judgment, but there must have been actual culpable negligence proved in order to justify a verdict of "Manslaughter." The jury then retired, and, after an absence of two hours, brought in the following verdict:

"We unanimously find that Robert Thompson, Sarah Thompson, George Dunne, and George Rowe, came to their respective deaths by the falling of the house No. 184, Strand; and that the falling of such house is to be attributed to the gross negligence of Mr. Abraham, the surveyor employed by the Duke of Norfolk and the Messrs Smith, in not causing the party wall to be sufficiently shored up and under-pinned before the excavations for the new building were commenced. Before we separate we are anxious to express our approbation of the conduct of the Messrs. Smith in volunteering at the expense of employing the three independent surveyors to ascertain the cause of the accident."

The Coroner said the verdict was equivalent to one of "Manslaughter" against Mr. Abraham. Some of the jurors said they did not mean any thing as strong as that—only that there was a want of care.

The jury again consulted together for a few minutes, at the expiration of which time the foreman said: "We cannot retract our verdict, whatever the consequences, although we did not intend to bring in a verdict of 'Manslaughter' against Mr. Abraham." A verdict of "Manslaughter against Henry Robert Abraham" was then recorded. The Coroner at once issued his warrant to Inspector Dodd for the apprehension of Mr. Abraham, and the witnesses were bound over to prosecute at the next Old Bailey Sessions.

REGISTRY OF MEDICAL MEN.—The Registrar-General has given directions to the superintendent registrars of districts to make a return of all legally-qualified medical men residing in their districts, with the nature of their qualifications, including those retired as well as in practice; where there are partners the names are to be bracketed; and assistants, if qualified, are also to be returned. The object of the preceding is in order fully to carry out the Compulsory Vaccination Act of last session, and, if necessary, other matters relative to the public health. The persons to whom the duty is deputed, however, are greatly dissatisfied with having the labour placed upon them, as they will receive no remuneration for so doing.

EIGHTY MILES AN HOUR.—The Pennsylvanian Railway Company own 49 locomotives, of which 12 are of a capacity equal to a speed of 80 miles an hour. The Baltimore and Ohio Railroad had 154 locomotives, some of which are of equal speed. This immense velocity has been attained through the active competition of the railroad companies, who have spared no expense in rewarding the constructors for costly experiments.—*Ohio State Journal.*

STRIKE OF THE LONDON POLICEMEN IN MELBOURNE.—The fifty London policemen who arrived here for the purpose of doing duty in Melbourne were subjected to a severe drill, &c., before the Melbourne chief, Captain M'Mahon. The rules and regulations were read to them, with which they would have to comply in future. But, the entire body, headed by their Inspector, who spoke out boldly and bravely, one and all refused to submit to the Melbourne regulations, so far as the hours of duty were concerned. They avowed their willingness of doing duty according to London time and hours, but gave the chief to understand that they never would submit to Melbourne time, and to such hours for duty as they were subjected to. Captain M'Mahon could do nothing singly with the men, and so informed them. He would have to consult the powers that be on the subject, and so for the present the matter rests.—*Australian and New Zealand.*

CHANGE OF NAME.

(To the Editor of THE ILLUSTRATED LONDON NEWS.*)*

Some friends of mine would be very glad of your advice under the following circumstances. They are a married couple with four children, but have, unfortunately, a very ugly name; in short, though not a common name, a vulgar name, and the wife, more particularly, does not like the children to bear this name.

Now, the name originally, and many, many years ago, was German, and not at all ugly, at least that is what the family say. Would it be lawful to alter the spelling and pronunciation of the name back to the original German? and, supposing this was merely a tradition, and the family never had been German, would this alteration be likely to cause any difficulties to the children hereafter?

My friends have heard that it is a married man changes his name, his wife is no longer, legally, his wife, which, of course is a very appalling idea. Is this so? One question more I would ask, is it necessary, in altering a name, to apply to any particular office, and is it expensive? or would it be sufficient to make the alteration for themselves without putting it to anybody?

The husband, though the youngest but one of a large family, is quite at the head of it, and as some of his relatives are no credit to him, it is highly desirable that the *odious* name should be got rid of

Your obedient servant, MARTHA STRUGGLES.

[The friends of our fair correspondent have an undoubted commonlaw right to change their name, and to change it as much or as little as they please. When they are commonly known by their adopted name, it becomes their legal designation and description as much as if they had registered the change of name in the College of Arms. The Royal leave and license cannot always be obtained, and is, besides, expensive; its use is in supplying legal evidence of the change, which, after the lapse of years and the death of contemporaries, cannot always be easily and satisfactorily obtained.]

FESTIVITIES AT SALTAIRE.

THE opening of the stupendous Model Mill of Mr. Titus Salt, alpaca manufacturer, near Bradford, in Yorkshire, was commemorated on the 20th ult., by a festival upon a vast scale—perhaps the largest dinner-party that ever sat down under one roof at one time.

Mr. Salt is one of the most eminent of the Bradford worsted manufacturers, employing a vast number of handloom worsted weavers, and is more particularly known for the extent of his workings in alpaca and mohair, a branch of business carried on almost exclusively in England. Twenty years ago, alpaca was chiefly known by the living specimens of the animal in our "Zoological Gardens;" now the manufacture of its wool employs thousands of hands. Mr. Salt was one of the first to introduce the wool into the Bradford trade, and brought it into general use about eighteen years ago. Nearly contemporaneous with its introduction was the bringing into general use in Yorkshire of an article similar in many of its properties—mohair, or goat's wool; and, from the success of the combined manufactures, has risen the vast establishment opened on Tuesday week

SALTAIRE MODEL MILL AND TOWN.

"Saltaire" is a combination of the name of the owner of the property and of that of the river on which it is situated. The estate is about four miles from Bradford, about half a mile to the west of the large manufacturing village of Shipley, and in the beautiful valley of the Aire. It stretches from the lower road leading from Shipley to Bingley to the confines of Baildon-green, and is inter-sected by the river Aire, the Leeds and Liverpool Canal, and the Leeds and Bradford Extension Railway. The part of the estate devoted to the works lies between the railway and the canal, both of which will be able to convey goods to and from the premises without either cartage or porterage; it is computed at six acres; while the several floors in the mill, if one stood on the other, would form a superficies of 55,000 yards, or eleven acres and a half.

The great building of Saltaire itself is of light-coloured stone, in the Italian style of architecture. The main front of the mill—which is 545 feet in length (exactly that of St. Paul's), and 72 feet above the level of the rails—has a very commanding and beautiful appearance. It is six stories high. The engine-houses are situated in the centre of the building, on either side of the principal entrance. The four first floors are thus subject; but the top room, which runs the whole length of the building, is one of the largest and longest (if not the very longest) in the world. The floors are based upon arches of hollow brick, supported by long rows of highly-ornamented cast iron columns and massive cast iron beams. The roof is of iron, and the windows are large and formed of immense squares of plate glass. The warehouses, which run northward from the centre of the e... at line, and terminate at the ... are 545 feet in length. The ground slopes downwards in the ... so that that end of the warehouses rises 90 feet from the ... of the water, or 18 feet higher than the principal front. On either side of the warehouses the ground is occupied by extensive sheds, roofed with sloping skylights. In the western side are also rooms for sorting, washing, and drying wools, and for reeling and packing. Beneath it is an enormous tank or reservoir, and floor, with 30,000 gallons of water; into which, through a number of conduits, the rain is carried, and, when filtered, applied to the processes of the manufacture. On the top of the warehouses a large iron tank is placed, capable of holding 70,000 gallons of water, drawn by engine-pumps from the river, and intended to supply the town when built, and also available in case of fire. At the western boundary of the works, a number of offices, storerooms, &c., are now being built, facing the new road made by Mr. Salt, which commences close by the Bingley turnpike-road, crosses the railway, the river, and canal by two iron bridges.

The two pairs of engines on either side of the principal entrance, though nominally of 400-horse power each, are capable of working to the extent of 1200-horse power. In the construction of the engine-beds alone, no less than 2400 tons of solid stone have been used. The boilers, eight in number, are constructed chiefly on the tubular principle, and occupy an excavation at the south of the mill, and about fifty yards from the chimney. The engines are supplied with water from the river by tunnels passing under the whole buildings and the bed of the canal; and when used, is again, by another series of tunnels, carried back to the river.

The grand exterior feature of the work is the chimney, which rises to the height of 250 feet—nearly fifty feet loftier than the London Monument. It is eighteen feet square at the base, and in design resembles a bell tower or Italian campanile. In like the greater number of stacks now built, it is square, and, from the great elevation of the works, appears less lofty than it really is. About the centre of the flue, between the boilers and the chimney, one of Green's fuel economisers is placed. It is formed of a number of tubes about four inches in diameter, along which the water passes to the boilers. This being also the passage for the smoke from the furnaces, the tubes are always kept at a great heat, and the temperature of the water given to the boilers is consequently high.

The gas works at the north-east of the premises are of great magnitude. The gasometer is 80 feet in diameter, and 18 feet in depth. It will yield 100,000 feet per day, for 4000 lights in the establishment: and the town which is about to be built. The works are constructed upon White's hydro-carbon system.

A branch from the Midland Railway, at the south front, will pass under the central arches, where there will be hoists for loading and unloading. The architects of these stupendous buildings are Messrs. Lockwood and Mawson, of Bradford, also the architects of St. George's Hall. The engineer is Mr. W. Fairbairn, of Manchester.

Messrs. George Hogg and William Chesterton are the clerks of the works, charged with the constant supervision of the buildings—a duty which they discharge in a very efficient manner.

When the works are finished, 4500 hands will be required to keep them going. The vast extent of the Saltaire works may be to some measure realised by reflecting upon the capabilities of one department. The weaving shed will contain 1200 looms; the length of the shafting will be 9870 feet, or nearly two miles, and weighing between 600 and 700 tons; the steam-engines to work these shafts are equal to 1250-horse power, at a pressure of 40 lbs. to the square inch; and the looms in this one weaving shed will be capable of producing 300,000 yards, or nearly eighteen miles, of alpaca cloth per day, and an aggregate length of 5668 miles of cloth annually.

The erection of Saltaire (says the *Leeds Times*) will involve an increase in the population of the immediate vicinity of scarcely less than 10,000 souls. Mr. Salt feels the responsibility which is thus imposed upon him, and he proceeds, with cheerful alacrity, to discharge it. Already have the architects of Saltaire instructions to erect 700 dwelling-houses for the operatives to be employed, and they are specially enjoined to make those dwellings replete with every convenience conducive to the health, comfort, and well-being of the inhabitants. On no account are they to suffer the air to be polluted by smoke, or the water to be injured or deteriorated by any impurity. Every improvement that modern art and science have brought to light is to be put in requisition in the erection of the model town of Saltaire. Healthy dwellings and gardens, in wide streets and spacious squares—ample ground for recreation—a large dining-hall and kitchens—baths and washhouses—a covered market—schools—a reading-room institution—a church: these are some of the characteristics of the future town of Saltaire.

THE OPENING FESTIVAL.

The magnificent entertainment at Saltaire on Tuesday week was given by Mr. Salt, in commemoration of three events—the jubilee day of his own birth, the majority of his eldest son (Mr. W. H. Salt), and the completion of the works to a certain extent. No time has been lost in bringing the enormous buildings at Saltaire to their present state, and none will be lost in fitting them up with all proper machinery, and making them a united hive of human industry. Flags floated from the roof of the mill—an arch of laurel and flowers spanned the west entrance of the spacious premises—the bells of the picturesque church of Shipley poured forth cheering sounds—pieces of ordnance were fired—and all gave token of proceedings of no ordinary importance.

The guests, on their arrival, were conducted through the principal rooms of the establishment, and thence into the shed intended for "combing," but which, on this occasion, served as a banqueting-room. In length this room is 210 feet, and in breadth 112 feet. It is covered with a boiler girder roof, or rather two roofs, the sides of which are unequal: the north being of slates; the north (which is erected at a more acute angle than the other) of glass. The whole is supported by fifty light cast-iron columns, which, for the festival, were wreathed with laurel. The walls were also decorated with pink and white draperies, flags, evergreens, and flowers. The entire room was occupied by the long table of the chairman (Mr. Salt) and the principal guests. The other table traversed the hall from east to west. The seven centre tables were upon a dais, and at these 644 ladies and gentlemen were seated. Right and left of this dais were 20 tables (10 on each side) for Mr. Salt's workpeople, male and female, amounting to 2430 in number, who were brought by railway from his works at Bradford and the neighbourhood. The tables were about 80 guests. At the west end of the room was an orchestra, in which were stationed the fine band of the 26th Regiment. Altogether 3274 persons sat down to a well-provided banquet; and subsequently the band, the police, and some other persons were feasted: so that altogether the guests of Mr. Salt, that day, amounted to about 3500; but the order was given for 3750.

The provisions (viands, wines, &c.) were satisfactorily supplied by Mr. Wilkes, of the White Horse Hotel, Leeds. The provisions included four hind quarters of beef, forty chines of beef, 320 veal and ham pies, 110 legs of mutton, 100 dishes of tongue, forty sausages, fifty pigeon-pies, fifty dishes of roast chickens and turkey-pouts, twenty dishes of roast ducks, thirty brace grouse, thirty brace partridges, fifty dishes of pickled pouts of various kinds, oysters and fish sauces, galantine of turkey and veal, 320 plum-puddings, 100 dishes of tartlets and lemon cheesecakes, 100 dishes of jellies, bancmange, pastry, Stilton cheese, &c.; altogether, no less than 4 tons of meat and 1 ton of confectionery. The dessert consisted of pines, grapes, melons, peaches, nectarines, apricots, filberts, walnuts, apples pears, biscuits, sponge cakes, &c. There were 7000 tarts and fancy cakes, 4000 custard glasses, and 2500 champagne-glasses. Mr. Wilkes slaughtered for the occasion three fine beasts, and in the centre of the dining-hall was a magnificent baron of beef, weighing 30 lb., surmounted "The roast beef of Old England;" and above floated a union jack.

Titus Salt, Esq., occupied the chair. On the right of the Chairman were the Earl of Harewood, Sir Culling Eardley, Bart., Mrs. Eardley, H. W. Wickham, Esq., M.P.; Mrs. H. W. Ripley; Wm. Fairburn, Esq. On the left of the Chairman were Mrs. Smith (the Mayoress of Bradford), the Right Hon. Lord Leeds (John Edgar Stanley), Mrs. Lister Ellis, Mrs. Adams, the Mayor of Bradford (Samuel Smith, Esq.), Mrs. W. Willans; Geo. Sandars, Esq., M.P., &c.

At twenty minutes past two o'clock, Mr. Titus Salt, the Earl of Harewood, with Mrs. Salt, and the other guests of the chief table, entered the hall and took their seats, and were received with hearty cheers. The repast being over, and the customary loyal toasts having been given with great applause, the Chairman proposed "The Health of the Earl of Harewood, the Lord-Lieutenant of the West Riding, and the Magistrates," drunk with vociferous cheers

The Earl of Harewood, in returning thanks, observed that he had never been at a larger dinner, and he had never been more amply repaid. He should go back impressed with a high notion of the orderly conduct of the manufacturing classes (Hear, hear). He hoped that the agriculturists would meet more together with their brethren in this field of labour than they had hitherto done; for it was a great mistake to suppose that there was any difference in their interests (Applause). The prosperity of the manufacturing operatives of the West-Riding was held as much at heart by the aristocracy and agriculturists as they could possibly be by any other class (Loud cheers). It rejoiced him to see so large and universal prosperity in the West Riding at the present time, and he wished the shade of the late Sir Robt. Peel were there to see the progress and happiness which reigned amongst them (Hear, hear). As to the price of yarns, whether that might be, the cause of keeping that price up was not on them [the agriculturists] (Hear, hear). He [the Earl of Harewood] had now the pleasure of proposing the health of Titus Salt, Esq. (Loud and enthusiastic cheering). When he saw the enormous premises which Mr. Salt had erected and he good architectural taste which was displayed in the building, he could not but say that the will he was greatly to be congratulated (Hear, hear). But he (the Earl of Harewood) would draw the attention to what Mr. Salt was doing for the good of the working classes by building them commodious, well-ventilated cottages, perfect in a sanitary point of view, so that his workpeople might be conveniently and comfortably lodged. This was an example of building good mills and providing well at the same time for those who worked in them (Applause). After a passing allusion to the fearful ravages of typhus fever in Newcastle-upon-Tyne, which he said was attributable to the overcrowding of cottages, bad drainage, and the want of attention on the part of those who employed the working classes in their town, the noble Earl said that no such sources of diseases would exist at Saltaire (Hear, hear). He

MR. SALT'S MODEL MILL, AT SALTAIRE, SHIPLEY, NEAR BRADFORD, YORKSHIRE.

…sounded much to the credit of Mr. Salt, whose health, and prosperity to Saltaire, he had great pleasure in proposing (Cheers)

The toast was drunk with enthusiastic applause

The Chairman then thanked the company in an appropriate address assuring them that he felt greatly honoured by the presence of the nobleman (the Earl of Harewood) by his side (Hear, hear), and he (Mr. Salt) had still further pleasure in seeing that vast assemblage of his Mr. Salt's) own workpeople around him (Cheers). Ten or twelve years ago he had looked for this day, on which he completed his fiftieth year (Loud applause). He had looked forward to this day, when he thought to retire from business and to enjoy himself in agricultural pursuits (Hear! Hear as the time drew near, and looking to his large family, five of them being sons, he reversed that decision and determined to proceed a little longer, and to remain at the head of the firm (Hear, hear). Having thus determined, he at once made up his mind to leave Bradford. He did not like to be a party to increasing that already overcrowded borough; but he looked around them for a site suitable for a large manufacturing establishment, and he pitched upon that whereon they were then assembled (Applause).

In conclusion, the Chairman stated that he would to all he could to avoid evils so great as those resulting from polluted air and water, and he hoped to draw around him a population that would enjoy the benefits of the neighbourhood, and who would be a well-fed, contented, and happy body of operatives (Applause). He had given instructions to his architect, who was quite competent to carry them out, that nothing should be spared to render the dwellings of the operatives a pattern to the country. If his life should be spared by Providence, he hoped to see satisfaction, happiness, and comfort around him (Protracted cheering).

The Chairman then gave "The Mayor and Corporation of Bradford, and Prosperity to the Trade of the District."

The Mayor of Bradford (Samuel Smith, Esq.), in responding to the toast, drew an interesting picture of the progress of the manufactures of Bradford, observing that, within the memory of persons present in that building, the whole process of the stuff trade was carried on by hand labour, and in the cottages of the poor. Then the cheerful hum of the spinning-wheel was heard in the cottage of the humble worker, and the good old English wool was the only raw material of which they knew (Hear, hear). The products were, no doubt, very comfortable wear and very substantial, but low insignificant in amount. The man was still living, he believed was present in that room, who carried the first gross of machine-spun yarn to Bradford market. What had been the result? What had been their progress? Instead of the manufacture being confined to the cottages, they had built palaces of industry equal to the palaces of the Cæsars (Applause), instead of hand labour, they had, to the utmost, availed themselves of the almost miraculous resources of mechanical science, instead of a master manufacturer carrying a week's production upon his own back, he harnessed the iron horse to the railway train, and daily conveyed away their goods by the ton; instead of being content with old English wool only, they now ransacked the whole globe for materials to work up; and there was no place under heaven where the Bradford manufacturer did not find something suitable—

SKETCH FROM THE PRINCIPAL TABLE AT THE OPENING FESTIVAL.

…there was no wool so coarse but he found a corner for it, and none so fine but he could discover a use for it (Applause). The Mayor then proposed, "The health of the West Riding and Borough Members of Parliament, and their own Borough Member, H. W. Wickham, Esq." (Loud cheering).

Mr Wickham responded to the toast, and concluded by proposing "The Magistrates of the Borough of Bradford."

Mr Forbes acknowledged the toast on behalf of the magistrates; and, in a eulogistic address, proposed the health of the son of Mr. Titus Salt." Mr. William Salt, on attaining his majority." The toast was drunk with great enthusiasm.

Mr W. H Salt returned thanks.

The Chairman then proposed "The healths of Mr Fairbairn, the engineer, and Messrs. Lockwood, the architects of the building."

Mr Fairbairn, in replying to the toast, gave some interesting details of the capabilities of the vast building. He found that the nominal power of the steam-engines was equal to 40, but working them up to a pressure of 40 lbs. on the square inch, they would give a force of upwards of 1200 horse power. The length of shafting to be put in motion before all the machines could be turned, was 2670 feet, or nearly two miles, and it weighed between 600 and 700 tons. (Hear, hear). All that immense mass of matter must be put and kept in motion before they could give power or force to the various machines which would be fixed in the different departments of the building. He had also ascertained that it would contain 1200 looms, capable of producing 30,000 yards of alpaca cloth per diem, or nearly eighteen miles each day (Hear, hear, and applause). This would give a length of 3000 miles of cloth per annum, which, as the crow flies, would almost reach to the native mountains of the alpaca.

Mr Lockwood also responded; and, after referring to Mr. Salt's anxiety to secure in Saltaire the health, intellectual culture, and rational recreation of the operatives, concluded by proposing "Prosperity, health, and happiness to the working-classes." The toast was drunk with loud cheers.

Mr. French, on the part of the operatives, expressed his thanks for the honour conferred on the class to which he belonged. He said he might look with pride and satisfaction upon the working classes when he saw such a mass of people before him, and considered that they were then assembled in a place which might perhaps become a future city (Hear, hear). He could reflect upon the conduct of the working classes hitherto with satisfaction, and he hoped that at the close of that day it would be found that not one single act had taken place amongst them calculated to mar the general harmony (Hear, hear, and applause). He concluded by reading a few verses composed for the occasion by Mr. Robert Storey, the "Craven poet," entitled the "Peerage of Industry."

Sir George Goodman, M.P., then, in an appropriate address, proposed "Mrs Salt and the Ladies." Mr W. Rand responded, and the proceedings terminated.

After leaving the dinner-tables, the company adjourned to the open air, and, in the adjacent meadows, a quadrille band being in attendance, dancing commenced with spirit. From six o'clock, successive trains drew up at the Saltaire platform; the carriages were filled, and the guests conveyed to Bradford, for the concert at St. George's Hall; but the

THE SALTAIRE CONCERT IN ST. GEORGE'S HALL, BRADFORD.

shades of evening had gathered around ere the last of the merry out-door groups was broken up.

THE CONCERT AT ST. GEORGE'S HALL, BRADFORD.

appropriately terminated the festivities. (We quote the *Leeds Times'* report.) At half-past seven o'clock, the Hall was crowded in every part; the stalls were filled with the principal guests, who appeared in full dress; and the area and galleries were crowded with workpeople of Mr. Salt. The appearance of Mr. Salt and party was hailed with several rounds of cheering. The entrance of Mr. Forbes, as well as that of the Mayor, were also signals for loud applause. The vocalists consisted of Mrs. Sunderland, Miss Freeman, Mr. Perring, Mr. Winn, and Mr. Delavanti. The orchestra presented an efficient choir, under the leadership of Mr. Jackson; and the fine band of the 28th (North Gloucester) Regiment. The piano accompaniments were performed by Mr. Winn and Mr. Jackson. Under the excellent leadership of Mr. W. Wallace, the instrumental music was well performed by the distinguished band, and elicited loud plaudits. The programme was rich in fine old English music—the madrigal and the glee.

Mrs. Sunderland was loudly encored in the Scotch song, "Sandy and Jenny," and the air, "On the cold shores." Miss Freeman was well received. Mr. Perring and Mr Winn sustained their parts with their usual ability. "The Gipsy Laughing Song," given by Mr. Delavanti, excited a loud encore; and that gentleman gave "The Low Back Car," with great acceptableness. The Irish song of "Katty Moyle" also met with an encore; and Mr. Delavanti then sung "Dame Margery" with much approbation. In the extravaganza, "Singing for the Million," he created quite a furore by the dramatic and comic effect with which he gave it; and he was required, amidst boisterous applause, to repeat it. The National Anthem then having been sung, the chorus-master, Mr. Jackson, called for three cheers for Mr. Salt, and three hearty cheers were given by the orchestra and audience.

Mr. W. Horsfall rose, and in a brief address proposed that they should embody their thanks in one loud cheer. (One loud cheer was accordingly given by the vast company, Mr. Horsfall leading.)

Mr. Salt, with evidently deep emotion, rose and acknowledged the compliment by a low bow.

Thus ended this memorable and gratifying day of festivity and rejoicing.

We are happy to add that the conduct of the workpeople was unexceptionably good; not a single instance of intoxication or other misconduct occurring throughout the day.

The Illustration in page 288 is sketched from the principal table at the Festival, and portrays the chairman, Titus Salt, Esq., before whom is the characteristic alpaca ornament.

NOOKS AND CORNERS OF OLD ENGLAND.

CROMWELL HOUSE, OLD BROMPTON.

THIS small suburban villa, more interesting from its historical associations than from any architectural pretension, was situated upon the estate lately purchased for the site of the proposed new National Gallery, at Old Brompton, and has lately been taken down. Faulkner, in his "History of Chelsea," relates the tradition that this cottage was once occupied by Cromwell as a place of concealment; but the veteran topographer rather imagines the story to have arisen from the fact that Henry Cromwell lived in the parish, and probably resided here.

In this retreat died the only son of the Right Hon. Edmund Burke; and the affliction is thus touchingly narrated in Mr. Peter Burke's recently-published "Public and Domestic Life" of the distinguished statesman, p. 277:—

> The district of Old Brompton, the fairest and healthiest rural suburb of the great metropolis, has ever been a customary resort, and in many instances a saving refuge, for those threatened with death from consumption. Here, at a villa called Cromwell House, lodgings were taken for Richard Burke. His father himself selected the residence, because he thought its nearness to town would the more readily enable the new secretary to depart for Ireland as soon as his health returned. Cromwell House, like many other localities nigh to it, acquired the name of "that great bad man"—as Burke termed him—the Protector, either from his having lodged, or having had his head-quarters there or in the vicinity, at some eventful period of the Civil War. The tenement and its gardens must at one time have presented a pleasing countrified appearance. Latterly the place had been suffered to fall into decay, until its aspect became truly desolate and forlorn—a fit memorial of the statesman's perished hopes. The ruined abode has just been entirely removed, making way for new improvements. To this Cromwell House, Burke's son was accordingly brought. The fatal symptoms pressed swiftly on, and death was evidently close at hand. A few days before it came, Dr. Brocklesby felt he must no longer delay disclosing the truth in its full terrors. From the moment he heard it, Edmund Burke abandoned himself to the desperation of despair: "His," he exclaimed, "was a grief which would not be comforted."
>
> Richard Burke expired on the 2nd Aug., 1794, aged 36.

CROMWELL HOUSE, OLD BROMPTON.

TESTIMONIAL TO R. K. ROTHERHAM, ESQ.

UPON the opposite page to the Illustration of a vast "Mill and Town"—wherein the wants and comforts of the workpeople are provided for with all the advantages that capital and scientific economy can ensure—it is doubly interesting to record an expression of gratitude of the employed; and such is the handsome Testimonial of Plate presented to Mr R. K. Rotherham, of Coventry, watch-manufacturer, by the workmen in his employ; the gift being commemorative of his having been in the trade the jubilee period of fifty years.

The Plate was presented at a dinner given to the workmen, on the 16th of May last, in St. Mary's Hall, Coventry.

The company was 235 in number, and, with few exceptions, they were

TESTIMONIAL PRESENTED TO MR. R. K. ROTHERHAM, OF COVENTRY WATCH MANUFACTURER, BY WORKMEN IN HIS EMPLOY.

all journeymen, or such as had been formerly employed by the firm of "The Old Factory,"—a term by which this firm is known, not only throughout the United Kingdom, but in many foreign countries. Some of the guests, were old men, who had continued their connection with the establishment from the day when they were bound apprentices; or as long as they had been able to work at the bench, a period of from sixty to seventy years.

Mr. Rotherham presided; and early in the evening proposed "The healths of the senior workmen," which toast was drunk with loud cheers. Mr. Mechie returned thanks; and in compliment to Mr. Rotherham, the song of "The old English gentleman" was sung, the company spontaneously in chorus repeating the last line of every verse; "and (says the *Coventry Standard*), the effect of so many voices resounding beneath the old oaken and figured roof of the old hall, with its stained glass windows, and its garnishings of ancient tapestry, old armour, and old paintings, was truly romantic."

A congratulatory address from the senior members was next presented to Mr Rotherham; to whom the plate was then handed in due form by four of the oldest workmen—Joseph Haynes, William Hill, James Carvell, and John Seddons—whose united ages amounted to 277.

The Testimonial consists of three very handsome pieces of plate. The centre is an arch-chased tripod épergne, with oak stem, around which are three allegorical figures—Flora, Pomona, and Ceres—on base, supporting an open-work silver basket, with chased vine border, and cut-glass dish. The other pieces are two large chased silver dessert stands, to match the épergne, with cut-glass dishes. The inscription on the plate is as follows:—

Presented to Richard Kevitt Rotherham, Esq., by the workmen employed by him, as a token of their respect, for the urbanity and good feeling manifested towards them during a period of fifty years. May 16th, 1853.

The weight of silver in the above is 144 ozs. 6 dwts., and its value about £108. It was manufactured by Hayne and Cator, of London; and is tastefully executed.

The health of Mr. Rotherham was drunk with enthusiasm; followed by other toasts; and the proceedings were throughout characterised by "the loud sincerity of mirth."

THE THEATRES, &c.

DRURY-LANE.

The engagement of Mr. Brooke continues prosperous to the lessee. On Saturday, the former supported the character of *Virginius*, and was so effective in the early portions of the play that he was summoned at the end of the third act to receive the acknowledgments of the audience. The paternal character was especially illustrated; and indicted with so much con-ious care as well as apparent impulse, that critics have formed from it a higher estimation of the actor as an artist than they had received on previous occasions On Tuesday Mr. Brooke acted *Claude Melnotte*; and on Wednesday was honoured with a morning performance of *Othello*, which was well and fashionably attended.

LINWOOD GALLERY, LEICESTER-SQUARE.

"The Tour of Europe" is the name of a vast picture just opened at this Gallery, by Mr. J. R. Smith, to whom the public was indebted for that of the Mississippi, in the year 1849 The artist tells us that it occurred to him, that "having brought a river 3000 miles long across the Atlantic, he should endeavour to take back the principal part of Europe in return." Hence the present exhibition of an European Tour, extending from Dover to Naples. Very early in the series he is treated with the beautiful effects of sunset, a storm at sea, and a wreck and total loss of the ship *La Republique*, on the coast of France. The scenes in Rouen are highly picturesque: the church of St. Omer, the Porte Massacre, the Place de Pucelle, the Rue Tabac, and the Cathedral are all interesting. We have then Paris exhibited by day and night, in its general aspects and in its special details; followed by those of Versailles. Pictures of Belgium succeed—also of Brussels, the Rhine, Hamburg, Berlin, Heidelberg Castle, Switzerland, the Castle of Chillon, Lake of Thun, the Bernese Alps, the Jung Frau, Via Mala, Grindenwald, and an Alpine sunset. Among the subjects treated are those of Napoleon crossing the Mount St. Bernard, a storm after the massacre of Culaine, the Prison and Guardhouse of Pompeii Besides the places we have mentioned, Milan, Venice, Florence, Civita Vecchia, Rome, the Falls of Tivoli, and of Terni, the island of Ischia, Naples, Vesuvius, with the near view of an eruption, and other scenes about Naples, until the spectator arrives at the Grotto of Antiparos. Of the entire route, Vienna is the only city omitted, the incomplete state of the railways making the attempt too expensive. This panorama cannot fail to ensure a large share of public support; the paintings being for the most part magnificently executed.

EARLY USE OF TIN.—Mr. Layard, in his work upon Nineveh and Babylon, in reference to the articles of bronze from Assyria, now in the British Museum, mentions that in the compositions he has probably obtained from Phœnicia; and, consequently, that that used in the Assyrian bronze may actually have been exported nearly 3000 years ago from the British Isles.—*From Notes and Queries.*

LOCOMOTIVE ENGINE MANUFACTORY, AT BIRKENHEAD.—The buildings for carrying on the manufacture of locomotive engines, and other machinery, by Messrs. Peto and Co., on the south side of Wallasey Pool, are fast approaching completion. The works will occupy an area of upwards of 22,000 square yards. The range of sheds, workshops, &c., forms a crescent, running from the edge of the pool along the whole length of the canal on the west side. A branch line of railway from the Birkenhead and Chester Railway is now being laid down to run along the front of the works. The machinery manufactured at these works will be for mighty locomotive engines, for the Canadian Railway, the contracts for constructing which have recently been entered upon. It is anticipated that the works will be in operation in a few weeks.

THE LAST OF THE WESTMINSTER ANNOYS.—A number of workmen are now actively engaged demolishing the last portion of that once notorious locality, the Westminster Almonry. The part now in course of demolition was called Jeffries-buildin... The ground is required for the formation of Victoria -street, a direct approach from Buckingham Palace to the New Palace of Westminster.

LETTERS AND NEWSPAPERS FOR AUSTRALIA.—On Tuesday notice was issued at the General Post-office, that a ship letter bag for Melbourne would be made up and forwarded by the *Abeona Palo*, to leave Liverpool on the 20th instant. Ship letter-bags will also be made up for Port Phillip and Sydney, to be conveyed by the *Harbinger* steamer, to leave Southampton the 21st instant. The *Australian* steamer, delayed from the 23rd ult., is to leave Gravesend on the 15th inst. She will take out ship letter-bags for St. Vincent, Port Phillip, Adelaide, and Sydney.

PLATE LICENSES.—On Tuesday the Stamp office commenced the issue of licenses to dealers to remain in force until the 31st of July, 1854. Tobacconists, walking-stick and umbrella manufacturers, whip-makers, and all other trades making or selling wares mounted with the precious metals, are considered dealers in plate; and, as the new stamp-duties are to be rigorously enforced, such parties vending articles into which silver and gold are worked, unless licensed, will be liable to a penalty.

MRS. CHISHOLM AT PLYMOUTH.—Prior to the departure of this lady, last week, she was waited upon, at the residence of Mr. Wilcocks, at Stoke, by a deputation from the committee of the Devonport Mechanics' Institute, who presented her with an address, gratefully acknowledgment of her noble and disinterested services for the amelioration of the condition of the working classes of England.

EMIGRATION FROM LIVERPOOL.—Eight emigrant vessels left the Liverpool docks last week for New York, one for Melbourne, one for New Orleans, and one for Boston taking out 3324 passengers for New York, 338 for Melbourne, 191 for New Orleans, and 369 for Boston Owing to the adverse state of the wind, several of these vessels are yet at anchor in the Mersey.

THE HERRING FISHERY IN THE NORTH.—The herring fishery is now over for the season, and the average returns shew that the take has been good. It is calculated that the total number of barrels cured on the whole of the coast of Scotland, from Dunbar to John O'Groat's, is 800,000, which, at an average price of £1 each, gives a total of £800,000 as the product, of two months' fishing of this deep.

MIDDLESEX REGISTRATION.—The revision for Middlesex will commence on the 3rd of October. Lancelot Shadwell, Esq., will hold his first court at the White Horse, Uxbridge; and the following day at the Albion Hall, Hammersmith. It is important to notice an Act framing the polling in counties to one day only passed during last session. The Registration of Voters' Act gives power to alter the polling-place. The elector will thus be enabled to poll at the district polling place where he resides This is to be accomplished personally, or by some one giving a notice to the revising barrister at the holding of his court, stating a desire to have the polling-place altered. So that if the freehold be at Uxbridge, and the residence of the elector be in the City, he will be able to vote in the City, instead of travelling to Uxbridge.

The game was protracted to 80 moves, and then dismissed as drawn.

(*a*) Threatening, evidently, if the Pawn be taken, to take the Kt with his Bishop, and if the queen then take the Bishop, to play Kt to Q 5th, winning a piece

(*b*) These moves are very well played

(*c*) R to K 7th would have decided the game in Black's favour

(*d*) R to Q 8th is still seen a better move.

(*e*) Kt R 7th would have gained Black time.

MATCH AT CHESS BETWEEN MESSRS. LOWENTHAL AND HARRWITZ.

This long-expected match commenced on Monday, at the Ship Tavern, Charing-cross, the hostelry which for the old Westminster Cross-club used to hold its meetings. Up to the time of our going to press, two games have been played, both of which have been gained by Mr. Harrwitz. In the first game Mr. Lowenthal made a strange oversight, but the second was an arduous contest of eighty-eight moves.

NEW ACT FOR THE REGULATION OF PARISH VESTRIES.—It is enacted by an act recently issued, that from and after its passing (on the 20th ult.) no person shall be required, in order to be entitled to vote or to be present at any vestry paid any rate to the relief of the poor of the parish in which such meeting shall be held, which shall have been made or become due within three calendar months preceding such meeting. Before the day of this act persons could be required to pay the rates demanded, to attend vestry meetings

THE NEW PENNY RECEIPT STAMP.—The new uniform penny receipt stamp comes into use on the 10th of October. The Stamp office has already issued a notice that it is prepared to supply them, or to stamp paper and envelopes, for any party who may require it, and that bankers will, sell to their customers, at the cost of the stamps, cheques having the penny stamp, and made payable to order, instead of to bearer—not the least of the advantages that will result from the new Penny receipt stamps will now be as convenient a small coin for transmitting small payments as penny postage stamps. We have no doubt that the revenue will gain by the change, for every receipt will now be stamped, whereas at present not one receipt in fifty is stamped. Remember that the payer of money, providing he stamps, is empowered by the act to demand it from the payee.—*Law Review.*

SIX WESLEYAN MISSIONARIES sailed last week for Melbourne, but the funds for their outfit and passage have been provided for by voluntary contributions from the above colony. We are informed that the extensive missions of the society in Australia and Van Diemen's Land are about to be organised into a separate conference, with a Conference of their own, after the example of the missionaries in Western Canada and in France.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

Mr. Henry Maxwell Lefroy is appointed deputy overseer of convicts at Western Australia, Mr John Work is appointed a member of Council, Vancouver's Island.

A daily newspaper has been started in Liverpool, under the name of the *Northern Daily Times*.

The number of persons belonging to the order of the Legion of Honour on the 1st of January last was:—The Emperor and Princes of the Imperial family, 31; grand crosses, 87; grand officers, 214; commanders, 972; officers, 4635; and knights, 45,356: total, 52,709.

The number of persons who left Liverpool during last week, under the regulations of the Government Commissioners, was 4912; all of whom, with the exception of 338 for Melbourne, by the *Birmingham*, were bound for various ports of the United States.

The various banking establishments in Scotland have announced that after the 1st of October the rate of interest on money deposited with them will be 2½ per cent per annum.

The Marquis of Angleses has closed his aquatic trips for the season, in the *Pearl* yacht, and arrived at Scandesert.

The long-talked of caloric ship the *Ericsson* is said to be a failure. The caloric engine has been removed from the New York Crystal Palace because it was to have been openly tested there, and the proprietor did not like such exposure.

Captain Chapman, late of the *Magdalena*, on retiring from the service of the West India Mail Company, has been presented with 100 guineas, as an appreciation of his character and services during the twelve years he had been in their employ.

The total of railway calls falling due in October, as yet advertised, amounts to £816,665. In October, 1852, the calls were £809,360. The total calls for the ten months of 1853 are £8,799,501, against £8,737,427 in the corresponding period of last year: showing an increase of £2,062 074.

The decree of 1814, published in the German provinces of Austria, declaring every document written in the Hebrew language null and void, has just been extended to Hungary, Croatia, Sclavonia, Servia, and the Banat.

Lord Brougham left town by the afternoon Dover express, on Saturday last, *en route* for his chateau in the south of France.

Winter has already set in with severity in Scotland. The Grampian hills are covered with snow of considerable depth, and there is every appearance of an early and sharp season.

The imports of sugar last week were very limited, the total amount being only about £206,000 sterling. The shipments, however, still continued heavy, representing an aggregate value of about £697,275.

Two specimens of that extremely rare bird the Great Skua have recently been shot in the Shetland Isles, by Mr. Saxby, of Calus College, Cambridge

M. Scribe, the author, says the *Journal de Paisne*, has just purchased the domain of Courbeim, in the arrondissement of Château-Thierry, for 280,000fr., with the intention of taking up his residence there.

According to the price of wheat in the Edinburgh market, the 4lb. loaf will be sold at 8½d. ready money, or if paid within a month; and 9d. credit.

The sum total of Burmah batta is £49,836 14s. It is divided as follows:—Colonel, £456 19s. 10d.; lieut.-colonel, £365 5s; major, £273 18s. 8d.; captain, £169 13s 6d.; lieutenant, £73 16s.; second lieutenant and ensign, £54 16s., surgeon, £109 11s.; assistant surgeon, £73 16s

A church is about to be built at Liverpool on a novel plan. The accommodation will be, not for sitting, but for *kneeling*. There will be no galleries, or pews. The expenses are to be defrayed by the weekly offertory.

Azimullah Khan, the envoy of the family of the late Paishwa of the Mahratta empire to England, on a mission to the East India Company, has just arrived from London at Paris, to make a short stay.

According to the Brussels *Nation*, the owners of private houses were forbidden to let lodgings to any persons during the visit of Louis Napoleon to that city, or to offer seats at their windows to any persons not previous y inscribed on the police sheets.

The wages question at Manchester, on Monday last, remained in precisely the same position as on Tuesday week. The dyers are no nearer a settlement, and the factory operatives are still permitting their 3000 looms to stand idle.

As a proof of the extent of the smuggling trade at Posen, between Germany and Russia, it is stated that at a late sale at Kalisch of confiscated goods, the sum received amounted to upwards of 42,000f.

At a meeting of the Lord Provost's committee at Edinburgh, held on Friday week, it was resolved to offer the freedom of the city to the Chancellor of the Exchequer.

The Earl of Shaftesbury took his seat at the General Board of Health on Monday, for the first time since his return from the Continent.

It is understood that the Revenue returns for the quarter ending the 10th October next, will show a comparative increase much beyond anything recently attained

M. le Docteur Mener, on a mission from the French Government, to watch the progress and mode of treatment of cholera in this country, had an interview on Monday with the General Board of Health, at their offices, Whitehall.

The Duke and Duchess d'Alba (relatives to the Empress of the French) have just passed through Bayonne, on their way to Spain.

From a return just published, it appears that 225 towns have asked for the advantage of the Public Health Act, and that 186 of them have had the Act adopted.

Previous to the commencement of the winter session of the Court, it is said one of the Inner House Judges in Scotland, who is a delicate state of health, will tender his resignation, and that the Lord Advocate will be elevated to the Bench

The African Steam Company have resolved to establish a steam line between London and Morocco. The vessels will touch at Gibraltar, Tangiers, Mazagan, and Mogador. No Government subsidy appears to have been sought or deemed requisite.

George Young, Esq, advocate, has been appointed Sheriff of the shire, Inverness, in the room of William Fraser Tytler, Esq., deceased.

Advices from Canada state that the news of the advance in the price of wheat in this country had caused much activity in the markets, and that it was expected from 4,000,000 to 5,000,000 would be shipped from the colony before the closing of the navigation.

The learned and distinguished Professor of Logic in Edinburgh, Sir William Hamilton, Bart., received a fracture of his arm last week, from a fall at Largo. He, however, is progressing favourably.

Since the year 1839, £2,253,859 has been expended in England and Wales in constructing and altering prisons, houses of correction, and lock-ups; and £1,982,376 in constructing lunatic asylums, making a total of £4,536,235 paid out of the county rates

Letters from Ticino, the Cantons, St. Gall, and Appenzell, in Switzerland, state that the decision of the Grand Council of Ticino in favour of the Lackmanier railway, has been received with universal joy.

The Post-office authorities have, in reply to a special application, stated that "the hunt of seven days from date of publication for the posting of newspapers does not apply to those forwarded from one part of the United Kingdom to another."

A telegraphic despatch from Niagara Falls, dated the 9th ult., states that, on the morning of that day, the remainder of the Table Rock fell, with a tremendous crash.

The new bridges for the new Westminster-bridge, designed to correspond in character and proportions with the New Palace, have been commenced in the bed of the river.

The Earl of Carlisle, who has arrived at Begdad from Constantinople, intended to make a brief tour in the Persian States previous to his return to Europe

The marriage of Viscount de Larochefoucauld with Mdlle. F. de Colbert took place on Friday week, at the Church of St. Thomas d'Aquin. The ceremony was strictly private, at the *hôtel* of Paris.

A farmer near Navan, in Ireland, has died of hydrophobia. He was bitten by his own terrier on the 12th of July, and the dog went mad almost ately afterwards

Madame Sontag is on her return to Europe. She cleared about fifty thousand dollars (£10,000) by her concerts in America.

H.R.H. the Duchess of Orleans and her two sons arrived at Bruges, last week, from Ostend, on their way to Eisenach, in Germany.

A few drops of creosote on brown paper put into the holes of rats, it is said, will drive them away.

The furniture and other confiscated property in the Schloss of M. Francis Palsky was advertised for sale, on the part of the Austrian Government, on the 18th inst.

A letter from Surinam (Dutch Guiana) states, that African slavery is soon to be abolished in that colony, and Chinese Coolies are to be introduced.

The exports of linen manufactures from Ireland have increased during the last seven months at the rate of 7,000,000 yards per annum.

Mr. William Rathbone, of Liverpool, has received instructions from the Hon. East India Company to forward to Mr. Hugh Fleming, the secretary to the Manchester Commercial Association, to be disposed of by him in Manchester, 550 bales of cotton from the Dharwar collectorate, received from Bombay

NEW BOOKS, &c.

THE TWIN SISTERS: A Novel.—By LUCY FIELD, Authoress of "The Two Friends." 3 vols, post 8vo, cloth, £1 11s. 6d

PARIS FASHIONS
FOR OCTOBER.

Paris at present wears not its usual aspect; and the people who throng it are not at all Parisians. They are strangers—principally English, who arrive there after passing the season at the German watering-places, and remain for some days in Paris before crossing the Channel.

The *modistes* profit considerably by the passage of these strangers; and the following are the principal points of taste for the influx of the present season:—The colour dark chesnut, but suitable to the advancing season, seems to be the fashion; as was green in the spring. Bonnets especially, of this colour, are in great demand, and suit nearly all toilettes or dresses; for instance, a bonnet chestnut colour and straw, or chestnut and black lace, harmonises with dresses of green, blue, deep pink, and lilac; and a black mantilla, either in lace or in silk taffetas, braided and embroidered, or having a trimming of lace or fringe, completes a lady's dress appropriate to the season.

Petticoats, which can be detached from the bodies of dresses, make up the ensemble of the dress in a very convenient manner. Thus, persons reluctantly leave off petticoats of light colour and material, which belong rather to summer wear; but the bodies of similar materials are found too light and cold for the present month, consequently, petticoats of muslin, barège, and grenadine, are retained; and with these are worn bodies of a warmer material—taffetas of a light colour, as pink, pearl grey, mauve, or light blue, &c., according to the colour of the petticoat. In this manner dresses may be made up appropriate to the season, but not having the sombre appearance and other characteristics of a winter costume. If warmer dresses are required, they may be made in poplin — the colour preferred is French blue—or in Scotch plaid, which is worn either with a body of the same stuff, or of black taffetas *à basque*, embroidered all round *au plumetis*, as also upon the exterior and interior seams of the sleeve. This is a novelty which has just made its appearance experimentally. It is certainly an additional ornament or trimming, which does not encumber nor overcharge a dress.

This is also the season when cashmere shawls make their re-appearance: always rich in effect, they give a *distingué* appearance to the wearer. The fabric and patterns of these shawls have reached a degree of perfection almost incredible; we speak only, let it be well understood, of Indian real cashmeres; for those which are made in Europe are not here for a moment to be taken into account. Square shawls are now most worn; the patterns are of round shape, large size, and very rich. The long shawls for winter are also much covered with pattern; and the ground is of the colour of the China rose

The trimmings of dresses are now exceedingly varied. We may mention a dress of black taffetas, with five volants, lined with a volant of blue taffetas, which reaches beyond the black two fingers depth; each volant is moderately indented, and bordered with narrow velvet; the body is high and close, and trimmed with bands, bordered or edged in the same manner as above; as are also the sleeves. Dresses are also worn of taffetas, with black and violet stripes of about two inches width, or in large squares; the petticoats are without volants; the bodies high and closed and covered with lace.

PARIS FASHIONS FOR OCTOBER.

The Illustration.—Riding habit, of cloth—mostly black or chestnut, or blue and green. Hat, low-crowned, with rather large brim, and raised on the side. The body *à basque*, moderate size, with bows of watered ribbon; the sleeve terminated by a facing, with under-sleeves in jaconet muslin, very little open. Gloves, doeskin, very thin. Body of pique blanc, *à basque*, trimmed with white galoon, with buttons in front, white, or rather of metal—gold, and ornamented with stones of fancy colours. Dress, in Scotch poplin; colours, French blue and black. Body, *à basque*, of black taffetas, slit behind, with a bow of ribbon. Sleeves, with double volant. Petticoat, with five volants; and on the coloured band, a black velvet is put on flat. The colour of the pattern or design on the dress is the same as that of the trimming placed on the basque of the body. The patterns most in favour for volants are plain; they are no longer worn in various squares.

RURAL FETE AT HALSWELL, SOMERSET.

The country round Bridgwater is replete with sites of traditional and historic interest. It was near here that Alfred defeated the Danes; and here the Duke of Monmouth lost all prospect of a throne in the battle of King's Sedgemoor. But the country is no less celebrated for natural beauty than for its historic associations; and the Quantock hills, with their wide prospect over the moorland, dotted with village towers, as well as far over the Holmes, that stud the distant Bristol Channel, to the Welsh Mountains, attracts many a visitor. Few spots, however, in the county offer such varied beauty as Halswell Park, the seat of Colonel Charles Kemeys Tynte, of Halswell house, and Cefn Mubly, in Glamorganshire.

Colonel Tynte is the worthy representative of a family who have for centuries maintained a leading position in the West of England. The early ancestors of the Colonel were the Halswells, or De Halswells—a family of great antiquity, who possessed the Halswell and other property immediately after the Conquest; and, through this family, Colonel Tynte traces his descent lineally from the Empress Maude and the House of Plantagenet. Colonel Tynte has been declared, by a Committee of Privileges of the House of Lords, senior co-heir of the whole blood to the Barony of Wharton. He is also co-heir to the Barony of Grey-de-Willton. Colonel Tynte has been the representative of Bridgwater in six successive Parliaments

The park scenery of Halswell is remarkably fine; and on Friday, the 16th ult., the picturesque domain was, by the liberality of Col. Tynte, thrown open to the members and friends of the Bridgwater Literary and Scientific Institution, when between 2000 and 3000 persons enjoyed the rural treat.

A very attractive programme was issued by the Committee of the Institution: and the visitors from the neighbouring towns crowded the park in an early hour in the morning. Passing up the noble avenue from the lodge gate, beneath banners waving from the lofty trees, the first attraction was a spacious tent, for the Exhibition of the Floral and Horticultural Society. The show of the exhibitors, the greater number of whom were cottage gardeners. Here vigorous youths enjoyed roundders, foot-ball, and other athletic sports. The committee had offered four silver arrows to be contended for; and archery still finds favour among the ladies of Somersetshire, if we are to judge by the numbers who contended for the prizes.

The successful competitors for the silver arrows were:—

1st prize—Miss Board, Cannington.
2nd prize—Miss Follett, Taunton.
3rd prize—Miss Priest, Bridgwater.

Near the archers the band of the West Somersetshire Yeomanry Cavalry was stationed, and enlivened the sports by their excellent execution of various marches, polkas, &c. There was, also, a well-stocked refreshment tent; and grounds were set apart for swings, pole-climbing

RURAL FETE IN HALSWELL PARK, SOMERSET.

feats, &c.; and beyond the "Meadow Wood" a match of cricket was played between the gentlemen from Taunton, Bridgwater, and neighbourhood, resulting in the victory of Taunton. Towards five o'clock the rustic sports began; and bobbing at treacle-rolls, leaping in sacks, foot races, and climbing a well-greased pole, for various prizes, were enjoyed until evening was fast closing in. Then followed many a merry dance upon the green. The visitors gave three hearty cheers for their kind friend Colonel Tynte before departing. Although more than 3000 persons of all classes were assembled in the grounds, nothing but order and good humour prevailed; not a single incident occurred to mar the pleasures of the day. On Monday the committee of the Bridgwater Institution gave thanks to Colonel Tynte for his liberality.

RUSSIA AND TURKEY.—M. KOSSUTH'S LETTER.

On Monday night a crowded meeting of the inhabitants of Stafford, convened by public requisition to the Mayor, was held in the Lyceum, for the purpose of memorialising the Queen on the Russian invasion of the Turkish provinces. Amongst those present on the platform were Mr. J. Turner, mayor of Stafford, Mr. David Urquhart, Mr. Peplow, Mr. Owen, Mr. Martin, Mr. Flint, &c. The Mayor having been called to the chair, Mr. Owen moved—"That the actual events in the East have shown that the process at present adopted for managing the intercourse of nations is injurious to England and beneficial to Russia. That by means of it the physicial power of Great Britain ceases to exist for the maintenance of our interests and the protection of our honour, and that, on the contrary, it comes to be used for ends injurious and fatal to the one and the other. That such a state of things is not endurable, and must be altered; and while it endures freedom is an empty word, government a mockery, and peace or war alike dangerous.. That this borough shall employ every means within its reach to induce its representatives to put an end to permanent embassies, to secrecy in diplomatic business, and to compel a return to the legal practice of the constitution, so as to prevent intercourse between the servant of the Crown and the representative of a foreign state, save under the warrant of the great seal, issued for that special purpose. That it will adhere to no projects of reform in which this restoration is not included. And that it will use its best endeavours to induce the other constituencies of the kingdom to act in like manner. Mr. Peplow briefly seconded the resolutions, which were then put and carried unanimously.

M. Kossuth, having been invited to attend this meeting, addressed a long letter to Mr. Peplow, giving his reasons for declining to attend. From his epistle we take a few of the principal points:

Had I been called upon to address the citizens of Stafford on the subject, it would have been, from my position, impossible not to dwell upon the intimate connexion of the Turkish question with the prospects of my own dear fatherland, and upon the advantage which the cause of freedom might derive from Turkey being effectively supported in her resistance to the Czar of Russia and his confederate.

Now, sir, I know, on one side, that any particular explanation of that nature would certainly have been but an additional claim to the sympathies of the men of Stafford; but, unfortunately, I have also reason to apprehend on the other hand, that the more successful I might have been in forwarding that cause, and in carrying that point, the stronger stimulus I should have given to the present English Government for pressing affairs to an issue such as the friends of justice, freedom, and humanity must deplore.

Sir, by analysing the conduct of the English Government, during the present crisis, it is impossible not to come to the conclusion that it is not so much either by fear from, or by a particular predilection for, Russia, that the English Government has until now either served or favoured the Russian ambitious designs; but that is rather for fear lest, by encouraging Turkey to legitimate resistance, an opportunity might be offered to some energetic popular risings in the countries.

I have, indeed, no hesitation to say, that the policy of England has long since been Russian in its results; though not Russian in its motives—it has been worse, it has been anti-European in principle.

Speaking of the invasion of Hungary and the intervention in Moldo-Wallachia in 1848, M. Kossuth adds:

I knew, sir, and can prove it if needed, that all the exertions of English diplomacy in the East have been not so much prompted by the wish to do what is advantageous to Turkey, as by the considerations what might be let embarrassing to Austria. There are some who suppose that this ungracious task might have been inspired by considerations which, however due to some private relations, are certainly of no importance to the people of England. But it is likewise founded upon a prejudice, blindly without investigation accepted by existing diplomacy, and that is, that Austria is necessary to Europe precisely as a barrier for Turkey against Russian encroachments. Now, sir, I proclaim this to be a false supposition in the past, and impossible for the future.

The Hungarian concludes his letter by saying

That it is with deep sorrow and intense anxiety that I see the British Government taking a principal share in a line of policy which the course of events has already condemned, and which impartial history will undoubtedly pronounce to have been unbecoming the position of England, adverse to the interests of Great Britain and of humanity; ineffacious to achieve its declared design, inconsistent in its bearing, compromising those it intended to help, and helping those it professed to oppose.—I am, sir, with particular regards, yours respectfully, L. KOSSUTH.

LEICESTER.—A requisition to the Mayor is in course of signature in that town, requesting him to convene a public meeting of the inhabitants to express their feeling upon the stern course pursued.

In addition to the meetings about to take place in London and in Leicester, it is stated that public meetings to discuss the Eastern question are about to be called in Manchester and Wolverhampton.

THE CASE OF MISS CUNNINGHAME.

A deputation from the Protestant Alliance had an interview on Wednesday with Lord Clarendon, at the Foreign-office, in reference to the case of Miss M. Cunninghame, a Scotch lady, who was recently arrested at Lucca, and who is now confined in the prison of that city, upon a charge of distributing the Bible and the "Pilgrim's Progress." The deputation consisted of the Earl of Shaftesbury, Colonel Alexander, Mr. Wilbraham Taylor, the Rev. Dr. Beecham, Mr. J. Cook Evans, the Rev. W. H. Rule, Mr. J. Hamilton, and Captain Gibborne, and was received in the most courteous manner by the Foreign Secretary.

The Earl of Shaftesbury briefly explained that the object of the deputation was to lay before his Lordship the case of Miss M. Cunninghame, and to solicit the intervention of her Majesty's Government to procure that lady's liberation from prison. His Lordship, after entering briefly upon the case itself, proceeded to express himself in the strongest manner upon the barbarous nature of the law under which Miss Cunninghame was arrested, and indulged a hope that the most strenuous efforts of the Government would be used to rescue a British subject from the indignity thus offered to her.

The Earl of Clarendon said he entirely concurred in the opinion expressed by Lord Shaftesbury as to the character of the law in question, which was not only contrary to the principles of the Gospel, but to the spirit of the age. His Lordship said he was quite familiar with the facts of the case, having received a despatch from Mr. Scarlett on the subject; and that he had lost no time in forwarding his directions to that gentleman, which he did the same evening by post. Mr. Scarlett had acted with the greatest zeal in the matter, and in a manner to secure his (Lord Clarendon's) entire approbation. All the members of the Cabinet with whom (Lord Clarendon) had had an opportunity of communicating entirely agreed with him in the view he took of the case, and he felt that it was one in which no exertion should be spared on his part to secure Miss Cunninghame's release. His Lordship concluded by thanking the deputation for urging this subject upon his attention, adding, that their so doing afforded a strong indication of the interest felt in the case by all classes. The deputation, after thanking his Lordship for his courtesy and the prompt manner in which he had taken up the case, withdrew.

We append that portion of the penal code of Tuscany which applies to the case of Miss Cunninghame:

"HEAD II.—REGARDING OFFENCES AGAINST THE RELIGION OF THE STATE

"Art. 184.—Any person exciting a sedition, or even taking advantage of a tumult proceeding from another object, or having put himself at the head of the same to destroy or to alter the religion of the State in Tuscany, is punished with death.

"Art. 187, Sec. 1.—Any person attacking the religion of the State by means of public addresses, or of writings in manuscript, or printed, or of pictorial illustrations, distributed, placarded, exhibited, or otherwise brought to public notice, is punished—

"(A)—With the House of Correction for five to ten years, if his purpose have been to propagate impious doctrines, or to separate from the Catholic Church persons who have belonged to the same; and

"(B)—With from one to five years' imprisonment if his intention were only to scandalise religion.

"Sec. 2. Any person employing private instruction, or proselytising (*seduzione*), for the object contemplated under letter A of the preceding section, is subject to from three to seven years of the House of Correction

THE FRENCH EMPEROR'S PROGRESS IN THE NORTH OF FRANCE.

The Emperor and Empress of the French appear to have been well received during their progress through the northern departments. At Lille the preparations made to receive them were on the most splendid scale. A feast of colour was presented in the long line of streets leading right and left from the Grande Place, from the extraordinary number of flags and banners displayed by the inhabitants. Festoons of richly-coloured drapery stretched along the principal thoroughfares beneath the first floors of the houses on each side of the way; and at intervals along the route taken by their Imperial Majesties were triumphal arches, tastefully decorated with flowers, flags, and evergreens, the oriflamme, and the silken banners of the various trading corporations, with gigantic imperial crowns in gold and colours.

Saturday morning was devoted by the Emperor to an inspection of the principal mills and manufactures of the city. Among the immense establishments thus visited was that of Messrs. Wallaert, Frères, where the Emperor was shown threads of extraordinary fineness, spun from cotton grown in Algiers. The Emperor gave M. Wallaert the Order of the Legion of Honour—a compliment also conferred upon the principals of other large manufacturing firms.

At one o'clock there was a review of the troops upon the esplanade, just within the fortifications—the *chef d'œuvre* of the renowned Vauban. The Emperor arrived upon the field on horseback, accompanied by the Minister of War and a brilliant staff; among whom, in addition to the English officers, were several officers of high rank in the Prussian, Dutch, and Belgian armies. The Empress followed in a calèche drawn by four horses. The troops displayed a good deal of enthusiasm, and cries of "Vive l'Empereur" and "Vive l'Impératrice" resounded from the ranks.

After the review, the Emperor and Empress inspected the great industrial establishments at Roubaix and Tourcoing, manufacturing suburbs of Lille. In the evening a ball was given at the Hôtel de Ville, at which between 4000 and 5000 persons were present. A magnificent *salle* of gigantic proportions, constructed specially for the occasion, covered the entire courtyard of the Hôtel de Ville. The vast galleries of this ancient palace of the Dukes of Burgundy, which was once inhabited by Charles V., were artistically fitted up as corridors and refreshment-rooms, and the whole arrangements were of the most admirable character. Their Majesties, who arrived about ten o'clock, were attended by the Minister of War, the Grand Chamberlain of the Empire, the Grand Marshal of the Palace, and other high officers of State. The most lively curiosity was manifested to see the Empress. During the evening, their Majesties made the circuit of the *salle*. The ladies being placed upon raised tiers of seats against the walls, their Majesties proceeded by the Grand Chamberlain, followed by their suite, proceeded along the front row of benches, quite close to the ladies, while the male portion of the assembly were drawn up on the other side. The Emperor and Empress continually acknowledged the plaudits of the assembly, and appeared extremely anxious to make a favourable impression. After partaking of some refreshment, their Majesties returned to the Prefecture. The illuminations upon the esplanade of the Hôtel de Ville and other public buildings, and many of the private houses, were rich and tasteful, and the streets were filled with the inhabitants of the town, and the population of the surrounding districts.

The presence of several English officers of rank at the festivities afforded the Emperor opportunities, of which he skilfully availed himself, to testify his respect for the English nation, and the value which he attaches to the English alliance. At the grand State dinner at the Prefecture at Lille, Major-General the Hon. Augustus Liddell, the English officer of the highest rank, was placed upon the left of the Empress, the Emperor being seated on her right, and was treated with marked attention by both illustrious personages. At the Hôtel de Ville at Lille an aide-de-camp was sent to the Earl of Lucan and the renowned Worcester, who were in full military uniform, to desire that they would come and take their places upon the Imperial dais. The noble and gallant officers thereupon passed before the Emperor and Empress, who testified in the most marked manner, and apparently to the satisfaction of the immense assemblage, the value which they attached to the presence of their English visitors. The Earl of Lucan afterwards danced in the first quadrille, in which the Emperor and Empress took part.

On Sunday morning, after hearing an early mass at the church of St. Maurice, the Imperial party left Lille for St. Omer. At all the stations along the line triumphal arches were erected, and at most of them canopies of velvet and gold were erected, under which, if the rain had been favourable, the Emperor and Empress would have received the addresses of the inhabitants. But the rain fell in torrents all the morning, and only cleared up for a short time when the Royal party reached St. Omer. At the railway station their Majesties were met by the Mayor and authorities, who presented an address; and they then proceeded in a covered carriage to the camp at Helfaut, where the Emperor reviewed the troops. The rain fell in torrents during the whole of the review, which was much abridged in consequence.

On Monday morning the Emperor and Empress left St. Omer for Dunkirk. They were escorted to the station by a procession of the authorities, and attended by a detachment of cuirassiers. The weather was beautiful. The railway station was richly decorated for the occasion, and the whole population thronged to see the Imperial cortége.

After making a short stay of three or four hours in Dunkirk, their Majesties made a public entry into Calais at five o'clock. Great preparations were made here for their reception. The railway station exhibited the usual triumphal arches, festoons, flowers, and emblems; and the streets through which the cortége passed were profusely decorated with tri-coloured flags. The Emperor, on his arrival in the Grand Marché-place, was conducted to the Hôtel de Ville, where the functionaries were presented to him. At night their Majesties honoured with their presence a ball given by the city of Calais at the Salle des Concerts.

Before the Emperor left Calais he was shown over the port, and granted a considerable sum of money towards the amelioration of the condition of the Gourgan fishermen, who are in a deplorably pauperised condition. His Majesty held out hopes to the Mayor that a credit should be opened for the improvement of the port and harbour. While the Emperor was on this visit, the Empress remained at the Hôtel Dessin; where, at ten o'clock on Tuesday morning, she was waited on by a deputation of young ladies, chosen from the most respectable families of the town, who were clad in white, with violet flowers in their hair. Her Majesty addressed them with great kindness and affability.

Their Majesties soon after set out for Boulogne, accompanied for some distance on their way, by the Mayor and principal authorities of the town, and followed by a procession of the inhabitants. Triumphal arches, flags, and festoons were displayed in every village and hamlet between Calais and Boulogne. When the Emperor arrived at Boulogne, the enthusiasm of the people assumed the highest character. The coast batteries fired a salute of 101 guns, and the bells of all the churches in the town burst forth in peals. At the Porte de Calais, where the Mayor and the public functionaries awaited the arrival of the authorities, a splendid arch was prepared, to which their Majesties were conducted. The Imperial cortége then proceeded through the principal streets to the hotel of the Sous Prefecture, where about an hour afterwards the public reception took place; and the bishop and clergy, the army, the magistracy, and the English residents were presented to their Majesties. At four o'clock the Emperor and Empress left the Sous Prefecture in an open carriage, followed by their staff, to visit the Column of the Grand Army. A body of veterans of the Empire were drawn up here, some of whom had formed part of the camp of 1804, when the first Emperor contemplated the invasion of England. The view from the Grand Column, comprehending, as it does, the white cliffs of England, a fine expanse of sea, the cathedral, and the handsome edifices and houses of the upper town, were by turns pointed out by the Emperor to his consort. A new object of interest was supplied by the French steam flotilla, which could be descried on its way down the Channel to Boulogne.

At seven o'clock their Majesties entertained at dinner from fifty to sixty of the most distinguished inhabitants; and at ten they honoured with their presence a grand ball given by the town to their Majesties at the theatre. Their Majesties, who were warmly received, took part in the first dances, and afterwards walked round the *salle*. The English visitors attended in great force, and comprised many names eminent in politics, literature, and art. Among them were the Mayors of Dover, Folkestone, Hastings, Margate, and Ramsgate, and the artillery officers of Dover. An interesting feature of the ball was the presence of a deputation of the fishermowen of the port in their picturesque costume, who participated in the festivities.

On Wednesday morning the Emperor and suite proceeded in open carriages, preceded only by about a score of soldiers as a guard of honour, to view the docks and the new sluice bridge. His Majesty, who was received at the docks by the municipal authorities, was received throughout the whole route with the greatest enthusiasm; whilst the ladies in the windows of the various hotels and private houses were waving their handkerchiefs and bouquets. His Majesty returned to the sous-prefecture shortly before twelve o'clock; and about a quarter to one a discharge of artillery announced that their Majesties were about to take their departure. The train left at one o'clock, amid loud acclamations.

This has been one of the most, if not the most, enthusiastic receptions which their Majesties have received throughout their tour; and, previous to his departure, the Emperor expressed to the authorities the great gratification both himself and the Empress had derived from their visit to Boulogne.

At every town and station on the line between Boulogne and Abbeville the bells of the churches rang out their liveliest peals; flags were exhibited; and the rural population were assembled. The Emperor and Empress, on their arrival at Abbeville, were received by the authorities, who conducted them into the town. The Emperor and Empress have seen, during the last week, triumphal arches enough to span the Channel—tricoloured flags sufficient to cover the prairies of the Western States—and festoons of evergreens enough to extend from Havre to New York. Abbeville did its part in these exhibitions of loyalty, well diversified by French taste; and, after visiting the principal streets and the cathedral, their Majesties returned to the railway station, and the special train proceeded to Amiens, where it arrived about five o'clock.

The railway station at Amiens was decorated with exquisite taste. The Mayor made an address to their Majesties, and presented the Emperor with the keys of the city. The Emperor and Empress then proceeded to the Hôtel de Ville, where the Treaty of the Peace of Amiens was signed in 1802. The reception of their Majesties was hearty and enthusiastic. In the evening their Majesties attended a grand ball, given by the municipality. The public edifices and many private houses were brilliantly illuminated, and the streets were densely crowded. On Thursday the Emperor and Empress attended mass at the cathedral, admitted to be one of the finest Gothic edifices in Europe; and soon after, the Emperor and Empress set out for Paris, where they arrived safe on Thursday evening, highly gratified and delighted with their northern tour.

MEETING OF THE EMPERORS OF RUSSIA AND AUSTRIA.

OLMUTZ, Sept. 25

The Emperor of Russia arrived here last night at six o'clock (the Emperor of Austria having gone to meet him), and at that hour the whole of the two Courts, with all the higher officers of the Austrian army, were assembled, and followed the Imperial cortège into Olmütz, and to the residence of the Archbishop, where the quarters of the Sovereigns are, being illuminated and decorated with garlands and devices. In front of the Palace stood the guard of honour, composed of medal-bearing veterans of the Austrian regiment of the Emperor Nicholas, and here took place one of those acts of fraternisation which the Emperor of Russia employs with such consummate tact, with a view to producing a favourable impression on the Austrians.

When the first bars of the serenade were got through, the Emperor Nicholas placed himself at the head of the guard of honour, and as he marched passed saluted the Emperor of Austria in the capacity of a comrade of the veterans and a holder of a regimental command under the Sovereign of Austria. Loud applause followed from the spectators as the Emperors publicly kissed each other, and then the Court dinner followed, the two Emperors spending the evening together in undisturbed privacy, the Prince of Prussia and most of the generals having gone to the theatre.

This was the grand field-day, and all the camp was early afoot. 45,700 men, with 126 guns, being encamped on the great plain of Olmütz, a couple of miles from the town, were disposed for divine service, and parade afterwards. At midday the whole mass of troops formed a long parallelogram, in three ranks, under the command of General Wratislaw, and under him were General Count Clam Gallas, General Count Schlick, the General Count Schaffgotsche, General Hauslap, and General Prince Lichtenstein.

The staffs of the Emperors were splendidly brilliant, comprising a great many Imperial and Royal personages, and upwards of sixty generals, headed by the hoary and respected Marshal Nugent. The Emperor of Austria wore a white factory, with the light blue ribband of the Order of St. Andrew of Russia, and looked quite in the prime of youth. The Emperor Nicholas, who is gradually getting stouter as years roll over him, wore the Cuirassier uniform of his Austrian regiment; but, with his usual breastful of stars and orders, gigantic stature, has lost none of that imposing appearance which most know him to possess.

The imperial cortége, in which the scarlet uniform of Lord Westmorland was prominent, then rode along the camp and down the columns to the right flank, when a salute was fired covered with a tent, where priests stood to perform the functions of mass. Opposite to this, the Emperor of Austria heard mass, the Emperor of Russia being on his right hand kneeling, making the sign of the cross, and apparently joining in the divine service. The Emperor Nicholas stood behind, as a spectator, but did not kneel. The elevation of the host was telegraphed to the most distant battalions, so that the whole army might simultaneously join in this rite of the Roman Catholic Church, and, instead of an organ, the anthem was played with astonishing precision and unity by the 30 bands united, so as to be one of the most pompous religious solemnities of the Roman Catholic church that can be conceived.

Divine service was followed by *Kirchen parade*, when the whole army defiled before the two Sovereigns. Each general led his own *corps d'armée*, and each colonel his own regiment.

Prince Windischgratz and the Ban Jellachich also figured as colonels, and in the Imperial cortège the brother of the Emperor, his Bavarian brother-in-law, and several Archdukes.

When the Prince of Prussia, as colonel of his Austrian regiment, rode past, and then joined the cortège, the two Emperors rode a little forward to do courtesy. The veteran Paskewitch, as colonel, also led his regiment, and appeared to be complimented by the Austrian Emperor.

The *defilé* lasted full three hours, the Emperor Francis-Joseph acting as nomenclator to his Imperial ally, who sat his horse and enjoyed his favourite spectacle with manifest gusto. The scene was highly interesting as the old tattered flags that had stood the battle and the breeze from Leipsic and Gemappe to Temeswar were carried past, and, as the sound of one flag was dying away in the distance, the trumpet tones of another coming on awoke the echoes.

The town of Olmutz is greatly crowded.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rectories:* The Rev. F. Barclay, to Bideford, Devon; the Rev. R. H. K. Buck, to Dowlish, Cornwall; the Rev. G. P. Casserat, to Drinkstone, Suffolk; the Rev. T. Jones, to White Roding, near Chipping Ongar, Essex; the Rev. A. J. Ryspon, to Ryndon, near Basildon, Essex; the Rev. J. Blackburn, to Newport, Isle of Wight: the Rev. W. S. Austin, to Bentley, near Colchester; the Rev. T. G. Onslow, to Catmore, near Wantage; the Rev. J. Ford, to Somerton, Suffolk; the Rev. F. C. Twemlow, to Forton, near Newport, Staffordshire. *Vicarages:* The Rev. E. S. T. Daunt, to St. Stephen's, by Launceston, Cornwall; the Rev. T. F. Salmon, to Waldershare, with Whitfield or Bennenden annexed, Kent; the Hon. and Rev. T. C. Skeffington, to Cotterstock, with Glapthorn annexed, near Oundle; the Rev. J. Chapman, to Arnesby, near Leicester. *Incumbencies:* The Rev. W. Seaton, to Christ Church, Leigh, Lancashire; the Rev. H. Gale, to the new church at Studley, Salisbury.—The Rev. J. Russell, to the stipendiary curacy of St. Stephen's, Willenhall, Staffordshire.

THE BISHOPRIC OF SYDNEY.—The Duke of Newcastle has offered this valuable appointment (which has been vacant since last February) to the Rev. T. H. Davies, Archdeacon of Melbourne, who is at present in England. The rev. gentleman has declined it.

NEW BISHOPRIC IN AUSTRALIA.—Dr. Short, Bishop of Adelaide, who is at present in England, has obtained the sanction of her Majesty's Government to the sub-division of his diocese; and to the creation of a bishopric of Perth, Western Australia. Miss Burdett Coutts has promised a large sum of money towards the creation and endowment of the new see.

THE CHANCELLOR OF THE EXCHEQUER IN THE NORTH.—On Tuesday Mr. Gladstone was presented with the freedom of the ancient burgh of Dingwall—by the Provost, Sir James Matheson, Bart.—as "the supporter of liberal economical principles, and as one of the most enlightened statesmen and financiers who has ever taken part in the public affairs of this great empire." The right hon. gentleman returned his thanks for the honour done him.—The Chancellor arrived at Inverness at five o'clock, and at once went to the Court-house, when he was admitted a burgess of that corporation. He again returned thanks for the honour: and, among other remarks, said, with reference to the present crisis—"You well know that causes are in operation that threaten the peace of Europe. I trust you also know, and are well persuaded, that the most anxious efforts of the British Government have been directed towards the maintenance of general peace, and the protection of those who want strength to protect themselves. (Cheers).

CALENDAR FOR THE WEEK.

SUNDAY, October 2.—Nineteenth Sunday after Trinity.
MONDAY, 3.—Old St. Matthew. King's College opened, 1831.
TUESDAY, 4.—Sir John Rennie died, 1821.
WEDNESDAY, 5.—Horace Walpole born, 1717.
THURSDAY, 6.—Louis Philippe, late King of the French, born, 1773.
FRIDAY, 7. Christophe King of Hayti, died, 1820.
SATURDAY, 8.—Eddystone Lighthouse finished, 1755.

HIGH WATER AT LONDON-BRIDGE,

FOR THE WEEK ENDING OCTOBER 8.

TO CORRESPONDENTS.

GLASS WALLS.—Mr. Ewing, who requests us to reprint the description of his patent Glass Walls, which has appeared in most of the London journals within the last ten days, is referred to the ILLUSTRATED LONDON NEWS for August 28, 1852, where he will find the above account, verbatim, with the advantage of an illustrative engraving. Had the source been acknowledged by our contemporaries, we should have received the quotation as an unnecessary compliment.

W. BROWN.—The charge for an advertisement of four lines is 2s.

J. C. T.—We understand the dropping keel of the *Sirdr*, to be a centre-board in two pieces, one falling from the other like a telescope.

AN OLD SUBSCRIBER, Hartlip.—We are unable to give the exact number of surface feet of canvas in the sails of the respective yachts, *Julia*, *Sirdr*, and *Aurora Borealis*, nor the minute measurements he wishes, of the hull, &c., but the dimension of the spars, which we have published, will with a little calculation afford pretty nearly the information he requires about the sails.

HYPO-SULPHITE. The questions asked relative to Mr. Talbot's reserved patent, involve some very nice legal points, which we cannot venture to discuss. It is doubtful if Mr. Talbot's patent embraces the collodion process at all.

AN OLD CORRESPONDENT had better consult a dealer in pictures. We cannot answer for the originality of his "Parmegianino."

PHILIP AUGUSTUS, Liverpool.—We cannot inform you.

T. F.—We have not room for the Sylvie sketches.

E. D. A. N.—A letter addressed to the principal officer of the University of France, in Paris, will obtain the desired information.

A CONSTANT SUBSCRIBER.—An illegitimate child can adopt any name, either that of the father or the mother.

Z. K. G.—We do not think that the privilege is ever accorded by the Horse Guards.

HENRI DE H.—John Webb, Esq., was sometimes designated "Kellowe."

F. N. S., Wisbeach. Definitions of the terms in question will be found in "Webster's English Dictionary." See "Short Short-hand," lately published.

A CONSTANT READER.—The wife of a nobleman's son is equally entitled, with her husband, to the prefix of "Honourable."

J. N. S.—Arms of Lynch: "Az. a chev. between three trefoils slipped or. Crest: A fox passant as collared or."

C. K. P., Rose.—1. Before registering a pedigree in the College Books, the Heralds require positive evidence of each descent. Of late years nothing can be more correct or conscientiously done than these registrations. When a pedigree is prepared, with all the necessary evidence, the documents are referred by the Chapter of Heralds to two of their body, who minutely investigate each point, and finally report their opinion, which, if favourable, enables the party to have the pedigree entered on the college books. 2. A pedigree may be registered without reference to the arms. 3. The official charge for registering is not heavy, but the expenses attending the acquisition of proof are often very great. 4. M. L, "Monumental Inscription."

C. W. L.—Adam de Welles was summoned to Parliament, as a Baron, *temp.* Edward I.; and the Peerage remained with the family of Welles until 1461, when Sir Leo Welles, sixth Lord, was slain at Towton Field and attainted. His sons were Richard Welles Lord Willoughby, beheaded in 1469; and John Welles, created Viscount Welles *temp.* Henry VII.

ALPHA.—We cannot trace the right of the name of Sargood to arms.

R. P.—A Marquis's proper designation is "Most Honourable."

T. W.—It is not in good taste to add the husband's military rank to the name of his wife. "Mrs. General Smith," "Mrs. Colonel Brown," though commonly adopted designations, are not correct.

Z. Z.—The intrusion of hens and chickens damaging your ground, as well as the hideous noise of Cochin-China cocks destroying the sleep of the neighbours, are actionable as nuisances.

DELTA.—It would be no easy task to ascertain and identify the arms of Smith! Our correspondent must give more particular data. The Smyths of Heath, near Wakefield, in the West Riding, an ancient family there, bear "Arg. on a bend between two unicorns' heads, couped az., three lozenges or." Their crest is a "unicorn's head erased az.;" and their motto, "Nec timeo nec sperno."

G. G.—The arms of Heyes, granted August 2nd, 1683, are "Arg. on a chev. az. between three snakes heads erect and erased vert, as many besants." "*Crest:* A snake's head erect and erased vert, ducally gorged or."

CURIOSITY.—The motto is "Inebranlable."

THE ENGLISH SONGS AND MELODIES, by CHARLES MACKAY and SIR H. R. BISHOP.—In answer to "C. T. A.," and numerous Correspondents, we beg to state that this series is not completed, and that the publication will be resumed at an early period.

Next week we shall illustrate, with several Engravings (from Sketches by our own Artists) the Visit of the Emperor and Empress to the North of France.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, OCTOBER 1, 1853.

EVENTS march forward in the East just as we have long been prepared to expect they would. The features of the impending crisis become day by day more strongly defined, more terribly real. Those who, in the interests of humanity, have long clung to the hope of some fortunate change in the symptoms of the case occurring, which might avert the dire calamities of war, at length begin to feel that it is but hoping against hope; and that the ambitious pretensions of Russia, and the attitude which she has assumed in supporting them, make up a position which all the arts and resources of diplomacy are insufficient to meet. When we assert this, we do not mean to say that war is now actually imminent; nor, indeed, that it is much nearer than it was thought to be three months ago. On the contrary, we may succeed in staving off the difficulty for months—perhaps till next spring, as we have dallied with it ever since last spring; but if we do, it will simply be because it suits the views of Russia to permit it. Russia has done enough for a first campaign, and done it cleverly and cheaply. She began by taking up a position in the Principalities; and, whilst the Porte and the Governments of Europe have been exchanging useless notes with her upon all the sundry matters in dispute, which were the pretended ground for that proceeding, she has been daily sending in additional troops, until her army of occupation now amounts to 250,000 men. This fact speaks for itself, and plainly shows that, however Count Nesselrode may amuse himself and the world by criticising the terms of this note or the other, the sword, and not the pen, is the weapon which his Imperial master is determined ultimately to resort to for the settlement of the question.

On the other hand, the Turkish people are becoming daily more enthusiastic in their cause (more "fanatical" is the term applied by some of the press, to a whole nation preparing to defend their country against the attacks and inroads of an insolent and unscrupulous neighbour); and the Ulemas, or head law authorities of the empire, have presented a strong memorial to the Sultan, calling upon him, without further delay, to declare war, or to conclude an honourable peace—with the third alternative, according to some accounts, of abdicating the throne. Half a century ago, in the time of the janissaries, and the thousand intriguing factions which they wielded, such a demonstration would have been tantamount to a sentence of death, and the signal for a sanguinary revolution; as it is, thanks to the improved order of things established within the last two reigns, and the firmness of the Turkish Government, sustained by the moral influence of the representatives of France and England, this terrible result has not taken place. Still, however, the Divan has deemed it right, upon the representations of the British and French Ambassadors, to issue a firman for the advance of four vessels of the line from the combined fleets at Besika Bay to the waters of the Bosphorus; and it is not improbable that the whole of the ships composing those fleets may speedily follow—if, indeed, they have not already done so. The motive with which this step has been taken is a point upon which the politicians of Paris and London are not at all agreed—some looking upon it as a measure of prudence to guard against popular outbreak in Constantinople itself; others denying the existence of any occasion for such a precaution, and asserting that it is intended as a demonstration against Russia, and an indication of the policy which the two Governments are now prepared to carry out, should all their efforts towards an amicable adjustment of the long-pending difficulty fail. Perhaps the real truth may partake of both versions; but, whichever way it be, there can be no doubt of the significance of the event itself, which virtually is an act in violation of the treaty of 1841—just as much so as the Russian invasion of the Principalities was in violation of the treaty of Adrianople—both being acts of war. Thus, if nothing else result from this movement, a "similarity" will have been established by it between the two parties, which Lord Clarendon stated, and stated very truly, did not exist before; and upon equal ground the rest of this difficult problem will have to be worked out.

We quite agree with Lord Palmerston that there is no portion of the people of this great Empire, whose approbation a statesman has more reason to be proud of than the approbation of the people of Glasgow and the other towns of Scotland. Education is there more diffused than in any other part of the empire, and the people are habitually cautious in forming and expressing a judgment. It must, therefore, as he said, be highly gratifying to the noble Lord, and it does honour to the Cabinet to which he belongs, that the citizens of Perth and Glasgow have received him with great applause, and have conferred on him the freedom of both cities. A similar honour was a few days ago conferred on Lord John Russell, at Greenock. A similar honour, too, has been conferred on Mr. Gladstone, at Edinburgh. The members of the present Cabinet, therefore, stand high in the good opinion of the people of Scotland. At Perth, Lord Palmerston, who is the very highest authority on questions of foreign policy, and who is now particularly acceptable to the nation, on account of the independent spirit he always exhibited in the Foreign Office, bore a testimony to Lord Clarendon's abilities which will be very satisfactory to the country. Lord Palmerston, we trust, would not remain in a Cabinet which sacrificed the national honour; and we derive pleasure from his assurance that the present Foreign Secretary "now ably performs his duties." He has penetration to see where the interests, and the honour, and the safety of the country are to be sought—sagacity to discover the proper means for maintaining those interests—and firmness, and energy, and perseverance to pursue the right course, and to arrive at a successful result."

But that is not all the instruction and satisfaction we derive from the noble Viscount's speeches at Perth and Glasgow. Being at present Secretary for the Home Department, he requires information from all parts of the country. As Foreign Secretary, his own agents supplied him with information he required; but now, with a modesty quite unexpected in him, he throws himself on the people, to increase his knowledge, and to suggest the course which would benefit them. "A minister of state has no better eyes, and can see no further, than his neighbours," he said at Perth. "His ears are not like those of Dionysius, the Sicilian, and they can hear very little of what comes from a distance; but his countrymen have eyes to see, and ears to hear, and tongues to speak, and pens to write; and if those who see and hear things that are going wrong will have the goodness to communicate to that officer whose duty it is, and who may have the power of setting these things right, they will be conferring a great favour on the man in office, and will be doing a great benefit to the country at large." He repeated the declaration at Glasgow. "I can only say, in regard to the department which is now committed to my charge, that I shall always be thankful to any one who may suggest improvements, pointing out what may in their opinion be wrong, and enabling me to set that which is wrong right." When a Minister throws himself so cordially on the people, and professes—as almost all Ministers now profess—a deference to them, it will be their own fault if Government does not act in accordance with the views which they take of the public interest. Lord Palmerston's appeal to the people for information, marks a great change in society, and a great improvement in public men. We remember when the height of ministerial wisdom consisted in disregarding the "swinish multitude," and treating the people as if they required to be continually coerced into unresisting submission. In his speech, too, the noble Lord marked another great improvement in public men. "There was a time," he said, "when it was the fashion for public men to say, 'show me a proved abuse, and I will do my best to correct it.' Man now say, 'show me a practical improvement, and I will do my best to realise it.'" The Minister who first professed the former opinion was the lamented Sir Robert Peel; and before his time it was the fashion for all Tories and most public men to deny the existence of abuses, and maintain that every part of the Constitution and of the public Administration was perfect. The first change was to admit of the existence of abuses, and propose to remedy them when pointed out. Now we have gone a step further; and statesmen propose not only to get rid of abuses, but proclaim that it is their duty to introduce every needful improvement. It was in this spirit that Lord Palmerston threw himself on the people for information and assistance. They are asked to inform the Government. They are called on to point out the political changes which will benefit the country, and Lord Palmerston will endeavour to give effect to them. If he invites suggestions, he also throws on the people great responsibility in making them. By common consent, Government, including legislation, is considered the most difficult of arts; the Parliament, and our successive Ministries, though animated, we believe, by the best intention, have not been eminently successful in practising it, and therefore it becomes the people to be very cautious in proposing new laws. Some of the enactments of modern times—even some of those which have been longest considered and most approved of—have in the end turned out failures. Nor is this when we consider the vast extent and the complicated nature of society, and how intimately every part is connected with every other, at all surprising; but it is well calculated to increase our caution in urging recommendations that will influence the mind of a Cabinet Minister. Lord Palmerston, like a true representative of the people, in a popular constitution such as ours, professes to administer the public affairs by the help of the people, and for their benefit; and on them, accordingly, is thrown the great responsibility of ensuring good government at present, and also of securing to posterity the means of commanding good government. Lord Palmerston declares that knowledge and power rest with the people; and if the public affairs be not well administered, the fault will be theirs.

THE COURT.

There has been nothing to diversify the ordinary routine of Court life at Balmoral, during the past week. The Prince Consort has enjoyed his sport of deer-stalking almost daily, generally accompanied by Count Alexander Mensdorff; and her Majesty has taken carriage and walking exercise as frequently as the weather would permit. The young Princes Arthur and Leopold are in the enjoyment of the best health at Osborne, attended by Lady Caroline Barrington, and one of our Majesty's Grooms in Waiting, and will join their illustrious parents on the return of the Sovereign from her Highland palace.

On Thursday, the 22nd ult., the Queen and the Prince proceed to the shiel of Ault na Guibach, where they remained for the night, returning to Balmoral on Friday; on the evening of which day Sir and Lady Augustus Dutton had the honour of dining with her Majesty.

On Saturday her Majesty drove to the Balloch Buie, accompanied by the Princess Royal and the Princess Alice. In the evening the Duchess of Kent and Count Alexander Mensdorff joined the Royal dinner party.

On Sunday her Majesty and his Royal Highness Prince Albert attended divine service in the parish church of Crathie. The service was performed by the Rev. Dr. Lee, of Greyfriars, Edinburgh. Her Majesty and his Royal Highness dined at Abergeldie in the evening, with her Royal Highness the Duchess of Kent.

On Monday the woods of Balmoral were driven for deer. The shooting party consisted of his Royal Highness the Prince, Count Alexander Mensdorff, and Lieut.-Colonel the Hon. A. Gordon. Her Majesty the Queen, the Prince of Wales, and Prince Alfred, were present during the drive.

Lord John Russell has relieved Viscount Palmerston as the Minister of State in attendance upon her Majesty.

It is now understood that the Court will return to Windsor Castle on the 18th of October.

Her Imperial Highness the Grand Duchess Marie of Russia, has deferred her departure from England for a few weeks.

The Countess de Neuilly, who, with the Prince and Princess de Joinville, left England on Saturday last, for Lisbon, has returned to Claremont. The stormy weather in the Channel had so serious an effect on the ex-Queen's health, that it was deemed advisable to put into Plymouth, where the Countess and suite landed on Saturday last.

The Duke and Duchess of Athol have been entertaining a large party at Blair Castle, near Dunkeld, to meet their Royal Highnesses the Hereditary Grand Duke and Duchess of Mecklenburgh-Strelitz. A grand stag-hunt took place in the Forest of Glentilt, on Thursday.

The Earl and Countess of Yarborough and Lady Sophia Pelham arrived in town, on Wednesday, from a Continental tour.

The funeral of the late lamented Earl Brownlow took place at Belton, near Grantham, on Tuesday last. The remains lay in state on the previous day at Belton Hall.

Lord and Lady Bloomfield have arrived at Patterson's Hotel, from the Embassy, Berlin.

NAVAL AND MILITARY INTELLIGENCE.

PORTSMOUTH.—Her Majesty's yacht *Victoria and Albert* is still being dismantled; but it is now discovered that, even if lengthened the sixty-three feet ordered, the requisite accommodation will not be obtained. This was found on a consultation over the plans for alteration, which were inspected on Tuesday morning at the master shipwright's office, by a committee of officers, &c. The order has since been given to go on with the intended improvements.

PLYMOUTH.—The *Leander*, 50, Captain G. St. Vincent King, is making every preparation for immediate departure. About fifty of her crew are yet on leave of absence. Forty first-class boys have been drafted from the *Impregnable* to the *Leander* for service in the Mediterranean.

PEMBROKE.—The Lords of the Admiralty, during their recent visit, minutely inspected the *Conway*, which was unbolted and moored off the yard. Her sheer and lines are quite perfect, and no less than 300 men made. She will immediately be moved from the Pembroke Dock. The *Pique* frigate has been almost re-built, she will be classed as a 36-gun frigate, in lieu of her former rating of 38 guns, and will be put into the service complete. The following new ships are now in various of building, here, viz.: the *Victoria*, 116 guns; *Royals*, 91 guns; *Ascension*, 91 guns; *Impregnable*, of 60 guns; *Magnificent*, of 60 guns; *Nile*, of 50 guns; *Aurora*, of 26 guns; *Curacoa*, of 26 guns; *Falcon*, of 16 guns; *Harrier*, *Ariel*, of 8 guns; and *Swallow*, of 8 guns. This force comprises 3 sail of the line, 5 frigates, and 4 sloops, &c.; of which seven will receive auxiliary power. Some of these are in a very advanced state, and could be launched in a short space of time.

QUEENSTOWN, Sept. 25.—The *Hogue*, 58, Captain Ramsay, joined the fleet in this harbour to-day from Kingstown, making the force assembled here eighteen sail of men-of-war. Courts-martials are ordered for to-morrow and Tuesday on board the *Queen*; and on Wednesday the Lords of the Admiralty have ordered the whole fleet to sea with their Lordships on board, who propose witnessing some trials of sailing, weather permitting. It is reported the fleet will remain out three weeks, and then return to a general rendezvous at Spithead. Such, at present, are the Admiralty orders.

GOVERNOR OF GREENWICH HOSPITAL.—The Earl of Aberdeen, in a highly complimentary note, has conferred the appointment of Governor of Greenwich Hospital, vacant by the death of Admiral Sir Charles Adam, upon Sir James Alexander Gordon, K.C.B., the present Lieutenant-Governor of that establishment. The gallant officer will therefore be forthwith gazetted as Governor, taking, at the same time, his proper rank of Vice-Admiral of the Red.

THE BREVET.—We have authority to state that a brevet upon the 9th of November (Prince of Wales's birthday), is positively certain, but the precise extent of the promotion is kept a strict secret at the Horse Guards and War-office. *Limerick Chronicle.*

THE STATE PRISON OF THE TOWER.—Amongst other alterations now going on at the Tower is that of this ancient keep for prisoners. It has for many years been used as a mess-house for the officers of the garrison, but in about three weeks it will be thrown open to the public, and cannot fail of being a great object of interest. The walls still retain upon them the names written by many of its former occupants among whom were Wallace, the Scottish hero, also the unfortunate Anne Boleyne.

FORTIFICATIONS OF DOVER.—The works at the citadel, western heights, will soon be commenced, the Board of Ordnance having accepted the tender of a gentleman from Woolwich. There are extensive works going on also at the castle, which, with those in progress at Hythe and Deal, will give employment to a great number of our artizans and labourers throughout the ensuing winter.

LATEST INTELLIGENCE.

THE EASTERN QUESTION.

Letters from Constantinople of the 16th ult. announce that a Cabinet Council, at which the Sultan presided in person, was held after the Fête of the Bairam. At that Council there were only four personages, exclusive of the Sultan, namely, the Grand Vizier, Redschid Pacha, Mehemet Ali Pacha, and the Chief of the Religion, Scheik ul-Islam. The object of their deliberations, or the resolutions, if any, which they adopted, were not known, though the meeting of these great dignitaries was regarded as of considerable importance. The most trustworthy accounts from Constantinople concur in stating that the city was never more tranquil; that the Christian population mingled as freely as ever in the crowds which thronged the streets on the Fête of the Bairam; and that, so far from experiencing any molestation from the Musulmans, they were treated with unusual deference.

It is expected in Paris that, however the present difficulties may terminate, a Convention will be the result, which will have for its object to put a stop to the aggressive violence of Russia. It seems to be admitted very generally that the term of patience and confidence in her good faith is at an end, and that the moment has at last come for energetic action.

The Turkish Government is believed to have received fresh assurances of support from both England and France, and to be convinced that its conduct in accepting the Vienna note with modifications, is now, since the last note of M. de Nesselrode, fully justified and approved by her allies.

The Paris correspondent of the *Chronicle* writes:—Intelligence has arrived in Paris from Constantinople, to the 10th ult., *viâ* Trieste. It states that the war party and the peace party in the Divan had become reconciled—the former apparently having succeeded in getting their views adopted. The refusal of Russia was generally known, and the Porte still persisted in its modifications in the Vienna note. The armaments, which for a short period had seemed to slacken, when there appeared a probability of an amicable arrangement, had recommenced with redoubled activity. A quarantine has been established against all vessels arriving from Odessa, under pretext that the cholera might be introduced from that quarter; but this step was considered by the public as a measure of precaution against Russian vessels. Further, a sanitary cordon had been established in the direction of Widdin. This measure being intended, it was supposed, as a precaution against the Russian troops, who seemed of late to have been advancing towards the point. This intelligence of the 10th says nothing of the entrance, up to that date, of the rest of the combined squadrons.

A letter from Erzeroum, of the 27th ult., announces the arrival in that city of an extraordinary courier from Teheran, with despatches for Constantinople. It was stated as certain that Persia had placed at the disposal of the Sultan a corps of 6000 of her best troops. This step is the more important, as the Cabinet of St. Petersburg has employed every means to isolate Persia from Turkey.

Accounts from Odessa state that, owing to the incessant arrivals of wheat in immense quantities from the interior, prices have gone down very considerably. The magazines do not suffice to contain the supplies. Prince Menschikoff held a grand review of the fleet a few days ago. It numbers fifty vessels, reckoning all above the size of a gun-boat. A number of Greek sailors have been enrolled. The army corps of General Luders has received considerable reinforcements. Very many regiments are cantoned on the Dniester, and Bessarabia swarms with troops. The cholera has broken out in a very decided manner, and makes numerous victims. A five days' quarantine has been established. Several armed schooners and gun-boats are coming from Sebastopol to take up a position on the Danube, and a new levy of the Don Cossacks is announced. The recruiting which is in course of execution in the southern provinces of Russia was never carried out so rigorously as at present. Instead of seven, the rate is now ten men in a thousand. Parents are held responsible for the flight of their sons.

In the Danubian Principalities, the Russian soldiers are deserting in great numbers, but most of the fugitives are captured, as the line of the Danube is strongly guarded. Most of them expiate the offence by death. Some of the officers have been shot as a measure of discipline. The arrests, and the intercessions of the most influential persons prove of no avail.

Complaints of certain losses of property, which Austrian subjects have suffered on Turkish soil, are still pouring in upon the Austrian Embassy at Constantinople. The indemnities demanded by Austrian subjects represent a very large sum. M. de Bruck has the most energetic instructions on this subject, and the Divan may expect peremptory demands on his part, which will be even more exorbitant than the demands preferred by Count Leiningen.

The Turks are concentrating an army of 100,000 men on the frontiers of Persia. The Persian and Ottoman soldiers fraternize, and large numbers of refugees, Hungarians and Italians, have joined the army.

FRANCE

It is announced that Prince Napoleon is indisposed. It is said that the Prince was indisposed on leaving Paris for the camp of Helfaut. During the review on Sunday, he suffered severely from the heavy rain; and, on his return to Paris, he was attacked with inflammatory fever. As yet, however, his position causes no uneasiness to his friends.

The French Government has requested that of Austria to furnish it with all the documents relative to the mode of supply of provisions at Vienna.

The Bourse was more than ordinarily agitated on Wednesday, and there were numerous fluctuations, according as favourable or unfavourable reports prevailed. The Three per Cents opened at 75f. and rose to 75f. 15c. on a report that the Northern powers had made no objection to the passage of a portion of the English and French fleets through the Dardanelles. A species of panic subsequently arose, in consequence of various alarming reports, among which the most serious was that M. de Kisseleff, the Russian Minister in Paris, had demanded his passports. There was no foundation for this rumour. The Three per Cents, however, fell to 74f. 10c., at which they closed for the end of the month; the Four-and-a-Half per Cents closed at 100f. 10c.

The *Siècle* states that more than 800 Poles have inscribed their names at the Turkish Embassy in Paris, with the offer of their services in the event of a war between the Porte and Russia.

It was rumoured at the Bourse on Thursday that the French Government had received intelligence from Olmutz of the Emperor of Russia having retracted the interpretation which he had put upon the note of the Conference of Vienna, and that the King of Prussia had expressed strong disapprobation of the note of Count Nesselrode on the modifications proposed by the Porte. No authority was given for these statements; but they appear to have produced some effect. The Three per Cents rose about ½ per cent.

SPAIN

A despatch from Madrid says:—

The Madrid *Gazette* announces that the question of Marshal Narvaez has been solved; the Marshal may return to Spain when he thinks proper. The new military organization will comprise, it is said, the nomination of several Generals who had formed part of the moderate Opposition.

AUSTRALIA.

The *Marlborough* has arrived with 72,000 ounces of gold, valued at £288,000. Her dates from Port Phillip reach to the 4th of July, this vessel having arrived off the Lizard in 82 days, and thus she was a month later than those previously to hand. She brings advices of an important character, and increases the serious anticipations entertained regarding the probable fate of the consignments lately made from this country to the colony. The import market for goods was already overstocked, and a vast proportion of those which consisted of unsuitable articles were apparently being sacrificed at auction at little more than nominal prices. With respect to provisions, a similar state of affairs seems to have approached. Sales that had been made of malt liquors to arrive had been disowned by the purchasers on various pretexts; while, as regards flour, it is said there were 50,000 barrels in the port, a great portion of which, according to some accounts, would be shipped to England. The *Fayle*, which was to sail about the beginning of July, is said to be bringing over 6000 barrels, at a freight of about 8s. per barrel. Three hundred ships, with cargoes on board, were lying in the harbour, and meanwhile the charge for lighterage was becoming more extortionate—56s. per ton being demanded for free, and 40s. to 45s. for bonded goods.

The revenue of Victoria for the quarter just ended again showed an extraordinary augmentation, and the amount of gold shipped from Port Phill p alone from the 1st of January to the 27th of June, valued at £4 per ounce, was £5,400,000. The price of gold was 77s. 6d. per ounce, and the rate of exchange on London was 2 premium, with an expectation that it might advance to 4 premium. Just before the departure of the *Marlborough*, the Union Bank of Australia had given notice of a robbery, which had caused great excitement. It appears that a case of notes forms belonging to the bank had been stolen from a vessel in Hobson's Bay, and put into circulation with false signatures. The forms comprised 13,000 of £1 each, 4000 of £5, 1000 of £50, and an unspecified number of £10 and £20 each. The *Cleopatra* steamer was to leave Port Phillip for Liverpool on the 27th of July, and the *Great Britain* some time during the same month. The *Marlborough* has brought sixty passengers and a heavy mail.

Rents are very high. A moderate-sized store lets readily at £2000 per annum, a respectable family house at £700, a four-roomed cottage at £100 to £200.

The cry is still for emigrants, but only for such as will work. Carpenters earn easily 20s. to 28s. per day, and bricklayers nearly as much; and any man may make 10s. per day on the road.

INAUGURATION OF THE SHERIFFS.—On Friday morning, according to annual custom, the Lord Mayor, accompanied by the Recorder and the Court of Aldermen, proceeded in state to Westminster-hall, for the purpose of presenting the new Sheriffs to the Cursitor Baron (the Right Hon. Mr. George Bramley, M.P., for the city of Bristol, one of Her Majesty's Counsel learned in the Court of Exchequer, the Cursitor Baron took his seat on the Bench. The Recorder then presented the Sheriffs. The Cursitor Baron signified the approval of her Majesty of the choice of the gentlemen presented by the citizens of London to fill the important offices of Sheriff of London and Middlesex. The usual ceremonies having been gone through, the Recorder invited the learned Baron to a dinner to be given by them in the evening at the London Tavern; after which the Lord Mayor, Aldermen, and civic cortège retired.

RECEIPT AND POSTAGE-STAMPS.—Some misapprehension existing as regards the receipts for the payment of money over 40s. the Inland Board of Revenue has issued the following:—"Notice is therefore given, that postage-stamps (the produce of which is part of the revenue of the Post-office) cannot be used for receipts, nor duties which are part of the revenue of stamps. Stamps on paper, similar to those now in use, and adhesive stamps are provided, the latter differing in design and colour from the postage stamps, and these must be used for receipts. If a postage-stamp were affixed to a receipt, the document would be in point of law wholly unstamped, and would expose the person giving it to a penalty. Under the same erroneous view of the matter it might be supposed that an adhesive receipt-stamp could be used for letters in payment of postage, but any such letter would be charged, or would not be forwarded. It should, therefore, be distinctly understood that stamps will be wholly inapplicable to receipts, and receipt stamps to the purpose of letters.—By order of the Board, THOMAS KEOGH, Secretary, Inland Revenue, Somerset-house, September 19, 1853."

DISTANCE-TABLES FOR HACKNEY-CARRIAGES.—On Thursday the distance-tables, compiled by the Commissioners of Police from actual admeasurement of the metropolis, were struck out of the hackney-carriage standings. Each table gives the exact distance in miles, furlongs, and yards from the particular standing to all parts of the metropolis and suburbs within the four miles radius from charing-cross, and the amount to be paid. To day (Saturday) the police attendants on hackney-carriages, &c. standings commence their duties.

THE EX-ROYAL FAMILY.—DOVER, Sept. 28.—Queen Amelie, with the Prince and Princess de Joinville, their family, and a numerous suite, arrived here, for Ostend. On the Queen's arrival, it was, and still is, blowing hard, the Royal party have, therefore, determined on sleeping at Birmingham's Royal Ship Hotel. The Prince Victor de Carignan, Grand Marshal of the Tyrol, has arrived, with his Princess, at the same hotel, from Germany.

BANQUET TO EARL DERBY.—The Mayor of Liverpool, Mr. S. Holme, will entertain the Earl of Derby and a distinguished party at a grand (private) banquet, in the Town-hall, Liverpool, on Wednesday next.

JOHN MITCHEL, THE EXILE.—Letters from Adelaide state that this exile has effected his escape from the island, being the fourth prisoner that has escaped. It is said that he is on his way to America, to join his companions already there.

COMMAND OF THE ARMY IN IRELAND.—According to the *Imperial Chronicle*, the Duke of Cambridge is to succeed to the command in Ireland, and the Earl of Cardigan is to be the Inspector-General of Cavalry. "This implies that the brevet will take in more colonels to be major-generals than was at first surmised."

GREAT CONFLAGRATION.—DESTRUCTION OF MESSRS. SAVILLE AND EDWARDS'S PUBLISHING ESTABLISHMENT.—On Friday, about four a.m., one of the most extensive fires, involving the loss of thousands of pounds' worth of property, and a serious damage to many dwelling houses broke out on the premises of Messrs. Saville and Edwards, Chandos-street, Strand. These extensive premises were situated at the back of the Strand, Bedford-street, Chandos-street, and Adam-street, and it appears that the flame were first seen to be spreading forth from the fourth floor, used as composing rooms. Not a moment was lost by the police in sending to the Chandos-street Fire Station, when the engines were quickly in a few minutes were on the spot. The New River turncock opened the water-mains, and the engines were set to work by the police and bystanders. This assistance was not equal to what was required, and speedily the horizon was illuminated for miles round the metropolis, which brought about ten engines from the fire-brigade stations. As these powerful engines arrived, Mr. Superintendent Pearce with Inspectors Dodd and Mackenzie, of the F division of police, sent every available officer to assist till auxiliaries arrived; and the engines being placed in the most commanding positions, torrents of water were thrown on the burning mass, but for nearly an hour the property of Messrs. Saville and Edwards was destroyed in flakes of fire and smoke. The neighbourhood; and the flames communicating to Chandos street, Bedford-street, and Harvey's-buildings, in the Strand, the destruction of those houses was considered inevitable. Meanwhile, the engines worked in full play, and by six o'clock the hope was realised of staying the progress of the flames. By this time, however, all the machines, presses, and back composing-rooms, with their contents, were entirely destroyed, including a quantity of [illegible] for the forthcoming number of several weekly [illegible] during out of employment about two hundred men. With [illegible] certain, however, by seven o'clock a [illegible] and [illegible], but a [illegible] was [illegible] of the [illegible] of [illegible] a few [illegible] [illegible] [illegible] of the [illegible] of [illegible] buildings presented sad spectacles, [illegible] and [illegible] saved, and great damage being done. As to the origin of the fire, in all [illegible], nothing could possibly be obtained. The prisoners had been at work all night; but as to the least idea of how or by what means the fire took place, none of them could afford the least information. The firm is, it is believed, insured. Every praise is due to the constabulary of the D division, who would allow no persons in any way to interrupt the firemen in their very arduous duties. The loss is roughly estimated at £8000 or £10,000.

HORRIBLE TRAGEDY.—HONG-KONG, August 7.—The brig *Arratoon Apear*, Lovett, master, left this harbour yesterday for Singapore and Calcutta, the crew consisting of Bengalees, eight Chinese, and two Chinese carpenters. At midnight of the 29th ult. and the second mate, Mr. Woodburn, relieved the chief mate when the pilot left. Soon afterwards the Chinese part of the crew, assisted by two other Chinese, passengers, came aft, armed with spikes, chopping knives, and hatchets, despatched the second mate, and thrown him overboard, proceeded into the cabin, where were sleeping Captain Lovett, Mr. Thompson (late of the *Lady Mary Wood*), and Mr. Smith, late of the *Red Rover*, passengers. Mr. J. H. Skirving, chief mate, and a European lad, Charlie. Of the five, only Lovett's corpse remains, and it is supposed that, finding it useless to resist armed men, the poor fellows jumped overboard. There are a few dry blood smears on the sides of the cabins, but no pools by which it might be inferred that they were killed outright on board. At the time of the assault a Portuguese, by name Augustin, was at the wheel. They tried to kill him also, but he got up into the rigging, where also fled the Lascar seamen of the watch. The pirates now got the *Arratoon Apear* into harbour this morning, a little after eight o'clock, says he slept forward until he was awoke by the Lascars from aloft, and learnt what had occurred. On going aft, he found Captain Lovett, who said, "Give me a drink of water;" and, having taken it, he drew a long breath and expired, death having occurred from a severe cut in the abdomen. The gunner found both quartermasters gone, the boat's bladrds cut away, the guns spiked, and fire in the after-hold—the scoundrels having attempted to blow up the vessel. With the assistance of a pilot, the brig was brought to Hong Kong. As the vessel was not far from two islands, it is possible that the missing people were able to reach the shore. Mr. Smith, it is said, jumped overboard, unwounded; and, being a good swimmer, we entertain strong hopes for his safety. Capt. Lovett's build is cut severely across the nose and lip; and having, it is said, fastened his teeth deeply into the calves of the assailants' legs, it is hoped that, by aid of his marks, the wretches may be discovered. There was not much treasure on board to excite their cupidity. The eight seamen had been two voyages in the brig. It would appear that the Calcutta Lascars took to the fight, with the exception of two Bengalees, who made a determined resistance, but were killed, and thrown overboard. All the bodies, except that of Captain Lovett, were thrown overboard. *Friend of China.*

FATAL EXPLOSION AT GIBRALTAR.—On the 17th ult., a frightful accident occurred, by the explosion of a powder-magazine, used by the 30th regiment, situated at the south end of the rock at Windmill-hill. The disaster was not fully accounted for, but was to be properly investigated. We learn, however, that a tobacco-pipe was found near the spot, thus indicating that the accident may have arisen from smoking. Five of the six men, all belonging to the 30th, who were at work in the magazine, were killed; and the sixth, the corporal, was dangerously wounded, and was not able to utter a word. He was not expected to survive.

PROVINCIAL INTELLIGENCE.

PRINCE ALBERT AND THE LAWSON OBSERVATORY.—The following is a copy of a letter written by Colonel Phipps, to William Felkin, Esq., late Mayor of Nottingham, and who rendered much and valuable assistance in furtherance of the Great Exhibition of 1851: "Balmoral, Sept. 24, 1853.—Sir,—I have received the commands of his Royal Highness the Prince to acknowledge the receipt of your letter of the 19th inst., together with the documents which accompanied it. His Royal Highness has commanded me to assure you that you have not overestimated his Royal Highness's interest in the encouragement of all institutions that may be serviceable to science, or to the spread of useful knowledge. His Royal Highness will willingly contribute 100 guineas towards the sum which Mr. Lawson requires to be raised for the building and endowment of the observatory, to receive his magnificent gift. I have the honour to be, sir, your obedient humble servant, C. B. PHIPPS.—William Felkin, Esq."

PEACE CONFERENCE AT EDINBURGH.—The preparations for this important Conference are proceeding most satisfactorily. Richard Cobden, M.P., John Bright, M.P., Edward Miall, M.P., George Wilson, Esq., of Manchester, and other eminent and influential individuals, have signified their intention of being present. A large number of the friends of peace from the south of England, and a still larger number from the north, are making arrangements with a view to attend. Public bodies in Scotland have commenced the appointment of their representatives, and so numerous is the attendance likely to prove, that it has become an object of official anxiety to procure places sufficiently large to accommodate the sittings of the Conference.

THE BIRMINGHAM GAOL CRUELTIES.—On Tuesday evening a meeting was held in the Town-hall, to protest against the justices appointing another governor and surgeon to the gaol. Such a hall has not been seen for years. From seven until eleven every inch of space was crowded. A crowd surrounded the building. Mr. George Edmonds presided. Mr. Alderman Laroden, several town-councillors, and the local clergy were present. Amongst the resolutions passed unanimously were one to the effect, that the meeting viewed with feelings of indignation the horrible system of cruelty and oppression which has been carried on at Birmingham by the implied sanction of the visiting justices; and the meeting announced its strong disapprobation of such inhuman treatment; and also expressed a hope that the people of England would acquit the people of Birmingham of any participation in these barbarities. In a subsequent resolution, the visiting justices were declared to have entirely forfeited the confidence of the people of Birmingham, and the meeting accordingly protested against their further interference. A vote of thanks to Lord Palmerston was carried by acclamation; as was also the following resolution:—"That this meeting is of opinion that the appointment of a stipendiary magistrate for the borough would greatly facilitate the proper, orderly, and impartial discharge of magisterial business, and would tend materially to the health and state of the prisoners confined in the borough gaols, and that a petition to that effect be presented to her Majesty in Council." A vote of confidence in the administration of the criminal and especially judicial decisions and summary convictions, which the borough justices now and at present possess." The immense crowd departed quietly at eleven o'clock.

NATIONAL SPORTS.

NEWMARKET FIRST OCTOBER MEETING.—TUESDAY.

Handicap Sweepstakes.—Jack the Giant-Killer, 1. Ephesus, 2.
Match.—Oats received forfeit from Vivaro.
Sweepstakes of 10 sovs.—Pebble, 1. F. by Cotherstone, 2.
Match. Beatrix, 1. Heathfield, :
Match.—Student received forfeit from Margaretta.
Hopeful Stakes.—Bay Celia, 1. Caliph, 2.
Grand Duke Michael Stakes. West Australian was last.
First Year of the Sixth Triennial Produce Stakes.—Ring Tom, 1. C. by Touchstone, 2
Match. Domino received forfeit from Adeline.
Buckenham Stakes.—Acrobat walked over.

WEDNESDAY

Match: 200.—Mississipi received 50 sovs. forfeit from Papageno
Handicap Sweepstakes of 15 sovs. each.—Calliope, 1. Miss Bolton, 2.
Sweepstakes of 50 sovs. each. Epaminondas, 1. Weathercock, 2.
Second Year of the Fifth Triennial Produce Stakes.—Sittingbourne, 1. Tattersall, 2.
Produce Sweepstakes of 200 sovs. each. Sortie walked over.
St. Leger Stakes of 25 sovs. each.—Cobnut, 1. Nutpecker, 2.
Fifty Pounds. Little Harry, 1. Lamartine, 2.

THURSDAY

Match: 200.—Mississipi received 50 sovs. forfeit from Papageno
Handicap Sweepstakes of 15 sovs. each.—Calliope, 1. Miss Bolton, 2.
Sweepstakes of 50 sovs. each. Epaminondas, 1. Weathercock, 2.
Second Year of the Fifth Triennial Produce Stakes.—Sittingbourne, 1. Tattersall, 2.
Produce Sweepstakes of 200 sovs. each. Sortie walked over.
St. Leger Stakes of 25 sovs. each.—Cobnut, 1. Nutpecker, 2.
Fifty Pounds. Little Harry, 1. Lamartine, 2

FRIDAY

Town Plate.—Nutpecker, 1.
Queen's Plate.—Hey, 1. Feverham, 2
Fourth Triennial Stakes.—Nabob, 1. Adine, 2
Match, £100.—Nathan beat Little Gerard easily.
Rutland Stakes.—Delia, 1. Mincemeat, 2

NORTHALLERTON RACES. THURSDAY.

Trial Stakes.—Commodore Charley, 1. Red Lion, 2.
Two-Year-Old Stakes.—Lucifer, 1. Ly by Cowl, 2.
North Riding Handicap.—Little Fawn, 1.

FRIDAY

All-Aged Stakes. Surveyor, 1 Red Lion, 2
Welter Handicap.—Italian, 1
Northallerton Handicap.—Donskoy, 1.
Speculative Stakes.—Lucifer, 1. Good Morning, 2.
Farewell Stakes.—Holyday, 1. Jujube, 2.

LATEST BETTING AT NEWMARKET.

[illegible]
100 to 6 against Carbonite (c. Cowley)
TATTERSALL'S.—Thursday. [illegible] 100 to 6 against Carbonite (c. Cowley)
[illegible] 100 to 8 against Jo [illegible]

CRICKET.—The Eleven of England against Twenty-two of the Honingham Club, Yorkshire.—In the two innings the Honingham Club made 208; All England, 87, and 44 with six wickets to go down, when the game was drawn. The Earl of Uxbridge's Eleven v. Welwyn.—The Earl's side, first innings, 262; the Welwyn's two innings, 146—losing in one innings.

RACING CRACKS.—A very handsome coloured print has just been published by Mr Moore, of St. Martin's-lane, of the principal "Racing Cracks" which have distinguished themselves within the last few years, and which, we have no doubt, will be welcomed by the lovers of the turf as an admirable and interesting addition to their picture-galleries. Instead of the ordinary mode of representing particular horses and jockeys, such as standing for the portraits, the artist, Mr. A. F. Prades, has placed his "cracks" in the centre of a score in number, in full action, on the course, as engaged in an actual race, with the winning-post and the Grand Stand in the background. The result is a very spirited group, with a rich landscape background. Amongst the horses portrayed—and, we believe, with great fidelity—are Weathergage, Longsauce, Revel, Flounder, Newminster, Hamilton, Voltigeur, Flying Dutchman, Teddington, Chanticleer, Canezou, Knight of the Shire, Nancy, The Reaver, Orestes, Joe Miller, and Kingston, whose public performances have rendered them familiar. Amongst the jockeys, Butler, Templeman, A. Day, Flatman, Marlow, Marson, Charlton, Wells, Carroll—large and small, young and old—all admirable artists.

THE EPIDEMIOLOGICAL SOCIETY.—The Cholera Committee of the Epidemiological Society, feeling the importance of obtaining authentic information from medical practitioners in all places where the disease may appear, especially with reference to the origin of early cases, invite communications, to be addressed to Dr. Bryson and Dr. M'William, 14, Trinity-square, Tower-hill.

MAILS FOR AUSTRALIA.—GENERAL POST-OFFICE.—The *Nelson*, appointed to convey the next mails to Australia, will not leave Liverpool until the morning of the 5th October, (in consequence of the state of the tide,) so that letters arriving at Liverpool by the night mail from London of the 4th October, will be in time to be forwarded.

THE PROPOSED RAILWAY SUSPENSION BRIDGE OVER THE ST. LAWRENCE.—The railway suspension bridge over the St. Lawrence, near Quebec, is to be 2400 feet long between the abutments—as far as we can approximate magnitude. The plan proposed, is to construct a "wire" suspension bridge. The towers are to have a total height, from their base, of 320 feet, and 52 feet by 137 feet square at the base, and 40 feet square at the height of roadway above high-water mark, is to be 162 feet. The railway will be 22 feet in the clear inside the parapet, with room for two tracks 10½ feet apart.

SOCIETY OF ARTS.—The number of institutions in union with the Society of Arts amounts to 280. During the quarter just completed, the following have been added to the association:—Hielands, Aberdeen, Berkhenstead, Blairgowrie and Rattray, Brighton, Bury St. Edmund's, Combo, Coalclough, Colchester, Coventry, Hartlepool (West), Newhouse, Norwood, Odiham, Shaftesbury, Tamworth, and York. It is satisfactory to know that the usefulness of the union increases with the increase of members. Since the issue of the list of lecturers, the society has put in circulation among the institutions a small collection of photographs, numbering nearly 100 specimens, and illustrating the best results obtained by the most able photographers in each process, who have most kindly seconded the efforts of the Society of Arts to extend a knowledge of this art, by lending, and in some cases presenting, the specimens for the itinerating exhibition.

Note.—The + or − denotes above the average, and the sign — below the average.

The reading of the Barometer during the week has varied from 29·12 inches on the afternoon of the 24th to 29·29 inches by the end of the week. The mean reading for the week, at the height of 82 feet above the sea, was 29·765 inches

The Temperature during the week was generally below its average, and ranged from 3° above, on the 28th, to 6° below, on the 24th

The mean Temperature of the week was 54·9°; being 1·8° below the average of the corresponding week during 38 years.

The range of Temperature in the week was 28·3°; being the difference between the lowest reading, on the 27th; and the highest, on the 26th.

The mean daily range of Temperature during the week was 15·8°.

Rain fell (on four days) during the week to the depth of rather more than four-tenths of an inch.

Thunder was heard on the 24th, 26th, 27th, and 28th.

The Wind during the week has been continually from the west and south-west, and blowing strongly. On the 26th the greatest pressure was 12 lb., and the least 4 lb. on the square foot. On the 26th and 28th the greatest pressure was 6 lb. on each day.

The Weather during the week has been changeable and cold, and the sky has been for the most part overcast; but only partially cloudy towards night, except on the last three days, when it was wholly overcast.

Lewisham, Sept. 30, 1853. JAMES GLAISHER.

HEALTH OF LONDON.—The number of births in the metropolitan districts in the week ending September 24, is stated to have been 1618. Of these, 824 were boys, and 795 were girls. In the eight corresponding weeks of the right preceding years, the number was 1536, showing an increase of births above the average of 82. The number of deaths registered in the week was 969, being less in number than the births by 650. In the corresponding week of ten previous years the average, corrected for increase of population, is 1113. The deaths range from 808 in 1846, to 1611 in 1849; at which latter period the mortality was much increased by cholera, then on the decline. The deaths in the present return are therefore less than the average by 194. The deaths are distributed as follows:—To zymotic diseases 288 (their average is 315); of these are due to small-pox (its average is 15); 12 to measles (its average 27); 48 to scarlatina (its average is 55); and to typhus, 49 (its average is). Cholera was fatal to 29 persons, 15 males and 14 females—an increase of 15 deaths from this disease compared with the previous week. Twelve deaths from cholera occurred on the north (the same number as recorded in the previous week), and 17 on the south side of the Thames; where the number registered in the former week was only 5. Two children fell victims to this disease under the age of 15 years, and 27 adults at 15 years old and upwards. The deaths registered from cholera in the last six weeks have been 10, 18, 16, 7, 16, and 29. Diarrhœa was fatal to 89 persons, during the last six weeks the deaths from this disease have been 138, 137, 152, 131, 78, and 89. The present return of deaths from diarrhœa is 19 above the corrected average. Of the ten corresponding weeks of the last ten years. To dropsy, cancer, &c., 37 (their average is 43). To tubercular diseases, 161 (their average is 178); of these, 106 are due to consumption, being 15 above the average. To diseases of the brain, nerves, and senses, 93 (their average is 113); of these, 29 are due to convulsions (its average being 40). To diseases of the heart and blood vessels, 26 (their average is 36). To diseases of the lungs and the other organs of respiration, 123 (their average is 100); of these, 46 are due to bronchitis (exceeding its average by 16), and 63 to pneumonia (exceeding its average by 15). To diseases of the stomach, &c., 54 (their average is 65). To violence, privation, cold, and intemperance, 23 deaths are attributed (their average is 37); of these, 18 are due to violence, being 48 less than its average. The health of London must be considered good; the diseases of great interest at present are cholera and diarrhœa. Of the 29 fatal cases of cholera, 15 are described as Asiatic; in the preceding weeks these were described as Asiatic, but the distinction is not large. The point to be observed is the increase of fatal cases; and, therefore, it would seem that the causes, whatever they may be, are more powerful than they were. Still, the fatal cases have occurred in crowded neighbourhoods and in the worst streets.

SANITARY IMPROVEMENTS IN LAMBETH.—The Commissioners of Lambeth have at length commenced a most excellent mode of draining the various streets leading out of the principal thoroughfares. Many of the side streets leading, especially out of the Waterloo-road and the neighbourhood of the New Str—locralities where the cholera raged during the last year—although the drainage is perfect, are scarcely, if not being properly formed, allowed the surplus water after heavy showers to remain in front of the inhabitants' houses for several days. In hot weather the effluvia arising from the stagnant water was unpleasant and dangerous; and the commissioners have commenced paving the streets in a novel way, forming a small conduit in the centre of the roadway, and, the sides of the road being slightly raised, the water is now effectually carried off.

THE SOCIETY FOR CLEANSING AND PURIFYING THE DWELLINGS OF THE POOR.—A meeting of the committee of the society has been held at the Bath and Washhouse establishment, George-street, Euston-square, for the purpose of considering the most effectual mode to be adopted by the agency of the department for purifying and ventilating the dwellings of the poor in the parish of St Thomas and neighbourhood, and, if possible, to mitigate the evils to be apprehended from the alarming advance of the cholera. After some general conversation on the following resolution was agreed to:—"It has been reported by the Rev. Mr Dale and Dr. Stebbing that the clergy have already in existence various committees who would at once ascertain all nuisances, whether arising from drains, water, or any other source, this society do respectfully request such committees to commence action at once, and report daily or weekly to the secretary of this institution." It was also agreed that the secretary be authorised to communicate with the proper authorities, pointing out existing nuisances, and requesting their co-operation in removing them. The committee was pos—empowering the secretary to write to the water companies, with a view to induce them to give a liberal supply of water—including Sundays—during the present season of drought." A sub-committee was appointed to carry the views of the society into effect

YOUNG MEN'S EVENING CLASSES.—The Society for Establishing Evening Classes for Young Men in the Metropolis, held a soiree in Crosby Hall, on Tuesday evening, which was numerously attended. The Lord Mayor presided; and many other patrons of education in the city testified by their presence the interest which they felt in the prosperity of this admirable institution. At the meeting a number of pictures, designs, models, and curiosities were exhibited; and various amusements were provided for the entertainment of the company who crowded Crosby Hall. The Mayor, immediately after he had joined the assemblage, was addressed in the name of the committee by the Rev. C. Mackenzie, who thanked him for the kindness which had induced him to preside over the proceedings. A number of interesting and meritorious tatives were given by pupils of the different classes; and the band of the Caledonian School enlivened the company by the performance of several musical pieces.

COURT OF COMMON COUNCIL.—A court for the despatch of business was held on Tuesday; when it was agreed that the sum of £50,000 should be obtained of the London Life Assurance Company, for the period of seven years at £7 per cent. per annum, to be laid out in advancing the New Cattle Market in Copenhagen-fields.—On the motion of the Rev. Dr. Cotton, a petition was presented "That the master elected to be a minister of the Church of England," which was opposed by Mr. Gilpin, who thought the court, which represented persons of all creeds, should not tie itself to the selection of a person of a particular creed. The amendment was lost by a majority of eight; and Mr. Gilpin then gave notice of his intention, at the next sitting of the court, to move that this resolution be rescinded. An adjournment it took place.

CITY OF LONDON REGISTRATION.—The revision of the lists of voters was held on Tuesday, by M. M'Christie, at Guildhall. The following statement was given as the result of the revision:—

CLAIMS—LIVERY LIST.		CLAIMS—HOUSEHOLDERS.	
Liberal—Allowed	1	Liberal—Allowed	1

THE ELECTION OF LORD MAYOR.

On Thursday the election of Lord Mayor took place in Guildhall. After attending St. Lawrence's Church to hear the sermon, a few minutes after one o'clock the Lord Mayor and other civic functionaries returned from church, and proceeded to the Council Chamber.

The usual formal proceedings having been gone through, the Town Clerk mentioned the names of those Aldermen who had not passed the chair, and were eligible to election.

The name of Alderman Sidney was first put, and his name was received with great enthusiasm. Alderman Moon was next proposed, and several hands were held up in his favour. Alderman Salomans's name was next put, when there were numerous cries of "No, no."

The Sheriffs decided that the choice of the Livery had fallen on Alderman Sidney and Alderman Moon.

Mr. Potter, a Liveryman, came forward, and said that Alderman Sidney did not respect the privileges of the citizens of London; for he had made an attack on those persons with his own partner was ordered to be summoned for his dues as a freeman (Cheers and hisses). Under such circumstances, he thought Alderman Sidney would not be appointed, as he did not respect the privileges of the city of London

Mr. Bennoch then addressed the Livery in favour of Mr. Alderman Sidney. The city of London had never had a more independent magistrate

THE ILLUSTRATED LONDON NEWS

No. 648.—VOL. XXIII.] SATURDAY, OCTOBER 8, 1853. [PRICE, WITH A SUPPLEMENT, SIXPENCE

THE WAR IN THE EAST.

The disputes that have for the last six months kept Europe in suspense, if not in fear, have produced their natural result. Led away by the impetuosity of his people, and by the counsels of all that is most eminent in Turkey for position and influence, the Sultan has declared war against Russia. Such a catastrophe has long been expected. The great Powers of Europe, who have done so much to avert it, may be alarmed and grieved; but they cannot be surprised. They have made but light of Turkey, throughout the whole course of the negotiations. They have considered the quarrel between her and her unrighteous neighbour, more as it affected their own interests, than as it imperilled those of Turkey herself. They had, no doubt, a regard for the rights of nations, involved in the wanton assault made upon her by the Czar; but they had a higher regard for themselves. They cannot wonder that the wronged and insulted party should have grown weary of the secondary position she was made to assume; and that she should have endeavoured to vindicate her own independence, and to assert her own dignity, by an appeal to the last logic of nations. At any moment since the first Russian soldier crossed the Pruth, the Turkish Government would have been justified in the course it has now taken. The provocation has been as great as the patience with which it has been encountered. However much the public opinion of Europe may deplore the resolution of the Porte, the world will do it the justice to confess that its decision was neither hasty in fact nor erroneous in principle; and that it endangered the success of no pending negotiation, until negotiation became alike inconsistent with safety and with honour.

The whole Christian and Mussulman world will look with intense anxiety for the next movement. Portentous as the circumstances appear, it is not imperative that immediate hostilities should follow the declaration of war. There has, in point of fact, been war between the two nations ever since the day when the Danubian Principalities were occupied by the forces of Prince Gortschakoff. The season and the elements may prolong this passive warfare until the spring—giving Turkey, in the meantime, the advantage of a protest, that may tend in some degree to satisfy the irritated public spirit of the Mussulmans. The last act of the Sultan is but a formal declaration of a state of things which was already in existence. It has, however, the additional merit of narrowing the dispute, and of notifying, what was apparent enough to everybody except to Ambassadors, that no negotiation was valid with the Emperor of Russia. The irresponsible Autocrat acted upon a foregone conclusion, and had made up his mind to plunder or destroy his neighbour, unless prevented by superior force. The allies of Turkey ought to have done three or four months ago what Turkey has now done for herself. There might then have been fewer despatches, but there would have been more despatch; and a European war, instead of being imminent, would, in all probability, have been averted.

We take it for granted that the remainder of the British and French Mediterranean fleets has, ere this, proceeded to Constantinople. As a matter of mere precaution, this step is necessary.

GATEWAY TO THE SULTAN'S NEW PALACE OF DOLMABAGHDSCHE, ON THE BOSPHORUS.—(SEE NEXT PAGE.)

Whether for war or for negotiation, the place of the combined fleets is before Constantinople. In either alternative their presence is the best check upon Russia. If the world may judge of the Emperor's intentions by the visits which he pays and receives, there seems every reason to believe that he is so entirely bent upon war that no concession would at any period of the dispute have satisfied him, or will satisfy him now. He has just played his part at a military spectacle, at Olmütz, to ingratiate himself with the Austrian army; he has been closeted for hours, in the strictest privacy, with the inexperienced and dependent Emperor of Austria; and he has departed from Olmütz to Warsaw, to be followed thither by the King of Prussia. All these things betoken mischief. It looks as if the three representatives of those who were accomplices in the partition of Poland were taking council upon a new deed of similar atrocity; as if the Czar—so able, so accomplished, and so daring—were exercising the high influence of his genius over the juvenile Sovereign of Austria, to lead him into evil courses; and over the irresolute and mediocre King of Prussia, to pervert him from the paths of interest and duty. Should the Czar succeed in the effort, the consequences will, no doubt, be disastrous in every part of Europe; but it would be to doubt the justice of Providence not to believe that they will be most disastrous to the originator and abettors of the wrong. Such a war would be the one predicted by Napoleon Bonaparte at St. Helena. It would be the war of brute force against intelligence—of Cossackism against Freedom—and of arbitrary power against the rights and the civilisation of mankind. It might be a long and a sanguinary struggle. The result would, in all probability, be the re-organisation of Europe into new states and kingdoms; but, in that re-organisation, it is more than probable that Russia would not be so large nor mighty as she now is; that Poland, Hungary, and Italy would be raised to the rank of independent nations; and that a great Germanic Empire, or a free Confederation of German States, would supersede the mushroom kingdom of Prussia, and the effete and heterogeneous empire of Austria. These are the eventualities which the Czar either does not see or expects to control; but which will excite the hopes and passions of millions of the bravest and most intelligent people in every part of Europe.

But the statesmen of Prussia and Austria are not, perhaps, so blinded or so reckless as the Czar. If there is any common sense among them, they must be aware of the extreme peril to themselves of having so bad an ally in so bad a cause. On this supposition, they will exert themselves to prevent a war that in its progress might be so ruinous, and in its results so fatal to themselves; and Great Britain and France will have them for cooperators in the work of pacification. The Czar, thus left without support, either moral or material, will discover that a State is not necessarily strong because it is large. The great Goliath of nations may thus find a little David to overthrow it.

It would be a consummation highly desirable and salutary that the war, if it cannot be averted, should, for the present, be left to the two principals to fight it out. Russia is a more unwieldy empire than Turkey, and Turkey has resources which have never been sufficiently estimated. In the conflict of fanaticism which Russia has excited, the bigotry and ferocity of the Turks, and of the Mussulmans of Asia and Africa, who will flock to the standard of the "Father of the Faithful," will more than equal the bigotry of the Greek followers of the "orthodox" Lord Emperor. It will be a war *à outrance*, imbittered by the worst of all bitterness;—that which springs from religious animosity. On the part of the Turks it will be waged with a fierceness surpassing that of ambition. Revenge and desperation are more powerful incentives than cupidity and love of conquest. The two opponents may thus prove to be more equally matched than the world supposes. In such a case, Europe will only have to look on and pray for the discomfiture of the aggressor; reserving to itself the right of interfering if the just cause should prove to be the weaker. It would be a righteous punishment if Russia were checked by the unaided armies of the Porte: it would be a spectacle that all men would approve; and would administer a severer rebuke and a more wholesome chastisement to the Emperor, than any defeat which he might suffer from the combined armies or fleets of Europe. But, at whatever cost, and by whatever agency, the fate of the wrong-doer must be made to overtake the Czar. An immediate peace, or peace as the result of a war, will alike be detrimental to his influence. His character is lost; his selfishness is apparent; his guilty ambition is unmasked; his desire to domineer and lord it over Europe is patent even to the slowest-minded diplomatists of Vienna and Berlin; and that he and his armies may be well and speedily beaten is the ardent wish of every honest man in Christendom.

THE SULTAN'S NEW PALACE,

AT DOLMABAGHDSCHE, ON THE BOSPHORUS.

The Sultan has many palaces in and about Constantinople, the Bosphorus being the favourite site for them. The reason for their great numbers—and they will probably go on increasing in number—is that every Sultan, on his accession to the throne, builds one at least, and always tries to outdo in splendour the palaces of his predecessors. It is curious to remark in them the changes in decorative taste which have taken place from time to time; more especially the gradual advance made towards the adoption of European and classic art. The Summer Palace of Beschiktash, built by the late Sultan Mahmoud, is a gaudy mixture of Orientalism and Classicism: the material being wood, is, of course, wholly inappropriate to Grecian pillars and entablatures. In the new Palace of Dolmabaghdsche, now building for the present Sultan, the materials made use of are marble and stone; and the architecture is more strictly European than anything hitherto attempted in Constantinople; being in the florid Italian Classic style. The building consists of a magnificent centre and double wings. It is approached by a stately triumphal gateway, of which we give an Engraving, made after a Photograph. This magnificent structure is in course of building, though near completion. It stands on the European shore of the Bosphorus, near Tophana, and facing the entrance to the Sea of Marmora. The view from this point, taking in Scutari, the Seraglio point, and old Stamboul on the right, is one of the finest in all Constantinople.

THE CEDARS OF LEBANON.—The cedars have diminished from a forest to a single grove, guarded by a priest and protected by a superstition. The prophecy of Isaiah has long since been fulfilled, and "Lebanon is turned into a fruitful field," "the rest of the trees of his forest are few, that a child may write them." The cedars of Lebanon scarcely occupy a space equal to two acres of ground; but Lebanon is a fruitful field; the mulberry tree yields its luscious fruit, and its more useful leaves, with graceful luxuriancy; and in its valleys the harvests wave spontaneously in autumn.—*New Quarterly Review.*

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The return of the Emperor and Empress from their Northern Tour, took place without any particular incident. Along the Boulevards immense crowds were collected to witness their arrival, but no sensation was otherwise manifested; and the Imperial cortège, in the centre of which was the carriage of their Majesties, closely surrounded by cavalry, passed amid in almost total silence. They proceeded direct to St. Cloud without stopping in Paris.

At Rouen a number of magnificent blocks of marble, destined to form a monument for Monseigneur Affre, the late Archbishop of Paris, arrived from Italy, are being unshipped. One mass, from which the statue of the Archbishop is to be carved, weighs 21,000 kilogrammes, and is of remarkable beauty.

An undertaking, which cannot fail to produce no common degree of interest in the world of literature—not only here, but throughout that of Europe and America—is being organised with the utmost activity, and with every prospect of success. It is to make the French literature of the day take its place in the Great Exhibition to be held here in 1855. The plan contemplated is as follows. A commission is to elect a hundred writers, who are to compose a book as large as an ordinary-sized journal, and containing one thousand pages, ten for each writer. The subjects are confined to such as spring from the Exhibition itself. Here a picture or a statue inspires a poem; a piece of tapestry forms the groundwork of a legend; the produce of some distant land leads to the description of a voyage; silks and jewels—alas! we fear female vanity will generally be selected as the theme when *they* are brought on the *tapis!*—instruments of labour and husbandry will suggest a pastoral in prose or verse. In short, with so rich a mine to work upon, the difficulty will be, not to find, but to select, a subject. The form and execution of every article, a first-rate artist is to make an illustration of the subject, representing the portion or object in the Exhibition suggestive of the piece; and a portrait of the writer, taken from a photograph, is to be appended, with a specimen of his writing and signature. The characters for the printing are to be cast expressly; and, instead of paper, parchment or vellum is to be employed; the binding is to be magnificent; and, in all points, nothing that can contribute to render the volume perfect is to be spared. Already a number of well-known and esteemed literary names are appended to the project, which seems to afford the first guarantee of success.

The *Assemblée Nationale* has been condemned to pay £20 on the following grounds:—The law desires that articles copied or translated from other journals shall acknowledge the fact. The paper in question produced a passage from the *Times* without the necessary declaration; and though it was proved and admitted that the phrase "We read in the *Times*" was written at the commencement of the extract, and that it was by the negligence of the printer that it was omitted in the paper, the condemnation was pronounced, and the fine enforced.

Reports continue to arrive from various parts in the provinces of troubles occasioned by the dearness of provisions—grain and bread more especially. Hitherto they have been repressed with little difficulty; but it is to be feared that, as the severe season advances, greater discontents will arrive, and be found less easy of termination.

A marriage, about to take place in a Royal family, excites considerable attention in the diplomatic circles. One of the daughters of the Queen Marie-Christine, of Spain, is about to be united to the son of the Senator d'André, des Princes Corsini, Duc de Casigliano, Minister of Foreign Affairs, of Tuscany. The Queen Marie-Christine, with her daughter, attended by the *jeunes*, appeared in the Imperial box at the Opera, where they excited universal attention.

It is stated that Louis Napoleon and the Empress intend going to Compiègne on the 8th, and proceeding from thence to Fontainebleau on the 15th, where they purpose remaining till their return to the Tuileries for the winter.

We learn, on what we believe to be good authority that M. Ragani, the new *entrepreneur* of the Italian Opera, has completed an engagement with Mario for the approaching season. This intelligence causes as much pleasure as surprise in Paris, it having been positively asserted that America had secured the first tenor of the day. It is said that M. Ragani has already partly succeeded in getting together an excellent troupe, and that the opening of the house will take place with the utmost éclat, on the 15th November. The great *féerie*, on the preparation of which the Porte St. Martin has been occupied for a year—"Les Sept Merveilles du Monde," has a great success, both on the stage and in the press; having stated this fact, it may seem presumption on our part to criticise, but we confess we were considerably disappointed. The *mise en scène* is very fine, and the costumes singularly varied, magnificent, and fantastic; but the piece seems to us not to be amusing; certain scenes, particularly that of the dancing in the gardens of Babylon, tediously long (especially when the dancers are extremely mediocre, as in the present instance); and altogether we find a want of *esprit*, of originality, and of amusement, in the thing, which renders the five hours of its duration a period more tiresome than interesting. The Théâtre Lyrique is rehearsing "La Jardinière," an opéra-comique of M. Adolphe Adam. The Vaudeville has considerable success with a very agreeable little piece, entitled "Les Moustaches Grises." The "Pressoir," at the Gymnase, continues to attract such crowds that it is difficult to obtain places.

DECLARATION OF WAR BY TURKEY.

Great sensation was caused in the metropolis on Tuesday by the publication of the following telegraphic despatch, announcing that the Sultan had at length declared war against Russia. The despatch is dated "Vienna, Monday":—

Advices from Constantinople, of the 27th ult., contain most important news. . . . The Divan, at the Grand Council held that day, resolved upon a declaration of war against Russia. . . . Report says that hostilities have already begun. . . . Last night the Emperor of Austria left suddenly, with the Prince of Prussia, for Warsaw, where the King of Prussia will meet them. . . . A league against the arms of the four powers the Sultan has signed the declaration of war. . . . Other accounts inform us that at the Grand Council, despatches from Omer Pacha were read, urgently counselling war before the winter should set in. . . . It is also stated that Prince Gortschakoff was moving troops as if he intended to cross the Danube, for the purpose of attacking the Turkish position at Roustchouk.

It appears that on the 26th ult. the Ottoman Grand Council was summoned, and advised the Sultan to declare war against Russia, considering that the armies of the Northern Power had not only entered upon the trans-Danubian Principalities, but that the Czar had rejected the modifications which the Sultan required to be made in the Vienna note, as the needful limitation to the concessions therein granted, and as precluding an interpretation which Turkey could not with safety or honour allow. The further report that the Sultan forthwith acted upon the recommendation of the Grand Council, and that, against the advice of the Ambassadors of the Four Powers, he signed the declaration of war, received very general credence, since it has long been considered impossible for the Sultan to resist the demands of his subjects and soldiers. The people of Turkey have raised their unanimous voice for war, and the peace and war party alike concur in the necessity of making a last stand for national independence against the insolent aggression of Russia.

As soon as the English Government were informed of the decision of the Grand Council for war, the members of the Cabinet then in town immediately met for deliberation, and summonses were issued to the rest to hasten their return to the metropolis. There is some reason to believe that within the last three weeks Lord Aberdeen has surrendered his pacific views in deference to a majority of his colleagues, and that, as the result, explicit orders have been despatched for the passage of the Dardanelles by the whole of the fleet in Beïka Bay. The French Government have pursued the same course; and both Governments are fully agreed that Turkey is justified in taking the course which the Sultan is believed to have at length adopted.

Meanwhile Lord Stratford de Redcliffe, our Ambassador at the Porte, is said to have signified his disapproval of the Grand Council's decision, and is exerting himself to delay action upon it. Happily, a broad river flows between the two contestants, and the season is already unfavourable for warlike operations; so that it is hoped by the more sanguine that hostilities may still be deferred. But war is imminent; if hostilities have not already commenced.

No doubt a last attempt will be made to avert the final appeal. If the Turks have not precipitated a hostile encounter with the Russian forces since we hear from Olmütz of peaceful assurances and signs of retreating on the part of the Czar. Austria has resolved to remain neuter in the event of war; but her peasantry, should war break out so near the frontiers of Hungary, and her precarious tenure of Italy, if France should make the smallest demonstration in Lombardy, cannot fail to have been forcibly brought under the notice of the Czar and his Minister, Count Nesselrode. By the time the young Emperor of Austria and his advisers. The Emperors took care to have two members of the Rothschild family in attendance upon them at Olmütz, in order to impart confidence to the monied world: and possibly, also, that they might be better able to discuss the practicability of a loan, under the mutual guarantee of both Powers; but the financial difficulties of Russia herself, and the notoriously bankrupt condition of Austria, would render it extremely difficult to raise money for the purpose of carrying on a Turkish war, if, as appears probable, Great Britain and France should take part with the Porte against the Czar.

These considerations will stimulate the activity of the resuscitated Vienna Conference, which will, no doubt, make a vigorous attempt to induce the two Governments now at war to suspend hostilities until another diplomatic note can be framed, that may effectually test the peaceful declarations of Olmütz.

The latest advices from Constantinople concur in stating that pollticians of all shades were unanimous in refusing any further concessions, and that the Sultan was warmly animated by the same feelings as his Ministers and his subjects. The armaments, which for a short period had appeared to slacken when there appeared a probability of an amicable arrangement, had recommenced with redoubled activity. The strength and defensive preparations of the Turkish army are thus described:—

The marching army now numbers upwards of 80,000 men of regular infantry (troops of the line), and 19,000 irregular foot soldiers, about 10,000 cavalry, and upwards of 180 pieces of field artillery, of different sizes. Three lines have been fortified—the Danube, the line strecching from Varna to Shumla; and another line situated further back, commencing at the river Kamscick, which is prolonged towards the east, and embraces every pass of the Balkan to beyond the city of Sofia. Upwards of 44 points are fortified, and altogether 130 different fortified works have been constructed. Works of colossal proportions have been undertaken and executed, and the greatest energy has been displayed. From Varna to Nicomedia all the vulnerable points on the right bank of the Danube are fortified and bristle with cannon. The defile of Soumondji is impregnable; and the artillery, commanded by European officers and non-commissioned officers, is well served.

The Moslem population desire war ardently, and doubtless the disbanding of the troops would be accompanied by serious difficulties, the dread of which has, no doubt, interfered to prevent further concession being made on the side of Turkey. The Turks loudly avow that they will not yield in anything, unless forced to do so by France and England.

Fresh troops from Southern Russia are pouring into the Danubian Provinces, and concentrating around Bucharest. In case of war, it is conjectured that the Danube will be crossed at Widin. The Russians have made all arrangements for winter quarters in the provinces, where, with the reinforcements now on the march, their army is estimated at upwards of 200,000 men, exclusive of Cossacks and gendarmes.

The Russian cavalry (Corps du Danube) has been withdrawn to a distance of two marches from the banks of the Danube, and has been replaced by Cossacks and by infantry. This change has been induced by the desertion taking place from the former corps. Up to the present time four corps have passed the Pruth. These corps are respectively commanded by the Generals Danenburg, Pantuzin, Osten Saken, and Luders.

Letters from Jassy announce that Prince Gortschakoff had apprized the commanding officers of the corps under his orders, that he had received instructions from the Minister of War at St. Petersburg, to take measures for establishing the army in winter quarters in Wallachia and Moldavia.

Now that the sword is about to cut the Gordian knot of the Eastern difficulty, a recapitulation of the diplomatic proceedings may enable our readers to follow the successive stages of the dispute. After the original differences respecting the Holy Places had been adjusted to the satisfaction of all parties, Prince Menschikoff presented a note to the Turkish Government containing certain demands on the part of the Czar respecting a spiritual protectorate. These demands the Divan considered inadmissible, and in this opinion it was confirmed by the concurrence of the Four Powers, who approved its refusal, and charged themselves with the substitution of some terms which the Porte might accept in place of the objectionable Note of the Russian Ambassador. These terms they embodied in a Note of their own, which has been styled the Vienna Note; and this Note, which they thought the Porte might safely admit, the Emperor of Russia at once agreed to admit also. But at this, which seemed the concluding point of the proceedings, arose an extraordinary difficulty. The Turkish Government alleged that the Vienna Note did not exclude the objectionable features of the Menschikoff Note, and it suggested, therefore, certain modifications, which the Four Powers approved. The Russian Government, on the other hand, not only rejected these modifications, but took occasion to declare explicitly that it had understood the Vienna Note as including substantially the terms of the Menschikoff Note. All the Four Powers must necessarily incline to Turkish interests, for all concurred in disapproving the Menschikoff Note, and in approving the Turkish modifications. All, however, were not acting with equal freedom, perhaps not with equal sincerity, and Austria has modified her adhesion to the policy of the Conference since it has become necessary to close more effectively with Russian pretensions. Nevertheless, the duties of the interposing Powers remain the same. They are called upon to maintain, if possible, the peace of Europe by adjusting the differences between Russia and the Porte; but it is plain, from what has already been said, that their conclusions, though apparently so favourable to the Russians as to be accepted at St. Petersburg, and so unfavourable to the Ottomans as to be refused at Constantinople, were, in reality, framed in the interests of Turkey.

The last accounts from Circassia state that the Russians have assembled a considerable force, and are preparing to make a general attack, with, according to some 40,000, according to others 60,000 men. Two envoys from Schamyl had arrived at Constantinople to demand further assistance from the Porte against the Russians.

Advices from Brails, on the Danube, not far from Galatz, are to the effect that all trade had been suspended for some time in consequence of a want of shipping, which could not ascend the river, the water at the mouth of the Sulina not being more than 6½ feet deep.

THE MILITARY CONGRESS OF OLMÜTZ.

The Emperor of Russia and the Emperor of Austria arrived at Olmütz on Saturday the 24th ult., and on Sunday the first conference was held, at which also the Prince of Prussia was present. Both on Sunday and Monday conferences took place between Count Nesselrode, Count Buol, and Baron Meyendorf, which were followed by meetings with the other Ministers present. Lord Westmoreland (the English Ambassador at Vienna), was received by the Emperor on Sunday, after which Count Buol had interviews with Count Nesselrode and Baron Meyendorf. Count Nesselrode and Buol had an interview of four hours long with the Emperor of Russia on Monday. On the 28th the Emperor of Russia left Olmütz for Warsaw, to be joined by the Emperor of Austria and the Prince of Prussia.

The result of the Olmütz Conferences is thus described by the Paris correspondent of the *Times*:—

The Emperor Nicholas and Count Nesselrode have given to the Emperor of Austria and Count Buol Schauenstein the most positive assurances that they have no intention whatever to the sovereignty of the Ottoman Empire, and that the object of the Emperor is to terminate the whole affair with honour, and to put an end to all suspense in the European money-market as soon as possible. For this purpose it is the unanimous joint desire of the Cabinets of Vienna and St. Petersburg that, with the concurrence of the Governments of England, France, and Prussia, the collective action of the Vienna Conference should be renewed, and that its result should be a formula of assurance so perfectly satisfactory to the Porte as to hold forth every prospect of acceptance. I therefore regard

the question as substantially terminated, and henceforth involving only a few forms which we may safely leave to the tact of the diplomatic men, unless the Moslem fanaticism which Russia has so incautiously evoked should interpose a barrier.

These assurances will take place with a view to enable Russia to accomplish, without humiliation, the grand wished-for point of the evacuation of the Principalities, but will involve, on the part of the five Powers, no technical guarantee to Turkey beyond what already exists in the Treaty of 1841, and which, in fact, would be perfectly superfluous.

With all this it cannot be denied that there is a strong shade of difference between the Eastern and Western Powers, even allowing each to stand upon the strength of the jointly-acknowledged treaties and those principles of international right recognised by both. The Western public asks satisfaction for an affront to an independent Power; but the Eastern Powers point out the pentarchical protection of this independence as not entailing a right to refuse to listen to the united voices of the five Powers; and the claim to that full measure of dignity which would be accorded to an unprotected military Power, able from its own independent resources to preserve respect, is gruffly, even rudely refused, to Turkey, with antecedents so little savouring of virtual or technical equality with the five Powers that do the police of Europe. Thus is the head ease of every state that has declined. England would, therefore, be sorry if any metaphysical theory of an equality that does not exist should interfere with that speedy and permanent evacuation of the Principalities which all the Western Powers have so sincerely at heart. From what I hear, the present attitude of the Emperor Nicholas is more the honest retracement of a hasty step by a man who stands in fear of the judgment of the soundly-thinking part of Europe, than from apprehension of the physical forces arrayed against him.

The semi-official *Austrian Correspondence* states that "a new scheme of adjustment has been agreed on at Olmütz, and will be forthwith offered for acceptance to the Porte. When the Conferences proper, to which Russia and Austria were parties, had terminated, a Council of Ministers was held, to which the Ambassadors were invited. It is said to have been here that Lord Westmoreland made his proposition of a Collective Declaration, which has been accepted."

The following sketch from Olmütz has been published:—

This little congress of two Courts, with so many greyheaded veterans, unavoidably carr es back the mind to the still more moving period of 1813-14-15; and Prince Radziwiłł and Count Nesselrode, having been less seen in the west of Europe than our current French, English, and German soldiers and statesmen, have been objects of considerable interest, from the association of their names with the political and military development of the Russian power during nearly two generations; and I give you an anecdote connecting the two epochs that may be relied on. Lord Westmoreland was relating to Prince Paskiewitsch that in January, 1814, at the advance on Paris, after the heights of Belleville had been stormed, Paris appeared, being then attached to the corps of the gallant Duke of General Miloradowitsch, this energetic officer called out, "Up with the artillery: let us at length have a shot at Paris." The artillery was brought up, and when the last shot was fired, Miloradowitsch said, "What a singular coincidence! This was the very art llery officer who opened the first fire at the beginning of the retreat from Moscow." When Prince Paskiewitsch had listened to this anecdote of the alpha and omega of the decline and fall of the Empire of Napoleon I., he added, "Allow me to conclude the series of coincidences, and inform you that the name of this young artillery officer was Paskiewitsch, and that hence has the pleasure of renewing in Olmütz, in 1853, the *anamnesis* of 1814 on the heights of Belleville." Unlike the tall and brawny Emperor, Count Nesselrode is brief in every proportion of length and breadth; but with refined and intellectual features; and, although one of the very few statesmen who preceded the Congress of Vienna, and politically survived the tempests of 1848, he still fresh and active, except having no longer the youthful strength of eyesight. He is still here, not having left with the Emperor last night. From all that I can hear, his counsels are of great value, not only to the peace of Europe, but to the interests of Russia herself; as he believes that a pacific development of the Empire will carry it further than a more ambitious and warlike policy.

The Emperor of Russia, on going to attend Divine worship at a chapel of the Greek-united Greek confession, near Olmütz, is represented to have uncovered his head even before getting out of his carriage when it drew up in front of the building, and to have walked thence to the altar with his figure bent in an attitude of reverence; and to have knelt down on the bare stone steps, rejecting the velvet cushion that was prepared for him.

SPAIN.

The new Sartorius Cabinet, most of whom figured in the period from 1843 to 1846, has inaugurated its accession to power by several administrative reforms; one of which relates to the examination of candidates for Government appointments; and it is reported there is to be a free trade in salt and tobacco, that the Cortes will soon be called together, and that the law on the press will be modified. The first act of the new Cabinet was, however, to order the seizure of two journals, the *Diario Español* and the *Tribuno*. The *Madrid Gazette* announces that General Narvaez is at liberty to return to Spain. General Juan de la Pezuela has been appointed to the Government of Cuba. The election of General Pezuela as Captain-General of Cuba, may be considered a very good one in an important point of view, viz., that he is not likely to give way to the temptations held out to indnce the authorities to connive at slave-trading practices. His opinions are Absolutist, and his temper violent; but he is universally regarded as an honourable man, If the Captain-General of Cuba really resolved to prevent slave-trading, the infamous traffic would soon be suppressed.

AMERICA.

A disgraceful occurrence has been witnessed in Norfolk, Virginia. The house of the G. P. R. James, the novelist, and now British Consul, has been set on fire for the fifth time; and it is feared that, in spite of the increased and anxious vigilance of the municipal authorities, the dwelling may be finally destroyed. The reason why this gentleman has become so pinnacled to the Virginians is that, some years ago, he wrote a poetical squib against American slavery, which a friend published without his permission.

A contract has just been signed between the Tehuantepec Railway Company and Messrs. James Sykes and Co., of England, for the construction of a plankroad and a railway across the isthmus of Tehuantepec. The former begins at Suchil, the head of navigation on the Coatzacoalcos River, and terminates at Ventosa Bay, on the Pacific,—a distance of ninety-six miles—and is to be completed in November of next year. The railway is to begin at Minatulla, only twenty miles from the mouth of the Coatzacoalcos, and terminates also at Ventosa Bay. It is to be completed within four years, and will be 166 miles in length. It is confidently alleged by English and American engineers that the transit from England to Australia by the inland railway route from Halifax to the Gulf of Mexico, and thence by steam to the isthmus, and across it by railroad, can never be exceeded or equalled by any other route, owing to the conformation of seas and continents.

The American fishery squadron had been disbanded, the fishing season being considered over.

Mr John Y Mason has been appointed Minister to France.

The steamer *Asia* brought news from New York that the Russian, Prussian, and Austrian Ministers had given in a protest at Washington against the conduct of Captain Ingraham, the captain of the *St. Louis*, United States frigate, who so energetically took the part of Mr. Koszta, at Smyrna, a few months ago, when that gentleman had been violently seized by the Austrians. Letters from Constantinople have since brought intelligence that Mr. Koszta had been released from the interim custody of the French Consul, with the concurrence of the Austrian Government. Mr. Kossta was put on board an American merchantman, which was to sail for New York from Smyrna.

Mr. James C. Forsyth had absconded from New York in the steamer *Atlantic*, for Liverpool, and taken with him between 100,000 dols. and 150,000 dols. in cash, the property of his father and father-in-law.

Frightful accounts were reaching New Orleans of the ravages of the yellow fever in the plantations and in the small villages along the lakes and river coasts. The fever in New Orleans was on the decrease, only twenty-four persons having died of that disease on the 17th ult. The deaths for the week, ending on that day, were 241. At Mobile the deaths were upwards of 20 a day.

We have a most gloomy picture of the state of affairs on the island of Cuba An epidemic of a choleraic nature, assisted by the pernicious fever, was sweeping off sailors, soldiers, negroes, and others with frightful rapidity. Some estates, numbering from 200 to 300 slaves, had been so reduced in the space of a week that there were scarcely men enough left to bury the dead.

There has been oppressive heat at Lisbon, and slight symptoms of earthquake have been experienced at Cintra of late.

"A PUT TO THE WHALE."—I observe that a querist, Pimlico, asks the origin of the phrase to "throw a tub to the whale." I think an explanation of this will be found in the introduction to Swift's "Tale of a Tub." I cannot lay my hand on the passage; but it is to the effect that sailors engaged in the Greenland fisheries make it a practice to throw overboard a tub to a wounded whale, to divert his attention from the boat which contains the harpooners.—*Notes and Queries.*

TRADE.—RUSSIA AND TURKEY.

WHEN we contrast the three little vessels, containing in all ninety men, with which Columbus set out 361 years ago to discover America, with the 339,206 vessels which came into and went out of our ports in 1852, the growth of the shipping of England—only a part of the shipping of the world—seems one of the marvels of society. At the same time, that single heroic event—a new starting point for the human race—is indelibly fixed on memory, while the daily and hourly labours, the buffetings and struggles of which the entrance and the departure of so many ships are indications, pass unknown and unchronicled—so little importance do we attach to the toils of millions, and so much to the brave achievement of one great head and great heart. From the voyage of those three little vessels, and those ninety men, has sprung—to say nothing of the many other consequences to the world—for England alone, a trade with one part only of the continent which Columbus discovered, of the enormous amount of £30,000,000 a year. Last year, the declared value of our exports to the United States was £16,134,397; and, as the exports were met by imports of corresponding or greater value, the whole trade was of more worth than the enormous sum mentioned. To give our readers a more complete idea of our trade at present, and formerly, let us state that the value of the imports and exports was in 1800 about £54,000,000, while last year the value of our exports alone was £78,000,000; which being doubled—for if the imports were not of more value than the exports the trade would be a losing one—makes the stupendous sum of £156,000,000 as the annual value of the foreign trade of this Empire. In that immense and growing mass of wealth which implies subsistence and employment for millions of people lies the secret of England's material grandeur. Within the last twenty-five years it has more than doubled: the exports in 1827 were £37,181,335; in 1852, £78,076,854.

It is useful to know which, of all the countries of the world, contributes the most to this increasing traffic; and they stand in the following order, according to the declared value of exports:—

United States	..	..	£16,134,397
Continental India and Islands	..	..	7,052,807
Hanseatic Towns (Germany)	..	..	6,872,5.5
British Settlements in Australia		..	4,222,266
Holland	..	..	4,103,0.0
Brazil	..	..	3,464,494
British North America	..	..	3,0.5,564
Turkish Dominions, in all		..	2,80.,541
France	..	..	2,7.1,286
China	..	..	1,914,944
British West Indies	..	..	1,908,559
Spain	..	..	1,222,857
Portugal	..	..	1,209,617
Chili	..	..	1,167,491
Russia	..	..	1,099,971

Having reached the great Northern Empire, which stands fifteenth on the list, we stop, because our more especial purpose is—now that war is declared between Russia and Turkey—to show, as far as trade is concerned, the relations of these two States to us. Turkey is the eighth on the list; and our trade with Turkey, it will be seen, is now nearly three-fold as great in value as our trade with Russia. Our trade with the United States is sixteen-fold greater than our trade with Russia, though our vessels went to the latter before the States were discovered. Such is, after all that is said of its growth, the slow progress of that barbarian empire. In modern times its trade with us has rather decreased than increased. In 1827, the value of our exports to Russia were £1,408,970; in 1852, £1,099,917. With Turkey, on the contrary, our trade has, in the same period, much increased. In 1827 it was £531,704; in 1852, £2,860,542; having increased more than five-fold. To Mr. Laurie, of Billiter-square, we are indebted for calling our attention again to this subject, and for some very elaborate tables and calculations concerning it, a summary of which we present to our readers nearly in his own words:—

Total Declared Value of Exports to the following Countries, from 1827 to 1852 inclusive (twenty-six years).

Russia amounting to	£42,843,645	..	Net decrease, nearly 1 per cent
Turkey	47,139,072	..	Net increase, nearly 30½ per cent
Egypt	8,1.5,0.0	..	5,278
Australia	33,278,087	..	349
India	129,714,995	..	105½
United States	218,014,273	..	286
All Countries	1,327,511,294	..	86

These accounts show that our exports to Russia decreased last year nearly 15 per cent (£14,716); whereas to Turkey they increased nearly 11 per cent (£10,821).

Of our total exports last year Russia took under 1½ per cent (£1,409); Turkey nearly 3½ per cent (£3,664).

Our exports to Egypt last year amounted to £255,701, which was at the rate of 1¼ per cent (£1,224)—nearly equal to Russia.

Mr. Laurie's valuable tables suggest one or two other important remarks. They begin with 1827, and end with 1852; and they are divided into periods of five years. The value of the total exports increased per cent in the first five years (1827-1831), 0.258; in the second (1832-36), 37.309; in the third (1837-41), 1.172; in the fourth (1842-46), 14.699; in the fifth (1847-51), 28.714. The fluctuations before 1842, when Sir Robert Peel began his Free-trade measures, is remarkable. In the two periods of five years prior to 1842—from 1827 to 1831, and from 1837 to 1841—which preceded and followed the Reform agitation, there was a very small increase of 0.258 in the first, and of 1.172 per cent in the last; while in the period of the Reform agitation, when the consequences of the reduction of taxation then made were manifest, the increase was no less than 37.369 per cent. This increase is greater than at any other period, but it was preceded and followed almost by stagnation and its horrible consequences. If we compare the first fifteen years of the series with the last eleven, we find that in the former, including the progress during the first Whig Administration, the increase was 38.739 per cent, and in the latter—the whole period since Sir Robert Peel's commercial reforms began—the increase has been 48.060 per cent, or 9.321 per cent greater in the eleven years ending 1852, than in the fifteen years ending 1841. We know that in the present year the increase is greater than it was last year, probably it will be as great as either of the years 1836, 1836—those years of cheapness and prosperity—and certainly it will much exceed in the actual quantity and value of our exports any previous year. The trade of which the growth from 1826 to 1852 excites our wonder, is still growing; nor can the mind foresee any bounds to its increase.

OBITUARY OF EMINENT PERSONS.

M. ARAGO.

FRANCIS DOMINICK ARAGO, a native of the south of France, and the scion and representative of a family long distinguished in literature, arts, and arms, was born on the 20th February, 1786. Arago received his first education at Toulouse, and afterwards obtained ready and honourable admittance at the Parisian Polytechnic School, to enter which, under any circumstances, is an honour in itself; since each applicant has to undergo one of the severest mathematical examinations possible before he can become a member of an establishment which Napoleon called his school for heroes. Arago's course in the Polytechnic Institution was marked with such brilliant ability, that, immediately on leaving it, Arago was attached to the Observatory of Paris; and he was shortly after selected to join M. Biot in his operation of measuring an arc of the meridian in Spain. Arago's adventures consequent upon this expedition would form a romance. They are thus narrated in that interesting annual, "Men of the Time:"—

While M. Arago was at Galazo, in Majorca, war broke out between France and Spain: and, under pretence that the fires which he made to aid his scientific measurements were intended to enlighten the march of the French troops, an attempt was made by the populace to seize Arago. He fled to the coast in disguise, and, after a series of hair-breadth escapes he embarked afresh, and arrived within view of Marseilles; but there the ship was attacked by a Spanish corsair, and Arago was taken prisoner to Rosas. Here all the preparations for a military execution were made before his eyes, with a view to frighten Arago, who was unknown, into the confession that he was an emigrant Spaniard, and to gain a pretence for confiscating the coveted vessel. In the end he was placed in the cellar of a prison, where he lived without light, overrun with vermin, and was often left for two days together without food. It happened that the Algerian vessel by which Arago had sailed had carried two lions, intended by the Dey as a present to the Emperor. One of these died on the passage, and Arago contrived to send a letter to the Dey, informing him that his lion had been starved to death, as it probably was, by the Spaniards. The Dey, enraged at the loss of the animal, addressed an angry letter to the Spanish Government, demanded recompense for the arbitrary seizure of the vessel, and threatened war if it were not immediately restored. A permission to set sail for Marseilles soon after reached Arago, just as he thought his affairs were at the worst; but the incompetent pilot conducted the ship at a venture about the Mediterranean for several days, and at last made a landing at Bougie. As the ship was no longer seaworthy, Arago resolved to proceed to Algiers by land, disguised as an Arab, and conducted by a Marabout a feat which long lacked credence among the French officers. The Dey had just died; a revolution, of which Arago was a witness, immediately destroyed his successor; the new ruler demanded of the French Government payment of a pretended debt; and as a categoric refusal arrived from Paris, Arago, with every Frenchman in Algiers, was inscribed on the list of slaves, expecting every day to be conducted to the galleys. At length, in 1809, after enduring many hardships, Arago obtained permission to leave Africa with a convoy of Algerian vessels, and a corsair of the same nation; but, just as they were in sight of Algiers, the convoy was stopped by two English frigates, and brought to Lord Collingwood. The corsair in which Arago sailed managed to escape, and after being chased once or twice, safely landed him in France.

On his arrival in France, the gallant adventurer was elected a member of the Institute, and, as such, he showed himself one of the greatest labourers in the cause of science that the world has seen. His endless discoveries among them—his determination of the diameters of planets, and his discovery of coloured polarisation, and of magnetism by rotation—will immortalize his name. M Arago's scientific essays are almost without number; they have for years continually illumined the pages of the "Transactions de l'Académie des Sciences," the "Memoires d'Arcueil," and the "Annuaire du Bureau des Longitudes. Arago was a member of every scientific society in Europe. In politics he was a democrat. He publicly endeavoured to dissuade Marmont from attacking the citizens in the Revolution of July, 1830; and he was Minister of Marine in the Provisional Government of the Revolution of 1848. M. Arago had also achieved a literary reputation; and his works deservedly renowned as an orator. One speech of his remains on memorable record—that where, opposed to Lamartine, he boldly contended for the superiority of the learned men and philosophers of modern times over those of classic antiquity. Arago was in everything a dauntless and unbending spirit. The energy of his nature, which impelled his victorious advance into regions of knowledge hitherto unknown and unconquered, carried him far away into political extremes. "I am," he used to say, "a sworn enemy of all privileges, a hater of every monopoly, a friend to free-trade, and a devoted defender of the rights of the people." Those principles he was ever ready to maintain to the utmost. Science throughout the world has experienced a loss in the present death of this great philosopher and genius of the nineteenth century.

A fine Portrait of M. Arago, from a Daguerréotype, appeared in the ILLUSTRATED LONDON NEWS, No. 560.

LORD ANDERSON.

ADAM ANDERSON, a senator of the College of Justice, in Scotland, under the title of Lord Anderson, was born in 1797, and was called to the Scotch bar in 1818, where he soon got into full practice, and acquired the reputation of being a sound and hard-working lawyer. He was a Conservative, but was far more attached to his profession, and to the amenities of literature and art, than to politics. In 1833, Mr. Anderson was appointed Sheriff of Perthshire, and held that office until 1842, when he became Solicitor-General for Scotland. He filled this situation until the fall of Sir Robert Peel's Administration, in the summer of 1846. In the year following he was made Dean of the Faculty of Advocates, succeeding the present Lord Justice-General in that office; he had previously succeeded his Lordship in the Solicitor-Generalship, and in the Sheriffship of Perthshire. In February, 1852, Lord Derby came into power, and Mr. Anderson was made Lord Advocate of Scotland. He then resigned the office of Dean of Faculty—thus following an example set by Lord Jeffrey in 1830. Soon after becoming Lord Advocate, Mr. Anderson addressed the electors of Lymington; and he had every chance of being returned to Parliament for that borough, at the general election in the summer of 1852; when a vacancy presented itself on the Scotch Bench; and he was promoted to be a Judge of the Court of Session, with the unanimous approbation alike of the public and of the profession. He took the title of Lord Anderson.

His Lordship's death happened unexpectedly. He had been making a short tour on the Continent, when, on his arrival at Folkestone, he was seized with illness, which, on his reaching London, alarmingly increased; and he expired there on the morning of the 24th ult. The news of the demise of a man so able in public, and so amiable in private life, has caused very general regret.

THE COUNTESS OF CARNWATH.

MARY ANNE, Countess of Carnwath, was the eldest daughter of the celebrated orator, the late Right Hon. Henry Grattan, and was married, first, to John Blachford, Esq., of Altadore, in the county Wicklow; and, secondly, after that gentleman's demise, to Thomas Henry Dalzell, eighth and present Earl of Carnwath, whose wife she became on the 9th of September, 1834. Her Ladyship departed this life on the 22nd ult.

Mdme. Mendelssohn Bartholdy, the widow of the late illustrious composer, died a few days ago at Frankfort, at the age of thirty-five. She has left four orphans, all of tender years. She was of delicate health; and the shock caused by her husband's untimely death brought on the consumptive malady which has brought her to the grave. She was Mdlle. Renaud, and belonged to one of the first families of Frankfort. They were married in 1837; and a most happy union of ten years' duration was dissolved by Mendelssohn's death, on November 4, 1847, before he had completed his thirty-ninth year. Soon after her marriage, Madame Mendelssohn accompanied her husband in one of his visits to England, and gained the esteem and affection of all his friends in this country by her virtues and amiable qualities.

THE GREAT SOUTH AMERICAN "ANT-EATER."
AT THE ZOOLOGICAL GARDENS, REGENT'S-PARK.

THE subject of our present Illustration is by far the most remarkable addition which the Zoological Society have acquired since the arrival of the hippopotamus; and, for singularity of form and habit, can scarcely be considered as in any respect inferior to him.

The Edentate animals of South America possess a peculiar interest on account of the vast development of that order which characterises its fossil Fauna; the Society are, therefore, particularly fortunate in having obtained the largest of the existing forms, up to [illegible] state, and in much more vigorous health than could have been expected, considering the great difficulties of treatment which [illegible] before its transport to England could be successfully [illegible].

The Ant-eater is of very considerable size, measuring about [illegible] in extreme length; has extraordinarily robust limbs; and its clothing of rough and shaggy hair, which, at first sight, would almost suggest a

GREAT ANT-EATER, JUST ADDED TO THE ZOOLOGICAL SOCIETY'S MENAGERIE, REGENT'S-PARK.

colder climate than the Brazils, as the place of its origin. Our Artist has seized in his Sketch a very characteristic attitude of the Ant-eater. The tongue, which is very flexible, is protruded as if in search of food; one bear-like arm is raised, and the inside of the other fore foot exhibits the folded claws on which the animal walks. Their immensely proportionate size, and the manner in which they are articulated, bear upon their primary object as instruments for scratching down the ant-hills, from which the animal habitually obtains its food; but these conditions, if fulfilled in the ordinary manner, would almost incapacitate it from walking; the almost solitary instance of this peculiar deviation from the formula of nature then provides an adaptation which leaves the common progressive action of the Ant-eater as free and as unembarrassed as that of any other animal of ordinary swiftness.

The Ant-eater is entirely devoid of teeth, while several of the so-called Edentates have teeth in one jaw. Its mouth is extremely small—so small, in fact, that nothing except extremely minute objects can enter it; and the long, attenuated form of the head gives it an expression which is quite apart from any other form of Mammal.

When in a state of repose, the use of the immense tail becomes obvious; for, being bent abruptly forward from its base, it entirely covers the whole body and head, and thatches them, as it were, with an impervious roof of pendent hair. In this state the Ant-eater is as difficult to understand as the Apteryx, and a drawing would convey no idea beyond that of a shapeless dusky mass, as little suggestive as possible of the excessively singular modifications of the quadruped type which lies hid beneath.

The continuous supply of novelties at the Gardens, as well as the uniform attention which is paid by the managers to the order of the Collection generally, has rendered the present season one of the most successful which the Zoological Society has experienced; and on Monday last, notwithstanding the waning period of the year, upwards of 5000 visitors enjoyed the intellectual amusement which the Menagerie affords. And there is now so large a portion of the most interesting objects placed under cover, that throughout the whole of the winter more than sufficient occupation for a morning's visit may be found, without suffering the slightest inconvenience from the weather, however inclement it may be. The Marine Vivarium alone will, we imagine, attract a stream of winter visitors; for we observed on Monday that the multitude of beautiful creatures which are contained in it exhibited themselves to far greater advantage, from the increased purity of the water, than when seen in the high temperature of a summer day.

LOSS OF THE STEAMER "QUITO."

The Pacific Steam Navigation Company's Royal Mail steamer *Quito* was totally lost, on the night of the 10th July, by striking on a rock, near Huasco, South America. An extract from the *Valparaiso Reporter* of the 30th of the same month thus describes the catastrophe:—

Many who had friends and relations on board were naturally in a state of uncertainty and fear, and Valparaiso appeared very dull without the arrival of the mail. The Government intended to despatch the war-steamer *Ancud*, but she could not be got ready for sailing so soon. So things remained until the 29th, when a telegraphic despatch came from Santiago, stating that the *Quito* had got upon a rock near Huasco; passengers and part of the silver saved. Next morning, Mr. Lambert's small screw steamer, *Firefly*, arrived with the mail-bags in a wet state, and brought particulars of the wreck; and we, in consequence, deferred the publication of our paper to the present date, there being no other steamer to take the mail. The *Quito* was sailing on the night of the 10th inst., twelve miles from Huasco, when she struck unexpectedly on a rock, and the shock drove her 100 yards further, striking from one rock to another with such force as to open her bottom immediately. The letter-bags and specie were then discharged with regularity. Of the first all were saved; but of the barrel of silver shipped at Coquimbo, 16 were missing, only 24 bars of silver and one of gold being saved. The following day the accident was known at Huasco, and the authorities and the English Consul went to the place, and the shipwrecked were conducted to the town, from whence the *Firefly* brought them to Coquimbo. The captain of the *Quito* wrote to the agency that only one person—Don Cruz Tobar—was drowned; and he had brought with him about 700 doubloons.

NEW CHURCH AT HOLYHEAD.

The population of the flourishing port of Holyhead has considerably more than doubled in the last six years, owing to the extensive works for the formation of a Harbour of Refuge. It now numbers upwards of one thousand souls; and, as the old church offers room only to five hundred persons, the spiritual destitution has been an object of serious concern to the Christian public. The immigrant population consists almost exclusively of the humblest class of labourers, from whom material assistance in providing additional church accommodation could not reasonably be expected. However, the good work was commenced in earnest; but, ere long, the Building Committee ascertained there was a deficiency of more than £1000 in the funds raised for the undertaking; whilst the necessity for a *second* church became increased by the difficulty of having morning and evening services in *two* languages in the same Church at hours convenient to both congregations, or, indeed, to either. Accordingly, an urgent appeal was made to the public, and the result has been the commencement of the building of the Church, the foundation-stone of which was laid on the 30th of August, at Holyhead, by the Hon. Mrs. Stanley, of Penrhos, in the presence of the Lord Bishop of Bangor, and a great number of his clergy, and of the laity. After the ceremony, a large company was hospitably entertained at the mansion of the Hon. W. O. Stanley, M.P.; who, together with his estimable lady, have devoted time and money to aid the worthy incumbent, the Rev. Charles Williams, B.D., in forwarding the good work. Mr. Stanley has headed the subscription list with the noble gift of £500.

NEW CHURCH OF ST. SEIRIOL, HOLYHEAD.

The new Church, designed by Mr. C. Verelst, of Liverpool, is dedicated to St. Seiriol, a saint of great local celebrity, and an intimate friend of St. Cybi, to whom the ancient parish church in the same place is dedicated. The ground for St. Seiriol's was presented by the Marquis of Anglesey, and the site is admirable and easily accessible. The sacred edifice will be surmounted with a spire, 181 feet high, and will be in the Early Decorated style; the plan consisting of a chancel and nave, with north and south aisles. The roof will be open, and the woodwork of it, as well as the open seats, will be stained and varnished. The great ornament of the whole edifice will be a glorious eastern window, which will be of four lights, surmounted with flamboyant tracery, and filled, it is hoped, with stained glass in memory of the dead. The church is designed to accommodate 753 persons: half the sittings to be free. The collection, on August 30, after an excellent sermon in English, in the morning, by the Rev. P. Constable Fillis, M.A., Llanfaes; and the Rev. Thomas Davies, in Welsh, in the evening, amounted to £57.

WRECK OF THE ROYAL MAIL STEAM-SHIP, "QUITO," ON A ROCK, NEAR HUASCO.

RECEPTION OF THE EMPEROR AND EMPRESS OF THE FRENCH, AT CALAIS.

TOUR OF THE EMPEROR AND EMPRESS OF THE FRENCH IN THE NORTH OF FRANCE.

(From our Special Correspondent.)

When Louis Napoleon started on his first tour, the general conviction throughout France (for his first election to the Presidency may be safely attributed to other than personal reasons), was that he was a wild-brained man, lost in a monomania; and that was the conviction which he succeeded in overcoming; substituting among all the official, military, and generally bureaucratic classes with whom he came in contact, a belief that he was a man with an intellect and character upon whom, in a given crisis, the utmost political reliance could be placed. At the moment he was rivalling half a dozen other men for the first place in France; and he passed his competitors simply because none of those competitors were in a position to do what he did—canvass the governing classes in France, and make the personal acquaintance of the people. Other causes undoubtedly contributed to the astonishing result consummated in his election as Emperor; but it would be folly to overlook the influences which were brought to bear by the machinery the provincial tours. And precisely the same influences Louis Napoleon attempted to sustain and intensify in his grand tour, the other day, between the 22nd and 29th of September, in the great northern towns and ports of France. It was his first tour, since his marriage; and, as a clever functionary well expressed it, he, by this means, sought to introduce his bride to his people. A beautiful Empress would naturally affect and modify extensively the political calculations of such a people as the French, and more especially of such a people as the French of the provinces—where pretty women, let it be said with regret, are very seldom seen; and, unfortunately, for French art,

VISIT OF THE EMPEROR AND EMPRESS OF THE FRENCH TO BOULOGNE.—THE SOUS PREFECTURE, FROM THE RAMPARTS.

the popular so-called portraits of her Imperial Majesty, are such dismal misrepresentations, that until the original showed herself, it was out of the question to hope that her loving subjects (to order) could compliment the taste of their Emperor. We know from English history, that historical women are expected to be pretty; a celebrated writer has observed that Charles the Second was allowed to die at Whitehall, and his brother James was driven out of the country, simply because the one king had pretty, and the other had ugly mistresses: and in France it is nasty was in the department of the North ten times stronger and safer on the 29th than on the 21st of September. It is also to be remarked, that such an impression in the North was very desirable for Louis Napoleon's purposes. It was his first visit there; and it was supposed that the Emperor would have had no chance in this town, if unaccompanied by the Empress. The North was to him, what La Vendee was to his uncle—decidedly opposed to him. The vote of the department was doubtful, when he was candidate for the Presidency; and it is said by those of the inhabitants, who talk freely, that the vote was distinctly against him when he commenced his election as Emperor. Various causes may account for this state of feeling; and in the towns these two causes may be stated as being actively at work—the manufacturers (and the department is the Lancashire of France) fear Louis Napoleon would be a Free-trader to secure the English alliance; and the workmen, who naturally disseminate their opinions among the rural population, are Republicans, and something more. Then for Louis Napoleon the North has unpleasant traditions. Damiens was born in Arras: and so was Robespierre. Lille was the place which distinguished itself in 1848, by the fervour with which it sent up General Negrier to fight for a Republic. Then, Boulogne! But, with a beautiful Empress by his side, and a superb state and military machinery to surround him with grandeur, Louis Napoleon could do much, even in Arras, Lille, and Boulogne; and the result shows considerable success. Complete success—certainly not; for the greetings of the population massed in the streets and along the roads were conspicuously one-sided—to the Empress and not to the Emperor. And for the partial failure of his plan in the tour, the Emperor is himself to blame; he very naively (taking his point of view of French interests) abstained from those lofty, but, from circumstances, necessarily familiar, speeches at banquets and presentations, which would have established, as in the other provinces they did red carpets of connection between him and the auditories established, close bonds of connection between him and the auditories whom he, as it were, took into his confidence. The absence of such speeches imparted to the whole tour the character of a procession passing silently across a stage.

Let us now record the different aspects of this procession, stating as briefly as possible those facts which illustrate the illustrations of our Artists. In the first place it may be mentioned, that, throughout the "progress," there was very little evidence of that voluntary welcoming to which we are accustomed with our own Queen travels in the British provinces. Wanting municipal machinery, and destitute, in consequence, of what local papers in England call "local spirit," the French towns depend altogether on such occasions on the dictation of an over-centralized system; and, in regard to this Imperial visit to the North, the fact would appear to be that the order to the different authorities to prepare hospitality came from Paris.

In such place, the cost of the preparations, banners, balls, &c., &c., was defrayed by a tax or contribution levied on the town, and indiscriminately on all classes. For instance, Arras had to pay 80,000 francs: Lille, 120,000 francs; Douai, 30,000 francs, and so on. Boulogne, in consequence of a false alarm early in the month, having to prepare twice over, and therefore paying twice over. And the cost was not confined to the mere payment of the tax; troops were moving about in large masses from place to place during this tour, and each house in France is liable at any time to receive and entertain the military. A fête in Paris, which costs the Parisians so much so often, is endured with equanimity because, in Paris, a fête attracts strangers—foreigners. But Lille's 120,000f. were sunk for ever; Arras was clearly 80,000f. poorer. And what the Imperial journey cost indirectly to the Emperor and to the general revenue, is beyond calculation. His Majesty travelled with forty or fifty horses, and from a hundred to two hundred and fifty servants; and, as he never takes a holiday, but is always governing, special couriers and special messengers and special telegraphs were perpetually on their way between him and Paris.

ARRAS.

Their Majesties left St. Cloud about noon on the 22nd of September, and travelled by the northern railway (the Company having provided a magnificent state carriage for them, on the model of that built by the North-Western for Queen Victoria) to Arras. The journey was accomplished in about four hours, good travelling; but still the tram was late. Here it may be observed his Majesty was late during the whole of his tour. He never kept his time, and he never observed the pre-arranged routes in the towns; neglecting that politeness of sovereigns, punctuality, and breaking through the programmes of scrupulous functionaries with such assiduity as to suggest a motive in his constant series of surprises—the motive of keeping clear of possible prepared dangers. At Arras the crowds were kept waiting two hours beyond the appointed time at the station; and, crushed into a small space, and suffering from an occasional drizzling, raw shower, their good humour slackened; and their greetings, in the end, were probably less warm (for even uniformed officials drilled into condition to lead cries of loyalty get damp) than they would have been had the train arrived at the promised hour. At the station those Majesties were received by the "authorities"—a term which is to be understood as including a marvellous variety of civil and military uniforms, and plain and badly-made black coats, with red scarves round their waists: these were deputations: and, after an infinity of bowing, screaming, scuffling, and plunging, the Royal pair got into the carriage, and escaped through the crowds into the Prefecture. The town had put on the holiday suit requested; and that it may not be supposed we are exaggerating, we give the proclamation of the Prefect to the inhabitants, in which he dictates the required loyalty. The document may be taken as a sample of a series:—

Inhabitants of Arras, Last year, in his triumphant march of the journey to the south, we saw an enthusiastic people cast themselves down with countless acclamations upon the steps of the saviour of France. The dangers which his hand then averted are further removed from us to day, but our gratitude ought neither to grow old nor suffer itself to be silent. Upon the occasion of their first visit to the towns of the north, Arras is about shortly to have the honour of receiving their Majesties. Upon this occasion a Princess will accompany the Emperor, already dear to France, and still more attached to our province, where Spain has left so many *souvenirs*: We have concluded all our efforts for preparing for his Majesties a reception worthy of their dignity; to you now belongs the task of giving it brilliant success. In larger and richer cities, the Emperor will find, without doubt, fêtes of greater magnificence; let him meet nowhere with a more enthusiastic welcome. The expression of our gratitude is that which will make the best impression on his heart. Decorate, then, your windows with flags and banners; ornament your corals, then, your windows with flags and banners; ornament your houses with hangings and foliage; and, above all, upon the passage of our France, let us hear the cry of "Vive l'Empereur! Vive l'Impératrice!"

The Mayor of Arras,
Chevalier de la Légion d'Honneur, M. PLICHON.

As the cortége passed from the station to the Prefecture, guns were fired, and the bells of the modernized and handsome cathedral showered down upon the bannered streets incessant peals. Bouquets fell from the balconies on the Royal carriage (an open one); or, if they missed it, fell on the other carriages. And the blouses gave shouts for the familiar faces of the Mayor and the other functionaries, or for the grand airs of the officers in the Imperial suite; among whom were prominently, and attracting that attention due to the Hero of the Second of December, the Marshal St. Arnaud, Minister of War; Le Grand Marechal du Palais, a superbly uniformed personage, who acted principal part in all the balls, where his duty seamed to be to give signals to the musicians; le Comte de Montebello, and le Colonel Fleury, Imperial Aides-de-Camp; Le Marquis de Belmont, Chamberlain; and the two Ladies-in-Waiting on the Empress—viz., the well-known Princess d'Essling, who is "grande maitresse," and la Comtesse Tascher de la Pagerie, whose title is "Dame du Palais." To these must be added, among a crowd, Dr. Conneau, whom, we presume, was travelling physician; and M. Mocquart, "Chef du Cabinet." At the Prefecture the Royal party dined. The dinner like all the other dinners on the tour being attended exclusively by functionaries. After dinner, on the 23rd, course, a ball. Early on the morning of the 23rd, their Majesties left Arras, the people being again collected to see them go, and the functionaries being again everywhere to lead off cries for "l'Empéreur;" speeding off for Douai, Valenciennes, and Lille. Arras, at noon, was restored to that repose which would seem to become its gloomy, half French half Flemish streets. But we must not omit one significant circumstance, in connection with the Imperial stay at Arras. Arras has a Bishop; and there would appear to be in that neighbourhood an enormous number of priests: and in the cathedral—whither, before leaving, the Emperor went to do homage to that Church which in the provinces is so powerful and so useful to him—the Bishop and the priests collected round his Majesty, and the Bishop (Monseigneur Parisel) delivered an address. M. Parisel, be it observed, is an eminent man; and his unreserved proffer of allegiance to the dynasty of the Emperor is to be received as a sign of the times. We take the following passage:—

Other men will not be wanting, Sire, to laud the supereminent qualifications which adorn the august person of your Majesty; that serenity of soul which nothing shakes, that power of will which triumphs over all, that sound view of things which seizes always the truth, finally, that sometimes superiority where which all the obstacles yield, and all pretensions vanish. We, whose thoughts should be above this world, because our kingdom is not of it—we have other homage to offer you. There is something in your Majesty superior to all the gifts of nature; *it is the mission which you have received from heaven.* The more the inward thought of faith reflects upon all you have done with so much promptitude and facility, the more convinced it becomes that you have not acted singly. *God is with you, Sire, and that is your chief glory.*

To this the Emperor returned a "suitable reply," but too curt for courtesy, not to say, piety.

It is further to be chronicled in connexion with Arras, than an address was delivered there to the Empress. The *Moniteur* did not state the terms of the document; but we may guess at its import from the circumstance that the deputation consisted of forty pretty young ladies dressed in a delicious uniform of white tarlatane robes, with violets (Napoleon violets) in their hair.

DOUAI

On the 23rd, Friday evening, Douai was the first place reached. Douai is one of the most important sous-prefectures in France; and is, altogether, a well occupied town. What with its Jesuit college, where O'Connell was educated, its Cour Royale, its Tribunal of the First Instance, its numerous literary societies (Douai is great in science), and its military employments—the arsenal being of consequence, and the place being well garrisoned—Douai, on an Imperial visit, should have done wonders; but Douai did very little, except turn its 20,000 inhabitants into the streets to look at, now and then—not often—shout. The Emperor was not to sleep there, he was only paying a flying visit; and the loving subjects there did not choose, apparently, to go out of their way, as the Arrasians had done—the Arras line having been the Imperial route the whole night. The station was very shabbily fitted up, even with functionaries; and the town had evidently been lazy, or illoyal, the military being the only class who had exerted themselves, and their exertions being confined to making a sort of garlanded and flowered avenue between the station and the arsenal. But Douai has associations which doubtless interested Louis Napoleon. Here, once, for six months, starved, as a sous-lieutenant, the great Emperor; and to the house in which he had a wretched room, has never been a visit *in memoriam*; but did not, probably from want of time. But his Majesty stayed long enough to receive a Mayor's address, and to bow to a collection of functionaries, and to compliment some colonels. Before going away, his Majesty distributed some few of the eternal crosses of the Legion of Honour. As was the custom of his uncle, his Majesty frequently in a fit of arranged enthusiasm, takes the cross from his own breast to transfer it to some suddenly-discovered hero; and thus, in fact, he does so often, as to suggest that he keeps a few crosses in his pocket for emergencies.

VALENCIENNES.

The roar of cannon announced the arrival of the illustrious visitors at Valenciennes. There were great arrangements at this station than at Douai; and the ceremony of presenting the keys—which the Mayor bore on a sort of tea-tray—was imposing. As at Douai, the Emperor and Empress were driven through the town—here in a delightable shower of rain—to the Hôtel de Ville; and there addresses of the stereotyped order were received; being presented to the Emperor by the usual constituted authorities; and to the Empress by a well-selected band of young ladies.

At one point in the passage through the streets the cortége was stopped, in order that the Emperor should hear the Valenciennes Harmonic Society sing, from a balcony, one of the songs of Queen Hortense ("Marchons à la Victoire"); and then the Empress was called a ("Chœur de Circonstance." Unhappily, the Royal pair could not appreciate the devotion of the Valenciennese which detained them in a shower. It was remarked that the Empress Eugénie, whose heart looks called forth unbounding applause, had the proffers made by the authorities of umbrellas; and, perhaps, in this century that is as good a test as another of the latent heroicism of a French Empress.

LILLE.

What with artificial and real spontaneity—and there was, to a great extent, among the shopkeepers, real honesty of intention to give a hearty welcome to the visitors—Lille, on the 23rd, did its duty. It is a fine town, and could afford it. It has been called the Manchester of France; but a town of not 70,000 inhabitants suggests very little of Cottonopolis, and the comparison can give very little idea of Lille. It is rather the Leicester or Birmingham of France; but it is utterly unlike any English town, inasmuch as it is not only a busy hive of industry, but that it conjoins with that aspect all the circumstances of a strong garrison town, capital of the department of the North, and the 3000 soldiers which constitute a remarkable feature in the surrounding landscape), one of the principal manufacturing places in France of such articles as cloth, cassimeres, blankets, velvet, and linen wares. Lille has also its military significance, as containing that renowned citadel which is regarded as the *chef-d'œuvre* of Vauban. This double phase of the town is illustrated on the Grand Place; on one side of which is the handsome medieval Bourse—always a scene of mercantile bustle—and directly in front, on the other side, is the grandiose cast (a gorgeous imitation of the Trois Frères of the Palais Royal), which from morning to night is full of the officers, to the number of several hundreds, of the garrison. And, of course, such a conjunction of "interests" contributes effectually to appearances on a fête day; civic and military personages competing for gala splendours; and variety in costume enhancing eminently the pleasantness of that picture which Princes—and none more than the present French Emperor—love to see. There are several picturesque points in Lille; and the Grand Place is one of the most picturesque of Paris; and these streets were draped and flowered into superb outlines; opposite houses were connected by silken and coloured cords; central ornaments were suspended, crowning garlands, banners, and all the military and civic accessories of Gala fête days; and from end to end of the principal streets, over the shop windows, were continuous lines of artistically hung red and white drapery. Then absolute holiday reigned in Lille—all the shops and workshops, the whole town, was closed; and the population were in the streets at mid-day; forming, for the Imperial path, double walls, lined—as is usual in France—with blue-coated little soldiery, armed to the teeth, loaded for a campaign, and collectively exposing a considerable aspect and awe upon the paige, and collectively exposing a considerable aspect and awe upon the blouses—who, at Lille, and on public occasions, have distinctly satirical tendencies. Then, of course, the windows—let out along the route at high prices—were filled with pretty and neatly-dressed people, whose inhabitants proper of the shops finding lower, but perhaps better, places at their own shop-doors; where, half inside and half in the street, were constructed (of chairs, stools, and counters) improvised stages and balconies. Lastly, the streets were sanded with pretty fine sand, as at Arras. And when the booms of artillery and the clash of clarions announced the excitements to the picture, it must be admitted that Lille was to have flashed in a very grand way on the Imperial eyes.

But, alas! the shower which was piercing the pink parasol and wetting the fair shoulders of the Empress at Valenciennes, was, at the same time, falling at Lille; so that the streets were plashy, oily—so that the blouses were damp and exhalative—so that the colours were limp, the garlands heavy with wet, the crowns teeming with rain-water—so that the pretty faces in the balconies had red noses, and the physiognomies of the bourgeoisie at the shop-doors a dreary conviction impressed upon them that the enthusiasm would, as a speculation, after all not pay. And the Emperor diminished Lille's further his chance of a hearty reception: he was due on the Grand Place, in and about which the mightiest of the crowds were waiting, about half-past three; and he did not arrive till five. It cannot, however, be said that the people did lose their good humour to the end: they managed to amuse themselves to the last by ironical recognitions of strutting functionaries moving about to their posts, by repeated (the joke at last became stale) cries for the Empress as to the Emperor's arrival, and by that laughing excitement with which we are familiar on British race-courses, whenever a stray dog gets within the lines and flees from the hootings of the multitude, who forbid all lateral escape. But when the Emperor did arrive, the rain still pouring down, he brought no reward with him—neither he nor the Empress was seen. They were in a covered travelling carriage, the windows up, both lying back in their seats, and only the most dreary pointing glimpses were got of the augus. countenances, for the carriages went at a sharp trot. Whether because of the rain, or disaffection—but we believe because of the rain—there was no cheering from the people, no cheering of handkerchiefs from the balconies. We state this as a positive fact. The functionaries cheered: and the officers waved their swords, and roared, and gesticulated, and incited their men, and indirectly incited the blouses; but it was a failure, there were no cries from the democratic dispersion: the cortége passed through the town, between the people, in a chilly silence. But it was, nevertheless, a very fine cortége. The gendarmerie and cuirassers galloped first, a dragoon band followed, then came a regiment of hussars, followed by cuirassers; and after the carriages galloped again more chasseurs, more cuirassers, more gendarmerie closing band. Only for the rain, the passage of the royal carriages to the place being then full of the following soldiery, visible but a mass of massed heads of the multitude—under the great arch, would have been a splendid piece of spectacle; and even with the rain, it was not without some striking characteristics of grandeur.

We are, however, anticipating. The Royal train, arriving from Valenciennes, had stopped at a sort of temporary station, at some distance from the regular one, beyond the town, and this was for the purpose of passing their Majesties through the old great "Porte" of Lille, the gate through which many great armies of the Grand Monarch, and the great Marlborough, and later of the great Emperor, had marched to victory, or in retreat—the Porte de Paris, a splendid old structure, an ornate Temple Bar, dear to Lille, as having been erected "in memory of the conquest of 1667." Here a great tent, really magnificent, had been fitted up: beneath the canopy at this place was performed, as through the ceremony of presenting to the refusing hand the impracticable keys of Vauban's impregnable city, which, nevertheless, has so often been taken. And here, of course, there was an address, mildly bowed with that stern expression—less small which so terribly bewilders provincial functionaries. Farther on, under a tasteful but dripping arch of triumph, which accidentally possessed the advantage of offering some cover from the shower, appeared a bevy of young ladies, who, on a question it was to cursey at a given signal, and to present flowers—to drill. The flowers would have been better had there been more sun; but the address, for a young ladies' address, was perfect; and that the perfume of this elocutionary bouquet may not be lost in a mere transmission, it is worth while giving the document entire, and in the original:

Sire,—Votre avénement providentiel a fait renaître la joie au sein de nos familles en rendant à la France le calme et la sécurité. Aux bienfaits répandus par nos mères sur le nom de Votre Majesté, nous avons compris la sainte reconnaissance que nous vous devons.

Les mêmes sentiments, sire, remplissent aujourd'hui nos coeurs, daignez en accueillir la sincère expression, dont ces fleurs sont le symbole.

Madame,—Depuis que Sa Majesté a placé sur votre front un diadème dont l'éclat est rehaussé en vous par la grâce et la vertu, chaque jour a apporté de nouvelles preuves de votre inépuisable bienfaisance et de votre sollicitude pour la gloire et le bonheur de notre bien-aimé souverain. Qu'il nous soit permis, Madame, de déposer à vos pieds, avec notre humble hommage, les voeux ardents que nous formons pour sa Majesté, l'Empereur ainsi que pour l'Ange de bonté qui a associé à ses destinées devenues désormais celles de la France

This pretty ceremony being concluded, the carriages passed on pretty nearly along the prescribed route (there was some sight alteration), and amid the circumstances we have stated; and of course the shelter of the Prefecture was sought with all speed. We heard marvels about the sleeping apartments, and of the gorgeous boudoir of the Empress; the functionaries neglecting no particular to enhance the comfort of the Royal and beautiful lady. At six there was a grand dinner, after which there was a reception; and it should be understood that the Prefecture had been newly painted, and newly furnished and arranged for this occasion; at which were presented the Archbishop and the clergy, several senators, members of the Corps Législatif, representatives of the army, of the magistracy, the sub-prefects, the Conseil de Prefecture, the Conseil-General, the Corps Municipal, members of the Chamber of Commerce, and numerous other civic and military functionaries. Then, at about eight o'clock in the evening, the dresses and jewels drove to the theatre; where there was a most loyal reception; and, but that the wet clothes and the soaking umbrellas gave out the odours peculiar to wet coats, the scene would have been splendid. Of course, this time, those who were present, got an excellent view of the Imperial couple; and there was, of course, a Babel of criticism, to the complete destruction of all effects intended by the laborious performers on the stage. As to these criticisms, the occupants of the Royal box must themselves have been fearful. "Belle, belle!" being the prominent word, and having only, of course, one reference. The Empress was very gracious, and has that sort of smile which wins upon a crowd; and she was probably pleased with the unreserved admiration she could read on all countenances, those of the ecstatic ones in particular. But it required Imperial courage to sustain the stares. We hear and see a good deal of the irksome vulgarity of English mobs of ladies and gentlemen when most profoundly impressed by royalty among them; anything like that kind we have never seen was exceeded at every point in the Northern Tour by the gaping curiosity, with which, in long sustained stares, French provincial eyes were fastened upon the young Empress.

Next day there were compliments at Lille. Their Majesties were to stay all day, and it was very fine. Of this the Emperor took advantage; and he and his Empress may be said to have been in the streets all day. He first visited all the great manufactories, then the Bourse, where he received the addresses of the merchants, and took off his hat to a statue erected in the centre, by "the industry of the north," to his great uncle, and in the afternoon he reviewed the garrison, numbering 2000 or 2500 men, horse and foot. Lille, like Manchester, has its big great project about cotton; as Manchester holds that India can grow enough cotton for Lancashire, so Lille, with parallel patriotism, contends that Algiers could produce cotton crops enough for France. There are some great establishments in Lille—notably that of Messrs. Wellaert and Cox (the latter we consider to be an Englishman); and with this the Emperor was so delighted that he gave M. Wellaert the Cross of the Legion of Honour. The scene is thus described in a Lille journal

M. Edmond Cox a mis sous les yeux de S. M. une collection de coton simples et retors du numéro 140 à 400 provenant des cotons d'Algérie, lorsque S. M. a eu remis entre mains le No. 360, elle a dit: "Comment ce produit sort des cotons d'Algérie?" et sur la réponse affirmative de M. Cox, elle a exprimé son contentement et a témoigné une satisfaction qui a été remarquée par tous. Puis pour notre industrie et pour notre colonie Algerienne. En sortant du bureau, l'Empereur a été sa croix et l'a placée à la boutonnière de M. Wallaert ainé. Cette recompense a provoqué une sympatique générale.

Subsequently, after the tour of the manufactories within the town, the Emperor paid a visit (by rail) to Roubaix—the Stockport of this Manchester—which is a few miles from Lille, and where a most extensive exhibition of the industry of the region had been prepared. To all the details connected with the various products, the Emperor paid that attention which was clearly unforced; for he is no gala sight-seer of such sights, being thoroughly conversant, both from the scientific and the commercial point of view, with all the topics arising out of questions of commercial and manufactures; and it is to be remembered that in the visit to Lille, such a knowledge, and the display of it, was of the highest importance to his interests, as enabling him to suggest (he was not likely to speak out) that he was not the man to sacrifice lightly such interests for political reasons in connection with the dreaded possibility of too intimate English alliance. After these complimentary concessions to commercial Lille, came the obeisance to the eagles of military Lille, the review, the inspection of the arsenal, &c.—occupations which took time. Several English officers were present at the review; among others, the Earl of Lucan, his son Lord Bingham, and the Marquis of Worcester, who had a go-official commission given them by the Government similar to that of the Duke of Cambridge at Olmütz—to accompany the French Emperor to the reviews held in the course of the Northern Tour. The red coats of the British, conspicuous among the blues and blacks and greens of the French staff, attracted great attention; and fortunately for the first impressions of the British army on the present generation of Lille, the Horse Guards had selected officers taller and finer than the tallest and finest Frenchmen on the ground that day.

Both at the review and in his numerous sudden and unexpected appearances in the streets—now in a carriage, now on horseback—the Emperor was well received.

At night there was a magnificent ball. The room, which contained 4000 people, was built at a cost of 20,000f., over the courtyard of the Hôtel de Ville; and was superbly fitted up, grandly lighted, exquisitely curtained, and wonderfully flowered. It was worthy of Lille; and the ball went off with great eclat. We heard next day that the Emperor and the "authorities" had had terrible fears—even before the dancing had commenced—that the room was not safe—that it was giving way; and the way in which the chandeliers swayed to and fro, giving way; and the way in which the chandeliers swayed to and fro, and in which the flooring yielded to the feet, may naturally have suggested such a terror. But the worst was raked, as, undoubtedly, had any shrinking been shown, the place would have come down under the rush of an illoyal and irreverent *canaille qui peut*. The Emperor and Empress

[illegible] minutes' staring on a raised throne, behind which [illegible] the brilliant suite—brilliant at least, if not for rank or [illegible] a ball in a quadrille—the Empress [illegible] and on, and his Majesty honouring his Worship's [illegible] as at Arras, the Emperor did not conceal the [illegible] good), or even a sympathetic demur; but the Empress, who smiles [illegible] to the music, no fervent opinions; and immense admir[illegible] so expressed for the Earl of Lucan, who, despite the [illegible] ish becomes a reputation, Peer, danced with the stiffness [illegible] country, and thus relieved the dance from an excess [illegible] matory appearance. After the dance, there was another ten[illegible] spired by staring at the Royal party, resented in their chairs [illegible] to, and it must be confessed that the patience of the crowd that [illegible] be gone through at all the balls) was not passed with the dignity which is graceful. The Emperor does not seem to enjoy the affair; and his sad face is contagious. He does not speak to the Empress; and the Empress, speaking to no one either, but smiling vaguely straightforward, [illegible] Imperial image of Patience with painful force. The suite [illegible] are as silent; the functionaries on either side are holding their breath; conversation is suspended in the ball-room; and every one's eyes are on the throne. The picture, at such a moment, is splendid; but the silence of the scene is oppressive; and, altogether, the constraint and the loyalty are, together, presented in rather an offensive, because too theatrical, an aspect. At Lille, as at all the other balls, it was an immense relief when, having communicated his wishes, the Emperor rose, took the Empress's hand, and stepped from the throne. This was the signal that he was about to walk through the rooms; and, instantly, the functionaries plunged into the crowd to make a passage—a passage which, in a few seconds, was as full as it had to be made; and it was not easy. The functionaries vociferated, trod on toes, pushed, tore [illegible] risked, in short, a little revolution; and they did, in the end, make a gangway round the room; but it was barely capacious enough for the succession of two abreast, headed by the Imperial couple; and the [illegible] ely march was such a continuous souffle, that not all the Empress's smiles could make it as successfully courteous and graceful as it should have been. After this circuit the Royal party retired, apparently from the room, all the uniforms crying "Vive l'Empereur!" all the black coats crying "Vive l'Impératrice!" Even those who had corns, and had threatened to call out the functionaries, felt chivalrous towards the Empress, who, among some 7000 women, the prettiest of the province, had proved her right to the first place—the right of supreme beauty.

Next day was Sunday. The Emperor and Empress, with their plus suite and staff, therefore, heard mass in the Lille Cathedral—a fine building, not fit for Royal prayers; and, after another visit for the distribution of crosses to the Hôtel de Ville—a splendid old edifice, with rich historical associations, Charles the Fifth having lived in it—Lille was bidden farewell, and Napoleon the Third and his Empress were on their way to St. Omer.

ST. OMER.

The visit to St. Omer was a visit to the camp of Helfaut, situated five miles outside St. Omer. The pretty little town had made proper preparations—put arches and colours in the streets, painted the Hôtel de Ville, sanded the pavements, and turned the wretched little theatre inside out to convert it into a miserable ball-room; and, as it was Sunday, every one had dressed in their best, had crowded into the streets and along the roads, and got wet (for it was another wet day) with loyal equanimity. But the visit was merely a passage, and the business of the day was clearly with the camp. Saying, therefore, nothing of the ceremony of offering the keys, which, of course, was not omitted in the rapid progress, and saying nothing of the dinner at the Hôtel de Ville, and nothing of the ball in the evening at the theatre (except that the Earl of Lucan danced with the Empress), we proceed to an account of the review—a review, be it remarked, of a larger number of troops than were assembled at Compiègne. The Emperor arrived at St. Omer soon after one o'clock; and he and the Empress having taken their places in a closed carriage, they were driven rapidly through St. Omer, and on the road to Helfaut. The streets were lined with thousands of people, and with country people collected from the department chiefly; and our Artist has depicted the scene at the gate, leading out of Calais, across the walls and across the moat, to the Helfaut-road. This scene was, at one moment, such that the cortége passed along the streets, the people closed behind it, and poured on a torrent after it; and just at this gate, as the soldiers, following the carriages, passed through, the rush, stopped by the narrow egress, became dangerous. Vast columns of men and women were seen from the town, and, ignorant of the cause of the stoppage in front, they only pressed the more as they encountered the unknown obstacle, and as only about a dozen could pass the gate at one time, and as who could see the gate struggled to get at it as the only means of escape from the frightful crush, the confusion, the cries, the screams, the curses, can be conceived. And this scene lasted full a quarter of an hour; hundreds of soldiery not doing what these four policemen have done—keeping open a passage—and in the rear to debouch on the side streets. Of course there were children, and of course there were women, and in the worst places, jammed into the most horrible corners; and their cries—yells partly of fear, partly of pain—were dreadful. But it was ended in time with, it may be hoped, none of those fatal consequences which at one moment had seemed inevitable; and, without waiting to see whether the women who had stared were really dead, on pressed the peasants of the politest of nations after that Emperor who, with the most magnificent military machinery, is powerless to manage with any order a French crowd. That it ruined hard—that it would rain all day that under such circumstances the review could not be a very fine one, did not in the least deter the hurrying mob. Up the hills and muddy roads, across stubble and ploughed clay, the mass rushed with the most marvellous speed; vehicles of all sorts, from the swell English travelling barouche to a square box of deal on broken wheels, supported to be a St. Omer agricultural cart—horses of all kinds, for miles round, having been hired, borrowed, or stolen for this occasion—mixing with the pedestrians; and the groupings of peasantry, townspeople, soldiers, and priests, being—on that fine road offering mountain views—picturesque and pretty in spite of the weather. When a crowd, on a bad day, has made up its mind to endure a heavy wetting, it recovers its good humour: knowing the worst is the next best thing to knowing the best; and on this Sunday there was no want of liveliness and fun to shorten the road, and light up the *spectacle*. The St. Omerians are used to grand reviews; there is always a vast camp there; but they never had an Emperor and Empress among them since the first Napoleon's time; and they were not going to lose their chance for the price of a Sunday suit. In short, the people they ought to have been put to no unnecessary trouble; but they were: for, consequent upon that want of police-machinery which keeps an English crowd en *rapport* with every fête—they did not know and could not find out, on what ground the review was to take place; the consequence of which was that they walked, in the rain and mud, an unnecessary two miles of steep hill—that is, they followed the Emperor up to the camp, which is on the heights of Helfaut; and the head of the columns of people had only just reached the camp when they were met by the first column of infantry, who were on their way to the ground which was to witness the manœuvres of the day. Hence new confusion, and a retrograde walk of a couple of miles for thousands of the poor people. The Emperor reached the camp about two, and was received by the troops on parade. He alighted at the hut (for the Helfaut camp is a camp of huts, some of them very comfortable, with pretty gardens in front) of that of the General in Command; and, after some conversation, he mounted on horseback, leaving the Empress covered up with cloaks, in the carriage. All the staff, and the foreign officers, were soon mounted too; and then there was a very brilliant cavalcade. The Emperor was on a fine bay charger, looked well; for he rides well, with an easy, English, certainly not French, seat. To the English party had been added Colonel Jones, of the Royal Engineers, and Colonel Fox Strangways,* a cavalry officer, and a fine soldierly man of the manner and aspect eminently qualifying him—for houses may be judged from bricks—for a representative of the British service. There were Prussian officers on the ground as well—and of course the Prussian being, the most ludicrous of head gear, was enjoyed by the assembled critical French army. Among other officers present was the Prince de Chimay, a Belgian Prince, and who had met the Emperor at Lille, commanded by King Leopold to pay his compliments to the French Monarch on his arrival so near the Belgian frontiers

* We are anxious to correct a passage in page 295 of the ILLUSTRATED LONDON NEWS of last week, stating that Lieut.-Colonel Dupuis (who is now in Ireland) was the Artillery officer deputed to accompany the Earl of Lucan and his party, to assist in the receptions, at Lille and St. Omer, of the Emperor and Empress of the French. Lieut.-Colonel Fox Strangways a very distinguished old officer—a cousin of the Earl of Ilchester, now commanding the Royal Horse Artillery at Head-quarters, was the officer representing that Regiment in Lieut. Lucan's party; and he was received in a marked and flattering manner by the Imperial Court.

At Lille, the Emperor and the Prince had a long conference, and, as the Prince is both a member of the Belgian Chambers and renowned (in Belgium) as a diplomatist, the purport of this conference was supposed to be political, and to have had for its object the terms of a new commercial treaty between France and Belgium. The Prince was very conspicuous at the Lille ball, in virtue of his splendid height and figure; but still more conspicuous, in the complimentary sense, was the Princess de Chimay, in virtue of her diamonds, more resplendent even than those of the Empress—as was natural, seeing that the Princess is the daughter of a millionaire (the celebrated M. Pellapra), and that the Prince is the heir and the son of the M. de Chimay who made a colossal fortune—like our Duke of Bridgewater—by constructing a canal—that the Canal di Midi. The Prince was well received on his mission; and being as much French as Belgian, he was peculiarly fitted for the embassy entrusted to him on this occasion. As the Belgian Deputy, he has distinguished himself by a demand, more resplendent

RECEPTION OF THE EMPEROR AND EMPRESS OF THE FRENCH, AT BOULOGNE.

almost every house, was illuminated after the most tasteful fashion; and it was greatly to be regretted that the elements had combined to mar, to a great extent, the admirable effect. At the corner of every street was an arch of triumph, decorated with green boughs, fern, and asparagus branches; and skirting every pavement were garlands of ivy and other evergreens, suspended from a series of poles which were festooned in the most fantastic manner.

At nine o'clock their Majesties attended a grand ball given by the public in the Theatre, which was fitted up for the occasion. The Emperor and Empress having danced respectively with the heads of the company, retired, after remaining about an hour.

On Wednesday, the 28th, at ten o'clock a.m., the Emperor visited the Port and the new Sinice Bridge. As on the previous day, the streets were densely crowded, and the enthusiasm great and general. The streets through which the Emperor passed were the Grande Rue and the Rue de la Lampe. These were lined with cavalry and infantry, which formed and followed as soon as the cavalcade had passed.

At half-past twelve the Emperor and Empress, attended to the Imperial carriage by all the authorities, took their departure for Abbeville by the railway. A salvo of 101 guns was fired from the batteries, and the bells of the town and parish churches rang each a peal. At mid-day there was a representation, gratis, at the theatre; and it was intended that a regatta and nautical fête should take place on the Laine; but the weather was such as to prevent these entertainments, and speedily clear the streets of those who had recently crowded them.

AMIENS.

The Emperor and Empress arrived in this busy, prosperous, and pleasant city about five o'clock p.m., on Wednesday. The mayor and the municipal authorities were assembled at the railway station, which was charmingly decorated with flags and evergreens.

In the evening, their Majesties attended a grand ball given at the theatre. The public edifices and many of the private residences of the town were illuminated a feeling of rivalry having been created by the promise of the municipality to award medals to those citizens whose illuminations and transparencies were of the most splendid description. The streets were crowded by the people, who manifested the utmost good-humour. A dense mob assembled in front of the theatre, who broke out into loud acclamations on the return of their Majesties from the ball.

On Thursday morning the Emperor and Empress went in procession to the cathedral, one of the finest Gothic edifices in Europe.

The Amiénoises were enraptured with the Empress's personal charms; but they must have had little discernment if they did not perceive that the Empress was heartily tired of the incessant demonstrations, addresses, receptions, balls, and reviews, in which, during the last fortnight, she had played so distinguished a part. Their Majesties were accompanied to the train by the Mayor and municipal authorities, and amid a salute of 101 guns, left Amiens for Paris, where they arrived about seven o'clock on Thursday evening.

FISHERWOMEN OF BOULOGNE WITH BOUQUETS FOR THE [illegible] EMPRESS OF THE FRENCH

VISIT OF THE EMPEROR AND EMPRESS OF THE FRENCH TO BOULOGNE—GRAND BALL IN THE THEATRE.

LITERARY MISCELLANIES.—No. VI.

COUNTRY THEATRICALS.

After a long and anxious struggle we have established a home, or rather summer-house for the Drama in our genteel little country town. Our principal magnate hereabouts is a gentleman of a polemical and literary turn—strongly opposed it both out of season and in season—which was very unkind, as ours don't last more than four months. But, having gone to Switzerland, where, report says, he is busy writing a bitter book against something or somebody, we took advantage of his absence, and made another application to the magistrates by whom a license has been granted for one year certain—its revival, depending, of course, upon the temper of our "magnate" when he has published his literary wormwood in 8vo (half calf), and our own good behaviour.

Our company, as well before as behind the curtain, is what may be called a "working one." We were rather surprised, the first night we happened to be present, to see so many of our hardy boatmen acting as supernumeraries, and representing the Hierarchy in the Peruvian drama of "Pizarro." Notwithstanding their white wigs, and the dignified composure with which they wrapt around them their sacerdotal vestments, we could not help recognising their old, familiar bluff faces; though it struck us they did not seem quite so much at ease in the "Temple of the Sun" as they would have done where we had often met them, in a lugger-rigged yawl. The chubby little boy—*Cora's* theatrical child—whom *Rolla* so gallantly supports on his shoulder, when he exclaims "He who moves one step to follow me dies upon the spot," we had repeatedly seen on the jetty, where his real mother sold shells, and edified the younger branches of families by gratuitous lectures on conchology. Whether the child was alarmed at the menacing attitude of the Spanish soldiery, by whom *Rolla* was pursued, or whether he thought to make a decided "hit" by a little extemporaneous performance of his own, we know not; but, on the occasion referred to, as *Rolla* was carrying him over the bridge, he began to cry out lustily, and commenced pommelling his preserver on the head with more than mimic violence, concluding by wantonly tearing off his peruke, which destroyed the solemnity of the affair altogether, and brought down the curtain amid thunder-peals of laughter.

Another amateur actor, whose sunburnt and honest-looking countenance had often won our regard, was a young man, who had charge of our favourite bathing-machine. In an Oriental spectacle, in which he made his début, his military duty was to march first, with a splendid emblazoned banner, but omitting to lower it in passing through the gateway of Somncoth, or some such place, it struck against the arch, and knocked down both the scene and himself, to the great discomfiture and a fierce Tartar behind, who was secretly nursing a baby, while his wife, in a plaid cloak was busy darning a pair of brick-coloured drawers. For this breach of histrionic decorum the offender was dismissed, as the audience could distinctly hear all over the house, by the stage-manager, then and there, with maledictions. We saw the unfortunate young man on the following morning, when we went down to the beach to bathe, and were affected by the change in his bearing and aspect. He told us, with tears in his eyes, that he had been cruelly treated. Mr. Wilbyforce, the manager, had promised him, it appeared, that he should have a speaking part, and had accordingly cast him for *Count St. Bris*, one of the gay nobles attached to the Court of Louis XIV., and who, like single-speech Hamilton, is famed for one oration only, which is, or ought to be, delivered in a tone of elegant raillery. "Just as it came to my turn to speak," proceeded our young tragedian, struggling to suppress his emotion, "Joe Mallett, who stood next me (he was one of the nobles same as me) gives me a dig in the ribs with his elbow; so, the consequence was, it went clean out of my head altogether, and I couldn't recollect not a single word, I couldn't." "How did you manage, then?" we demanded. "Why, Mr. Wilbyforce, who was prompting, spoke it for me in a loud voice, and so he did every night afterwards, only allowing me to open and shut my mouth, like Punch and Judy, that it might seem as if I was speaking when I warn't."

Being near the sea, and supported as we are, principally, by those who go down there in smacks, it is not to be wondered at that everything about our Thespian Academy has an "ancient and fish-like" appearance The box-keeper is a regular Ben Block, with a bald head and a wooden leg, and the manner in which he performs the duties of his delicate office, in conducting ladies to their seats, exhibits a nautical gallantry that is highly characteristic. All the time the performance is going on he is stumping up and down the lobby, or peeping in at the little windows in the box-doors, unless the piece happens to be "Black-eyed Susan," when he comes boldly in, and takes his seat like a paying spectator, and there he sits in stern wonder, as well he may, for, incredible as it may seem, Mr. X. Y. Gong, our leading man, will persist in representing the British seaman with a pair of moustachios and a tuft.

Our principal patron is that veteran friend of the drama, Captain Bressy, R.N., whom we meet every morning in a little round straw hat and flannel trousers, on the beach, where he bathes summer and winter, and looks as tough and salt as a piece of junk. He never comes to the theatre without his telescope, and we have often been amused to see him pointing it like a gun at our fair vocalist, Miss Fairyland, all the time she is singing "Charming May." The late *Count St. Bris* told us, while waiting for one of his vacant machines, that he heard Miss Fairyland tell the manager that she is positively afraid to raise her eyes from the foot-lamps while that funny old captain is surveying her, as if she was a strange ship. Ludicrous, however, as may be the conduct of Captain Bressy, it is, in our opinion, eclipsed by that of the aristocracy in the dress circle, who may be observed with their *lorgnettes*, regarding one another from opposite sides of the house, which may be a little wider than Temple bar, but is certainly nothing like so dark

Like all theatrical speculators, we have difficulties to contend with but some of ours are peculiar and almost unique. When the members of our *corps* came down from London, they were as nice, thin, pale consumptive looking people as a lover of the picturesque could desire to contemplate. Before, however, they had been amongst us a month, the salubrity of our air, the beauty of our marine views, and the genial hospitality of our townspeople, had wrought such a change in them, that they were all "O! ruddier than the cherry!" and as fat as turtle. The consequence was ruination to the heart-broken fathers, the misanthropic pirates and villains of all sorts, who are naturally expected to be hollow-eyed and wan; and as for poor Miss Mountedgcumbe, who, when we first knew her, was a perfect picture of misery, she is now so partridge-like, and so merry-looking, that even her most ardent admirers begin to despair of her ever realizing her characters again. In fact, we did hear from a highly-cultivated barber, to whom we lately sat for a facile shave, that Miss M. seriously thought of changing her "line," and representing the "pert chambermaids," instead of *Mrs. Heller*, and so on. Even our low comedy man, who, when he first came down here, was a confirmed hypochondriac, has left off drinking nervous herb-tea, and talks cheerfully of human progress.

We really believe there is not a better-conducted establishment in the kingdom than ours; no elves are more respected by the town than our players, or conduct themselves in a more gentlemanly and solvent manner. We can hardly give such high praise, however, to our audience. There are two fisher-boys—audacious, blue-eyed, and curly-headed young desperadoes—who, occupying front seats in the gallery, divert themselves, between the acts, by whistling—with their fingers between their lips—like a juvenile hurricane. Nor is this all. Some dangerous lunatic is everlastingly cooling his fevered brain by banging one of the hinged benches in the box slips up and down, producing a volley of claps that would silence the very copper-mills. Strange to say, no one interferes to stop these irregular proceedings, and, strange, still, no one seems affected by them; our nerves, perhaps, being so tightly braced by constant immersion in the briny waves, as not to be shattered under any circumstances, though they have been severely tried lately by the leading articles in our local journal, the *Alarmist*, upon the state of our national defences

Who the architect was that built our "house," we have not been able to learn; but we suspect that he must have been a wag in his way. There is only one entrance to the pit, and that is in a corner close to the orchestra, and so small that it looks like the door of a wine-cellar. At Miss Mountedgcumbe's benefit we had, of course, what is vulgarly called a "bumper," and a stout bonnet-man, who had rashly squeezed himself into the pit when it was already filled to repletion, against the remonstrance of his friends, was positively unable either to get out himself or to let others out. and the result was that all the pit audience, at the close of the performance, had to pass over the stage, the fat man going last, amid the derisive cheers of all the dwellers in Olympus

What our magnanimity will say when he returns from Switzerland, with his literary fulminations, powder under his arm, and finds we have taken a mean advantage of his absence, to get our license, only his most intimate friends can imagine. The best revenge he could take upon us, in which we should be delighted to encourage him, would be to establish an elementary school, expressly for some of the unhappy people who frequent the playhouse to read and write; for, much as we respect the piscatory inhabitants of this genteel little sea-side town, for their many excellent qualities, we must candidly confess that a more illiterate and gullible generation cannot be found in any part of her Majesty's Britannic dominions. Our playbills circulate in the boxes to a small extent, and there only—neither gallery nor pit "take them in," for the best of all reasons, that they could derive no information from them. Not long since, it was reported all over the town that a "star" from Drury-Lane would appear for one night only—the leave's benefit; and it is an historical fact, which our highly-intelligent barber can confirm, if necessary, that a body of fishermen gathered round the pit-door, and gravely asked those who came out whether it could be seen with the "naked eye?" A. A.

MUSIC.

M. JULLIEN.

Monsieur Jullien is creating a great stir in the United States—a thing not to be wondered at. Our American progeny, though they are apt to give themselves airs, and to talk about their great country "flogging all creation," still have at heart a becoming respect for "the old country," and a great English reputation is a sure passport to their good will Jullien's reputation is entirely English; in his own country he could have done nothing in ours he has done wonders. Of all the countries in the world, it is only in America that he could have obtained similar means wherewith to produce similar results. We cannot now enter into arguments in proof of this proposition; but we believe that most people acquainted with the present state of music in Europe and America will be inclined to admit it without much question

Jullien began his performances at New York, on the 23th of August. They are given at the Castle Gardens—a place to which London has no parallel; and which, indeed, for great popular entertainments, is, probably, unrivalled in the world, both in respect to magnitude and to picturesque beauty. Jullien's orchestra is numerically more powerful (being one hundred strong) than that which he assembled in Drury-Lane, and is described as not inferior in quality. He has not depended upon England for his resources—the great body of his troops being recruited in America, but strengthened by several distinguished solo performers whom he carried with him: among these are Mdlle. Anna Zerr, the brilliant prima donna from the Royal Italian Opera; Signor Bottesini, the unrivalled double-bass player; Lutzen, the violoncellist; and Koenig, Lavigne, Reichert, Collinet, Winterbottom, and other eminent performers on wind instruments, who gave so much eclat to his concerts in London. He himself, as generalissimo, of course, wields the bâton in his own inimitable style, and his concerts, similar in form and materials to those with which we have so long been familiar, have created in the public mind in New York no less the highest pitch of enthusiasm. He has wisely heightened the general feeling by a piece of well-timed generosity On Sunday evening, the 10th of September, he gave a concert for the benefit of the afflicted people of New Orleans, and handed the whole receipts of the night, amounting to 1500 dollars, to the committee for their charitable purpose, without any deduction whatever on account of expenses; a step which, very deservedly, has gained him "golden opinions from all sorts of people." An official letter, addressed by the committee to M. Jullien's agent, acknowledging the receipt of the money, and published in the New York papers, says:—"The princely donation from M. Jullien's private funds of these exigencies (say 600 dollars and 83 cents) is characteristic of the man. His heart is as full of charity as his soul is full of music. This noble act will ever be remembered by the members of the association and by the citizens of New Orleans, as well as by the poor widows and orphans who will be the recipients of his immediate benefits."

During the present suspension of musical performances in London, there is no want of music in the country.

In the first place, Grisi and Mario are giving, under the auspices of Mr. Beale, a series of "farewell concerts" in the provinces, which are attended with immense success; the interest attached to the names of these great artists being enhanced by the impression that the public are now enjoying their "most sweet voices" for the last time. They have we observe, to be at Edinburgh on the 15th of this month; and their concluding concert is to be at Brighton on the 29th. Their ulterior movements are not yet certainly known, and probably not yet determined on. As all events it appears that their intended visit to America has been postponed till next year.

Another musical party, including Mr. and Mrs Sims Reeves and Mr. Farquharson Smith, with Emile Prudent, the celebrated pianist, and Mr. Case, the eminent performer on the concertina, have been engaged by Messrs. Boosey to make a provincial tour during the present month and the next.

THE THEATRES.

DRURY-LANE.

Mr. Brooke took his benefit on Monday in *Virginius*, and was greeted by an enthusiastic and numerous audience. Indeed, the house was crowded. The patrons of the actor had taken especial care that his engagement should be recorded in theatrical annals as a triumph. In estimating this, we should bear in mind the important fact, that the success has been obtained without adventitious aid; it has not been assisted by spectacle; whatever the value of the acting, it has been solely conferred by that. The crown must be shared between the poet and the player: the scene painter and costumier have had no part in it. After the performance, Mr. Brooke delivered an address, which was certainly, as a composition, remarkably neat and pointed. He began with acknowledging that the welcome which he had been received, far outstripped his expectations and his deserts; and that he valued them as furnishing a proof to his American friends that he was not without some small merit in the eyes of his countrymen; that the noble art to which he belongs is not dead; that "in spite of all seductions, the Bard of Avon still lives in the eternal admiration of his countrymen. and that the wonderful creations of his genius, however feebly portrayed, are still followed by congregated thousands. * * * I feel it," Mr. Brooke continued, "an honour and a privilege to interpret, however unskilfully, the inspirations of this mighty mind; and my vocation is not without its value, if it serve to perpetuate them in all their imperishable beauty."

On Thursday week, Mr. Brooke's triumph had been celebrated by his numerous admirers at a dejeûner, when it was arranged that the successful tragedian should be re-engaged for twelve extra nights. Accordingly, on Wednesday, he made his appearance again in *Hamlet*, and will probably repeat the characters he has already sustained. On his departure for California, Mr. Brooke will, we understand, be absent from England for four years.

OUR MAGAZINE COLUMN FOR OCTOBER.

EFFECTS OF THE CHINESE REVOLUTION.

It is not [illegible] to expect that China, once [illegible] to civilization, will [illegible] to the [illegible] of the [illegible] and canals will, [illegible] steam-boats, which will at once [illegible] natives, and will convey the [illegible] to the [illegible] of the Empire. Rails, for which the great [illegible] peculiarly adapted, will ultimately complete these facilities. [illegible] may [illegible] the intrepidity of a Fortune to visit the strangest nature and art displayed in the Sunny-Isle and Bohea hills. Thousands of tourists will annually trudge across the long bridge of Fu-chu fee, and the bridge of boats at Ningpo. The regattas of Chusan-chu will be open to all the world. Golden pheasants, mother-of-pearl pot-dridges, and gigantic edible bats, await the sportsman. *New Monthly Magazine.*

THE LOTTERY.

Before that national evil, the lottery, was abolished in France, a village curate thought it his duty to address to his flock a sermon against the dangerous infatuation for this privil-ged form of gambling. His auditory consisted of a crowd of miserable old women, ready to pawn or sell their last garment to secure the means of purchasing tickets. Nevertheless, the good man flattered himself that his eloquence was not thrown away, for his audience was singularly attentive. "You are not lazy," said he, addressing them, "that if one of you were to dream this night of lucky numbers—ten, twenty, fifty, or any matter what—instead of being remained by your duties towards yourselves, your families, your God, you would rush off to the lottery-office and purchase tickets." Satisfied that he had accomplished more than one conversion among his hearers, the good cleric stepped down from his pulpit; when on the last step, the hand of an old hag, who had appeared particularly attentive to his admonitions, was laid on his arm—"I beg your reverence's pardon," said she, "but *what* lucky numbers did you please to say we were likely to dream of?"—*Bentley's Miscellany.*

THE UNITED STATES IN 1953.

The present United States of America, after [illegible] been, perhaps, more than once split asunder and soldered together [illegible] or the whole, or a large portion voluntarily re-annexed to the mother country, and by-and-by again detached—after these and other possibly more or less sudden, violent, and bloody vicissitudes have become a great empire, under the stern, but salutary sway of the Emperor of America; his Majesty, a Jet black, who had shown consummate and unexpected high qualities for acquiring and retaining the fear and submission of millions of the stormiest tempers of mankind; but his lovely Empress a white. He has an immense army devoted to his person and will, composed of men of every complexion from black, through copper middle tints, down to white; and correspondingly diversified are his banners, but black, of course the predominant: a quadroon bearer commander in-chief. As for his Majesty's civil service, he has a coal black chancellor, equally at home in the profoundest mysteries of white and black letter; a mulatto minister of instruction, and a white secretary of state; black and white clergy, and a similarly mottled bar, here a big black face frowning out of a white wig; and there a little white face grinning out of a black wig; with black and white bands, and gowns varied *ad libitum*. And the laws which they are concerned in administering accord with these harmonious elements; being, for instance, enacted, under heavy penalties, that no black shall, by gesture, speech, or otherwise, presume to ridicule a white because of his colour; nor, *vice versâ*, shall a white affect to di-parage a black because of his complexion; that the Emperor and Empress shall always be of different colours, and that the succession to the throne shall alternate between black and white, or mulatto, members of the Imperial family. By this and other provisions have been secured a complete fusion between North and South—between black and white—intimately typified by intermingled gems in the Imperial crown; the central one being the identical black diamond that figured in the famous Exhibition in Great Britain in 1851 and presented to the Emperor by one of the descendants of her Majesty, Queen Victoria, then on the British throne! "To this *complexion*" shall it be that matters have "come at last."—*Blackwood's Magazine.*

A LORD CHANCELLOR IN FULL STATE.

Not many years since, we were standing at the door of the House of Lords, when the session was about to be opened by the Queen in person, and the Lord Chancellor of that day advanced, full robed, and in magnificent array. By his side, but out of the procession, moved two of his lordship's nearest relations and he was distinctly heard to be whispered into the ear of one of them some remark only heard by the lady. The reply, however, was distinctly audible to every bystander; it was, "Bah! comme tu es bête." Such a man, in such a robe, in such a way, and with such a mace, in all his pride and pomp of state, and a pretty woman can find it in her little feminine-instinctive soul to call him a fool, and he laughs good-humouredly, and seems to enjoy the epithet! What a conquest of human affections over pernicious and spangled dress! *New Quarterly Review.*

PARIS AND LONDON COMPARED.

The French metropolis is undoubtedly the finest monumental city in the world, with the advantage, that it can always be seen from an elevated point, while London is usually enveloped in smoke and mist, and presents a gigantic outline, dim and undefined. Ascend the column in the Place Vendôme, the towers of Notre Dame, the heights of Montmartre, or Belleville, or the artificial mound in the Jardin des Plantes. On every side you have a bright stereotyped view. Look down on London from the dome of St. Paul's, the Monument, the keep of the Tower, or Primrose-hill, and you can seldom distinguish anything beyond the circle inscribed within a radius of half a mile. Nay, even on a summer's day, you may post yourself on Waterloo-bridge, and Westminster or Blackfriars is scarcely distinguishable. This is less the effect of climate than of the dense, tangible vapour, engendered by an unlimited consumption of coal. Our public buildings of Portland stone turn dingy and black before the scaffoldings are removed. The new colonnade of the British Museum is already grievous to behold. As it is, the white gypseous freestone defies time and weather, and looks as brilliant and as clear to-day as it did two hundred years ago. The original Louvre is scarcely more discoloured than the recent additions, and the gates of St. Denis and St. Martin are as fresh as when they were erected. Let us do justice to the beauties of the French capital. We can show nothing to compete with the palaces of the Louvre and the Tuileries, the Place de la Concorde, the line of the Rue de Rivoli, the quays, the statues, the fountains, and the extended sunscircle of the Boulevards, even in the absence of the trees. But we can produce good specimens of architecture in our bridges, in Westminster Abbey and St. Paul's, in Somerset-house, in many churches, and in the new Houses of Parliament, supposing they are finished before they begin to decay.—*Dublin University Magazine.*

THE GIPSY SLAVES OF WALLACHIA.

The physical constitution of this unhappy people is strongly marked. The men are generally of lofty stature, robust, and sinewy. Their skin is black or copper-coloured; their hair thick and woolly; their lips are of negro heaviness, and their teeth as white as pearls; the nose is considerably flattened; and the whole countenance is illumined, as it were, by lively rolling eyes. All, without exception, wear beards. Their dress consists commonly of a piece of tattered cloth thrown carelessly around them: perhaps an old bed-curtain given by some master, or a blanket that has gone through every degree of fortune, until it has been rejected by the scullion. As is the case in the most squalid in many savage tribes, the women are extremely ugly or extremely handsome. Most of the Zigunara are beautiful up to the age of twenty; but, after that time, they suddenly shrink and shrivel, change colour, bend, and lose the lightness of their step, as if an enchanter's wand had changed them from youth, admired and wooed, to dishonoured old age. The dress of these women is peculiar, consisting generally of nothing but a light tunic or boddice made of sheepskin, and scarcely reaching to the knees. It leaves their legs, their arms, and their necks bare. Over this they throw the most coquettish throw a white veil, and some few indulge in leather sandals. As ornaments they wear earrings of brass filigree, necklaces of paras strung upon a slender thong, and a variety of metal bracelets. The children go naked up to the age of ten or twelve, and whole swarms of girls and boys may sometimes be seen rolling about together in the dust or mud in summer, in the water or snow in winter—like so many black worms. As you pass by, a dozen heads of matted hair and a dozen pairs of sharp eyes are raised towards you, and you are greeted with a mocking shout, which alone tells you that the hideous things are your fellow-creatures.—*Dickens's "Household Words."*

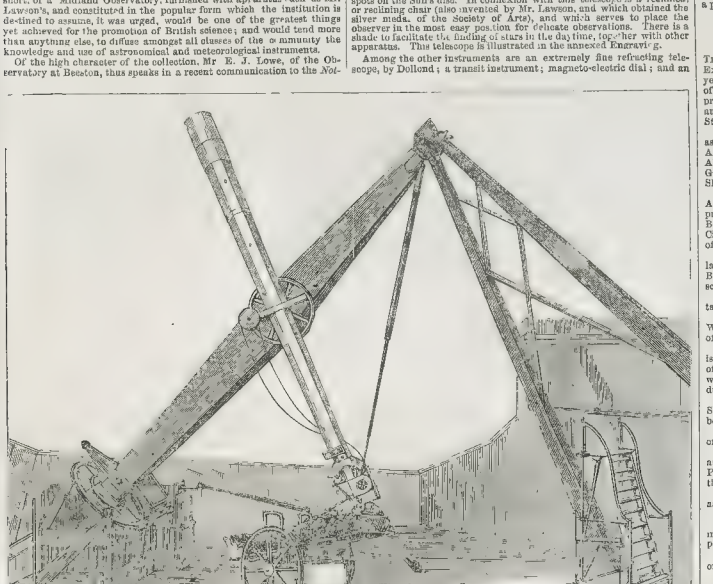
THE LAWSON MIDLAND OBSERVATORY.

Our readers will remember that Mr. Lawson, of Bath, to whom is due the merit of many remarkable improvements in astronomical and meteorological instruments, upwards of twelve months since, offered to present the whole of his valuable collection to the people of the Midland Counties, for the institution of an observatory at Nottingham in the immediate neighbourhood of Sherwood Forest, and the great blank in the English observatories at that particular point, justifying its selection. Mr. Lawson's offer, in point of intrinsic value, was a munificent gift, the worth of the instruments being stated at £10,000. Now, it was estimated that a corresponding sum of £10,000 would be required to meet the expense of the Observatory site and edifice, with the endowment for a resident astronomer. Towards this amount Mr. Lawson himself contributed one thousand guineas. A committee was rapidly formed at Nottingham, who succeeded in raising upwards of £4000, and memorialised the Lords of the Treasury for a grant of £2000, which being reasonably calculated on, the attainment of the grand object appeared almost within the grasp of its promoters. Meanwhile, Mr. Lawson, experiencing the approach of age and infirmities, and unable longer to leave the office he had made, as he expressed it, an open question, felt the necessity of limiting the time for the raising of the subscriptions to the 1st of October (Saturday last). Under these circumstances, the most strenuous exertions were made in the locality, as well as in scientific circles generally, to accomplish the object before the close of last month. It was strongly urged that important advantages to the country at large would accrue from the establishment of the Midland Observatory, as a central point for the regulation of British time; as an additional place of inter-communication of British and foreign astronomers; and as a contribution to the means of observation and discovery; but more especially as respects the meteorological apparatus of Mr Lawson's collection, which has not perhaps, any rival in the United Kingdom; and from the application of these several advantages the most important results were anticipated. The establishment, in short, of a Midland Observatory, furnished with apparatus such as Mr. Lawson's, and constituted in the popular form which the institution is destined to assume, it was urged, would be one of the greatest things yet achieved for the promotion of British science; and would tend more than anything else, to diffuse amongst all classes of the community the knowledge and use of astronomical and meteorological instruments.

Of the high character of the collection, Mr E. J. Lowe, of the Observatory at Besston, thus speaks in a recent communication to the *Nottinghamshire Guardian*—this gentleman having used the instruments repeatedly:—

1st. An extremely fine Refracting Telescope, with an object-glass of seven inches clear aperture and a focal length of 120 inches, having an achromatic middle lens. This telescope was manufactured by Dollond; and is of the same description, but superior to that used by Mr. Hind, in his discoveries. The telescope is equatorially mounted, having the right ascension and declination circles complete. This mode of mounting is the means of enabling the astronomer to find the heavenly bodies in the day time, and of at once detecting any faint object of which the right ascension and declination are known. A mercurial clock (invented by Mr. Lawson) is attached to the axis of the telescope, in order to move it at the same speed as the object under examination; consequently, the heavenly bodies never move out of the field of the telescope. It is well known that the Moon moves faster than the planets, the planets more rapidly the nearer they are situated to the Sun, and the stars slower than the planets. In order to keep objects moving at different speeds in the field of the telescope, an equalising motion is adopted: this is produced by dipping (more or less) vertical paddles in a large dish of quicksilver, these paddles moving slower the more deeply they are plunged, owing to the greater resistance offered by the quicksilver on the greater lengths of paddles. The collection of eye-pieces is numerous and very complete, one set made by Dollond, magnifying from 50 to 1400 times; another set of achromatic eye-pieces are of the celebrated German manufacture; and a third set are single lens, with convex and concave glasses of equivalent foci. There are solar eye-pieces (invented by Mr. Lawson), by which the Sun may be viewed with perfect safety to the eye, even when the whole area of the object glass is made use of. Also the contracting solar eye-piece, as arranged by the Rev. W. R. Dawes; lunar eye-pieces, by which the great cure of the Moon and Venus is done away with. The micrometers attached to the telescope are very good: the 1st, a valuable divided lens, known as the double image micrometer; 2nd, a large cobweb micrometer, with various eye pieces and lamp complete; 3rd, a four-glass eye-piece micrometer for taking the positions and distances of binary stars, provided with various magnifying powers; 4th, a rock-crystal micrometer, to measure the most minute angles or distances of double stars; and, 5th, various reticulated micrometers for measuring the areas of spots on the Sun's disc. In connexion with this telescope is a reclining, or reclining chair (also invented by Mr. Lawson, and which obtained the silver medal of the Society of Arts), and which serves to place the observer in the most easy position for delicate observations. There is a shade to facilitate the finding of stars in the day time, together with other apparatus. The telescope is illustrated in the annexed Engraving.

Among the other instruments are an extremely fine refracting telescope, by Dollond; a transit instrument; magneto-electric dial; and an



REFRACTING TELESCOPE, PRESENTED BY MR. LAWSON, FOR THE MIDLAND OBSERVATORY.

atmospheric recorder, invented by Mr. Lawson; a standard barometer; a Danish hygrometer; electrical apparatus; quadrants, levels, &c., indispensable in an observatory.

The appeal for securing Mr. Lawson's splendid gift, and its right appropriation, was liberally responded to; and the greater portion of the required sum has been raised. In the ILLUSTRATED LONDON NEWS of last week we had the high gratification of recording his Royal Highness Prince Albert's hands me contribution of 100 guineas towards the fund for building and endowment of the Observatory; and we have now to add the welcome intelligence of the accomplishment of the great object being placed beyond doubt.

Saturday last was a day of anxious interest at Nottingham. In the morning a special meeting of the Town council was held in the Guildhall, when it was unanimously resolved that three acres of land on the forest, or six acres on Mapperley Plain, be presented to the Observatory Committee, as a site whereon to erect the proposed Midland Observatory, on condition that, should any other site be preferred, the corporation be allowed to purchase their land back again for the sum of £500. With this grant the amount raised reached almost within £1000 of the whole sum required; and the committee being prepared to guarantee the raising of the deficiency, Messrs. Lowe, Bradley, and Chapman had been deputed to wait upon Mr. Lawson, at Bath, and upon the Lords of the Treasury, for the purpose of making final arrangements. At the above meeting was read the reply of the Lords of the Treasury, stating their Lordships were prepared to grant their promised contribution of £2000, on these conditions:—

In considering the case, my Lords have had regard entirely to the advantages which such an establishment in the centre of England was likely to confer upon the public at large. My Lords are desirous that it should be understood that in such cases they cannot recognise the claims of institutions, however valuable in themselves, which are only of a local character and importance in their results, to be aided by public grants of money, and that to justify such grants their Lordships require to be satisfied of a more general advantage to the nation at large.

My Lords have also regard to the fact that the public already support the Royal observatories of Greenwich, Edinburgh, and Dublin, as national establishments. As a preliminary step, therefore, to coming to a decision upon this question, their Lordships thought it to be their duty to submit to Professor Airey and Sir John Herschel the following inquiries for their opinion and report:—

1. Whether there are any advantages of a public nature which would be obtained from an observatory at Nottingham, which are not capable of being obtained from the Royal observatories at present established, and, if so, what they are?

2. Whether the situation of Nottingham presents any special advantages for an observatory that would make it an exception to similar applications from other places?"

Upon these points my Lords have had before them the reports of Professor Airey and Sir John Herschel.

From these reports, my Lords have come to a conclusion that there is comparatively little public benefit likely to be derived from the establishment of an observatory at Nottingham, so far as regards astronomical observations, or at least that could not be, and is not now, supplied by the Royal observatories and existing private observatories; and if the course which their Lordships should pursue rested entirely on this department of the proposed observatory, they would not feel that such a case existed as would justify an expenditure of public money.

It is, however, strongly stated that, in regard to meteorological pursuits and inquiries, such an establishment might prove of the greatest value in a national point of view; and, moreover, it is shown by Sir John Herschel that Nottingham possesses some peculiar advantages for observations of this kind. It is represented that, important for the purposes of agriculture and other national objects as this branch of science is compared with astronomy, it is, nevertheless, much behind, and has been comparatively neglected. With regard to this branch of the subject, my Lords advert to the continued efforts which are about to be made by the Government of the United States, represented by Lieutenant Maury and by her Majesty's Government, under the sanction of this Board, in order to obtain meteorological observations at sea for maritime purposes; and although their Lordships cannot look for much aid to that particular object from observations made at Nottingham, yet they will not be wholly without value, even in relation thereto.

My Lords are, however, prepared to look for more important national advantages, as regards the interests of agriculture and other pursuits, which are much affected by climate and weather, from such an establishment at Nottingham, provided meteorology may be looked to as the main and most important object to be attained by the establishment.

My Lords are therefore prepared to ask Parliament to sanction a grant for this national object, to the extent of £200, in aid of the private subscriptions, provided the remaining £5000 can be raised elsewhere, and provided also that my Lords are satisfied that funds will be forthcoming to maintain the establishment, when once started, and that no application will be made to this board for such purpose.

It will thus be seen that great care has been exercised in considering the fitness of this grant; and the communication closes by repeating that it was chiefly with a view to the meteorological pursuits of the proposed establishment claiming an important part of its attention, that their Lordships have arrived at the above conclusion.

Mapperley Plain, the site which it is generally believed will be preferred for the Observatory, is situated at the northern extremity of Nottingham, about a mile and a half from the town. Being high, and remarkable for the dryness of its atmosphere, as well as for the surpassing beauty of the landscape, it will, no doubt, in a few years, be one of the most attractive places in the Midland Counties. The elevation is so great, and the air generally so clear, that Belvoir Castle, and even Lincoln Minster, may be seen thence with the naked eye.

THE AZTEC CHILDREN.—Dr. J. M. Warren (in January, 1851) read a paper containing some observations upon two remarkable Indian children, who had lately been exhibited in Boston, known as the "Aztec children." He had been led by his examination of them to the following conclusions:—"1. That the children are possessed of a very low degree of mental and physical organisation, but are not idiots of the lowest grade. 2. That they probably originated from parents belonging to some of the mixed Indian tribes. 3. That they do not belong to a race of dwarfs, because history teaches us the truth of the doctrine stated by Geoffrey St. Hilaire, that dwarfs cannot perpetuate their kind." At the conclusion of the paper, a letter was read by the secretary, containing the following statement:—"The Commissioner of the port of La Union, in the State of San Salvador, Central America, informs me that they were born somewhere near the town of Santa Ana, in that State, of parents, one of whom, certainly, if not both, was dwarfed or deformed and imbecile. The Indians residing in the vicinity of Santa Ana are civilised, and centuries ago adopted Spanish customs and the Spanish language. So far as I could discover from a few words of their ancient language which came into my possession, they belong to the Chontecosan or Chorotega stock, which, before the conquest, extended over a part of San Salvador, Honduras, and Nicaragua, but which was chiefly concentrated around the Gulf of Fonseca."—*Athenæum.*

THE DISCOVERER OF GOLD IN AUSTRALIA.—The amount of the reward to Mr. Hargraves has been decided on by the Government. The Duke of Newcastle proposes to cause the sum of £3000 to be inserted on the Estimates for this purpose, and submitted to the Council in the usual way. In reply to the proposal, Mr. Hargraves demurs to the inadequacy of the amount. He says:—"The interest of £3000 would yield me £250 per annum, a sum altogether insufficient for the support and education of my children.

THE GREAT IRISH EXHIBITION.—The attendance during last week averaged about 3000 a day. The *Nation* thus refers to the subject:—"We are sorry to perceive that the Exhibition Committee have announced their intention of finally closing upon the 31st inst. We trust they may be induced to reconsider the decision. The fact is, that if it be closed upon that day there can be hardly a doubt that Mr. Dargan will be a loser by the undertaking. We calculate he would lose not less than £10,000, and perhaps much more. We have already said we believe there will be a highly remunerative attendance for the next two months. Any one may have observed that there have been more fêtes champêtres and rustic fêtes in the building for the last fortnight than at any previous period; and we are sure that up to the 1st of December, at least, it would not lack a prosperous attendance."

CIVIC TENURE CUSTOM IN THE COURT OF EXCHEQUER.

THE annual presentation of the recently-elected Sheriffs in the Court of Exchequer is followed by a curious tenure custom, of which we this year engrave an Illustration, accompanied by a few historical particulars of the ceremony; before detailing which we shall record the Sheriffs' presentation, which has nothing whatever to do with the tenure "suit and service," although it takes place on the same day, the morrow of St. Michael (September 30).

The Sheriffs—Alderman D. W. Wire and Mr. G. A. Willis—before assembling at the Guildhall, entertained the Master Wardens, Courts of Assistants, and a select circle of their private friends to breakfast. Alderman Wire entertaining the companies to which he belongs, the Girdlers and Innholders, at Girdler's-hall, Basinghall-street; and Mr. Sheriff Willis, his friends at the London Tavern.

The Lord Mayor, accompanied by several members of the Court of Aldermen, the Sheriffs, Under-Sheriffs, and other corporate officers, then proceeded in state from Guildhall, via Cheapside, Ludgate-hill, and Bridge street, taking water at Blackfriars-bridge, and proceeding in the City barge to Westminster, where they were met by the High Constable of that important city

On their entering the court, which was much crowded, a number of ladies being present, the Curitor Baron took his seat on the bench. The Baron wore his scarlet robes, as did also the Sheriffs and Recorder their scarlet robes, as also the Lord Mayor, with his collar of SS.

The Lord Mayor and Sheriffs, and other civic functionaries having taken their position within the bar,

The Recorder addressing the Curitor Baron, then related Mr. Sheriff Wire's personal history, and civic position; together with the connection of Mr Willis with the City.

The Curitor Baron having referred to the ceremonial as having existed for several hundred years, concluded by signifying the approbation of her Majesty to the appointments the citizens had made; and by wishing health and strength to the Sheriffs to discharge their onerous duties.

The Recorder then read the warrant of attorney from the new Sheriffs to receive and execute all writs, &c., and prayed that it might be recorded.

The Queen's Remembrancer read the warrant, which the learned Baron ordered to be recorded.

The Recorder also read the warrant for the late Sheriffs to account, as also the Under Sheriffs, they having placed in their stead Mr. G. K. Potter and Mr. Thomas Cleobury; and thus terminated the ceremony of the Sheriffs' presentation.

Proclamation was then made by the Crier of the Court for the service, as follows:—

Oyes, Oyez! Oyez!

Tenants and occupiers of a piece of waste ground, called "The Moors," in the county of Salop, come forth and do your service, upon pain and peril that shall fall thereon!

Alderman Moon, as the senior Alderman below the chair, then cut one faggot (small twigs) with a hatchet, and another with a bill-hook.

The Crier then made a proclamation:—

Oyez! Oyez! Oyez!

Tenants and occupiers of a certain piece of waste called "The Forge," in the parish of St. Clement Danes, in the county of Middlesex, come forth and do your service.

Alderman Moon then counted certain horse-shoes and hobnails, and was questioned by the Queen's Remembrancer thus:—"How many have you?" "Six Shoes." Then the Alderman counted the nails:—"How many have you?" "Sixty-one nails—just number."

The Recorder having invited the Curitor Baron to the dinner at the London Tavern, the civic cortège returned.

Mr. Nichols, in the "Gentleman's Magazine," for October, 1804, vol. lxxv., p. 865, describes the custom as performed in that year, and adds this explanation:—"The ceremony on this occasion, in the Court of Exchequer, which vulgar error supposed to be an unmeaning farce, is solemn and impressive; nor have the sheriffs the least connection either with chopping of sticks or counting of hobnails. The tenants of a manor in Shropshire are directed to come forth and do their suit and service, on which the senior Alderman below the chair steps forward, and chops a single stick, in token of its having been customary for the tenants of that manor to supply their lord with fuel. The owner of a forge in the parish of St. Clement (which formerly belonged to the City, and stood in the high road from the Temple to Westminster, but now no longer exists), are required to come forth to their suit and service; when an officer of the court, in the presence of the senior Alderman, produces six horse shoes and sixty one hobnails, which he counts over in form before the Curitor Baron, who, on this particular occasion, is the immediate representative of the Sovereign."

Mr. Sheriff Hoare, in the journal of his Shrievalty, 1640-41, in his own handwriting, says:—"The senior alderman present cut one twig in two, and bent another, and the officers of the court counted six horseshoes and hobnails. This form they, it is said, is passed through each year, by way of suit and service for the citizens holding some tenements in St Clement Danes, as also some other lands; but *where they are situated no one knows, nor doth the City receive any rents or profits thereby.*"

The Court of Exchequer, be it observed, is the legal court of accounts; and, moreover, pursuant to the charter 32 Henry III., the high officers of the City are, on their appointment, to be presented to the Sovereign, or, in the absence of Majesty, to the Sovereign's Justices or Barons of the Royal Exchequer.

In the evening the friends of Mr. Sheriff Wire dined, on the invitation of that gentleman, at the London Tavern, where a sumptuous entertainment was served up. The numbers present amounted to about 200. Mr. Sheriff Wire in the chair, supported by Lord Dudley C. Stuart, M.P., Mr Baron Rolfe, the Curitor Baron, Hon and Rev. Mr. Legge, Lord Mayor Elect, Mr Masterman, M.P., Sir J. Duke, M.P., Mr. Chaplin, M.P., Sir Smith, M.P., Sir J. Musgrove, Dr. Bowring, &c.

The usual loyal toasts—the Lord Mayor, Lord Mayor Elect, Curitor Baron, the Sheriffs—and a variety of other healths, having been honoured and responded to, amid much cheering, the Sheriff then gave "Lord Dudley Stuart and the House of Commons," and paid a high compliment to the noble Lord for his exertions in behalf of foreign exiles and the cause of liberty all over the world.

Lord D. Stuart replied.

The Sheriff then proposed "The health of Dr. Bowring," who was distinguished as a poet, a statesman, a friend of education, and a promoter of commerce, and who had served his Sovereign in the important duty of endeavouring to open up to this country the trade of the vast empire of China (Cheers).

Dr. Bowring said, no words were so grateful as those that welcomed

ANCIENT CIVIC TENURE CUSTOM, ON THE MORROW OF ST MICHAEL, IN THE COURT OF EXCHEQUER, AT WESTMINSTER.

the wanderer who came back to see the country that gave him birth; and nothing was so pleasing to him as to see that country prosperous in all its departments (Cheers). He gave it as the result of his experience, that one year in ancient Europe was worth a cycle in Cathay (Hear, hear). But, speaking of China, he wished he could bring to the knowledge of England the great and wonderful provision by which every man in that empire was enabled to receive the blessings of education; and how, in the midst of calamities and convulsions, that education had been saving the people, and conducting them through the storms of a great revolution (Hear, hear). If he could do this with effect, he should feel that he had not visited China in vain. Not long ago it was his privilege to see a great struggle for official position in one of the provinces of that country, which could only be obtained by literary distinction (Hear, hear). He saw 9000 youths from village schools come together to be examined for literary honours; and it was the highest ambition of themselves and their relatives that they should attain what was called literary rank. They arrived at Canton attended by about 50,000 of their friends, and so earnest were they that some of them died in the struggle. Of those 9000 only 72 could be elected for literary distinction; and the 72 who were successful were sent to Pekin, there to be kept as the future rulers of the land (Hear). Such was the system which had placed the Chinese in a position of superiority to all the nations that surrounded them (Hear, hear). He trusted that the intercourse of England with China would increase year by year. In Canton the word of an English merchant was better than a bond; and it was for the interest of England and China alike that this feeling should be maintained. In China there were seven newspapers published in the English language; and he trusted that in all our intercourse with that country England would appear less in the character of a conqueror and more as a merchant (Cheers).

Several other toasts were drunk, and the company separated.

LAYING OF THE FOUNDATION-STONE OF THE VICTORIA PIER, QUEENSTOWN.

TUESDAY week being the day fixed for the laying of the foundation-stone of the new Pier building for the Lords of the Admiralty at Queenstown, a large and fashionable assembly was in attendance for that purpose. The scene of the ceremony was gaily decorated with flags of all descriptions, and the protecting railing was covered with green boughs. The addition of ladies' light dresses, and a sprinkling of naval and military uniforms, increased the gay appearance of the scene.

Exactly at two o'clock, the steamer yacht the *Black Eagle*, having on board the Lords of the Admiralty, followed closely by the *Banshee*, entered the harbour and fired a salute, which was immediately answered from the guard-ship; and soon after the two steamers took their places close by Haulbowline. About half-past two the *St. Jean d'Acre*, which had been seen off the harbour from an early hour in the morning, came in under topsails, and fired a salute announcing her arrival.

A deputation — consisting of Messrs. Fagan, M.P., B. Ve[illegible], and George Scott — waited upon their Lordships, to request that they would assist at the laying of the foundation-stone of the new Pier — the ceremony which was about to be performed by Rear-Admiral Sir W. F. Carroll. Sir J. Graham, who received the deputation with the utmost courtesy, readily acceded to their request; and, at three o'clock, arrived at the pier. Sir James Graham was accompanied by Captain Milne and Rear-Admiral Dundas, both Lords of the Admiralty; and Sir Baldwin Walker; the Mayor; Messrs. E. B. Roche, M.P., Fagan, M.P., Beamish, M.P., and the Harbour Commissioners.

REAR-ADMIRAL SIR W. F. CARROLL, K.C.B., LAYING THE FOUNDATION-STONE OF THE VICTORIA PIER, QUEENSTOWN.

At three o'clock the huge stone was lowered to its place, and Sir William Carroll descended to perform the interesting ceremony. As he stepped upon the stone, his appearance was greeted with a vociferous cheer from the gentlemen, and waving of handkerchiefs from the ladies. A number of coins of every denomination of value were placed beneath the stone; and then a square plate of brass, containing the following inscription, which the Admiral read in a loud and distinct voice :—

The foundation-stone of the pier, built at the expense of the Government for the benefit of the public the inhabitants of Queenstown, was laid by Rear-Admiral Sir W. F. Carroll, K.C.B., Commander-in-Chief of the Port, on the 22nd day of Sept., 1853.

Colonel George T. Greene, Director of Engineering and Architectural Works of the Admiralty.
W. H. Churchward, Superintending Engineer.
John Edwards, Contractor.

Mr. Edwards, the Contractor, then presented to the Admiral a silver trowel of exquisite workmanship and design, with a carved ivory handle, from the establishment of Mr. Hawksworth, of the Grand Parade. The trowel bears the following inscription —

Presented to Sir W. F. Carroll, K.C.B., Commander-in-Chief of the Port, on the occasion of his laying the foundation-stone of the Victoria Pier at Queenstown, Sept., 1853.

Mr. John Edwards, Contractor.

The Admiral, taking the trowel, dipped it in mortar, and drew it round the stone; then, taking a large bottle of champagne, he broke it upon the stone, and said, "I declare this the Victoria Pier." This declaration was received with a deafening shout. The Admiral then waving his hat, called out, "Her Majesty, God bless her." And with three loud cheers the ceremony was concluded.

The Illustration represents Sir William Carroll reading the inscription-plate, accompanied by the Right Hon. Sir James Graham, the Hon. Capt. Milne, &c.

OPENING OF THE NEW FLOATING DOCKS, AT LIMERICK, BY THE LORD-LIEUTENANT.

LIMERICK DOCKS AND RAILWAY.

LAST week was fraught with promise for the commercial prosperity of Limerick, in two of the leading incidents of the Viceregal visit: namely, the opening of the new Floating Docks at that port, by the Lord Lieutenant; and his Excellency's commencement of a Railway, intended to connect Limerick with the great existing lines, and the estuary of the Lower Shannon at Foynes Harbour, regarded by the highest official authority as the best station in Ireland for Transatlantic communication.

THE DOCKS.

The opening of the Docks took place on Wednesday, when the town presented a most animated appearance. The principal hotels, clubs, houses of business, &c., were decorated with flags and banners. At eight o'clock in the morning, on the firing of a signal gun, all the shipping in the port hoisted their colours, and were gaily decorated. At nine o'clock another gun announced low water, and a number of flags were immediately hoisted on the walls round the Docks.

The Docks themselves are well worthy of a place on the "king of Irish rivers." They are situated about half a mile below the Wellesley-bridge, adjoining Mount Kennett, and about sixty miles from the mouth of the river. They consist of one large dock, covering about eight acres in extent, and are built in the most substantial and solid manner of cut limestone. The walls are thirty feet in depth, and there will be twenty-five feet of water at spring, and twenty feet at neap tides. The entrance is seventy feet in width. It was originally intended to be fifty feet, but was widened to its present extent in order to admit the largest class of Transatlantic Steamers, should Limerick be chosen as the Western Packet Station.

The entrance gates are constructed according to Wilde and Mallet's new patent, being made on the tubular or cellular principle of boiler plate iron, riveted in the same manner as the boilers of steamers.

The total amount expended in the construction of the Docks was £54,000, of which £39,000 was for labour, and the remainder for the materials, &c. During the four years they were building, the average number of labourers employed was 300. The length of quayage inside the Dock is 3000 feet, and outside in the river about 1000 feet more. The depth of the river here at high water is 28 feet, quite sufficient to float the largest ships—that being the depth drawn by the *Duke of Wellington*, while the largest ocean steamers only draw 19½ feet.

About one o'clock, the different guilds of trades, with flags and banners, proceeded to the borough boundary, where they awaited the arrival of the Lord-Lieutenant, and from whence they were to walk in procession to the Wellesley-bridge. The Corporation also proceeded to the same place, attired in their robes of office. About half-past one the Viceregal party, in three carriages, arrived at the boundary. Their Excellencies were received by the Mayor, and were loudly cheered. The guilds of trades then marched past the carriages, after which they formed into procession, and walked two and-two into the city. The corporation, headed by the sword and mace-bearers, then formed into procession and preceded the carriages, which were flanked by a guard of honour of the 7th Dragoon Guards. The entire line of route through the Crescent, George's-street, Brunswick-street, &c., was crowded with people of all ranks, and the windows filled with fashionably-attired ladies.

ABORIGINES OF CAPE YORK, AUSTRALIA.—(SEE NEXT PAGE.)

THE LORD-LIEUTENANT COMMENCING THE LIMERICK AND FOYNES HARBOUR RAILWAY.

At a quarter before two o'clock the procession reached Wellesley-bridge, where the trades halted and filed off on either side of the bridge; the members of the corporation then passed through, and were followed to the wharf by the Viceregal party, her Excellency the Countess St. Germans leaning on the arm of the Mayor of Limerick. Their Excellencies were here met and received by the Harbour Commissioners—Lord Monteagle, Sir Matthew Barrington, &c.; the band of the 7th Dragoon Guards playing immediately "God save the Queen."

The Viceregal party then went on board the *Rose* steamer, accompanied by a great number of the nobility and gentry; and, at about half-past two o'clock the *Rose* steamed out, followed by the other vessels, and preceded by the harbour-master in his boat, and went slowly down the river. All the ships in the harbour were dressed out in their gayest bunting, and were crowded with people. The houses were also gaily decorated with flags, and thousands of persons were congregated in the windows and streets. A number of small cannon from the ships and houses kept up a series of firing while the vessels were steaming down the river. A few minutes before three o'clock the *Rose* passed into the dock, the entrance of which was lined by the foremen and workmen and a large crowd of civilians, who cheered their Excellencies most enthusiastically.

A troop of the Royal Horse Artillery were stationed on a rising ground to the south of the Dock, and fired a Royal salute as the *Rose* entered the Dock. She was followed by the several other steamers, and all sailed slowly round the entire circuit of the Dock, the various bands playing the National Anthem. Their Excellencies having landed on the east angle, they were conducted across the bridge, which his Excellency desired the engineer, Mr. Long, to open, and proceeded to the opposite side: where Sir. Spaight, President of the Chamber of Commerce, read an address to his Excellency.

His Excellency then declared the Dock opened for the trade and commerce of the world; after which, taking off his hat, he desired three cheers to be given for its success. The call was enthusiastically responded to.

Mr. Spaight then introduced Mr. Long, the engineer, to his Excellency, by whom he was congratulated on the creditable manner in which the work had been executed. The Viceregal party then left the Dock, and was loudly cheered.

In the evening his Excellency was entertained at a grand banquet in the theatre.

THE RAILWAY.

On Thursday, the Lord-Lieutenant commenced another of the great objects of his visit to Limerick, namely, the cutting the first turf of the Limerick and Foynes Railway. About twelve o'clock, a large party of the resident gentry, magistrates, and the distinguished visitors in Limerick, assembled by invitation on board the *Halyard* steam-tug. The splendid band of the 7th Dragoon Guards was also on board.

About half past twelve o'clock the *Holyrood* left the Dock, and steamed rapidly down the river, reaching Foynes about half-past two o'clock.

A Government Commissioner decided that Foynes, on the Shannon, was the most eligible, in every point of view, for a Transatlantic packet station. The Commissioner, however, suggested that, without a railway to Limerick, the chain of communication would be incomplete. Acting on this suggestion, a company was accordingly formed about a year since, for the purpose of constructing a line of railway between the two points; and the Act of Parliament for the construction of the line was obtained early in the present year.

Foynes is situated on the south bank of the Shannon, about twenty-

five English miles from Limerick, and about thirty-five from the mouth of the river; and the line of railway will run through the towns of Adare, Rathkeale, and Askeaton. The total amount of capital subscribed was £130,000; and the line has been contracted for by Mr. Dargan, who undertakes to have it finished in nine months from the time he gets possession of the land; and, judging from Mr. Dargan's punctuality and business habits, the railway will, no doubt, be running in the middle of next summer

To inaugurate this undertaking was the object of his Excellency's visit this day. His Excellency and Lady St. Germans started at an early hour in the morning, and proceeded by carriage to Adare Manor, the seat of the Earl of Dunraven. Several noblemen and gentlemen journeyed by land, and met their Excellencies at breakfast; amongst whom were the Protestant Bishop of Limerick, Lord Ernest Bruce, Sir Matthew Barrington, Major Ponsonby, Captain Elliott, Captain Dickson, Captain Vandeleur, Croker Barrington, and Mr. May.

In the absence of the Earl of Dunraven, the honours were done by his Lordship's brother-in-law, Wyndham Goold, Esq., M.P.

The Viceregal party proceeded by land to Foynes where they were met by Lord Monteagle, and awaited the *Holyrood*, immediately on the arrival of which the Company on board disembarked. The whole party immediately proceeded about 300 yards from the pier—and where their Excellencies, and the party who had come with them from Adare, were in waiting. Captain Dickson, Chairman of the Railway Company, presented to his Excellency a small mahogany barrow, and a beautiful silver spade, bearing a suitable inscription.

The ceremony of turning the first turf having been then performed in the usual manner, his Excellency, turning round, said, "I have now turned the first turf of the Limerick and Foynes Railway—an undertaking that has afforded me much pleasure in accomplishing; and I now hand over the ground to the Company, and these implements to the care of your energetic and spirited contractor, William Dargan (Cheers). This is not a day for making a long speech, and I will not therefore detain you."

Three hearty cheers were then given for his Excellency. His Excellency then, taking off his hat, said—"I call upon you now to give three cheers for Mr. Dargan" (Loud and enthusiastic cheering).

The Mayor of Limerick then called for three cheers for the Countess of St. Germans, which was heartily responded to; after which, three cheers for the success of the Limerick and Foynes Railway were given.

The whole party then proceeded to the *Holyrood*, where their Excellencies and a select party were entertained at a very elegant déjeûner given by the Directors of the London and Limerick Steam-ship Company. The remainder of the company were also entertained in a similar manner.

Their Excellencies, on landing, immediately drove to the residence of the Protestant Bishop. In the evening, their Excellencies attended a grand ball given in the Chentre, at which all the rank and fashion in Limerick were present.

CAPE YORK ABORIGINES.

These natives have lately arrived in England from Evens Bay, Cape York—lat. 10 deg. 42 min. 40 sec. S., long. 142 deg. 28 min. 30 sec. E.—upon the peninsula which forms the north-easternmost extremity of Australia, and is separated from Guinea by Torres Straits. Cape York for a day or two, and during the time a number of natives came on board. When she got under way, with a fresh breeze, to continue her voyage, these two natives were on board; and their canoe, which was fast alongside (or astern), broke adrift; and the ship being soon beyond reach of their own part of the coast, they objected, on account of the hostility of other tribes, to be left anywhere else. They were, therefore, taken on to India, and finally brought to this country, where the *Scotus* arrived about 11th May last.

The natives at Cape York show most of the physical characteristics observed amongst other Australian aborigines: they have the septum of the nose perforated, and some—as those at present in this country,—have one or more of the front teeth knocked out. They are marked with raised artificial scars of different patterns on the shoulders, chest, &c., for which they have particular names, according to their situation on the body; the women being marked in the same way as the men, but having somewhat different figures.

A number of tall men were observed among them, and in the greater size of their canoes, which have sails, and their management of them, they showed a degree of superiority to the coast tribes in other parts of Australia. These natives have at this time a degree of peculiar geographical and commercial interest. Since the establishment at Port Essington was abandoned, in 1849, there is no harbour of refuge to which, in the event of wrecks on Torres Straits, the boats of vessels may run for shelter; and the only part of the coast in that neighbourhood which might be approached with the chance of meeting friendly natives would be Cape York. Under these circumstances it is satisfactory to know that the good disposition of the tribe there, to which these men belong, has been already tested. Some years ago, a small cutter, from Morton Bay to Port Essington, was wrecked upon the reefs of an island in the Straits, near Cape York, where the principal man of this tribe happened to be at the time, on a friendly visit; and who was the means, with his canoe, of saving the life of a white woman, who was on board (the few men composing its crew having been drowned during the storm, in their attempts to reach the shore): he afterwards assisted her to escape from the islanders to H.M.S. *Rattlesnake*, in 1849, when she was brought away, and restored to her parents, by Captain Owen Stanley, after five years' detention.

For this we already owe a debt of gratitude to the particular tribe to which these men belong, and we have in it a guarantee for future acts of succour; which, so long as the northern coasts of Australia remain without any port of shelter, may at any time be required at their hands.

Not the least important consideration connected with these people is, that, in the event of vessels being wrecked there, they might, as in the instance above mentioned, be instrumental in saving life, or bringing accounts of such disasters to vessels either calling at Cape York or on their passage through the Straits.

On the first visit of the *Rattlesnake* to Cape York, in 1848, when the jealousy of the islanders prevented the Cape York people aiding in the escape of the white woman, one of them endeavoured to learn from her by heart a message in English, with which he came on board, but could not make us understand; though, as we afterwards learned, he had made earnest and repeated attempts to do so.

A glance at the chart will show the geographical and commercial importance of the locality of this tribe, as the point of Australia nearest to a country so unknown to us as New Guinea, whose central cordillera, with its mountains rising in places to a height exceeding 13,000 feet—vast alluvial tracts of land, and numerous river openings along its shores—suggest ideas of mineral wealth, and a future field for all the richest products of the tropics; while an indirect aboriginal trade or barter for feathers, ornaments, and weapons, through the islands of the Straits across to Cape York, shows the existence here of a natural channel of communication of a distinctly different character from the trading of the Malays with the natives of Australia on the other side of the Gulf of Carpentaria.

We are gratified to learn that the Lords of the Treasury have acceded to the recommendations made by the Secretary of State for the Colonies, and have granted the sum requisite for the expedition of discovery proposed by M. Ernest Haug to Northern Australia. The growing importance of the region bordering by the northern shore of Australia, and [illegible] with India, China, and Australia, I have concurred in the [illegible] Treasury. This liberal act of [illegible] Australia will be hailed with satisfaction by all the country who have an interest in practical science, and it will be received by the people of Australia as a fresh earnest that their interests are diligently cared for. It is not often that an application of the kind meets with so speedy and satisfactory, and so prompt a response. It is scarcely [illegible] month since the deputation of the Geographical Society, introduced by Sir Roderick Murchison, waited upon the Duke of Newcastle to represent the merits of the project; and in this case promptitude of reply was an essential part of the favour, since it was necessary to obtain the means for the expedition before the time should become too short for the expedition to be landed upon the shores of Australia by the commencement of the dry season. We understand that M. Haug intends to start from this country at the beginning of November, for Singapore, where the expedition will be finally organised. This port also will be a convenient place at which to procure the beasts of burden—horses, bullocks, and camels—necessary for the expedition. An eminent geologist has already been attached to the expedition, as well as a competent photographer; both of whom tender their services gratuitously. There is, indeed, one thing which peculiarly marks this project the most unprecedented spirit of zeal and liberality has distinguished every person who has taken an active part, or has been invited to furnish assistance. The hopeful energy and enthusiasm of M. Haug have been admirably seconded by the scientific sagacity and practical vigour of Sir Roderick Murchison, with other members of the Geographical Society; the representatives of the Australian colonies in London have not been behindhand; and the Treasury has caught the spirit of enlightened liberality from the present Minister for the Colonies.—*Globe*

RAILWAY INTELLIGENCE.

London and North-Western.—The directors of this company have, with the view of bringing local traffic upon their lines, issued a notice "to persons intending to build houses of a suitable character, and of the value of not less than £50 annual rent, within two miles of the following stations; viz., Harrow, Pinner, Bushey, Watford, King's Langley, Boxmoor, Berkhamp-stead, and Tring," that they will grant a free annual first-class pass to one resident on each of such houses for the following periods:—Harrow, 11 years; Pinner, 12 years; Bushey, 10 years; Watford, 17 years; and for the other stations mentioned, 21 years. We have also a table of the charges for periodical tickets to and from some of the London and North-Western stations within fifty miles of London. This table also shows the liberal policy of the London and North-Western board towards the public. Its liberality will be best understood by our giving the charges for the periodical tickets, and placing in juxta-position with such charges the amount which the passenger would have to pay supposing that he passed to and fro over the line daily in a first or second class carriage, and that he had a day-ticket with a reduction of one-third of the ordinary fare.

Between London and—	First-class Periodical Tickets Six Months.	First-class Ordinary Fare. Six Months.	Second-class Periodical Ticket. Six Months.	Second class Ordinary Fare. Six Months.
Willesden	£6 10 0	£12 3 5	£5 0 0	£9 2 6
Harrow	7 10 0	24 7 0	6 0 0	18 5 0
Watford	10 0 0	28 0 0	7 10 0	24 6 7
Tring	12 10 0	71 0 0	10 0 0	51 17 4
Leighton	15 0 0	86 0 0	12 0 0	65 10 0
Bletchley	17 10 0	105 0 0	14 0 0	74 10 0

These periodical tickets include also the stations of Sudbury, Pinner, Rusney, King's Langley, Boxmoor, Berkhampstead, Cheddington, Aylesbury, Dunstable, Winslow, and Amphill.

Great Western.—The vast works in progress at the metropolitan terminus of this line of railway at Paddington, are proceeding with very great rapidity, and a correct idea can now be formed of the improvements which are being effected in this locality, and the facility and convenience which they will afford to the public, when entirely finished, which, it is expected, will be the case at an early period of the ensuing year. The new shed for the outgoing trains being entirely roofed with glass, presents a light and handsome appearance, with separate entrance and reception-rooms for the Queen and the Royal Family, and all the other requisite accommodation for the general public, which are of the most appropriate and complete character, are finished, and the formation of the arrival sheds, with extensive offices, is now proceeding with great rapidity. When the whole is finished, the terminus of the Great Western Railway will be fully half a mile nearer the town than at the present, which will prove of material importance to the public.—The returns for this company show that for thirteen weeks, ending September 26, an increase of £6341 per week on the returns for the same period last year.

London and South-Western.—A meeting of shareholders in this company was held on Monday, at Morley's Hotel; Mr. Snell in the chair. A series of resolutions were passed in favour of the recommendations in Mr. Snell's circular against proceeding with the extension lines to Exeter, and for entering into a pacific arrangement with the Great Western Company.

New Palace at Balmoral.—Last week, the first stone of the new castle at Balmoral was laid by her Majesty. After a short prayer by the Rev. Archibald Anderson, of Crathie, for the welfare of its future inmates, a glass cylinder was placed by her Majesty in the centre of the foundation, containing specimens of the current coin of the realm, and a parchment document describing the nature and date of the commencement of the building, signed by all the members of the Royal family present, and the chief and gentlemen in attendance. A silver trowel was then presented to the Queen by the architect. Her Majesty, having spread the mortar, the stone was lowered under the superintendence of the architect for the works. Her Majesty then applied the square, level, plummet, and mallet, and having ascertained that the stone was correctly placed, poured over it some corn, wine, and oil. Immediately after the ceremony, the whole of the workmen employed on the new works, with their wives and families, sat down to a dinner, prepared for them by her Majesty's command, in the temporary iron ball-room, where they danced afterwards in the evening.

The New Penny Receipt Stamp.—During the few last weeks the *employés* in what is called the "Dry Stamping Department" of the Stamp-office, Somerset House, have been busily engaged, late and early hour in getting ready for the New Penny Receipt Act, which comes into operation on Monday next, the 10th inst., whereby every person paying or receiving money above 40s. is obliged to have every such receipt or receiving money above 40s. is obliged to have every such receipt duly stamped. The Commissioners have commenced delivering these new stamps to the public; but applications from parties licensed to sell stamps in the metropolis, and throughout the United Kingdom, have been so great that many have had some difficulty in getting their orders complete. An extra number of men are constantly at work so as to meet the emergency, for documents and deeds of every description are being sent in by hundreds to be stamped, as well as blank certificates. The new stamp is similar to the old receipt stamps (dry stamped), with with the only difference of its being marked "one penny," instead of 2d., 4d., 1s., &c. As a vast number of the licensed dealers in stamps have a considerable quantity of the old stamps on hand, the Commissioners have notified that they will be able to obtain a similar amount of new stamps in exchange, at a trifling discount.

City Children.—Fanny Fern pities city children thus:—"Here comes a group of pale-faced city children, on their way to school. God bless the little unfortunates! Their little feet should be brushing the strawberries, ripe and sweet, on some sunny hill-slope, where breath of new-mown hay and clover-blossoms would give roses to their cheeks, and strength and grace to their cramped and half developed limbs. Poor little creatures! they never saw a patch of blue sky bigger than their satchels, or a blade of grass that dared to grow without permission from the mayor, aldermen, and common council. Poor little skeletons! tricked out like the fashion-prints, and fed on diluted skim-milk and big dictionaries, I pity you."

THE STRAIT OF THE DARDANELLES.

The Strait of the Dardanelles, the ancient Hellespont, is the channel which separates Europe from Asia, and connects the Sea of Marmora with the Archipelago. The extreme length is upwards of fifty miles. The width varies, measuring about ten miles at the end near the Sea of Marmora, but gradually diminishing to about two miles, opposite Gallipoli; which may be considered the average width for the remainder of the passage southward; though in some places it becomes less than a mile. There is a current constantly running from the Sea of Marmora to the Archipelago, which in the narrow parts is so strong as to render the passage impassable for sailing vessels when the wind is from the north. Both sides of this narrow passage are strongly fortified, for the purpose of protecting the city of Constantinople from attack from the side of the Mediterranean.

The fortifications originally consisted of four castles—two on the European, and two on the Asiatic shore. Two others, called the New Castles, were built in 1659, at the mouth of the Strait opening into the Archipelago, by Sultan Mahmoud IV., to secure his fleet from the assault of the Venetians, who used to come and attack it in sight of the old castles. Major Keppel, however, who published an account of his journey across the Balkan some years ago, says:—

Strong as the Dardanelles are, where in every direction the eye rests upon guns bearing on a short and very narrow passage, the most dangerous part is the approach to the inner (old) castles. Their strength consists in the power of the Castle of Sestos, to which, from the nature of the current and from the banks running far out, a ship must come stem on, and inevitably be raked, without the power of returning more than her own guns until just abreast, by which time she would be dreadfully cut up, if the fire were at all well-directed.

The same author states that the batteries are well built, and placed in spots judiciously chosen; and that the greater number of the guns are *à fleur d'eau*; but that they have no carriages, and cannot be pointed, they fire only when a ship covers them. Among them are several immense guns, from which they discharge stone shot. The quantity of powder which these large guns require is enormous: the largest is charged with 320 lb.

We have been favoured, by Lieut. Montagu O'Reilly, of H.M.S. *Retribution*, with the very interesting and careful drawings made by him of the Asiatic side of the narrow part of the Dardanelles—that comprehended between the Old Castles—from which the three Engravings upon page 312 are taken.

First on the right is the Castle of Chanak kalessi, or Sultanie kaniess, which faces the Castle of Chelit-bawri, on the European shore; and the two are called by the Turks Bogaz-hisenleri, and by Europeans the Old Castles of Anatolia and Roumelia. This fort mounts 100 guns, some of them firing very heavy stone shot. The town of Chanak-kalessi is the place properly called the Dardanelles; and the castle is the residence of the Governor of the Dardanelles. The town itself is a miserable-looking place—containing about 2000 houses—lying very flat at the foot of the hill range. It is the residence of a Pacha and of Consuls from various Governments. A ricketty-looking wooden pier projects into the water, and serves as the landing-place for steamers and other vessels. A little to the left, near the British Consulate, is the coal store of the Peninsular and Oriental Steam Packet Company.

The Castles of Chanak-kalessi and Chelit-bawri were long supposed to be the ancient Sestos and Abydos; but this is now considered to be a mistake. North-east of Chanak-kalessi the Hellespont forms a long bay—or rather two bays, called the Capitan Pacha's Bay and Packet Bay—in all, three or four miles across, terminating in a point of land called Nagara Burnu, or Peagles Point. This is the point which has been fixed upon as having been the site of Abydos, and on the European shore opposite is supposed to have stood Sestos. Upon the point on the Asiatic side stands a strong fort, mounting 64 guns in two tiers.

About midway between these two old fortifications, and not far from the village of Tekct, is a new circular battery, called the Kiosk Battery, mounting 46 guns

The total number of guns mounted in all the fortifications of the Dardanelles, may be estimated at about 800.

The importance of this passage, as commanding the approach to Constantinople from the Mediterranean—as the Bosphorus does from the Black Sea—cannot be overrated. It has always been a rule with the Porte to prohibit the entrance of armed ships into it, except by special permission; and only once has that regulation been held at defiance. This happened in 1807, when the British Government being very desirous to induce, by threats, the Porte to make peace with Russia, in order to strengthen the combination of European powers against the French, commanded the British fleet, under Admiral Duckworth, to force the Dardanelles. In obedience to this order, eight vessels of the line entered the Dardanelles, and made their passage to Constantinople, before which city they anchored, to the great terror and scandal of the whole population. The Divan, however, being roused by the French, under General Sebastiani, to increased energy to meet the impending danger, preparations for defence on so formidable a scale were speedily set on foot, that the British Admiral deemed it prudent to withdraw his fleet from the scene.

In 1809, the Russian Government, working upon the terrors of the Porte, at the time of the insurrection of Mehemet Ali, obtained its signature to the Treaty of Unkiar Skelessi; by which, in return for the promised armed assistance of Russia against all enemies, external and internal, it promised to close the Dardanelles against all vessels whenever Russia should be at war. This condition virtually gave the command of the Dardanelles to Russia—a pretension so monstrous, that immediately upon the nature of the transaction being known, it was firmly protested against by England and France. After an exchange of notes with the Russian Government—which, thanks to the slippery dealing of Count Nesselrode, led to no result—the British Government, resolved to brook no further trifling in so important a matter, and sent an Ambassador in a vessel of war, with orders to sail through the passage of the Dardanelles. The late Earl of Durham was appointed to this mission. He arrived at the entrance of the Dardanelles on the 1st September, 1838, and demanded a Firman, to enable him to enter—which was granted; and thus the British Minister bore out his threat to the Russian, that, if ever it should become a question of applying the obnoxious conditions of the treaty of Unkiar Skelessi, the British Government would act as if such treaty had never existed. Indeed, in 1841, a treaty to which Russia was a party, was signed, declaring that the Dardanelles should remain for ever closed against ships of war of all nations, except when Turkey itself should be at war. Under these circumstances, the recent passage of the combined fleets of England and France through the Strait, by permission of the Divan, was an event of great European significance; and the formal declaration of war on the part of the Porte against Russia, was afterwards to be expected as a matter of course.

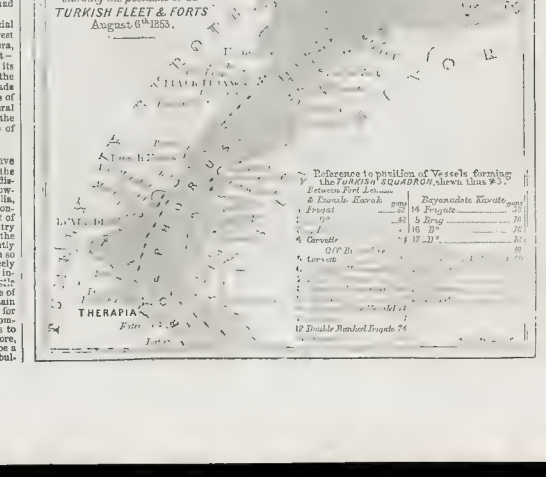


CHART OF THE POSITIONS OF THE SHIPS OF THE TURKISH FLEET IN THE BOSPHORUS.

In our Supplement of the 24th ult., we gave a View of part of the Turkish fleet in the Bosphorus; we now, in order to make the matter more clear, give a Plan of the Bosphorus, with stations of the several ships, their names, &c; for which we are indebted to the kindness of Lieut. Montagu O'Reilly, of H.M.S. *Retribution*, at present with this fleet in the waters of Constantinople.

MELODIA DIVINA, or, Sacred Original Music, for Public Worship. Consisting of Tunes, Chants, Sanctuses, &c., for post office orders. "Harp Melodia Divina is by far the best collection of sacred music which has come under our notice; it contains, we may say, every popular psalm and hymn tune, some beautiful chants, pieces from Handel, Haydn, Mozart, and many existing original Compositions, and, what is peculiar to this work, peculiarly adapted to congregational singing. Certainly no family should be without it."—Bell's Weekly Messenger.
London: HOGG, Groombridge and Sons.

Note.—The sign — denotes below the average, and the sign + above the average.

The reading of the Barometer was nearly stationary at 30·02 inches on the 30th; then decreased to 29·63 inches by the afternoon of October 1; increased to 30·07 inches by noon on the 3rd; decreased to 29·30 inches by noon on the 5th; and increased slowly to 29·44 inches by the end of the week. The mean for the week was 29·807 inches.

The temperature of the air has been below its average. Its mean value on October 2nd was 46·1°, and is the lowest recorded on that day since 1840, when it was 45·4°; that of the 4th was 46·8°, and is the lowest since the year 1836, on which day it was 46°; that of the 3rd was 44·1°, and is lower than any on record as occurring on this day. The mean of these three days is 45·7°, and is of lower temperature than that of the same three days in any year since 1836; in that year their average was 45°. The mean for the week was 48·2°, being 4·6° below the average of thirty-eight years.

The range of temperature in the week was 27·8°.

The mean daily range of temperature during the week was 15·2°. The greatest was 23·5°, on the third; and the least, 6·4°, on the 5th.

Rain fell on five days to the depth of one inch.

The weather during the week has been dull and cold; the air, excepting on the 4th, has been the most part in gentle motion only, or it has been calm. Thick fog was prevalent on the morning of the 3rd, and throughout the 4th. The sky during the day has been mostly overcast, and was cloudless on three nights.

For the month of September the *mean reading of the barometer* at the level of the sea was 30·026 inches.

The highest temperature during the month was 73·8°, and the lowest was 38·0°.

The range of temperature in the month was 35·8°. The mean of all the highest temperatures by day was 65·5°; and of all the lowest by night was 48·5°.

The mean daily range of temperature in the month was 17·0°.

The mean temperature for the month was 55.8°, being below the average of 18 Septembers by 1·0°.

The mean temperature of the dew point was 50.5° ; and the *mean degree of humidity of the air* was 85; complete saturation being represented by 100.

The fall of rain for the month was 2.4 inches.

Lewisham, Oct. 7, 1853. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending Saturday, October 1, the births of 1024 children were registered: of these, 524 were boys; and 500 girls. The number of births exceeds the average of the same weeks in the eight preceding years by 206. The number of deaths from all causes in the week was 1212; but this number is increased by about 100 spread over the quarter, upon which coroners' inquests have been held, and returned only at the end of the quarter. The excess of births over deaths in the week was about 500. The deaths due to zymotic diseases were 308 in number: of these, 211 were under fifteen years, and 39 exceeded sixty years of age, principally distributed as follows: 1 in small-pox, 8 (being one-half its average) : 10 measles, 14 (being less than its average by 10); 5 scarlatina. 47 (its average is 60); 10 hoop-ng-cough, 20 (its average is 28); 10 croup, 8; 94 diarrhœa, 50 (its average is 24); 1 cholera, 1 (its average is 84)—being a decrease of 20 on the previous week. During the last six weeks, the deaths from this disease have been 137, 152, 131, 78, and 69; and are on the decline. To obtain an increase in the two preceding weeks the numbers were 16 and 29: it is, therefore, more fatal. Of these 48 deaths, 21 were children under the age of fifteen years, and 27 of adults above fifteen years; 31 were those of males, and 17 were those of females; the sex of one death is not stated. These were thus distributed over London. In the west district, 3; in the north, 6; in the central, 2; in the east, 4; and on the south side of the river, 32. The deaths registered in the cholera of the last seven weeks have been 10, 18, 10, 7, 16, 29, and 48. To these, 7 deaths are attributed to diarrhœa above the average of the same week in ten years: 1 to typhus; 1 to scarlatina; and four deaths from unregistered causes were certified their average is 47. To tabulate diseases 151 their average is 108. Deaths from the eruptive diseases are 1 above the average in 10: to these 4 of the 1 have been from scarlatina, 1 from measles, and 4 of these the cause of was supposed to be small-pox. Deaths from diseases of the respiratory organs are 1 above their average in 10: of these 2 were from bronchitis and 52 pneumonia. To diseases of the heart and blood vessels 6 deaths are referred their average is 10. To diseases of the stomach, 9 deaths are attributed their average is 7·0. To sudden deaths 4 the average is 2·0. From this account it will be seen that for the most part the average number of deaths in each disease, or class of diseases, is not above 2 more or less than were the deaths, excepting their average by 5 only. Although this does not include cholera, whose average for the week is 8 only, and to deaths took place: the full particulars of these deaths are given by the Registrar-General. They are nearly in every case confined to the working and labouring classes, whose residences are affected by bad smells, arising from cesspools or drains. The exceptions are—one case, a gentleman 79 years of age; another, a clerk in a Government office, 32 years of age; but neither of these cases seem to have been Asiatic cholera.

THE MEDICAL SESSION.—On the usual opening of the medical session in on the 1st of October; but, falling on Saturday, Monday was generally taken as the day for the commencement. At the University College, Professor Garrod delivered the introductory lecture. At King's College Hospital, Dr. Guy, in presence of a numerous auditory, gave the lecture. Dr. Parker performed a similar kindness at the London Hospital. At the Middlesex Hospital, Dr. Frere delivered the introductory lecture to a numerous company. Mr. Guthrie gave the inaugural address at the Westminster Hospital. The distribution of scholarships and prizes at the St. George's Hospital took place under the presidency of Dr. Paris, when Dr. Nairne addressed the auditory, and the President delivered the awards.

ROYAL COLLEGE OF PHYSICIANS.—At the usual quarterly meeting of the College, held on Friday, September 30, the following gentlemen were admitted members of the college:—Dr. Callaway, London; Dr. Coote, Oxford, Dr. Ballard, London.

ROYAL COLLEGE OF SURGEONS.—The library and museum of the Royal College of Surgeons of England, which has been closed during the month of September for the purpose of cleaning and dusting the books, shelves, and anatomical preparations, are now opened for the reference and accommodation of members of the College of Surgeons, as well as of visitors, under certain prescribed regulations. The customary examinations for the diploma of the College will commence for the present session towards the end of the month.

ROYAL DISPENSARY FOR DISEASES OF THE EAR.—The half-yearly meeting of this institution was held at the Dispensary on Monday last. Dr. Till was called to the chair. He was supported by the Rev. W. C. Williams, T. Cooper, Esq., and other friends of the charity. Mr. Harvey, the surgeon, informed the meeting that the number of patients had been greatly augmented for the half year—being 765; of which, 387 were discharged cured, and 248 greatly relieved. The thanks of the meeting were passed to Mr. Harvey, the surgeon, for his labours, and to the chairman, and the meeting separated.

ROYAL WESTERN OPHTHALMIC HOSPITAL.—At the Quarterly meeting of the Governors, held on the 6th inst., the Rev. H. Mackenzie, the Vicar of St Martin's, in the chair, it was reported by the secretary, that during the past quarter 1025 out patients had received the benefits of the institution; thus 24 persons, blind from cataract, had been wholly or partially restored to sight by operation—seven by the operation of artificial pupil. And of the out-patients the large number of 64 had been cured by operation of the deformity of strabismus, or squint. It is to be deplored that the exertions of this excellent charity should be cramped by the want of funds to carry out its benefits to the fullest extent.

BETHLEHEM HOSPITAL.—By a clause in an act of Parliament passed in the late session, which will take effect on the 1st of November, the power of detention is made as to Bethlehem Hospital. Hitherto it was exempted from the operations of the Lunacy Acts, but that enactment is repealed, and it is to be forthwith registered as an hospital under them, and open to the visitation of the officers appointed by Government

THE CRYSTAL PALACE, SYDENHAM.—On Monday the whole of the firemen selected from the London fire-engine establishment, took up their new quarters at the Crystal Palace, Sydenham. The works are sufficiently advanced to be insecure without a body of firemen being on the spot, in the event of a fire breaking out. A house has been hired for the temporary accommodation of the firemen near the building.

THE ENTOMOLOGICAL SOCIETY.—On Monday last the Entomological Society held a meeting, when five insects new to England, and a large foreign collection were exhibited; and communications were read from Mr. Newman, Mr. Scott, Dr. Lankester, and the Rev. Jos. Greene

PROPOSED MINING STOCK EXCHANGE.—A meeting was held at the Bull Hotel, Bishopsgate street, on Thursday week to consider the establishment of a Mining Stock Exchange, to be conducted on a system similar to the Stock, Corn, and Coal Exchanges; it appearing that at present no facilities or place of assembly exists for transactions connected with the increasing business of mining adventure, the main object being to place the purchase and sale of mining shares under proper rule and regulation, and to abolish those discreditable practices that are understood to attach to operations connected with that class of speculation.

THE WELLINGTON FUNERAL CAR.—The admission of the public to view the funeral car of the late Duke of Wellington, at Marlborough House, Pall-mall, will be as follows:—On Mondays, Wednesdays, and Thursdays, the public will be admitted without tickets. On Tuesdays and Fridays admission will be granted by tickets, obtainable on application at Messrs. Banting's, 37, St. James's-street. On Saturdays the doors will be closed. The hours of admission on each day will be from eleven til four.

CAB LAW.—Two decisions of importance were given on Wednesday, at the Police-courts. One renders the hirer liable for the fare of any other place driven over in consequence of an obstruction of the streets through which the direct path lies. The other authorises the cabman to receive 6d. for every fifteen minutes during which he may be kept waiting, although the fifteen minutes may not have been completed at any single stoppage. He is entitled to add up the time consumed in stoppages, and to charge 6d. each for as many complete quarter hours as the total may be found to amount to.

FLEET-STREET AND LUDGATE-HILL.—On Thursday morning, the entire roadway of Fleet-street was opened, and the general traffic for omnibuses, &c., resumed as usual; workmen were the same day engaged in taking up the pavement of the roadway from the Waithman Obelisk up Ludgate-hill to the Old Bailey, preparatory to its being relaid with new granite.

MUSEUM OF PRACTICAL GEOLOGY.—On Saturday last Professor Forbes delivered, in the theatre of this institution, the opening lecture of the autumn session of the metropolitan school of science, applied to mining and the arts. The subject of the lecture was the "Educational Uses of Museums." It was listened to with every attention, and received with great applause. Amongst the audience were Sir R. Murchison, Dr. Lyon Playfair, Sir C. Lyell, Sir H. de la Beche, &c.

PROVINCIAL INTELLIGENCE.

THE EASTERN QUESTION.—MEETING AT LEICESTER.

A public meeting—"for the purpose of conveying to Government the sentiments of the people of Leicester on the necessity of prompt, energetic, and decisive action at the present important crisis of the Eastern Question"—was held in the New Hall, on Tuesday evening. It was very numerously attended.

The Mayor presided; and, in opening the business, said that he believed her Majesty's Ministers were so anxious to know the feelings of the people on this subject as the people were anxious to express them.

Dr. Noble moved:

That, in the opinion of this meeting, the invasion of the Danubian Principalities, and the continued occupation of those provinces by the army of the Emperor of Russia, is an unprincipled act of aggression, contrary to the law of nations, and calling for the immediate interference on the part of the English people

Mr. W. Hardy seconded the motion, and it was carried unanimously.

Mr. J. F. Hollings moved:

That the integrity of the Turkish Empire being guaranteed by the most solemn treaties, to which Great Britain has been a party, it is the plain duty of the English Government to fulfil its engagements to the utmost, by preserving her territory inviolate, and by maintaining the Sultan in the full possession of his rights as an independent Sovereign.

Captain Harris seconded the motion, and said he had visited Turkey more than once: and so lately as four years ago he left the Turkish dominions for this country. The Turks had been represented by many of the public organs to be a barbarous people, whom it would be to the interests of Christianity to chase out of Europe. A more fallacious representation was never made. The Turks, he was able to say, were among the most enlightened of European nations—if enlightenment meant high moral principle (Hear). Turkey now looked to England in her present case—and to England almost entirely: but our Government had a difficult position to maintain, and they might have acted according to their ideas of wisdom and integrity; but had he individually been at the head of the Government, when the Emperor threatened the Turks with the invasion of the Danubian Principalities, he (Captain Harris) should have instructed his ambassadors to say, "The moment that a single Russian battalion crosses the Pruth, shall our English fleet in the Bay of Constantinople" (Loud cheers); and he (Captain Harris) felt that the Emperor of Russia, resolute as he was, would never have suffered a Russian soldier to cross the Pruth.

The announcement that a telegraphic despatch had been received that morning in London, reporting that the Sultan had declared War, was made to the meeting, and was received with rapturous applause.

The Rev. J. P. Mursell (Baptist) moved that a memorial, embodying the above resolutions, be laid before Lord Clarendon, and that the members for the borough be requested to undertake its presentation.

MEMORIAL.

My Lord,—We the inhabitants of Leicester, in public meeting assembled, beg to call your Lordship's attention to the serious position in which the interests and honour of England are placed by the menacing and unjustifiable attitude recently assumed, and still maintained, in defiance of treaties, by the Emperor of Russia (our professed ally), the Sultan of Turkey.

And we respectfully request your Lordship, as an influential member of the British Government, to take such decisive and immediate measures as shall lead to the evacuation of the Danubian Principalities, to the full Independication of the Sultan for the injuries sustained by the late invasion of his territories, and his future security against the recurrence of such an act of aggression.

Mr. J. Biggs seconded the motion, which was carried unanimously. The proceedings terminated with a vote of thanks to the Mayor.

SURREY REGISTRATION.—The number of electors on the register in force in 1851; objections sustained by overseers, 464; by Reformers, 171; by Tories, 56: total, 691. The rest of the electors on the register, 6210. Re-claims allowed, 179; new claims allowed, 388: total, 717. Total number of electors for 1853-4, 6,927.

CHICHESTER DIOCESAN TRAINING SCHOOL.—The foundation-stone of the diocesan training-school for school-mistresses, about to be erected at Brighton, was laid on Wednesday last by the Countess of Chichester, with the benediction of the bishop. Divine service was performed at St. Peter's Church at two o'clock, after which the procession was formed and left the church for the site of the building on Rose-hill.

WEST KENT RAILWAY.—A numerous and influential meeting of noblemen and gentlemen, proprietors of land in West Kent, was held on Wednesday, at the Crown Hotel, Sevenoaks, to consider the expediency of forming a line of railway from Sydenham to Bromley, by Otford to Maidstone, with branches to Lewisham, Greenwich, Eltham, and Farnington-causeway, for local and suburban traffic, and with duplicate lines, and independent termini for the Crystal Palace traffic.

HULL IN 1853.—We believe Hull is in a much more flourishing state than it has been for years. There are few out of work, and wages are high. Seamen receive £5 or £6 3s. per month, an advance of about £1 over previous years. At a meeting of the board of guardians last week, the governor stated that there were fewer paupers in the house than there had been for thirty years.

THE FORTIFICATIONS AT DEAL.—The works at No. 1 Battery are progressing favorably. The foundations of the sea face are completely laid, and enclose the whole of the battery. The foundation is laid 15 feet below the surface of the ground, and the wall is to be varied to a height of 15 feet above the surface. It is to be composed of solid brickwork, four feet thick, and laid in cement. Another wall, 20 feet high, is to be erected within this, and the centre is to be filled up with concrete; and upon the summit of the latter are to be fixed eight 68-lb. cannons, which, from their position, will command a full sweep of the Downs.

EMIGRATION FROM PLYMOUTH.—The splendid ship *Blenheim*, belonging to Duncan Dunbar, Esq., has been chartered by her Majesty's Emigration Commissioners to take emigrants to Port Phillip, on 14th November, for Melbourne. The *Dalhousie* and *Ann* for Sydney, *Duke of Portland* for New Zealand, and *Diana* for Melbourne—all taking passengers—will be despatched during the present month, and the early part of November; also, the *Emerald Isle* and *Sultana* for Adelaide, and *Omega* for Melbourne—the last three chartered by the Emigration Commissioners.

OPENING OF A RAILWAY BRANCH TO YEOVIL.—On Saturday last, a large concourse of people celebrated the opening of the Durston Branch of the Bristol and Exeter Railway to Yeovil. The directors were received by the portreeve and burgesses, and most of the inhabitants, and subsequently joined the procession to the Town-hall, where a company of about 150 sat down to partake of a substantial and handsome dinner. The directors, with one exception, were all present, and appeared to be much gratified with the proceedings. Mr. Butler, the chairman of the directors, in the course of the evening, said that, if it were only as a test of the inquiring and intellectual spirit of the age, this line would be extensively patronized, passing, as it did, through a country replete with historical recollections.

THE PEEL MEMORIAL AT OLDHAM.—The Peel Memorial in Oldham having taken the form of Public Baths and Washhouses, the committee of the Testimonial Fund have decided upon erecting a bust, life size, of the great statesman in the entrance-hall; and have commissioned Mr. Alex. Munro to execute it in marble.

BIRMINGHAM GAOL.—The magistrates of Birmingham assembled in special session on Wednesday, and, from ninety candidates, selected Mr. G. W. Hillyard, of the county gaol at Nottingham, as the fittest person for recommendation to the Quarter Sessions to fill the office of governor of this gaol.

AWFUL RAILWAY ACCIDENT IN IRELAND.

ONE of the most frightful accidents that has ever occurred on a railroad, took place on the Great South-Western line, at Straffan, only a few miles from the Dublin terminus, on Wednesday evening. A passenger train from Killarney and the south, was due at Dublin at six o'clock; from some defect in the engine, the train came to a stand-still near the above spot. Mr. Croker Barrington, the solicitor to the Company, and his wife, were passengers; and he directed a man to take the red (danger) lamp back on the line, as a cattle and heavy goods train was following. Many of the passengers who had left their seats in the carriages, thinking the goods train would be coming slowly, and also that it would be sure to see the signal-lamp, returned to their seats.

Such, unhappily, was not the case; for, scarcely had they done so, when the cattle train ran at full speed into them, going clean through a first-class carriage, and driving the remainder into a heap of ruins. The third carriage from the front of the passenger train, a second-class carriage, broke up and turned over, bursting the powerful iron links which held it. The impulse given to the two forward carriages thus freed was so tremendous, that the roof was cut clean off the one next the ruined carriage, the unroofed carriage, with the one before it, the tender, and the engine, being sent flying along the line, which they traversed for nearly three-quarters of a mile before they stopped. Of the passengers in those two carriages scarcely any escaped without serious injury. Two were killed, two men were not likely to survive the night, and five or six were badly injured, all having broken limbs or serious contusions. Among the less seriously hurt was Mrs. Barrington. Of the killed, the only names ascertained were Mr. Jelly, of Maryborough, and Mr. Egan, of Birr.

Among the passengers was Captain James Collis, the commander of the *Times* steamer, on which the fatal accident occurred a few months back off the Pigeon-house Fort by the bursting of the boiler plate, and whose activity and humane conduct elicited so much praise. Captain Collis got out of the train when it came to a stand. He had for some time previously been thinking that all was not right with the engine, for the train was eleven minutes behind its time at Sallins, and when it stopped it was about a half-mile short of the station at Straffan. His example was followed by a few other gentlemen—but only four, viz., Mr Connor, of Newbridge; Mr. Kelly, of the same place; Mr. Leitch, of Armagh; and an English gentleman, whose name he did not ascertain, remained upon the embankment with him. The others all, unfortunately, returned to their carriages.

And here a most melancholy episode occurred. The English gentleman was accompanied by his sister, his wife (a beautiful young lady of 21), and their child, an infant of about nine months. A passenger, a Mr. Jelly, of Maryborough, had got out of the carriage in which the two English ladies and the baby were, and stood talking with Captain Collis, but, on seeing the cattle train coming along, he got in again and stood in the doorway watching its approach. The ladies got alarmed on hearing that the train was coming, and wanted to get out, but the English gentleman ordered them to stay as they were, and he was about to get in himself, and was only waiting for Mr. Jelly to get out of the doorway when the collision took place. Mr. Jelly was instantly decapitated, both his legs cut off, and his body torn to pieces. The ladies were both killed, and the agony of the unfortunate husband and brother, when he cast himself upon the lifeless body of his young wife, is quite indescribable. The baby was extricated from under its unhappy mother and aunt, and was living

When Captain Collis saw the train approaching he advised the other gentlemen to wait, as there was no calculating the speed at which a train, and on, was approaching. He glanced along the shining part of the rails, and observed by the glitter of the reflection that the speed was full. He at once shouted, "My God! she's coming on full speed! look out! look out!" and, turning round, he sprang over the wire fence into the field. Mr. Leitch followed his example, but fell. Mr. Connor and Mr. Kelly threw themselves on their faces, having no time to retreat. Captain Collis, having gained the field, turned round at once to the scene above described. When the engine came to a stand-still in the midst of the ruin, he jumped back again, and ran with Messrs. Leitch, Kelly, and Connor to assist the wounded. In a few out, and all who were able to move had congregated round the shattered carriages to render aid. When he noticed the violent throbbing of the engine he sang out for the engineer, who was helping to extricate some passengers, and bid him instantly jump on the engine and blow off the steam. The engineer did as he was ordered, and thus the lives, in all probability, of even more than had been sacrificed by the collision, were preserved. Capt. Collins having seen 14 dead bodies, and having helped to extricate about 50 wounded people—a labour which occupied some hours—arrived in town about midnight. It is to him that the public are indebted for the above dreadful narrative. Every assistance was immediately despatched from Dublin.

Later accounts state the number of killed to be twelve; and that the wounded and injured are not so many as at first stated.

THE CHOLERA.

In addition to the returns made by the General Board of Health, the following official reports have been issued

NEWCASTLE.—The total number of deaths from cholera and diarrhœa in Newcastle during the present outbreak has been 1413. In the same period (viz., the first thirty three days) during the prevalence of epidemic cholera there in 1831-32, the number of deaths was 949.

HEXHAM, Oct. 3.—Cholera—deaths, 2.

STOCKTON, Oct. 3.—Cholera—death, 1.

SOUTH SHIELDS, Oct. 2.—Cholera—death, 1. The total number of deaths from cholera in South Shields to the 2d inst. has been thirty-five.

GATESHEAD, Oct. 3.—Cholera, 5. Diarrhœa, 5. The total number of deaths from cholera and diarrhœa in Gateshead to the present date has been 304. During the like period (viz., the first 27 days) in 1831-32, the deaths amounted to 139. The latest advices received by the General Board of Health from this place state that Dr. Waller Lewis is about to leave for Stockton. At Walker, an out district of the Tynemouth Union, there were four deaths on Monday, and Friday more were expected. In 1849 many deaths took place: in one locality (Scotch-row) 45 persons died in a population of 200. At that time it was in a most filthy and overcrowded state, and the medical officer reported last week that the overcrowding was now as bad. It is confidently hoped that the prompt treatment provided by the guardians will mitigate the severity of the present visitation.

LONDON.—A fatal case occurred in Blandford-street, Marylebone, on Sunday. The patient, a young man, had been for some days previously ailing, and had imprudently, seeditz powders. Several inmates of the house are affected with diarrhœa. In the rear are some most offensive impurities, which have been long neglected. -Another fatal case occurred on the same day in York-court, Baker-street, Marylebone.—On Tuesday a fatal case of cholera occurred at St. Patrick-street, Grosvenor-square, in the person of the wife of a relieving-officer of St. Marylebone parish. Death occurred twenty-five hours after attack. Between the 23rd and 27th ult., as many as seven cases were seen by one of the resident medical men in Bermondsey: four proved fatal. In the majority there had been neglected diarrhœa. A fresh case occurred on Tuesday morning in the same gentleman's practice. He attributes this attack to the horrible effluvia from a foul ditch which had been stirred up the day before, the black mud being left exposed on its banks.—There was a fatal case in Deptford on the 26th ult. Diarrhœa had been for five days neglected. The case occurred in Creek-street, a very filthy locality, where several deaths took place in 1848.—Dr. Milroy (Medical Superintending Inspector of the General Board of Health), accompanied by Mr. Hall, of the Poor-law Board, had a conference to day (Tuesday) with the local authorities of Lambeth, and pressed upon them the importance of adopting the measures requisite for the protection of the public health in that parish, which it is well known abounds in many parts with prolific causes of disease.

CONTINENTAL TELEGRAPHIC MESSAGES.—The Continental Telegraphic Association has adopted some new regulations, which will serve as a check to the transmission of hazardous and unfounded intelligence. For instance, persons sending despatches must prove their identity by passport or certificate, or conformity of signature with that appended to the despatch, by personal appearance, with guarantee of identity. The expeditor of despatches, after having been satisfied of identity, is to add on the despatch, "The sender is accredited." This remark must accompany the despatch, but is not to be reckoned in the payment

RAILWAY COMBINATION.—It is stated that an arrangement is in a forward state between the London and North-Western, the Midland, the Oxford, Worcester, and Wolverhampton, the Worcester and Hereford, the Newport, Abergavenny, and Hereford, and the South Staffordshire Companies to consider their own lines, and those of the other companies as if they belonged to one common undertaking.

DEATH OF A CENTENARIAN.—Eliza Montgomery, who had been, for the last twelve months, an inmate of the Dowpatrick workhouse, died last week, aged 113 years

CALENDAR FOR THE WEEK.

SUNDAY, Oct. 9.—20th Sunday after Trinity. Dutch Fleet defeated, 1797.
MONDAY, 10.—Oxford and Cambridge Michaelmas Term begins.
TUESDAY, 11.—Old Michaelmas Day. Canova died, 1822.
WEDNESDAY, 12.—Wat Tyler killed, 1381.
THURSDAY, 13.—Trans. of St. Edward the Confessor. Fire Insurance due.
FRIDAY, 14. William Penn born 1644. Battle of Hastings, 1066.
SATURDAY, 15.—Murat shot for attempting to recover his Kingdom, 1815.

TIMES OF HIGH WATER AT LONDON-BRIDGE,

FOR THE WEEK ENDING OCTOBER 15, 1853.

Sunday.	Monday	Tuesday	Wednesday.	Thursday.	Friday.	Saturday.

TO CORESPONDENTS.

J. W. P., Ramsgate.—The King's College Kalendar will afford you the information you require

AN OLD SUBSCRIBER.—You had better consult a professed picture-dealer as to the value of the picture supposed by Parmegiano.

X. Y. Z.—The Will in question has not appeared in this Journal.

J. A. is thanked

E. E. S.; and W. E See the fourth edition of "Hogg's Practical Manual of Photography."

HALBERT.—"Haydn's Book of Dignities" is a continuation of "Beatson's Political Index."

H. L., No non-square. We have not room to engrave the implement.

H. T. S. H., Oxford.—Declined.

W. R. B.—The object seen by you on September 10 was meteoric.

H. De S., Manchester.—No such method as you describe has yet been invented.

FERNE.—It would be illegal to publish a daily newspaper without a stamp.

A. Y. W.—The "British Almanac" gives a list of London Baths and Wash-houses.

MERCHANT OF VENICE.—See Felix Summerley's "Guide to Westminster Abbey."

SANTON.—Translation declined

H. W.—Arms of the family of Hardwick, descended from John de Hardwick, of Hardwick, co. Warwick, and seated in after times at Lindley, co. Leicester: "Gu. a saltire engr. arg. between four mullets or. Crest: On a mount vert, a stag courant ppr. gorged with a chaplet of roses, arg."

C. P.—The Earldom of Pembroke has been held successively by the families of Clare, Marshal, Valence, Hastings, Pole, Tudor, and Herbert: never by any one bearing the surname of Pembroke. Richard de Clare, second Earl of Pembroke, was the famous Strongbow. The Earldom was conferred, A.D. 1138, on his father, Gilbert de Clare, feudal Lord of Clare, the conqueror of Cardiganshire. Strongbow left an only child, Isabel, who became the wife of William Marshal, afterwards Earl of Pembroke.

AQUARTER.—The English word "fair," a meeting of buyers and sellers, is derived from the French *foire*.

C. S. L.—Liveries depend altogether on the Arms. The principal colour is the tincture of the "field;" the facings, that of the first "charge."

W. J. T.—Arms of Thirkell of Shenstone, co. Stafford: "Arg. a chev. between three roses gu." Of Thirkell (or Thirkeld) of Yorkshire: "Gu. a mascle arg." The Crest used on paper or envelopes comes clearly under the tax for armorial bearings.

THE GOVERNMENT OF INDIA.—We cannot enter into a controversy with Mr. Buckingham on the subject of his pamphlet. We consider his plan to be indefensible, because it would not dovetail in with Imperial institutions; and would necessitate for one portion of our dominions a system incompatible with the existing organisation of the Executive Government at home.

*** We regret we have not space to insert the Sketch received from "R. L. S." of the Banquet given last week, by the Corporation of Cork to the Lords of the Admiralty, the officers of the fleet, &c., in the large room of the Victoria Hotel

A. L.—We regret that we cannot publish the excellent translation of "The Minstrel's Curse." The interest of the subject has passed over.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, OCTOBER 8th, 1853.

IF it be true that the Emperor of Russia has declared for peace, now that the Sultan has expressed his readiness for war, the true method of dealing with the Czar, and of bringing him to reason, must be as obvious to the purblind diplomacy of the Ambassadors at Vienna as it has long been to the common sense of Europe. It is reported that the Czar declared at Olmütz, that, as he had accepted the Vienna Note at the hands of the Conference in full satisfaction of the demands made upon him by the Allied Powers, and on the terms framed by his opponents—meaning, we presume, Great Britain and France—he could not, with any regard to his own dignity, listen to any second proposal. He offered, however, to accept a declaration, or interpretation of the Vienna Note, which would deprive it, or seem to deprive it, of the obnoxious character attributed to it by the Sultan. The world, however, can have but little confidence in the statement. Even if it be true, it must be taken at its value, which is just as much and as little as previous declarations from the same quarter. It is, no doubt, highly desirable that the intentions of the Czar should prove as pacific as they are represented to be by persons claiming to have the most authentic information; but, until the Emperor shall give to the cause of peace the "material guarantee" of withdrawing his armies from Moldavia and Wallachia, the people of Europe will continue to rely upon the British and French fleets, and the Sultan's army, as the best of logicians and of peace-makers. One thing is abundantly evident, that the diplomacy of the Great Powers, as displayed at Vienna, has brought diplomacy into contempt. If the Conference had acted with the ordinary and gentlemanly caution which would have been displayed by seconds anxious to prevent an "affair of honour," and in this spirit had communicated the terms of their note to Turkey—the invaded party—before showing the document to the agressor, the affair would, probably, have been brought to a crisis, and terminated a month ago, to the satisfaction of all Europe. If it be terminated now in the peaceable manner we are led to hope, no thanks will be due to the Ambassadors at Vienna, or at Constantinople, for the result. The energy of the Sultan, and the cordial aid that will certainly be afforded to him by Great Britain and France—should it be needed—have proved to be the arguments which the Czar best understands. We are glad to learn, not only that the most perfect understanding exists between the British and French Governments upon their interest and duty in this time of peril and perplexity; but that the most cordial good feeling prevails between the officers and men of the allied fleets: and that Admiral Dundas, with a chivalrous courtesy which does him honour, has offered to serve under the orders of the French Admiral Hamelin, his senior in years though not in rank. Such circumstances are of good augury, and will possibly not be without salutary effect upon the mind of the Emperor Nicholas. Both nations are fully prepared. France, with a celerity of action, which is one of the results of an Imperial and Autocratic Government, is ready to send 30,000 men at a day's notice to the shores of the Bosphorus. These are intelligible facts—patent to the meanest capacity, and not to be overlooked by the clear-sighted man whose bad ambition has caused all the mischief. For these and other reasons, there is much ground to hope that, unless the eagerness of the Turkish troops under Omer Pacha should precipitate a collision, the peace of Europe will yet be maintained.

THE state of French education, or rather information, often reminds one of Prince Potemkin's Palace, where champagne was to be had in profusion, but not a glass of fresh water; where you might get *patés de foie gras aux truffes* by the dozen, but not a slice of plain bread. If our tastes are military or theatrical; if we are lovers of libraries, ancient or modern, or students of chemistry or astronomy, or of any branch of natural history; or if we are among those who take delight in galleries of sculpture and painting, then we may be satisfied with France, where institutions—scientific, ornamental, and military—are to be found in profusion and perfection. There is, nevertheless, one branch of information on which the whole French nation is not only lamentably ignorant, but in which they seem to make no progress—and that is in the common sense of commerce, credit, and the principles which are unknowingly practised by every little shopkeeper in England. Ignorant prejudices prevail in France of which even the most rustic disciple of Young England would be ashamed. Academicians, members of the Institute, statesmen, authors who write elegantly, journalists of the first class, are not aware that they are doing wrong when they cultivate the ill feeling of the ignorant against "contractors," "speculators," and "forestallers." The children of the masses, who are taught, besides reading and writing, to draw from casts of the Apollo and Antinous, are also taught by their newspapers that those who make a profit by feeding the people are the deadly enemies of the nation. A few years ago some of these foolish fancies prevailed in England. A high price of bread was sometimes attributed to a conspiracy among the bakers; at other times to the millers; and in Ireland—that benighted land, to which no polished Parisian would like to have his enlightened country compared—the warehouses of provision dealers have been burned down in time of famine. Indeed, we must own that in England a respectable squire is occasionally to be encountered in some Ultima Thule of the rural districts, who firmly believes that the Corn-laws were repealed in order to enable the men of Manchester to buy the estates of the aristocracy at a depreciated rate.

But in France—the birthplace of such great economists as Quesnay, Turgot, Neckar, Baptiste Say, and Bastiat—it is as amazing as it is lamentable to find leading writers and orators, as well as the Government, doing each and all of them their best to teach the whole people that the prices of the necessaries of life can be settled by laws and decrees. Of the effects of this almost universal ignorance of the true principles of trade, we have recently had some singular illustrations. When, in 1848, corn was scarce and dear in England, and plentiful in France; and when, to the horror of our Protectionist croakers (who, fortunately, had not the mob on their side), sailing-ships and steamers were continually crossing the Channel, laden with French corn and French flour, as well as French fruit, vegetables, poultry, and live stock, the inhabitants of several French ports, under the prompting and guidance of people who ought to have known better, raised a tumult, and even attacked and destroyed cargoes of bread stuffs on their way to embarkation. Vessels were loaded under the protection of the armed police, others departed in ballast; and it was common to hear Frenchmen of the middle class talking, as if an injury was done to France by these English purchases.

In 1853 the tables are turned: England, in the face of a deficient harvest, has become one of the granaries of Europe; we import from every country where our merchants see a chance of a profit; and we export to France. Fortunate it is, in this instance, that France has alongside of her a nation more commercial than herself. On a sufficient supply of bread the tranquillity of France depends. A chain of monopolies and restrictions has dwarfed the mercantile community, and sapped the mercantile marine. A Government which prohibits or taxes every manufactured article, and taxes highly every raw material, may have shopkeepers to sell native produce, but cannot support a numerous merchant class. The merchant lives by the double profits of barter. The French tariff only allows the French merchant to make one profit by the sale of French goods; while the Englishman and the American make two—one on what they export, and one on what they import. In like manner there are few French ships, because the Customs laws of France forbid shipowners to carry the cargoes that would be most profitable. Under these circumstances, dependent on foreign shipowners and foreign ships for the necessaries of life, the old prejudices cultivated by the Thiers school of economists against the exporter, are directed against the importer; and it is a fact that, very recently, in certain districts of France, the effects of the short harvest have been aggravated by French importers being afraid to import the corn they had purchased in England as rapidly as it was required, lest they should awaken suspicion, and bring down upon their unfortunate heads the attentions of a mob excited by such epithets as "*usurers*," "*hoarders*," and "*speculating foreign conspirators*."

It was but the other day that one of the leading French journals eloquently protested against the suspension of the duty on foreign cattle, although the scarcity of meat has often driven French workmen to consume offal and horse-flesh!

If these delusions—founded on the idea that the profits of the exporter are the losses of the importer—had only affected English interests, we might, perhaps, have refrained from alluding to them, because we know the jealousy of the French on such subjects; but in the present state of France, for the interest of the French themselves, the thing most needful is free communication with their corn and cattle-raising neighbours on the Continent.

It is to be hoped that the threatened dearth of provisions will lead intelligent Frenchmen to expunge from their speeches and writings such phrases as "invasion of foreign oxen," "deluge of foreign corn," "overwhelming oppression of foreign iron"—phrases more inflammatory than even "*Mourir pour la Patrie*," or "*La République Sociale et Démocratique!*"

THE COURT.

The Queen and the Prince Consort continue to enjoy the invigorating air of their Highland home in the mountains of Aberdeenshire. On Thursday se'nnight his Royal Highness Prince Albert went to the Ballochbuie forest, and enjoyed the sport of deer-stalking. Her Majesty and the Princess Alice accompanied his Royal Highness. On the following day the Queen and the Prince Consort drove in an open carriage in the direction of Castletown. On Saturday last the Queen, with the Princess Royal and Princess Alice, drove to Invercauld, the residence of Mr. and Mrs. Farquharson. Viscountess Canning was in attendance on her Majesty. The Prince Consort went out deer-stalking. In the evening the Duchess of Kent dined with her Majesty. On Sunday the Queen and the Prince attended Divine service in the parish church of Crathie. The service was performed by the Rev. Archibald Anderson. Her Majesty and his Royal Highness dined at Abergeldie in the evening, with her Royal Highness the Duchess of Kent. On Monday morning the Queen went out walking, attended by Viscountess Canning. In the afternoon, her Majesty, with the Prince Consort and her Royal Highness the Princess Helena, drove out in an open carriage. Some of the younger members of the Farquharson family came from Invercauld to pass the afternoon with the Princes and Princesses. The Duchess of Kent joined the Royal dinner circle in the evening. The Court returns to Windsor Castle next week.

Her Imperial Highness the Grand Duchess Marie of Russia, accompanied by three of her youthful family, paid a visit to the Earl and Countess of Mount Edgcumbe at their seat, near Plymouth, on Tuesday last, returning to Torquay the same evening. The Grand Duchess comes to town to-day (Saturday) for a short period, and leaves England for St. Petersburg on the 23rd inst.

His Excellency the Bavarian Minister has left town for Germany for a short period.

The Duke and Duchess of Sutherland, accompanied by the youthful Lord Albert and Lord Leveson Gower, have arrived at Lochinver House, from Dunrobin Castle, *en route* for the south. The Marquis and Marchioness of Stafford are still at Tarbut House, Inverness-shire, where they have been receiving a succession of visitors.

The Marquis of Lansdowne arrived in town on Tuesday night, from the Continent.

The Earl of Listowel is re-appointed a Lord-in-waiting to the Queen, in the place of Lord Elphinstone, nominated Governor of Bombay.

The Countess of Cottenham and the Ladies Pepys, who arrived in London at the close of last week from Germany, have since left Parkhame for Sandridge-park, Surrey.

Lord and Lady Bloomfield have left town for Ireland.

Lord Brougham has left Paris for his château in the south of France.

Lord Thomas and Lady Sophia Cecil are passing a few days at Folkestone. They are among the fashionable company sojourning at the Pavilion.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rectories:* The Rev. L. Browne, to Whittlebury and Silverstone, Northamptonshire: the Rev. T. Coldwell, to Greens Norton; the Rev. W. Temple, to Nymet Rowland, Devon; the Rev. J. E. Cooper, to Great St. Mary, Norfolk; the Rev. E. M. D. Fyne, to Bawdsey, Suffolk; the Rev. J. Prior, to Lynby, Notts. *Vicarage:* The Rev. G. Sharp, to Merther. *Incumbencies:* The Rev. H. Gale, to Studley, Wilts, the Rev. J. Davies, to Smallwood, near Congleton; the Rev. H. St. George, to Bolinge, near Lancaster; the Rev. H. Cooper, to Stoke Prior, with Docklow; the Rev. E. Jones, to Llanychaiarn, near Aberystwith; the Rev. T. B. Lloyd, to St. Mary's with St. Michael's annexed, Shrewsbury.

TESTIMONIAL.—A gold watch, with a black silk gown, and Bible and prayer-book, were presented, on Monday last, to the Rev. J. F. Greenamith, M.A., by the parishioners of Eastington, Gloucestershire, as a token of their respect and esteem.

PROPOSED STATUE OF PRINCE ALBERT IN HYDE PARK.—The Lord Mayor has put himself at the head of a movement for carrying out the idea of commemorating the great and industrial gathering in Hyde-park by a statue of the illustrious Prince to whose active and energetic co-operation it owed so much of its success. Lord Granville, as Vice-Chairman of the Commission for that Exhibition, when applied to on the subject, properly considered himself disqualified from taking the initiative in the matter, though it has, we believe, his Lordship's hearty approval. As the Lord Mayor, therefore, assumed the leadership, addressed the provincial mayors for support—we believe with great success—and maintained the right of the metropolis to take the first place in what is, nevertheless, a national movement. We cannot doubt that the project will have a large acceptance.

SIR F. B. HEAD.—The Queen has granted a pension of £100 to Sir Francis Bond Head, Bart. Sir Francis was Governor-General of Canada during the rebellion of 1837. He is, also, the author of "The Pampas of South America," "Bubbles from the Brunnen," &c. &c.

BIRMINGHAM THEATRE.—Madame Celeste and Mr. Webster have been performing with great success at Birmingham, where "The Green Bushes," "Flying Colours," "The French Spy," have attracted crowded houses

ROYAL MARIONETTE THEATRE.—The Hungarian band made their first appearance in the metropolis, in this pretty little theatre, last Monday evening, and their performances, which have been continued daily during the week, have been well attended.

HIBERNIAN HALL.—Mrs. Alexander Gibbs (late Miss Gradon) inaugurated, on Thursday evening, an entertainment "The Emerald Isle." It consisted of a discourse, in two parts, descriptive of Irish scenery, accompanied with songs, legends, and anecdotes. The diorama, illustrative of the lecture, has been painted by Mr. Charles S. James; and, among other places, exhibits Bay of Cork—River—Rock of Cashel—Giant's Causeway—Inn at Glengariff—Cromwell's Bridge—Lakes of Killarney—Old Weir Bridge—Innisfallen—Gap of Dunloe—and Muckross Abbey. The songs were chiefly Irish; "The harp that once in Tara's halls," "The Lakes of Mallow," and "Rory O'More," being the most admired. The entertainment, it was announced, would commence on Monday.

THE INCLOSURE COMMISSION.—A special report to Parliament has been printed. Since the last report twenty-seven consents for inclosures had been obtained, of which one related to Chobham, of thirty-two acres. The land was to be sold to Sir Denis Le Marchant, and the proceeds to be invested in public works.

HARVEST-HOME ON THE ROYAL FARMS NEAR WINDSOR.—On Saturday last "the long accustomed feast of harvest-home" was celebrated on the Norfolk, Flemish, and Bagshot Farms, all of which are in the occupation of his Royal Highness Prince Albert. The whole of the regular labourers and harvest-men, numbering altogether about 100, were regaled with a substantial repast of prime roast beef and plum-pudding, in a spacious barn at Norfolk farm Mr. Brebner, the Prince Consort's farm-bailiff, presided. The rustic banquet was graced by the presence of Colonel the Hon. A. N. Hood, clerk-marshal to Prince Albert, Lady Mary Hood, and their youthful family.

ROYAL BUCKS (KING'S OWN) MILITIA.—This fine regiment is now assembled for a month's training and exercise at High Wycombe, under the command of Colonel Lord Carrington, Lord-Lieutenant of the county of Buckingham. The corps is nearly 900 strong, and, as a proof of the readiness with which men were found to enlist in this county, it may be mentioned that 660 applicants for enrolment have been declined. The daily parade and usual exercises take place in the beautiful grounds of Wycombe Abbey, Lord Carrington's seat, where the men are enabled to pursue their course of training without interruption. The corps is drilled by the sergeants on the permanent staff of the regiment, selected from the Grenadier Guards, and the efficiency of the men in all that pertains to military tactics and discipline, is stated to be most satisfactory. In addition to the great advantage arising from being commanded by an acting Colonel, this regiment enjoys the privilege of numbering among its officers several experienced military men. Lord Carrington has provided an admirable band, and a permanent staff of drums and fifes is kept up throughout the year. The Royal Bucks Militia was the first regiment raised after the Bill for the enrolment of this force passed last year. It is the only militia corps in Great Britain bearing the double distinction of "Royal" and "King's Own." The first was granted upon the corps volunteering to proceed to Spain during the Continental war; and the second was conferred by George III., on the occasion of the regiment forming his Majesty's body guard, at Weymouth, in 1794. On the return of the regiment from Ireland, in 1799, 400 men volunteered from it into the 4th (King's Own) Foot. The regiment will be inspected by Colonel Dibbs, of the recruiting department, on the 22nd instant, in the grounds of Wycombe Abbey.

THE SHIPWRECK SOCIETY.—Her Majesty the Queen has, with her characteristic liberality, presented to the Royal National Institution for the Preservation of Life from Shipwreck £100, in aid of its diminished funds. We trust that the public, following the liberal example set to them, will come forward with their contributions to assist to lessen the frightful amount of the loss of life from shipwrecks (on an average, between 700 and 800 lives thus annually perish) which take place on our iron-bound coasts.

POSTSCRIPT.

WAR IN THE EAST.

It is not yet known with certainty whether the decision of the Supreme Council of Turkey for open war has been embodied in any formal declaration on the part of the Sultan, although there is every reason to suppose that the opinion of the Supreme Council will be adopted by the Executive Government. All the information we receive from Turkey confirms the belief that the feelings of the population and of the army have become uncontrollable, and that a declaration of war was thought by the Divan to be indispensable, as well to the internal security of the State, as to the vindication of the national honour and independence.

While the fanaticism of the army under Omer Pacha renders it probable that the declaration of war will be immediately followed up by hostilities, authentic information has reached the British Government that the Emperor of Russia has declared for peace; and that the sentiments of the Czar, as expressed by him at St. Petersburg, are not only in favour of a pacific settlement, but are reconcileable to a great extent with the conditions proposed by the allied powers. The Emperor of Russia represented to Lord Westmoreland that, as he had accepted the Vienna Note at the hands of the Conference in full satisfaction of European demands, and on the terms framed by his opponents, he could not, with any regard to his own dignity, be now referred to any second proposal. He offered, however, to accept a declaration or interpretation which seems to deprive the original Vienna Note of the objectionable features since discovered in it; and stated distinctly that, although he could not swerve from the conditions first imposed upon him, he was ready to admit at once such an explanation of those conditions as was conformable to the views of the French and British Governments, provided only that his acknowledged rights were still maintained.

It unfortunately happens, however, that the Czar has deprived himself of the benefit of the expedient he has himself suggested, by the "explanation" which he has already issued through Count Nesselrode in a sense exactly contrary to that now proposed. He might interpret the Vienna Note, as desired by the Western Powers, in a manner favourable to the security of the Porte; but, as he has already interpreted it through Count Nesselrode's despatch in a manner totally destructive of the security referred to, the only result would be that a note, by which the relations of two empires were to be regulated on points of extreme delicacy, would carry with it two conflicting explanations, and thus be neutralised altogether. Had the Emperor, after accepting the Vienna Note, refused the Turkish modifications without attempting to place upon their effect any construction of his own, he might have forced the Four Powers to complete an agreement which they had dictated themselves. But, by interpreting this Note in Russian fashion, and basing on it a claim to those very privileges from which it was meant to debar him, he exposed his own intentions and aggressive designs. So clearly is the Emperor convinced that Count Nesselrode's insolent and overbearing despatch has ruined his cause, and is likely to plunge Europe into war, that, it is said, he has since endeavoured to disavow the unlucky despatch, and declared that it had been written without his concurrence or authority. Such an explanation may be instantly accepted, without being in the smallest degree believed, and the diplomatists will then have a basis for further negotiation, since there seems to be no longer any dispute about the substance of terms of peace. The Czar now affirms his readiness to accept substantially the conditions of the Western Powers, and to have his relations with the Greek Christians of European Turkey so defined as to divest him of all pretences for political interference. In short, as regards those points for which the Four Powers have, in their own interests, been contending, he appears willing to yield without reserve.

A declaration of war is usually followed up by hostilities, and the party who makes it is the first to begin. In the present state of exasperation of the army under Omer Pacha, increased as it must be by the refugees who are in its ranks, it may be out of the power of that commander to restrain it, even if he were not known to be eager for war. By what means they could cross the barrier which yet separates them from their enemies is not clearly ascertained, but it would appear such an event is not out of the limit of probabilities.

The next news from St. Petersburg will be anxiously awaited. By some it is considered probable that the Emperor of Russia will respond to the declaration of war by the annexation of the Principalities to his Empire, and then defy the Turks or anybody else to compel him to give them up. Others maintain that he will make no movement after that declaration, but remain where he is, fortifying himself on the Danube so as to have a base for further operations in the spring. The pacific declarations of the Count de Orsolle appear to have preceded by a letter of explanation on the part of the Russians to treat at Constantinople. The Russian Consul Argyropoulo, had commenced negotiations with one of the Turkish Ministers, and it was said that the Emperor himself had commissioned him to do so. Despatches from Her Majesty's Consul are also stated to convey assurances to the Porte, that Russia, in spite of Turkey's refusal to give her a material guarantee, would still refrain from hostilities, and simply confine herself to the occupation of the Principalities.

Letters from Sophia, dated Sept. 22, state that Prince Gortschakoff had issued strict orders to the army with reference to the possibility of the invasion of the Turks leading to any attack on the outposts. These instructions were also known in the camp at Shumla; and the command was given by the Turkish General, that any soldier or commanding officer of an outpost who should give any Russian outpost grounds of complaint, should be punished with the severity proportioned to the nature of his offence; but that any one firing a shot across the Danube, should be punished with death.

The greatest English officers of rank had been observed in the neighbourhood of the Turkish camps occupied in reconnoitring the force of the Turkish troops, and the state of the army in Roumelia and Bulgaria.

The news from Bucharest (dated the 24th ult.) gives sad reports of the condition of the Russian troops in the Principalities. According to one expression, they are dying like cock-roaches, at the swampy mouths of the Danube. Nearly one-fourth of them are in the hospital, or rather on the sick list, for there is but very small hospital accommodation, and wretched medical attendance.

Accounts have been received, per Trieste telegraph, from Constantinople, to the 26th. The French and Austrian Ambassadors had urged the Sultan to accept the Vienna Note; but he refused to do so. The Grand Ottoman Council consequently met, and approved unanimously of the Minister's conduct in declaring war. A meeting was also held to frame an address to the Sultan, requesting him solemnly to declare war.

Another telegraphic despatch via Trieste, says:—"The beginning of the war is very probable. Firmans with regard to it were expected on the 27th, and were already sent to head quarters. There was great financial embarrassment, and a great augmentation of paper currency."

Up to the 27th ult. it would appear that the resolution of the Supreme Council at Constantinople had not been acted upon by the Porte. At that date an immediate declaration of war was not considered improbable, although numerous causes were indulged in that mutual concessions might still be made. There were then six English, one Sardinian, one Neapolitan, one Austrian, one Prussian, and four French war steamers lying in the Bosphorus.

LATEST INTELLIGENCE.

In Paris, on Thursday, it was generally believed that an Anglo-French expeditionary force would be sent to Turkey. The French Government have not yet given definite orders, but 30,000 men are said to be held in readiness to be sent to Constantinople—10,000 of whom will be composed of troops from Algeria, and the rest from the home troops, principally those who were lately at the Camp at Helfaut. The number which England is to furnish in her turn will not be, it is said, more than 10,000, who are to be embarked at several of the Channel ports. The last piece of information will strike the English reader as being premature, since it is unlikely that the British Government would embark in so active an interference without first calling Parliament together. The position to be occupied by the allied forces would be, it is supposed, near the line of the Balkan; but whether to the north or south of that chain is not known. The army of this expeditionary force seems, however, altogether premature, in the presence of the two facts that the Sultan does not yet appear to have declared war, and that the Emperor of Russia has repeated at Warsaw, the declarations of his desire for peace which he made at Olmütz.

The *Patrie* of Thursday contradicts, in a semi-official manner, the statement of the Sultan having signed a declaration of war on the 27th ult. What was resolved upon by the Divan was, that no more concessions could be made, and that the preparations for defence must be carried on with increased energy.

The statement of the Emperor of Russia having left Warsaw for St. Petersburg turns out to be unfounded. A telegraphic despatch from Berlin states that he had remained at Warsaw, and had been joined by the Emperor of Austria and the King of Prussia. He persists in his professions of peace; and, it is expected, will encourage the Emperor of Austria to make another attempt at mediation. Before the Emperor left Olmütz, he signed a ukase for a new levy of troops, and sent it off by courier to St. Petersburg. A despatch from Berlin says that the King of Prussia would return yesterday (Friday), accompanied by the Emperor Nicholas.

Upon the Paris Bourse on Thursday the Funds were much affected in the early part of the market. The Three per Cents were at one time down as low as 71f. 75c. for the Account—chiefly from an announcement that the Bank of France had raised its rate of discount to four per cent. The price soon rallied; and at the close it was 72f. 60c. for the Account, and 72f. 90c. for Cash.

FRANCE.

PARIS, Oct. 6.—The Bank has raised its rate of discount to 4 per cent. The *Moniteur* states that the rumour of an impending modification of the Cabinet is altogether unfounded. The *Bulletin de Paris* states that the *Solon* went out with despatches for the two Admirals in Besika Bay, instructing them to enter the Dardanelles, and the two fleets will be in the Sea of Marmora on the 12th instant.

The French Government appear inclined to adopt vigorous measures against Russia in the war now imminent in the East. It is stated that the French Government decided, at a Council of Ministers held at St. Cloud, that a corps d'armée of 50,000 men shall be embarked on board the Atlantic squadron, and sent out to Constantinople, there to be landed. General Canrobert will, it is stated, have the command of this body. In the event of an engagement taking place on the Danube, the 7th (being part of the Anglo-French division will, it is rumoured, occupy a position somewhere near the Balkan. The *Presse* says:—

The part to be performed by England and France in the East is clearly traced out. They will circumscribe the limits of the war, and oppose all re-victualling of the Russian army by sea; and in the event of a victory by the Russians over the Turks, they will prevent—by force, if necessary—the Russians from crossing the line of the Danube and of the Balkans: they will maintain the European equilibrium as fixed by treaties. The most cordial understanding exists not only between the two Governments, but also between the two Admirals.

Great and increasing uneasiness prevails upon the Paris Bourse. Very few persons are to be found who venture to hope for the maintenance of peace. Everybody believes that unless the Four Powers intervene to prevent the Porte from making an effort to drive back the invader, war between Turkey and Russia is inevitable, if hostilities have not already commenced. There was another and heavy fall in the price of public securities at the Bourse on Wednesday, caused by unfavourable reports from London, and by a report that the Bank of France had called on the depositaries of railway shares on loan in that establishment for additional security. The Three per Cents opened at 72f. 35c., and fell to 72f. 20c. They closed at 72f. 50c. for the end of the month. The Four-and-a-Half per Cents closed at 99f. 50c. In the Share-market there was almost a panic, and the fall in several of the companies was considerable

The French Government are making rapid advances in the direction of Free-trade. An Imperial decree extends to the end of July, 1854, the measures which rendered the importation of foreign corn free.

During his visit to Boulogne, the Emperor presented the military medal to the gendarme, who arrested him in 1840. His Majesty, while giving it, said to the person near him, "I admire men who obey their chiefs" The Emperor likewise sent 500f. to the coastguard who had aimed his musket at him on his landing on the same occasion.

The funeral of M. Arago took place on Wednesday. A brigade of Infantry marched with the procession, and the Emperor was represented at the ceremony by Marshal Vaillant, Grand Marshal of the Palace. It is also stated that the Minister of Marine attended to represent the Minister of Public Instruction. Though it rained incessantly, at least 3000 persons followed the funeral procession to the Cemetery of Père la Chaise. The only political display of any kind was at the Column of the Bastille where the victims of the revolution was buried. About four or five hundred workmen, who were arm-in-arm, pulled off their hats as they passed the column. There was only a small display of the armed force, and that apparently in compliment to the deceased as a member of the Legion of Honour, and a very slight display of the police force; but there was a large body of police in plain clothes mingled with the crowd.

ITALY.

The case of Miss Cunninghame (a Scotch lady), who was lately arrested at the baths of Lucca on a charge of attempting proselytism by the distribution of tracts, has created much sensation among our fellow countrymen resident in Tuscany, from its similarity to the affair of the Madiai in some respects, and the severity of the punishment to which this lady may be subjected, for having, in ignorance of the law (as she affirms), distributed a few tracts. The English Chargé d'Affaires (Mr. Scarlett) has been very active in his exertions to obtain Miss Cunninghame's release, on condition of her quitting the country; but the Grand Duke, to whom he applied personally in hopes of gaining his interest, has refused to interfere. The term of punishment to which a Roman Catholic living under the subject accuses an offender liable, is said to be from five to ten years' imprisonment, with the usual conditions awarded to felons; and this law has been enacted by the Grand Duke in contradiction to the terms of that constitution which he granted in 1846, whereby free exercise of every religion was guaranteed, and which constitution the English Government acknowledged.

AUSTRIA.

We learn from Frankfort that the *projet* of the new Austrian Loan has been communicated to the house of Rothschild.

PERSIA.

The intelligence from Persia is not without its influence upon the Eastern question, although it is not yet known whether the Persian preparations for war are intended to assist the Sultan or the Czar. The Schah quitted Teheran, for Sultanieh, at the head of a large body of men on the 5th ult. 3000 loads of gunpowder and other military stores had already been sent forward. Orders have also been received by the Minister of War to send six cannons, 350 artillerymen, and 600 loads of ammunition, with four regiments of infantry, to the Khoi territory. These important military movements have excited great attention. Cholera has almost disappeared in the capital, but is raging at Meshed, Ispahan, and Sultanieh. Murders and robberies continue to occur daily throughout the country. Insecurity has completely ruined business; the bazaars are untenanted, and caravans cannot proceed forward to Erzeroom and Trebizond unless strongly escorted. Something must be done for this country; it requires new men and a new order of things. Under the present administration the whole will crumble to ruins before many years are over, and in that prostrate condition it cannot be otherwise than a prey to Muscovite aggrandisement.

SYRIA.

BEYROUT, Sept. 30.—There have been riots in the province of Naplouse. Two hundred persons were killed, and quite as many were wounded. The authorities had not the power to interfere. The Christian population of the Lebanon is in a state of anarchy, and the Druses refuse to obey the Government.

AMERICA.

The *Franklin* touched at Cowes on Thursday evening, on her way to Havre. She brings the information that an immense and enthusiastic public meeting was held at the Metropolitan-hall, New York, on the 22nd ult., for the purpose of voting a testimonial to Captain Ingraham, of the United States' sloop-of-war *St. Louis*, in appreciation of his gallant conduct in rescuing the Hungarian, Kossta, from the grasp of an Austrian frigate in Smyrna Harbour. The hall was densely crowded. French, Italian, German, Hungarian, Swiss, and Cuban exiles gathered in immense numbers, marshalled under their respective revolutionary banners. The speeches, delivered in French, Spanish, German, and Slavonian, elicited tremendous applause, and the demonstration was of a most effective character.

Exchange on London at New York was 11¼ to 11½ premium.

The screw steam-ship *Andes* arrived at Boston, from Liverpool, on the 22nd ult. On the 11th ult. she encountered a tremendous hurricane, during which Mr. John Maxwell, the second mate, was washed overboard and drowned, and Captain Hutchins was so badly injured that he died the same afternoon.

Telegraphic despatches from Washington state that General Almonte, the Mexican Minister, had received intelligence of large discoveries of gold on the Rio Mescala, which is on the route of the Mexican Ocean Mail and Inland Company. Thousands of Mexicans were flocking there.

Commodore Vanderbilt's steam-yacht, the *North Star*, arrived at New York on the 23rd ult. from her European trip.

THE SEARCH FOR SIR JOHN FRANKLIN IN THE ARCTIC REGIONS.

Despatches have been received at the Admiralty from Commander M'Clure, who sailed in December, 1850, in search of Sir John Franklin, in H.M.S. *Investigator;* and from Captain Kellett, who sailed in the spring of 1852, in H.M.S. *Resolute*, on the same mission. We regret to say that no traces towards success in the main object of their mission have been discovered; but we have been favoured with communication of a letter from Commander M'Clure, dated H.M.S. *Investigator*, Bay of Mercy, Baring's Island, April, 1853, which announces his success in accomplishing the long problematical enterprise of the North-Western passage. The gallant writer states that, during the winter of 1850, his vessel wintered in pack, without sustaining any damage (and, surprising to say, he has to report the same result at the end of the third winter, and without the loss of a single man of her crew) in the frozen waters called Prince of Wales's Strait, and communicating with Barrows, as he ascertained on 26th Oct. of that year. "In July, 1851," he states, "such a body of ice came down upon us with a strong east wind, and set the vessel so far to the south, that we determined to attempt a passage by the east end of the cliffs of Banks Land, forming the north entrance of the large island under which we now are." The difficulties and dangers of the passage may be estimated from his statement that the ice floes encountered measured from 45 to 70 feet beneath the water, only 6 or 7 feet above. We must refer for the details (of which we cannot now make even a hurried transcript) to the despatches, which, of course, will be immediately published.

It is interesting to learn that inhabitants have been discovered farther northward than known previously, at Wollaston and Victoria Lands, and northward still on the tract designated as Prince Albert's Lands. These were found exceedingly kind and friendly, and great quantities of copper were found, apparently in a very pure state. This metal is used by the natives for edging their weapons, &c., but they appeared to be amused at seeing pieces of it worked up by the crew, and passing value.

In April, 1852, Commander M'Clure went to Melville Island on sledges, expecting to find there one of Captain Austin's vessels, or, at all events, a store of provisions; but was disappointed on both counts, as notice left by Lieutenant M'Clintock, saying where provisions were, and giving the position of their ships. It was inferred that the search was supposed to be abandoned, and no other vessel would visit that land for a year.

Since October, 1851, the crew of the *Investigator* is stated to have been put on two-thirds allowance—half a pound of meat per diem to alternate where the commander states they could not have existed another winter. On the hills adjacent to the bay from which the letter is dated, large numbers of deer and other game have been found; which must have contributed a welcome relief from the short-commons of the previous polar sojourn

The only portion of Captain Kellett's letter read has merely been as follows:—"Dated 1st May, 1853, at Melville Island, the brief notice that Mr. M'Clure had sent out a party, at which time he had already boarded several of the crew to return home by Baffin's Bay, and had sent a party by the Mackenzie.—*Globe*

A CABINET COUNCIL was held on Friday at the Foreign-office, at two o'clock, attended by all the Ministers in town.

ZOOLOGICAL SOCIETY OF LONDON.—At a monthly general meeting, held at the society's house (Dr. Gray in the chair), the Duke of Hamilton, Madame Favard de l'Anglade, Mrs. Barton, Mrs. Gordon, and Messrs. J. D. Salmon, and A. E. Campbell, were elected fellows of the society; and Messrs. W. Cory, W. Cory, jun., J. S. Leakey, R. Free, and E. Lechertier Barbe were proposed as candidates for the fellowship. The report from the council stated that the number of visitors to the gardens during September had amounted to 44,961, and during the year to 358,517 presenting a very large increase over every preceding year of the society's existence. The report concluded by enumerating the various additions made to the society's menagerie since their last meeting, among which the great American ant-eater is the most remarkable—of which we give an illustration in this week's Number.

THE NEW METROPOLITAN CATTLE-MARKET.—The members of the Market Improvement Committee on Wednesday last viewed the works in progress for the formation of the new market at Copenhagen-fields, executed by Mr. Bunning, the architect to the Corporation. They found the works proceeding with the most vigorous rapidity; the contractor, Mr. Willson, having 1600 men and 150 carts employed constantly on the ground.

INDIAN RAILWAY.—A meeting of the scripholders of the Upper India Railway was held on Thursday, at which a committee was appointed to confer with the directors on the expediency of postponing, if possible, the proposed call, in the present disturbed state of financial affairs

PORT OF LONDON.—Great inconvenience continues to be complained of from the want of a sufficient number of the Queen's Surveyors of the Custom house. Owing to the great increase of trade with a corresponding increase of hands, the deliveries of goods are delayed to an unusual extent. The number of vessels in the port of London for the present time has exceeded that of the corresponding period of last year by upwards of 1100.—*Times.*

ANOTHER LIVERPOOL BANQUET.—His Worship Mr. S. Holme entertained the Earl of Derby and a distinguished party at a private banquet in the Town hall, on Wednesday. Among the guests were the Earl of Derby, Sir J. H. Maxwell, the Hon. H. T. Liddell, M.P.; Mr. W. Brown, M.P.; Mr. H. Heyworth, M.P.; Sir R. Cunliffe, Bart. Bent, Admiral Grenfell, Archdeacon Brooks, Rector Campbell, Rev. R. M. Fielden, Rev. E. Ashton, the Town Clerk, Mr. H. Ashton, Mr. J. H. Turner, Mr. J. Turner, Captain Baynes, Mr. Cropper, Mr. Earle, Mr. Fletcher, &c., &c.

MANCHESTER.—THE CHANCELLOR OF THE EXCHEQUER.—It is understood that the Chancellor of the Exchequer has accepted an invitation to meet the influential merchants and others at luncheon, on Wednesday next, and that addresses will be presented to him on that occasion. The right hon. gentleman is to arrive on Tuesday.

LONDON SMOKE.—A deputation waited on Viscount Palmerston at the Home Office, Thursday, attended by Mr. Whitbread, Mr. Combe, Mr. E. Wigram (from Reid and Co), Mr. Elliott, Mr. A. A. Barclay, Mr. F. Calvert, and Mr. Wilson Calvert, on the subject of the smoke nuisance

MILITARY FRACAS.—According to the authority of the *Limerick Chronicle*, a very curious circumstance has occurred in Dublin garrison, which, it is said, must lead to a court-martial. It appears that a field-officer of the 89th Light Infantry has placed his commanding-officer under arrest for alleged drunkenness

FREE-TRADE IN FRANCE.—A letter from Brest, of the 4th inst., states that the shipowners of that port have already begun to prepare themselves for importing salt beef from Central America, where it may be purchased at one halfpenny the pound. This is the result of the decree, permitting the importation of salt beef into France on payment of a nominal duty.

DESERTIONS from the Royal Marines at Plymouth have lately been so numerous as to cause great anxiety amongst the authorities.—*Plymouth Journal.*

LAUNCH OF THE "GREAT REPUBLIC."—This magnificent ship, the largest clipper in the world, will be launched from the ship-yard of Mr. M'Kay, at East Boston, on the 4th of October. Her hull is now nearly finished. She is between 6000 and 7000 tons stowage capacity, and is the longest and sharpest vessel ever built in this country. She is 325 feet long, 53 wide, and 30 deep, with four decks, and is of a model so beautiful as to seem perfection itself. When fitted out she will proceed to New York, and there load for San Francisco.—*Boston Atlas*

PROSPECT OF DARKNESS AT PLYMOUTH.—The gas company, to whom the commissioners are indebted some £1800, we understand, have given, or have determined to give, this body three months' notice that unless their claim be legally discharged at the end of that period, the supply of gas to the public streets will be discontinued.—*Plymouth Mail.*

WHALES.—About two hundred whales were stranded near HUSWICK, Zetland, on the 23rd ult., the blubber of which was sold on the following day at prices from £13 to £15 per ton.

ROYAL FREE HOSPITAL MEDICAL COLLEGE.—This college was opened on Thursday evening, as a school of medicine and surgery, with an introductory address by Dr. Tyler Smith. The theatre of the college was crowded, and the audience comprised many of the elite of the profession, the medical officers of the hospitals and school, and nearly all the medical students residing in the neighbourhood. In connection with this hospital, we may state, that the following bill has been extensively circulated in the neighbourhood:—"Poor persons attacked with diarrhœa or looseness of the bowels, are invited to apply without delay. Advice and medicine may be obtained gratis at any hour, day or night."

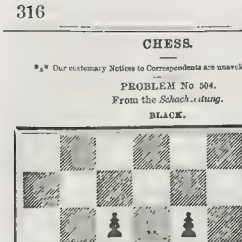
ROYAL ORTHOPÆDIC HOSPITAL FOR THE CURE OF CLUB FOOT, &c., BLOOMSBURY-SQUARE.—On Thursday a meeting of the friends and supporters of the above-named hospital was held at the boarding-room in Bloomsbury-square. The hospital was established in 1839 for the cure of club foot, lateral curvature of the spine, and all other contractions and deformities. Since the opening of the building more than 14,000 destitute cripples have been successfully treated and restored to the complete use of their limbs by the agency of the charity. The influx of patients from different parts of the kingdom (and one would scarcely credit the prevalence of such cases without seeing the crowds which daily gather round the hospital doors) has proved the urgent necessity of increased space for in-door patients. The committee have, consequently, decided on enlarging the building; and active endeavours are being made to raise the necessary funds.

CHESS.

*** Our customary Notices to Correspondents are unavoidably postponed

PROBLEM No 504.
From the *Schachzeitung*.

BLACK.



WHITE.

White to play, and mate in three moves.

MATCH BETWEEN MESSRS LOWENTHAL AND HARRWITZ, FOR £100

This much-talked-of contest commenced on Monday, the 26th ult., at the Ship Hotel, Spring-gardens, where with the object of preventing inconvenience and interruption to the players by too numerous an assemblage of lookers on—private apartments have been engaged for the combat, the entrée to which is restricted to four friends of each party.

As far as the chess-playing antecedents of the two combatants enable us to form an opinion, we think them extremely well matched, and that the encounter is likely to be one of the most interesting which we have had for some time. Löwenthal, "the Hungarian player," attained a marked celebrity, many years ago, by the victory which, in conjunction with his compatriots Szen and Grimm, he achieved over the French players in the match by correspondence between Paris and Paris, and by his contests with many of the picked men of the German chess-circles. Since that period affairs of more importance have engrossed the greater part of his time and attention, and his talent for chess has hardly had the cultivation it deserves. Still, he has not altogether neglected his favourite game, for in America he won golden honours in several matches with the best skilled amateurs of the States; and at the Great Tournament held here in 1851, he proved himself entitled to a place in the first rank of the great players assembled.

His opponent, Harrwitz, is a native of Breslau, and is chiefly remarkable for his unsurpassed nary facility in what is called blindfold chess, that is, playing the game without seeing the board or men. In this peculiar branch of chess-playing he is probably, now Kieseritzky is no more, unequalled. His progress in the game, in the first instance, appears to have been truly remarkable. At a bound, almost, he obtained a point of eminence which few reach, even after years of labour. In 1846 he was publicly unknown as a player. In 1846 he played the well-known match of twenty-one games with Mr. Staunton. In this contest he lost every game in which his opponent did not give him odds. He lost the majority, also, of those in which he received the large advantage of the Pawn and two moves; but, strange to say, he won a majority of those wherein he received the lesser odds of the Pawn and move. In the same year he distinguished himself by winning a match, by the odd game, against Mr. Horwitz, a German player of great eminence, and by numberless minor victories over the London amateurs. During the following year he achieved new laurels, by defeating a well-known Divan player, named Williams, almost without a struggle, and shortly after he again scored the odd game in a second match against Horwitz. His subsequent battles have been of comparatively little moment; and, though by incessant practice with every variety of player for the last seven years, he has acquired a readiness and dexterity which are surprising, we suspect his best play by far will be found in the games with Mr. Staunton and Mr Horwitz. Since that period he seems to have made no advance whatever in the higher elements of chess strategy; and, indeed, it is questionable whether, while he has gained in smartness, he has not lost in depth and breadth of combination.

To those acquainted with the constitutional timidity of Löwenthal, his loss of the two first games occasioned no surprise. The games themselves showed clearly that he lost not from any inferiority of executive power, but from a want of confidence and self possession. The three next games were won by him in a style which leaves nothing to be desired, and justifies the opinion of his friends, that, having taken the lead, he will maintain it to the end. From the beginning to the end of them, his adversary never had a chance. At the termination of the fifth sitting, the score stood—

Lowenthal	..	..	..	..	3
Harrwitz	..	..	..	..	2
Drawn	..	..	..	..	0

The following, which was the third played, we look upon as the best game that has yet come off —

(Ruy Lopez Knight's Game.)

WHITE (Mr. L.)	BLACK (Mr. H.)	WHITE (Mr. L.)	BLACK (Mr. H.)
1. P to K 4th	1. P to K 4th	23. P takes P	K B takes P
2. Kt to K B 3rd	Kt to Q B 3rd	24. Q Kt to his 3rd	B to Q 3rd

6. P to Q 4th	B to Q Kt 3rd	27. P to K B 4th	R to Q B sq
7. B to K Kt 5th	P to K R 3rd	28. P to K 5th	B to Q Kt sq
8. Q B takes K Kt P	takes B (a)	29. Kt to Q 2nd	R to K Kt 5th (i)
9. P to Q 4th	Kt to K sq (b)	30. P to K B 3rd (d)	R to K Kt 3rd (j)
10. Kt to K R 4th (c)	Q to her B 4th	31. Kt to K 4th	K to his 2nd
11. Q to K B 3rd (d)	Q takes B (e)	32. R to K B 3rd	R to Q B 5th
12. Q takes P	Kt to K B 3rd (f)	33. Kt to K B 6th	R takes Q R P
13. Kt to K B 5th	B to Q B 4th	34. Q R to Q sq (m)	R to Q R 7th
14. Q takes B P (ch)	K to B square	35. R to Q 3rd	K R takes K Kt
15. Q to B 6th	K to his sq		P (ch)
16. P to Q Kt 4th	K B to his sq	36. K to B sq	B to Q R 5th (n)
17. P to Q R 4th	Q to her 6th	37. Kt to Q B 6th	B takes Kt
18. Q to K 6th (ch)	Kt to Q 5th (g)	(k)	
19. P takes Kt	Q P takes P	38. K R to Q 7th (ch)	K to B sq
20. Q to her 6th (g)	Q takes Q	39. K R to Q 8th (ch)	K to his 2nd
21. Kt takes Q	B to Q 3rd	40. Q R to Q 7th (ch)	
22. Q Kt to Q 2nd	P to Q B 4th	And Black surrendered.	

(a) So badly is Black's game opened, that, even thus early, he is compelled to make this disadvantageous move, or lose his centre P.

(b) It would have been better strategy if Kt to his own square, if we mistake not to Kt 2nd to take away an attack. It no previously.

(c) A bold and masterly stroke. Whether Black capture the proffered piece or not, his position is greatly inferior to his opponent's after this move.

(d) Black was evidently unconscious of the fine attack which his adversary forsaw he be sacrificed the Bishop, or he would have retired his Queen, instead of taking the

(e) The best move. Black is forced or he would have soon most disastrous

(f) Mr Lowenthal appears to give up his attack by playing thus; but we believe he acted prudently in doing so. He has won a Pawn, and obtained a much better situation than Black; and, with these advantages in exchange of pieces is in his favour.

(g) Clever and unexpected.

(h) It is tolerably evident that if Black had taken the Q B Pawn he would have lost the exchange.

(i) Black's object in placing his Rook at the K Kt 5th was probably to tempt his antagonist to play Kt to K 4th; in which case the Bishop might safely have taken the King's Pawn.

(j) We should have preferred playing this Rook to K Kt 6th.

(k) This and the subsequent move dependent on R, are admirably played by the Hungarian.

(l) Black had two other squares—namely, K sq and Q Kt 4th—to which he might have played the Bishop, and either would have been better than that chosen; though in no case could he have saved the game in the end. As the case is at present, from the Bishop going to either of the squares mentioned are very interesting moves, I suppose—

In the first place:—

38.	B to K sq	38. R takes R	R takes Kt (ch)
39.	Kt takes R	39. K to B 3rd	
40.	K to B 3rd (best)	40. K to B 3rd	And wins
	Kt to Q 3rd (best)		

In the second place:—

38.	Q Kt takes R	
39.	K to K 2nd	
40.	K to B 3rd	
	(This is the only move by which White can win.)	
38.	Q R takes Kt	
	(He has no better move, bad as the is)	
39.	R to Q 7th (ch)	B takes R
40.	R takes B (ch)	
	And then makes it two more moves.

LAUNCH OF A SHIP AT BRIDPORT.

A splendid ship, the *Speedy*, the largest ever built on this coast, was launched at Bridport Harbour, on Tuesday. She is intended as a packet ship for Australia, and is the sixth of first-class shipping built by Messrs. J. Cox and Son. The *Speedy* bids fair to sustain the prominent character of her builders. Her principal dimensions are: Length over all, 220 feet; breadth of beam, 33 feet; depth of hold, 21 feet 4 in. Tonnage for burthen, 1460.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The news at hand from Constantinople, to the effect that the Sultan has signed a declaration of war against Russia, has been productive of great consternation and considerable depression in the money-market. The fall in prices, however, has not been so extensive as might have been expected, arising from the comparative scarcity of Stock, and the doubts entertained in some influential quarters of the policy about to be adopted by England in the impending struggle. It is clear, however, that, in the event of this country becoming actively engaged in it, Consols will go much lower than they are at present.

The foreign exchanges are gradually becoming more in favour of England: consequently, it is fair to presume, looking to the fact that the demand for gold on Continental account has fallen off—that the Bank returns, during the next three or four weeks, will show more favourable results than for some time past. The late rise in the minimum rate of discount by the Directors of the Bank of England, may be a most judicious step; but, at the same time, we cannot help observing the inconsistency in lending money on the Government Securities at 4 per cent, and at the same time charging 5 per cent upon the most approved mercantile bills. No doubt the measure was adopted for the purpose of checking the outflow of gold, but any great accumulation of the precious metals there appears to be wholly out of the question. The increase in the value of money here has induced the directors of the Bank of Prussia to raise their rate to 5 per cent; and it is thought that discounts will shortly be higher in Paris.

Numerous fluctuations took place in the quotations of Consols on Monday. The Three Per Cents opened at 99¾, and closed at 99¾ ⅞ both for money and the account. On Tuesday the market was dull and drooping; whilst, on Wednesday, the Three Per Cents were down at 99⅝ to ¾, and 99⅝, both for money and the account. On this and Exchequer Bills, 1st. to 10s. dis. India Stock was 249; and South Sea do., 111, the latter figures showing a decline of ⅛ from Monday. The market opened firmly on Thursday morning, but, in consequence, in the absence of any further positive intelligence from Constantinople, were on the advance. Stock was comparatively scarce, and the account was proving a favourable one. The Three per Cents opened at the quotations of Wednesday; but the market closed heavily, at 91¼ to 91⅜, both for transfer and the next account, which is fixed for the 18th inst. Exchequer Bills were heavy, at 12s. to 7s. discount.

Foreign Bonds have had a downward tendency. Mexicans have declined, notwithstanding that 117,000 dollars have arrived for the dividends. Russian securities are somewhat lower, arising from the being mostly in strong hands. Brazilian Old Five per Cents have been done at [illegible] Little Four and-a-half per Cents, 1852, 85; Dutch Two-and-a-half per Cents, 58 to 59; Portuguese Four per Cents, 32 to 33½ ex div. Spanish, 42 to 43; Granada Deferred, 8 to 9. Mexican Three per Cents, 21½; Peruvian Four and a-Half per Cents, 77. Ditto Deferred Three per Cent, 48 to 50. Portuguese Four per Cents, 43. Russian Five per Cents, 110. Ditto, Four and a Half per Cents, 97. Spanish Old Three per Cents, 44½; Swedish Loan, 91½.

Very little specie is now being forwarded to Australia; the steamer, which left for Sydney on the 6th, having only about £600 on board, chiefly in silver.

The total amount of stock "accepted" at the Bank of England up to this time is £1,763,044 6s. 2d.; and at the South Sea House, £1,297,397 19s.

We have had an arrival this week of £540,000 from Mexico, the West Indies, &c.; and £50,000 from New York. The shipments of bullion to the Continent have fallen off; but £501,750 has been forwarded to the East.

It is gratifying to observe that most of the commercial bills which fell due on the 4th were well met. In Lombard-street money has been plentiful, at from 4½ to 5 per cent per annum for first-class paper.

The October dividends will be in course of payment to the public on the 13th inst. The transfer books of the South Sea Annuities will be reopened on the 10th inst.

Miscellaneous Shares have been dull and drooping. Hungerford-bridge Shares have sold at 12; Waterloo, 5; Vauxhall, 2¾; Albion Insurance, 8½; Alliance, 21¾; City of London, 2¾; Country, 197; European Life, 20⅞; Globe, 148; Guardian, 60, ex div.; Imperial Fire, 375; Ditto, Life, 20; Law Life, 56; London, 29; Pelican, 44; Provident Clerks' Life, 8; Royal Exchange, 249; Sun Life, 65; Universal, 45¾. Berlin Waterworks have been 2¾; East London, 129; Southwark and Vauxhall, 89¾ ⅞; West Middlesex, 131; Crystal Palace, 6¾; Electric Telegraph, 5¾; Peninsular and Oriental Steam, 69 to 70. Australasia Joint Stock Bank shares have been 6¾ to 7 ex div; London Chartered of Australia, 15 to 14¾; London Joint Stock, 22; Union of Australia, 64 to 63¾; Provincial of Ireland, 49; Union of Australia, 64 to 63¾; Australian Agricultural, 32; Peel River Land and Mineral, 4¾; and Van Diemen's Land, 15.

Railway Shares are firm, and the whole of the prices have given way. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Aberdeen 20¾; Ambergate, Nottingham, and Boston Junction, 6¾; Bristol and Exeter, 94; Caledonian, 49¾ ex div.; Chester and Holyhead, 15¾; Cork and Bandon, 13; East Anglian, 4¾; Eastern Counties, 11¾; East Lancashire, 69; Edinburgh and Glasgow, 80¾; Great Northern, 75½; Ditto B Stock, 124; Great Southern and Western (Ireland), 104; Great Western, 80¾; Lancashire and Yorkshire, 61¾; London and Blackwall, 7¾; London and Brighton, 95; London and North-Western, 102¾; Ditto, Eighths, 2; London and South-Western, 76; Midland, 69; North British, 36⅞; North Staffordshire, 11¾; Oxford, Worcester, and Wolverhampton, 39¾; Shrewsbury and Birmingham, 20; Shropshire Union, 7⅜; South-Eastern, 57¾ ex. div.; South Wales, 34¾; Vale of Neath, 14¾; York, Newcastle, and Berwick, 61¾; Ditto, Extension, 10⅜; York and North Midland, 41.

LINES LEASED AND RENTALS.—Manchester, Buxton, and Matlock, 8; Midland, Bradford, 99; Wear Valley, 30.

PREFERENCE SHARES.—Great Northern, Five per Cent, 111; Great Western, Four-and-a-Half per Cent, 99½; Ditto, Four per Cent, 97; Londonderry and Enniskillen, 15¾; Consolidated Bristol and Birmingham, 140; Oxford, Worcester, and Wolverhampton, 107¾; Ditto, 1¾.

FOREIGN.—Great Indian Peninsula, 6¾; Great Central of France, 8¾; Northern of France, 22½; Paris and Lyons, 24½; Paris and Rouen, 37¾; Paris and Strasbourg, 35½; Sambre and Meuse, 8.

The railway "calls" for the present month are £816,665, against £809,350 last year.

In Mining Shares—the value of which has been drooping—very little has been doing. On Thursday Agua Fria were 1⅞ ⅝; St. John del Rey, 3¼; Liberty, ⅜; Nouveau Monde, 1⅝ ⅜; Port Phillip, ⅞ ¼.

Friday Evening.

Considerable fluctuations have taken place in the value of Consols today. The demand for Money Stock—the supply of which has been small—has increased to some extent. The Three per Cents have been 91⅝ ¾, 92¼ ⅜, and 92⅜ ½. Exchequer Bills have sold at 12s and 11s. discount. Foreign Bonds and Railway Shares steady.

THE MARKETS.

CORN EXCHANGE, Friday.—There was a slight increase in the quantity of English wheat on offer to-day's market, yesterday's, owing to the weather, being fine, the arrivals coastwise were moderate nature of the supplies from abroad. Fresh wheat met a fair sale, at prices nearly as in most instances to-day's, but rather higher than on Monday last. The imports of foreign wheat into London last week were 8000 quarters. A full average business was transacted in [illegible] week, at late quotations, and [illegible] last week. Barley and beans were in [illegible] and prices were fully as high as on Monday last. The demand for malting barley was [illegible] and prices were worth 40s. per barrel.

ARRIVALS.—English, wheat, 2630; barley, 2410; malt, 2060; oats, 1900; flour, 2560. Irish: oats 200 quarters. Foreign: wheat, 2470 oats, 1900; flour, 8460 barrels.

[illegible] were [illegible] 2s. [illegible] white, 62s. to 78s.; Norfolk and [illegible] 72s. to 74s.; rye, 34s. to 36s.; grinding barley, 2s. to 26s.; distilling ditto, 28s. to 30s.; malting ditto, 32s. to 36s.; grinding beans, 2s. to 26s.; Lincoln and Essex, 28s. to 30s.; Kent and Suffolk, 30s. to 32s.; brown ditto, 26s. to 28s.; Lincolnshire feed oats, 21s. to 24s.; potato ditto, 23s. to 25s.; Scotch and Cork, black, 20s. to 24s.; ditto, white, 20s. to 26s.; Dutch, new, 42s. to 45s.; Polish, old, 42s. to 44s.; grey peas, 40s. to 42s.; maple, 42s. to 43s.; white ditto, 42s. to 45s.; boilers, 46s. to 48s. per quarter. Town made flour, 45s. to 50s.; Suffolk, 42s. to 45s.; Stockton and Yorkshire, 40s. to 42s. per 280 lbs. *Foreign.* French flour, 40s. per sack; American, 37s. to 40s. per barrel

Seeds.—Mustard-seed has moved off steadily. Canary has been held as high as 61s. per quarter. Linseed is on the advance. Cakes on all other articles are firm.

Linseed, English, sowing, 52s. to 60s.; Baltic, crushing, 48s. to 49s.; Mediterranean and Odessa, 42s. to 43s.; baregseed, 32s. to 34s. per quarter; coriander, 9s. to 12s. per cwt.; Brown mustard-seed, 12s. to 17s.; white ditto, 16s. to 18s.; and tares, 8s. 6d. to 9s. 6d. per bushel. English rapeseed, £37 to £39 per last of ten quarters. Linseed cakes, English, 4l. 10s. to £10 0s.; ditto, foreign, £9 10s. to £10 10s. per ton. Rape cakes, £5 5s. to £5 10s. per ton. Canary, 54s. to 60s. per quarter. English clover-seed, red, 48s. to 63s.; white ditto, 44s. to 64s. per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 10d. to 10½d.; of household ditto, 8d. to 9½d. per 4 lb. loaf.

Provisions.—Wheat, [illegible] sugar.—Wheat, 50s. 5d.; barley, 37s. 0d.; oats, 22s. 7d.; rye, 36s. 11d.; beans, 40s. 10d.; peas, 39s. 3d.

Tallow [illegible] Wheat, 54s. 4d.; barley, 33s. 1d.; oats, 21s. 6d.; rye, 34s. 9d.; beans, 41s. 10d.; peas, 39s. 3d.

Butter.—Wheat, 54s.; barley, 1s.; oats, 1s.; rye, 1s.; beans, 1s.; peas, 1s.

Tea.—Public sales have been held this week and at which [illegible] were [illegible] branded, on former terms. Privately the demand has been limited, and [illegible] have been supported. Up to Saturday last duty was paid on 33,052,[illegible] lbs., against 29,464,347 lbs. in 1852.

Sugar.—For all kinds of raw sugar the demand has been in a very inactive state. In refined, however, scarcely any change has taken place. Fine refined Barbados has sold at from 38s. to 39s.; good mid., 35s. 6d. to 37s. 6d.; low ditto, 33s. 6d. to 35s.; ordinary yellow, 31s. 6d.; small to fine brown Mauritius, 29s. 6d. to 32s.; fine yellow ditto, 33s. to 37s.; fine white Bourbon, 42s. 6d. to 43s. per cwt. Refined sugars have sold freely, at full currencies. Brown lumps, 44s. 6d.; low to fine grocery, 45s. to 48s. per cwt. Up to Saturday last, duty was paid on 4,964,711 cwts., against 4,707,447 cwts. in 1852.

Coffee.—[illegible] were very [illegible] per cwt., with a very slow inquiry. Good ordinary native [illegible] In other kinds of coffee, very little is doing.

Rice.—[illegible] White Bengal, 14s. 6d. to 16s.; Madras, 12s. 3d. to 13s. 6d. per cwt.

Provisions.—The demand for most kinds of butter has been limited, and [illegible] Carlow, Cork, and Kerry, [illegible] Waterford kinds, 82s. to 84s.; Limerick, 80s. to 82s.; Cork, 78s. to 80s.; Belfast, 76s. to 78s.; Clonmel, 74s. to 76s.; Sligo, 72s. to 74s.; and Dublin, 70s. to 72s. per cwt. Bacon has been in fair request, at full prices. Hams, lard, and cheese are firm, and quite as dear as last week.

Tallow.—The market has been rather excited, and prices have been on the advance. P. [illegible] on the spot has sold at 56s. to 56s. 6d.; for [illegible] every during the last three months, 56s. to 56s. 6d.; and for the spring, 53s. to 53s. 6d. per cwt.

Oils.—[illegible] Linseed oil has been in fair request, at 31l. 10s. per ton. Cocoa-nut oil [illegible] 4l. per ton. Palm oil [illegible] 4l. per ton. Rape oil [illegible] 4l. 5s. per ton.

Spirits.—Rum continues to move off steadily, [illegible] Proof Leewards is held at 2s. 6d. East India, at 3s.; and Jamaica, at 3s. 7½d. per gallon. Brandy is held at the late advance. Geneva and corn spirits steady.

Hops.—The past series of [illegible] week sales will commence on the 20th instant. The quantity declared is 59,751 bales Australian, and 3902 bags Indian. In the private contract market very little doing, and prices are barely supported.

Wool.—The demand is steady, as follows.—Hlawks, 105s. to 115s.; Regents, 120s. to 140s.; merinos, 150s. to 160s. per ton.

Coals.—Friday.—As the produce of the new crop is turning out [illegible] and it has declined 1s. per ton. The demand is active, and prices are on the [illegible] Hetton, 19s.; Lambton, 19s.; Hartley, 18s. 6d.; Tees, 18s.; Cowpen [illegible]

Potatoes.—Supplies [illegible] of Kent, 170; of Essex, 130; and of Cambridgeshire, 40 sacks. The [illegible] moderate—Flukes from Oxford, 44; Hamlins, and Scotch Cups (Paisley Reds), Hedge Hogs, Regent Hardy, 60s. of Ayrie Cows, 45s. of Shaws, 45s.; and Lambton, 42s.; Lemleys, 40s. and Tees, 32s.; Cowpers [illegible]

Vegetables.—[illegible] were [illegible] and prices were reasonably moderate. [illegible] the 4th instant [illegible] were well supplied with [illegible] Prime Leewards sold at 2s. 6d. per [illegible] Monday's prices were well supported. The numbers of [illegible] were [illegible] less the sale for that description of stock was in a sluggish state. [illegible] terms. Calves, the supply of which was [illegible] off slowly, 5d. to 5½d. and [illegible] were quite as dear as last week. Milch cows were steady, at from £14 [illegible] Sheep, in fair demand, [illegible] steady.

Fat Cattle.—Since this day's [illegible] Coarse and inferior beasts, 3s. 6d. to 3s. 8d.; second quality ditto, 3s. 8d. to 3s. 10d.; prime large oxen, 4s. 0d. to 4s. 2d.; prime Scots, &c., 4s. 4d. to 4s. 6d.; coarse and inferior sheep, 3s. 8d. to 3s. 10d.; second quality ditto, 3s. 10d. to 4s. 0d.; prime large coarse-woolled ditto, 4s. 2d. to 4s. 4d.; prime South Down ditto, 4s. 4d. to 4s. 6d.; large coarse calves, 4s. 2d. to 4s. 6d.; prime small ditto, 4s. 8d. to 4s. 10d.; large hogs, 3s. 8d. to 4s. 0d.; neat small porkers, 4s. 6d. to 5s. 0d.; small [illegible] to 5s. 4d. per 8 lbs. by the carcass.

Newgate and Leadenhall Markets.—Trade has moved off steadily, [illegible] prices.

Per 8lbs. by the carcass.—Inferior beef, 2s. 10d. to 3s. 0d.; middling ditto, 3s. 4d. to 3s. 8d.; prime large ditto, 3s. 10d. to 4s. 0d.; prime small ditto, 4s. 2d. to 4s. 4d.; large pork, 3s. 10d. to 4s. 8d.; inferior mutton, 3s. 4d. to 3s. 8d.; middling ditto, 3s. 10d. to 4s. 0d.; prime ditto, 4s. 2d. to 4s. 10d.; veal, 3s. 10d. to 4s. 8d.; small pork, 4s. 8d. to 5s. 4d. ROBERT HERRITT.

STONE.—On the 29th ult., at Bondleigh, Devon, the Rev. G. Stone, Rector of that parish, and previously Vicar of Longburton, Dorset, aged 55.

THE ILLUSTRATED LONDON NEWS

No. 649.—VOL. XXIII.] SATURDAY, OCTOBER 15, 1853. [PRICE, WITH A SUPPLEMENT, SIXPENCE.

AN EXAMPLE FOR EUROPE.

FREE-TRADE, like many other great truths that have permanently established themselves, had to pass through an ordeal of doubt and difficulty, if not of danger. That day has passed, as far as regards its reception and acknowledgment in the country which may claim the honour, as well as the advantage, of having been its birth-place. Its friends, that were at one time to be counted by units, now include millions; while its opponents have gradually dwindled away from year to year, and from day to day, until they have become as rare as the Ichthyosauri.

One of the favourite arguments of those who formerly advocated a restrictive principle of commerce was—that, although Free-trade might be theoretically right, it would be practically erroneous, as long as other nations were not converted to it. With treaties of reciprocity it was admitted, though somewhat reluctantly, that we might give the principle a trial. Without such treaties, it was held to be suicidal to open our ports to the products and commodities of the world. It was contended, on the other side, that Free-trade, like virtue, would prove to be its "own exceeding great reward;" that the principle, being true, ought to be established for its own sake; that treaties of reciprocity were not worth consideration; and that if this country did what was right, other nations would, in due time, follow the example. Experience has proved how well founded was the reliance of the Free-traders upon their great principle. They built their philosophy upon an abstract truth, and deemed it impossible that it

THE EMPRESS OF THE FRENCH, FROM A PICTURE BY LOUIS DAVID.—(SEE NEXT PAGE.)

could misfit with, or be antagonistic to, any other truth whatsoever. Every succeeding year has confirmed the justice of their opinions. The labouring classes have gradually ceased to give their rulers uneasiness. If at the present moment the poor man's loaf be dear, he knows that its price has not been enhanced by legislative interference; and that, dear as it may be, it is the cheapest that is to be procured for him in the markets of the world. Consequent upon the freedom has been the increase of trade; and increasing employment has brought increasing comfort to all classes. England at this moment offers a spectacle which astonishes the protective nations, and which makes them doubt whether, after all, their wisdom is much better than foolishness;—it shows them that the reduction of taxes which formerly impeded commerce and manufactures increases instead of diminishing the public revenue. The proofs of these facts are not few and unconnected, but many and continuous. He who runs may read them. They have uprooted sedition from the land; they have reconciled the people even to the anomalies and short-comings of that venerable and often-maligned Constitution, which permits them to be so prosperous and so free; they have augmented the public wealth and improved the public morality; while they have strengthened the foundations of the Throne, and impressed the whole world with an idea of our greatness, which will do us as much service as a score of armies. Other nations have not yet imitated the example we have set them, but they have begun to waver in their old allegiance. The doctrine of Protection is no longer considered invulnerable and sacred. France, our nearest neighbour, and which ought to be our best customer, as we theirs, is already dubious of a policy under the operation of which she stints herself of the cheap manufactured goods which are separated from her by only twenty-five miles of water, and in periods of scarcity feeds her people upon bread 20 or even 50 per cent dearer than it is in England. Our commercial history for the last seven years is so full of instruction, as well as of warning, that sooner or later France must follow our example. The other nations of Europe, if the bad passions of the Czar do not interfere to throw them into confusion, will gradually recognise the same truth.

The National Balance Sheet of Great Britain before the reform of the commercial tariff and the repeal of the Corn-laws, exhibited but too often the melancholy record of a falling revenue. Before the year 1846 it was a problem for statesmen to know what new tax to levy to maintain the equilibrium between the receipts and the expenditure. Subsequent to that time, by the wise expedient of taxing property and untaxing the means of subsistence, the problem has been to know which were the best taxes to abolish. Year after year crowds of applicants besiege the official sanctum of the Chancellor of the Exchequer, demanding the remission of duties that are still found to press heavily and injuriously upon the industry, the health, or the morals of the people. Year after year it is found possible and advisable to accede to some portion of these demands. The articles of which the tariff takes cognisance have gradually been reduced from 1200 to 400. The oppressive Window-tax has been abolished. The excise-man, the most vexatious of all tax-gatherers, has been relieved of the duty of attending to the manufacture of soap, and has nothing further to do with that article than to wash himself with it. There is even a probability that in a year or two he will be a stranger to the manufacture of paper, and read his cheap book, and his penny daily newspaper, with advantage to himself and to the community, without the slightest disadvantage to the revenue. These results, so agreeable in themselves, entail no loss upon the nation. Taxation remitted is not, under a Free-trade system, equivalent to revenue sacrificed, whatever it may be in countries where Protection and prohibition are still the rule. Our quarterly and our annual tables of the revenue all tell the same tale. The story is as old as the repeal of the Corn-laws, but has lost neither its novelty nor its welcome. The quarterly returns that were made up on Tuesday last are of the same complexion as their predecessors. Although a harvest below the average, and the unsettled state of our relations with the East of Europe have operated in a manner prejudicial to the interests of trade, they have not yet affected the national income, nor afforded any ground for believing that the surplus to which we have been accustomed will be superseded by a deficiency.

The decrease on the quarter amounts to £54,906; of which, £25,000 is in the Post-office, and £29,996 in the Miscellaneous taxes. Both of these items are accidental: that on the Post-office results from the payment, within the last quarter, of sums for the mail-packet service that are chargeable to the previous quarter, or to the whole year; while that in the Miscellaneous taxes may be accounted for by the non-collection of sums that will figure in due course in the quarter next ensuing. In every other great branch of revenue there is an increase: in the Customs, £120,667—although the modification of the Tea Duties has come into partial operation; in the Excise, £5474—in spite of the abolition of the Soap Duties, which formerly brought in so large a sum to this department; in the Stamps, £98,742; in the Property-tax, £24,467; in the Crown Lands, £10,000; and in the Miscellaneous, £22,400: making a total of £281,750. To this has been added a further sum of £207,218, derived from imprest and other monies, and the repayment of advances—making a total increase upon the quarter of no less than £417,727. The figures for the financial year ending upon the same day as the quarter, show a still more satisfactory result. The only item that shows a decrease, is the Miscellaneous—£100,033. On the Customs the increase is £361,519; on the Excise, £372,768; on the Stamps, £476,372; on the Assessed taxes, £27,130; on the Property-tax, £204,191; on the Post-office, £45,000; and on the Crown Lands, £182,888. These items, with a sum of £751,888 derived from imprest and other moneys, and the repayment of advances, raise the total increase upon the year to the sum of £2,311,752. Great Britain may well be proud and grateful for such results as these. They show the vigour of her industry, and the elasticity of her resources, as well as the wisdom of the statesmen under whom she has had the good fortune to be governed. We may be certain that the state of things which they disclose, will not be without salutary effects—not only upon our friendly intercourse with the great French nation, which is now our firm ally, but upon that remote and semi-barbarous nation which may consider us her foe, if she do not withdraw from the territories of the neighbour whom she has so wrongfully invaded. For peace or for war the figures of our balance-sheet are alike satisfactory to ourselves, and full of significancy for all Europe.

EQUESTRIAN PORTRAIT OF THE EMPRESS OF THE FRENCH.

We have this week the pleasure of producing an Engraving from a fine portrait of the Empress Eugénie, of France, recently painted by M. Louis David, painter to the Emperor. This is the only equestrian portrait of her Majesty that has as yet appeared, with the exception of that in which she appears in the Maja costume, and which we Engraved about a twelvemonth ago. It is considered an excellent likeness; having been highly approved of both by the Emperor and Empress; and is intended as the companion to the portrait of the Emperor, by the same artist—engravings of which have been sent by the Government to many thousands of the Communes of France.

A very good print of this portrait, from a drawing on stone, also by David (though the Artist's name was not put to it), made by the Emperor's permission, but without any regular sitting, has been published by Mr. Sinnett, the English printseller, in the Passage Colbert.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The Oriental question, with the thousand and one daily rumours to which it gives rise, once more engrosses public attention, to the exclusion of all other subjects, except the winter amusements and the winter fashions. The last-mentioned points, in the capital of the civilised world—as the French, with that *naïve* vanity which is often more amusing than offensive, have christened their metropolis—are, at all times and all seasons, much too important to be neglected for anything short of a revolution. Various preparations are being made in the theatres, the *salons*, and at the *magasins de nouveautés*, the *couturières*, the *modistes*, and the tailors, for the ensuing season. Doubtless, the struggle going on abroad will suggest some brilliant ideas to the above caterers to the public taste, and *chapeaux à la Sultane*, *paletôts à la Viéma*, *chemisettes à la Cosaque*, will be the rage during the winter.

The Emperor and Empress, having deferred their departure for Compiègne from the 8th till the 12th, have been making a round of the newest pieces at the theatres. They were to have gone to the "Sept Merveilles du Monde," on Monday or Tuesday; but their visit was deferred till later by the works going on to complete a private staircase constructed to lead to the Imperial box at the Porte St. Martin. Their Majesties were much gratified by the representation of the "Pressoir" which they visited last week.

The preparations at Compiègne for the reception of visitors are on a large scale. A considerable number of the *corps diplomatique* are invited to join the chasse, which the Empress purposes attending on horseback. It appears that the *manteau de cour* is to be adopted by order for the ladies who go to court, from the 1st of January next. There is also a question of bestowing titles to such of the Ministers and high dignitaries who are still without this distinction.

Le Chevalier de Lezama has been charged by the Marquis de Villuma, Ambassador from the Court of Spain, to convey to the Spanish Government the remains of his late illustrious predecessor, Don Juan Donoso Cortès, Marquis de Valdegamas, together with those of the celebrated dramatic poet Leandro Fernandez de Moratin, who died at Paris in 1828, and was interred at Père la Chaise. The coffins having been formally remitted to M. de Lezama, he departed at once for Madrid, accompanied by the Curé of St. Philippe du Roule (at which church the body of the Marquis was temporarily deposited), who had been the personal friend of the late Ambassador.

It is reported that great changes are to take place in the organisation of the army. Among the *on dits* is one that asserts that the regiments of light infantry are to be replaced by battalions of chasseurs in the style of the tirailleurs of Vincennes: two battalions forming a regiment under the command of a Lieut.-Colonel. The cap of the new regiment of chasseurs (here begins the verification of our prophecy registered above) almost exactly resembles that of the Cossacks. The uniform in general is sufficiently elegant.

Extremely strict measures are being taken throughout the provinces for the establishment of regulation and order in the cafés and cabarets, which in a variety of instances have been closed altogether. Those measures, if not carried too far, or exercised with tyranny, are likely to do considerable good, the present state of many of these establishments requiring much reformation.

A new journal, treating of a subject hitherto holding but little place in literature or public interest, has just appeared in Paris. The title of this production is the *Savoyarde*, the subject "Shoemaking!" The founder pursues the double vocation of shoemaker and poet.

An unfortunate accident has just occurred to M. Aquado, Marquis de Lasmarismas, which has caused much sensation. Preparing for a short journey, he was loading a pistol, when, from some cause, it went off, and both balls passed through his hand. Fortunately, no bone nor joint has been injured, and the results are not likely to prove serious.

The 27th of this month is the day definitively fixed for the trial of those compromised in the plot known by the name of the affair of the Opéra Comique. Twenty-seven persons are to appear at the bar.

A singular discovery has been made in the demolition of the Hôtel du Ministère des Affaires Etrangères. Behind the wainscoting, three of the workmen employed discovered a sum of 150,000 francs (£6000); they took possession of and fled with the treasure; but are being pursued, and will, in all probability, be arrested.

The Théâtre Lyrique has a brilliant success at this moment with a new opera of M. Adolphe Adam, entitled, "Le Bijou Perdu," sung by a *débutante* who has sufficient merit to satisfy a public already prepared to expect much from the reputation spread previous to her appearance. Mdme. Marie Cabel is young and pretty, *ce qui ne gâte rien*; her voice is clear, flexible, facile, and full of charm; a sort of joyous insolence—a superabundance of life and gaiety and sprightliness abound in her person, her acting, and her singing, which have an irresistible attraction; and promise for this young *cantatrice* a long and brilliant career. The opera is admirably suited to display her talents. The plot, though slight, is quite sufficient for the *thread* of an opéra comique; which, when containing an intrigue too complicated or too serious, is apt to embarrass the music. The latter is sprightly, well-sustained, graceful, and melodious; interspersing airs full of gaiety and freshness, and easily retained. The chansonette—

> Ah! qu'il fait bon rire,
> Quand on a dix-huit ans!
> Ah! qu'il fait bon rire,
> Quand on a dix-huit ans!

sung by the brilliant cantatrice with a *verve*, and a charm wholly indescribable, is already the *refrain* everywhere. At the Gaîté, a drama by MM. Aricet Bourgeois and Michel Masson, named "Georges and Marie," is having what Théophile Gautier, the admirable critic, justly calls "un *succès de larmes*." Admirably performed by Mdme Nantal Arnaut and Saferrière; the piece, itself possessing considerable interest, though perhaps a little wanting in originality, moves on before an audience full of sympathy and admiration. A new piece of Alexander Dumas, "La Jeunesse de Louis XIV.," about to be represented, has been forbidden in its present form—the subject treating of the passion of the youthful monarch for a young girl of birth inferior to his own, being considered as likely to lead to remarks and comparisons of a political tendency; it has, therefore, to be nearly remodelled before appearing on the stage. A farther obstacle to its representation is likely to occur in the misfortune—we trust a temporary one—which has occurred to the gifted actress, Augustine Brohan, who was to have sustained one of the principal *rôles*, in an affection of the eyes, which, it is feared, may prove serious. The Théâtre Français is about shortly to produce a comedy in verse, entitled "Le Songe d'une Nuit d'Hiver."

WAR BETWEEN TURKEY AND RUSSIA.

Letters from Constantinople enable us to give a connected narrative of the events preceding and accompanying the declaration of war which last week reached London in the brief and contradictory announcements of the electric telegraph. The news of the rejection, by the Emperor, of the Vienna Note, and its modifications, caused great excitement in Constantinople. Couriers daily arrived, and the great question was, "Shall we have war?" As soon as the text of the document containing the Czar's refusal of the Sultan's modifications arrived, the interviews of the Turkish Ministers with the representatives of the Foreign Powers succeeded each other with astonishing rapidity. On the 24th the Sultan convoked a Council at the Imperial Palace; and on the 25th the Grand Council assembled. The Secretary of the Grand Vizier had sent round summonses to all the Muchirs, Viziers, functionaries, and clergy. Not only the Pachas in active service and those retired, and the other great dignitaries, but almost the whole of the Ulemas and the Hodjas—more than 100 in all—were summoned to the Council. The Grand Council, which was composed of not less than 300 dignitaries of the Turkish empire, commenced its deliberations at mid-day, and continued sitting until midnight. Its resolution, which upheld the modifications of the Vienna Note, was taken against the advice of the Ambassadors of Great Britain and France. To accept the Vienna Note would be, the Grand Council declared, incompatible with the dignity of the Empire, and war was preferable to such humiliation. After the Council couriers were sent to Omer Pacha and the chiefs of the various corps, instructing them to be in readiness and prepared for all eventualities.

On the 27th the Sultan signed the declaration of war against Russia as agreed to by the Grand Council; and the declaration of war was posted up on the doors of all the mosques. The Sultan is said to have been induced to adopt this extreme resolution by the fact of the heads of the clergy having placed their property at his disposal. It is added, that the Sultan at once despatched a confidential officer to Omer Pacha with a large sum of money for the troops, and at the same time with orders to commence hostilities should the Danubian Provinces not be evacuated in eleven days, and not four weeks, as stated in one telegraphic despatch. Omer Pacha has been instructed to make, in the first instance, a formal summons to Prince Gortschakoff to evacuate the Ottoman territory; if the Russian General reply that he must refer to his Government for instructions, then Omer Pacha is to grant him a reasonable time, eleven days, as said by some; with more probability a month by others; if, however, the Russian General reply that his instructions are to continue to occupy the Principalities, and that he has no occasion to refer to his Government, then Omer Pacha is ordered to commence hostilities; but he is recommended not to pass the Danube. Any hostilities, under such circumstances, could only be affairs of outposts, and would be of little advantage, except to irritate the Russians, and render a pacific solution less probable unless this sort of warfare be to satisfy the population of Constantinople. But, if the flash of the musket is once seen, and blood drawn, it may be difficult for Omer Pacha himself to restrain the wild soldiery of the desert; and the dangerous feat of crossing the Danube may be attempted in spite of him. From Servia to its mouths, that river extends about 140 leagues; and it is probable that neither Omer Pacha nor the Russian General can guard that long line so effectually as to prevent those attempts.

As regards the Western powers their attitude remains firm. France and England have announced their determination to support Turkey, if necessary, by force of arms, in resisting the demands preferred by Russia. The modifications suggested by the Porte are substantially adopted by the Western powers as the basis of their terms, and the Emperor Nicholas has not been indisposed in his desires respecting the point of form. They have endeavoured, as long as it was possible, to defeat the insidious policy of the Czar by peaceful means, and their conduct will not be less firm, now that the prospect of success by those means seems problematical. The fleets of France and England are at this moment in the Bosphorus to aid the Sultan as he may require. All hope of a pacific termination has not yet vanished, inasmuch as we hear from Vienna that another note is to be submitted to Russia and Turkey. It appears, however, that no agreement has been come to as to the bases, and that the Austrian Cabinet refuses to make it an ultimatum until it shall have been first ascertained that it would be acceptable to the Emperor of Russia. Probably the Vienna Conference will not now draw up the note in the form of an ultimatum, but will submit it at the same time to the Porte, and the Emperor of Russia, in order that each may approve of it, or state the grounds of disapprobation. The delay may not be distasteful to the Emperor; but, with the English fleet in the Bosphorus, and the declaration of war posted upon the mosques, it is doubtful whether the Sultan will consent to any further delay, or forego his determination to insist upon the immediate evacuation of the Principalities.

The following private telegraphic despatch has reached Paris:—

MARSEILLES, Oct. 9.

The *Fury*, of the British navy, brings news from Constantinople of the 2nd. The Divan had determined that the official declaration should be proclaimed on the 4th, placing Russia in the alternative to evacuate the Principalities immediately, or that war should commence.

A report was current that the Turkish and Egyptian fleets had advanced into the Black Sea.

The *Fury* met the *Ardent* on the 3rd, bearing an order to the French fleet to enter the Dardanelles.

The next important intelligence which we expect relative to the Eastern question is the reply of the Emperor of Russia to the notes of the French and English, the object of which is the immediate evacuation of the Principalities. It is reported that the Emperor of Russia, on hearing that the Sultan had declared war against him, became exasperated, and commanded that additional troops should march towards Turkey.

A letter from Bucharest, dated the 26th ult., says:—"Large stores of provisions, the presents of patriotic Russians, have been sent to the army in the Principalities. Prince Gortschakoff is on the banks of the Danube inspecting the troops."

The Russians are represented to have so thoroughly strengthened every spot at which the Turks might be expected to cross, that any attempt to do so would be an act of excessive rashness.

Letters from Schumla state that the Turkish army there was daily increasing, and full of enthusiasm. The want of officers was, however, felt. The sanitary state of the army was excellent, which could not be said of the Russian army in the Principalities, where sickness and a deficiency of rations were making great ravages among the Russian troops, and where numerous desertions were taking place. Very lately a Russian captain and a number of soldiers attempted to pass over the river to the Turks with arms and baggage; they were, however, arrested. The captain was poisoned and the soldiers shot. Twenty deserters have lately arrived at the camp of Omer Pacha; and, according to their statement, cholera, dysentery, and pernicious fever are daily thinning the ranks of the Russian forces. On the other hand, there has not been a single instance of escape or desertion throughout the whole Turkish army; their health is excellent; and, notwithstanding the effort used to pervert them, the whole Christian population along the Danube is animated by sentiments of devoted attachment and loyalty to their Sovereign.

Three steamers have been despatched from Constantinople to Syria and Tunis for troops. The irregular cavalry, Bashi Bozouks, from Asia Minor, continue to arrive in small parties, and immediately proceed to join the army by way of Adrianople. Other preparations continue, and large stores of ammunition and guns have been sent to Varna. Turkey at the present moment possesses a real and imposing military force; and people commit a grave error in supposing that its present army is what it was in 1839, during its contest with the Pacha of Egypt at a period, namely, when the ancient organisation had just been destroyed, and when the new had not yet been commenced: in a word, at a time when the religious interest, so powerful in the eyes of Musulmans, was not engaged as it is at the present day.

Letters from the Russian camp lead us to suppose that Russia is meditating a winter campaign, as she calculates on the speedy disor-

ganisation of the Ottoman army, on insurrections and troubles of every kind, and even a revolution; and, above all, on the impossibility of the Anglo-French squadron doing anything. Her intention is to march on Adrianople, and thence towards the Dardanelles. This plan is not new —it was the same in 1829. General Rott, arriving with his *corps d'armée* at Adrianople, sent instantly General Muchanon, with a brigade of cavalry and artillery, to Enos and Saros; and was himself to follow with the whole of his division, if the negotiations had not begun. Those are fine projects, made without counting on the opposition Russia would encounter in the bravery of the Ottoman army.

Apprehensions that Austria will at the last moment throw off the mask and send her troops into Servia under the orders of the Ban Jellachich, have obliged the Porte to organize the defence of the Herzegovine of Bosnia, and of the whole line of the Austrian frontier. Fifteen battalions of regular troops are now in the two provinces, under the orders of Arni Pacha, who has his head-quarters at Bosna Serai. It is believed that any invasion by Austria would be repulsed, and that 100,000 combatants would rally under the Ottoman banner in Servia if the Porte be forced to make war against Austria.

The Duke of Nemours, travelling under the name of M. Saublon, a retired officer, has arrived at Constantinople. He is about to visit all the cantonments of the Russian troops, and will then proceed to Schoumla, and visit those of the Ottoman army. He merely journeys as an amateur.

Amongst the officers commanding the Egyptian contingent now at Varna, is one of Napoleon's Adjutants, Colonel Seves, who, after the disastrous retreat from Russia, took service in Egypt, and, having been distinguished by Mehamet Ali as a brave and capable officer, received the 1st Regiment of Egyptian Guards, became a Musulman, and took the name of Soliman Bey.

The French Consul-General in Wallachia, M. Poujade, who was about to leave the country, has received further instructions to remain, but without renewing his relations with the Government for the present. The English Consul was absent from Galatz.

A story has gone the round of the papers of 1300 Redifs having landed in Wallachia, plundered a village, and retired without being molested by the Russians. The following are the facts on which the statement has been founded:—The Russian garrison of Bucharest was alarmed on the 24th September by a report that a number of Turks had passed the Danube at Zimnitza. Prince Gortschakoff instantly sent orders to a regiment of cavalry stationed in that direction to march upon the place, and also set in motion a regiment of infantry of the Bucharest garrison. In the meantime, the Cossack officer with his thirty men had precipitately left Zimnitza, and had retreated four leagues into the country without stopping to convince himself that the Turks really had landed. In consequence, two *Jeteljigers* were immediately despatched to St. Petersburg and Warsaw with the false intelligence, and six hours afterwards two more with the correction of the first. It turned out that a few Turks had landed on an island, and subsequently returned to Sistow.

News from Odessa and the Danubian ports states that immense stores of grain are collected in those towns. Odessa contains, at present, more than 1,200,000 quarters of various kinds of grain; while at Galatz and Ibrailа the magazines are entirely filled; so much so, indeed, that the corn now arriving is piled in the open streets, rendering them, in some places, impassable.

The dredging machine at the Sulina mouth has been set to work. As if determined to make up for lost time, the Russian officials cease their operations neither day nor night, but little impression has yet been made upon the bar. Indeed, it appears doubtful whether an ordinary dredging-machine is fitted for this duty, and whether recourse to an improved system of "raking" would not (assisted by the natural scour of the river) be more effectual.

MEETING OF CROWNED HEADS AT WARSAW.

From Olmütz the Emperor of Russia and the Emperor of Austria proceeded to Warsaw, where they were joined by the King of Prussia. It need excite no surprise that the young Emperor of Austria should be induced to return the visit paid to him at his camp at Olmütz. But the most pressing entreaties were resorted to in order to induce the King of Prussia to join the Emperors at Warsaw. He represented that his visit would be construed into a demonstration against the Anglo-French policy in the Oriental question; and only consented to go upon the underst nding that every care should be taken to show the world that the visit had for its object the military manœuvres, and for its motive the amicable personal feelings existing between the two Monarchs. No change has as yet taken place in the determination of the Prussian Court and Cabinet to preserve a strict neutrality.

The Emperor Nicholas was received at Vienna; but the Emperor of Russia returned to Berlin with the King and Prince of Prussia. They arrived at Berlin on the evening of the 7th—the Emperor, the King, and the Prince alone occupying the same carriage. Baron Budberg, the Russian Minister at Berlin, attended the Emperor from Warsaw, and was the only diplomat in the Emperor's suite. At the station in Potsdam the Royal party were received with all formalities. The Royal Princes now in Berlin, the Grand Duke of Mecklenburg-Schwerin, a numerous group of Generals, and a guard of honour, were in waiting. Among the dignitaries assembled to receive the King and the Emperor was Baron von Manteuffel, who had not on this occasion, as his wont is, travelled to some distance to meet his Majesty, and confer with him on his approach to his capital

On the 8th there was a military parade in Potsdam, afterwards a state dinner, and a dramatic representation in the evening in the theatre of the palace. On Sunday the Dom Chor sang a number of Russian choral compositions at the Greek service, which the Emperor attended. Since it was known that he would visit Berlin, orders were given that these compositions should be practised for the occasion

The French General, Goyon, who received so flattering an invitation from the Emperor to visit the manœuvres at Warsaw, but who was recalled by his Government, arrived at Berlin last week, on his way from Vienna to Paris. The English officers who attended the reviews at Warsaw were Lieutenant-Colonel Bloomfield, Captain Duplat, Major M'Kenzie, Captain Shute, and Lieutenant Ross.

The *Times* says of these Imperial visits and demonstrations:—

We rejoice in being able to state that the peace of Europe is not further imperilled by the meeting between the three Sovereigns at Warsaw. It has been productive of no direct result to the Russian Emperor; and he will not succeed in blinding the eyes of Europe to the fact that the meeting at Warsaw has been a barren demonstration. The King of Prussia has shown himself equal to his sacred trust. He has not suffered himself to be cajoled out of the plain path of duty. We believe that the Russian Sovereign has but scant reason to congratulate himself upon the success of his manœuvre. He may have dreamt of a Holy Alliance and a fresh coalition, but we will venture to say that he has returned sorely disconcerted. As far as Prussia, at least, is concerned, there is no longer room for doubt. If in the case of Austria the decision has been less formally delivered, we must not forget that we are speaking of a youth scarcely yet trained to the duties of empire, and who finds himself involved in a conflict of obligations from which it might puzzle a maturer statesman to find a plausible loophole of escape. But, speaking of the coquetry of the Russian Emperor with the two great military Courts of Germany in its general results, it is not too much to affirm that it has proved a failure.

An intimate friend of M. de Manteuffel, the Prussian Minister for Foreign Affairs, said, the other day, "So long as you do not hear of the retirement of M. de Manteuffel, do not believe that Prussia will make common cause with Russia. If the King of Prussia should manifest a disposition to take such a course, be assured that M. de Manteuffel would immediately give in his resignation, and that would be fatal for the King in the opinion of the nation."

AUSTRIA.

The Emperor of Austria has returned to Vienna from Warsaw.

It is asserted that the New Five per Cent Loan has been effected with the Rothschilds at 80. It amounts to £7,000,000 sterling. There is a clause declaring the contract invalid in case of war.

HOLLAND.

The Minister of Public Worship in Holland has notified to the Royal Commissioners in the Provinces the receipt, by the Government, of an official communication from the Pope, giving notice of the erection in the kingdom, by his Holiness, of an Archbishopric and four Bishoprics, and of the nomination of an Archbishop and four Bishops. The Commissioners, in accordance with the new law on religious liberty, must, consequently, be enabled to communicate officially with the above-mentioned dignitaries, provided that the family names of the prelates be joined to their ecclesiastical titles.

SPAIN.

A Royal decree convokes the Cortes for the 15th of November next One of the first acts of the new Cabinet will be to reform the Senate, the spirit of which institution has been completely perverted by the numerous batches of members appointed by preceding Ministries.

AMERICA.

By the steamers *Golden Age* and *Arctic* we have advices from New York to the 2nd inst

The reply of the President of the United States to the Austrian Government, relative to the seizure of Kossta, occupies eight columns of the *New York Herald*.

A severe shock of an earthquake had been experienced at St. Thomas's on the 19th ult.

The advices from Europe per *America* had a depressing effect upon the New York Stock-market.

Cotton in moderate demand, at firm prices. Flour in good demand, at advancing prices. Wheat had advanced 3d. to 5d. per bushel.

INDIA AND CHINA

The following telegraphic despatch has arrived, viâ Trieste:—

Alexandria, Oct. 5.—The American squadron, under Commodore Ferry, reached Japan on the 8th July, and left again on the 11th. It was well received, but the opening of Japan was postponed to the spring of 1854.

The rebellion in China continued to progress, and Pekin was expected to fall soon, and with it the Hien-foung dynasty. Manufactures everywhere in better demand, except in the China markets. Tea in demand and Congou higher.

The exports of grain from Egypt were still going on, and the question of stoppage unsettled. The Nile had done damage, but was falling.

The accounts from Burmah are unsatisfactory. The war party at Ava was increasing in strength. The King alone prevents war. Our new provinces are overrun with large bands of robbers, who lay them waste, with the view of driving the inhabitants into Burmah. These bands are so strong that it has been judged prudent to increase the force at Prome. Our troops are sickly.

The Persians have obtained possession of Herat.

POPULATION OF CHINA, &c.—The following statistics relating to the internal condition of China Proper are taken from a new work entitled, "China, Political, Commercial, and Social." In China Proper it appears there are 367,629,207 inhabitants; and in the dependencies of Manchooria, Mongolia, Turkistan, Thibet, &c., about 40,000,000, making a total of 407,000,000 of people under one Government. The population on each square mile is 243, and the area in square miles is 1,297,999. The quantity of land is estimated at 830,829,100 English acres, of which 161,1 6,247 are under cultivation. The land tax realises 27,354,075 taels of silver; the salt revenue, 6,818,834 taels; and other duties, 691,092 taels. The total fixed revenue of the provinces is 35,015,923 taels, of which sum 22,445,573 taels, and 3,425,565 shih of rice (a shih being about 120 lbs. avoirdupois) are transmitted to the Imperial treasury, while 1,509,239 taels remain in the provinces. The standing army and militia number 1,632,000 men. The table from which the above statistics are taken is prepared from various authorities, the greater portion having been furnished in China, and translated from the official records. With respect to the density of the population, Dr. Gutzlaff and other Chinese scholars consider the census to be correct. The population is most dense along the banks of the great rivers, particularly near the great Yangtze-kang, and in the central districts of the country, where the waters furnish large supplies of food. The very great fecundity of the Chinese is visible in the smallest village. The natural productions of the various provinces include every description of metal, as well as almost every known article of merchandise.

TRADE AND NAVIGATION.—The accounts for the month ending 6th September were published on Saturday last. The value of the goods exported is £3,297,086, being an increase of £1,466,000 over the corresponding month of 1852, and of £1,651,168 over that of 1851. During the eight months which have elapsed, the exportations are in value £18,188,729; for the corresponding period of 1852, the amount was £37,009,145; and, for 1851, £27,157,981. The items upon which the largest increase for the month is shown are haberdashery and millinery, hardware and cutlery, gloves, linens, machinery and metals.

POETICAL TAVERN SIGNS.—The following sign inscription was on the walls of a tavern half-way up Richmond hill, three miles south of Douglas, Isle of Man, kept by a man of the name of Abraham Lowe:—

"I'm Abraham Lowe, and half-way up the hill,
If I were higher up what's funnier still,
I should be below. Come in and take your fill
Of porter, ale, wine, spirits, what you will,
Step in, my friend, I pray no further go;
My prices, like myself, are always low." *Notes and Queries.*

GLASS WALLS.—The report of the Horticultural Society for the last month contains the following testimony to the success of this improvement:—"Both the flowering between the walls and fruit trees against Mr. Ewin's glass walls are succeeding admirably. Figs grow well, and we promise to ripen fruit on them this year. The peaches, too, on a tree of considerable size, which was moved and put in, are now swelling fruit very well for a tree so recently transplanted. Tomatoes also produce finely in them, and their fruit is free from disease, which is not the case with the crops outside. The long violet-fruited aubergine is ripening beautifully, although it has always been thought that this variety required more moisture than these walls could be expected to furnish. Capsicums, too, both the large tomato sort, and the common kind of fruit, come to great perfection in glass walls, and whose trial in the garden has as yet been most satisfactory."

SKETCHES OF STAGE FAVOURITES.

MR. T. P. COOKE.

WE propose a theatrical portrait-gallery of living London Favourites, but not so much in the way of memoir as of personal and general estimate; in which, postponing the details that would otherwise be necessary, we direct ourselves to the *man*, rather than to the exact facts of his history. We commence the series with one of the oldest and most agreeable of our remembrances—Mr. T. P. Cooke; who is now reviving the fortunes of the Royal Standard Theatre;—a handsome temple of the drama which is reared opposite to the entrance of the Eastern Counties Railway. We dispense, then, with statistics, and content ourselves with saying, that the hero of this notice is in every way a Londoner, that here he was born and commenced the labours which he has so worthily developed; and that here he is still among us, with all his powers in full play, and a younger man than half of us who count but half his years.

We premise we have no occasion to defend his claims as a stage favourite. A star that for thirty years has performed his annual revolution round our entire dramatic system—that has shone in every theatre, and to the delight of all beholders—stands in no need of our eulogies. Still our hero has been fortunate. Whatever be the nature of his powers, which we shall investigate forthwith, he has always enjoyed a grand advantage—he has had his speciality. The British public loves a speciality. It loves to have minds sorted and ticketed to hand—minds that can do one thing well. It saves thinking and confusion; and we are just now in such a hurry in civilising and clothing the whole habitable globe, that we really haven't time to stop and look at a man twice. So we have a *right* to specialities; and, as we possess one as a nation—as we are avowedly and honourably the most maritime of people, it has been the happy fate of our hero to stand forth as our exponent; he has had a national significance; for five-and-twenty years he has been *the* Sailor of the British stage.

But acting has its schools, like every other form of art. It has its one broad division of the old school and the new, which of course includes the expression of all salt water psychology. Now, we are old enough to remember some of the distinctions of the letter, as originated by the elder Wallack, and the elastic William Miller, and transmitted to our boyish vision by the unconquerable Herring—that Herring which had such evidence of being fresh out of the ocean. We remember well the lion's tail that always graced that gallant head, the trousers always coming down, and the oath that was always coming up; the belt-load of combustibles, and that superhuman combat that invariably wound up a meeting with three Frenchmen, or six savages: when, after killing all but one, and then contriving to break his sword, he vanquished the last with a quid of tobacco, carefully directed at the right eye. Great was the terror of such encounters—but, somehow, always qualified by a conviction in the audience that Jack was sure to win. Whatever might happen, *he* could never suffer! And not less do we remember him in his purely social moments—in his inexhaustible capacity for liquor or affection—with his perpetual last guinea, which he was always bestowing on a friend—with his cannonade of kisses on every "craft" that he "brought to" (he was a sort of Colt's revolver)—with his eternal hatred of a lawyer, on whom he was always "bearing down"—and his pause of sublime devotion when, advancing to the foot-lights, he breathed that kindling sentiment: "The man that wouldn't fight for his country, or succour a woman in distress" ——!

Now all this, and a great deal more that was peculiar to the old school, we hold to have been the broad farce of nautical humanity—the mere sensuous, material aspect that found a proper exposition in its eternal "grog" and "shiners." And all this do we need to say our great Blue jacket has reversed. With the date of his immortal *William* commenced the new school of the sailor, which could render Jack harmonious, and put a soul within his senses. Then, at last, we had the man—the simple, fervent, genial, fearless, self-forgetting man—who, ever refreshing his own element, could either brighten in the sunshine, or rise up grandly in the storm. We were able to appreciate this strange, mysterious mixture of the child-like and the heroic—who could be so boisterous in merriment, and so tranquil in disaster—so unmanned at others' sufferings, and so rock-like midst his own. It is true he had his old adjuncts—he had still his lass and his love of flip, and his established hatred of a lawyer (the stage devil of the sailor); but how refined, through a true emotion and a proper sense of art! How rescued from their old grossness and absurd exaggerations! It is also true, on the other hand, that he had the aid of a great writer, who, in his conception of the said *William*, was as much above the current Dibdins as our artist himself was superior to an entire shoal of Herrings. But this does not detract from his claims. If he shared another's perception, the whole expression was his own; and to *embody*, with his precedents, was really to create. And yet it may be asked, did this deserve the name of genius? Was it an effort of imagination, or one of memory? Had he not trod the boards of a ship before he sought those of a theatre, and realised the life that he was afterwards to image? It is true, and unquestionable, that experience and observation are a grand store-house of materials, but we must remember there is still art, which selects from their variety, and builds up the ideal which the mechanic hand but *fills* at. We might remember, too, in his case, that reality for once was something nobler than imagination—that he had shared in fights and perils in the service of his country, and deserved more than the fleeting honours he had ever gained in representing them.

So much for the sailor; and here do we conclude? Not so. We are happy to remember that our public was not always so devoted to things special. Eighty years ago it had seen some good in Garrick, and was loud in the support of all who followed his variety; and thirty years ago our hero was a student, however humble, in that school. He was the Proteus of the Minors. He was constant in Frenchmen; he was marvellous in Dutchmen. Who that saw forgets his *Ketzler*—that wonderful admixture of cowardice and courage—that trembler at a shadow, and yet despiser of a gun-barrel. He was grand in mountain-chiefs, and appalling in black savages. He was equally at home in pantomime and farces. How pathetic was his *Perouse*, and how gallant was his *Jacin*. His soul was equally fitted to the romantic and the roystering, the natural and the supernatural. Indeed, we have long considered that this latter of all fields, was peculiarly his own. We doubt if even his sailors showed so much originality. Others played ghosts and demons with unquestionable success; but how mechanically and solidly—with what a substantial reality and outline. It was he who first infused them with a true poetic element—gave them a dreamy indistinctness—a vague suggestive shadow, which, while it chained the senses, set the imagination loose. We were very young indeed, but how old must we become before we outgrow the remembrance of his *Monster* and his *Vanderdecken*. How earnestly at this moment are we seated, waiting for the former, our first grand dramatic horror, with a mixed longing for and terror of this new indefinite shock! What a pause was all about us in that well-compacted pit; how breathless and how blank was that entire floor of faces; and what a mystery came at last—that shapeless, sightless, speechless, mass of movement without thought, that glides forward rather than walks, and, all unconscious of its danger, breaks through the balustrade, and comes crashing to the ground. Some twenty years to come, should our hero be getting old, and think it time to say adieu to us, we trust he will repeat that vision, with all the truth he did at first, and again afford a proof of how art—which is so powerful in giving beauty its due force—can even serve to redeem the gross, and throw a charm over the appalling!

We conclude these recollections, with a brief piece of statistics, which has some interest, as an evidence of Mr. Cooke's popularity. It is the number of times he has appeared in his principal impersonations up to his present engagement at the Standard Theatre.

In "I lack-eyed Susan"	..	..	..	785 times.
Long Tom Coffin, in "The Pilot"	..	..	..	962 "
In "The Monster"	..	..	..	962 "
"Roderick Dhu"	..	..	..	365 "
Aubre, in "Dog of Montargis"	..	..	..	260 "
"The Flying Dutchman"	..	..	..	250 "
"The Red Rover"	..	..	..	165 "
"Poor Jack"	..	..	..	149 "
"Luke the Labourer"	..	..	..	140 "
"My Poll and my Partner Joe"	..	..	..	181 "
	..	..	..	267 "

So that, taking rehearsals and performances, in the last quarter of a century, he has passed a whole year in the company of the *Monster*; a year and a half (as compensation) with his worthy friend, *Long Tom*; and nearly two years and a quarter with his incomparable *William*—an amount of intimacy which we think ought to satisfy their writers, even if they belong to the most craving of their fraternity.

B. B.

THE BATHS OF LUCCA.

(From a Correspondent.)

THIS picturesque locality, about fifteen miles from Lucca, consists of three villages (the Engraving shows the middle one, with the Ducal Palace above the bridge), shaded by mountains covered with chestnut-trees, so steep and high, that the sun appears two hours later in this valley, and is lost sight of two hours earlier, thus curtailing the accumulation of heat in an Italian day; whilst the river Lima dashing through it causes a continued circulation of air most refreshing to the English sojourner for the summer months, when not able to pass the Alps. The Princess Elise, eldest sister of Napoleon, first opened these valleys, by excellent roads formed on their steep banks; but the late Ducal family, by their liberality and encouragement, made it almost an English colony. Several English have purchased property here. The hotels and lodging-houses—numerous and excellent—are replete with English comforts: the language is spoken in every shop. A handsome building for the English Church service was raised, under the auspices of the Duke, not without the gates of the city, but near to his Palace, and in a most picturesquely-situated cemetery. All the acts of the family shewed kindness and liberality; and, obtained from one return, subscribed handsomely to the wants of the peasantry around, both by collections in their church, and subscriptions, besides private charity. In 1847, when a neighbouring valley was destroyed by inundation, the entire crops and houses being carried away by an autumn flood, an English subscription relieved the starving sufferers before aid arrived from their own Government.

Thus has every kindly feeling existed and been fostered between the English and the inhabitants, extending even to the priesthood; but by the Treaty of Vienna, the ducal family of Lucca succeeded to the state of Parma on the death of Maria Louisa, and Lucca

MR. T. P. COOKE, AS "WILLIAM," IN "BLACK-EYED SUSAN."

PALACE OF THE GRAND DUKE OF TUSCANY.—THE BATHS OF LUCCA.

was transferred to the bigoted Grand Duke of Tuscany, who not only forgets the benefit Lucca has derived from the English, but also what Florence owes to them. But for English arms, where would be the statues and pictures that cause Florence to be visited and enriched by the expenditure of strangers? Where would that Grand Duke himself be, who refuses a passport to a young English lady, detaining her in his dominions that he may punish her for giving the Word of God and the "Pilgrim's Progress" to some weary soul entreating the way of salvation may be opened to it? Most English travellers know how anxiously a Bible, small enough to be easily concealed, has been sought from them; and for yielding to such entreaty, an English maiden is subjected to the horrors of an Italian prison.

ICEBERG OFF CAPE HORN.

We have been favoured by M. Louis Chevallier, one of the passengers in the *Marlborough*, from Port Phillip, with the accompanying Sketch of an Iceberg seen near Cape Horn on the 6th of August last.

The *Marlborough* (Allen W. Young, Commander), weighed from the Port Phillip Head, on the evening of the 4th of July, and passed out the same night through Bass's Strait to the westward, with a strong north-west gale, which increased until July 6, at 4 p.m., when it blew a perfect hurricane, and the ship was in a most perilous position; whilst running with the wind quarterly, she broached-too, from a heavy sea striking her on the quarter, the main topsail blew to ribbons, and the ship was thrown almost upon her beam-ends; the lee-side and lee-quarter boat being buried in the water. The gusts of wind were also so terrific that it was impossible to stand against them, whilst the tops of the sea were blown completely over the ship. The barometer stood at 28·20 during the height of the gale. This happened in lat. 39 deg. 55 min. south, long. 142 deg. 10 min. east, off the south-west coast of Van Diemen's Land.

On the morning of Aug. 6, in lat. 58 deg. 50 min. south, long. 80 deg. 26 min. west, the huge iceberg here sketched was seen a-head, the ship passing about a quarter of a mile to leeward. The thermometer fell to 29 deg. Fahrenheit, when the *Marlborough* was close to the berg, and it was with difficulty that she steered clear of the large loose pieces of ice that were floating around the mass. The height is stated as about 324 feet; length half a mile; north side abrupt and bold; lee or south side, undulated surface, and opaque, resembling frozen snow. The wind was blowing fresh from the N.N.W., and the sea was moderately rough. The sky was cloudy; and the temperature, when about two miles from the berg, not very cold, the thermometer being at 32 deg. The iceberg was visible from the deck of the ship about three hours.

The *Marlborough* passed Cape Horn on the 8th August, and experienced strong gales until in lat. 35 deg. south. She passed the tropic of Capricorn August 20, and arrived in the Channel on the 26th September, thus making the rapid passage from the southern tropic in 37 days; and 83½ to the Start Point. The ship had an entire Lascar crew (the first Lascars that had ever been round Cape Horn); and there is little doubt that, had the crew been European, the voyage would have been accomplished in a week less time.

So much has recently been said about the *Marco Polo*, and other clipper-ships, that great credit is due to the *Marlborough* for the efficient manner in which she has made her passage out to Melbourne in seventy-eight days; from thence to India and back in forty days; and now her run home was done in eighty-three days and a half—thus making the voyage round the world in five months twelve days, although not successive months. The passengers have expressed themselves highly delighted with the voyage, and the kind and gentlemanly conduct of the captain.

"THE MARLBOROUGH" PASSING AN ICEBERG OFF CAPE HORN

THE DRUG BAZAAR, IN CONSTANTINOPLE.

THE DRUG BAZAAR AT CONSTANTINOPLE.

The covered bazaars at Constantinople, are the chief lions of the place, after the Seraglio and the mosques have been visited; and their singular construction, the order of their arrangement, and the crowds with which they are thronged the live-long day, are the wonder of all new comers. They have more the appearance of booths in a fair, than a street of shops; the shutters being opened by lifting upwards, in one piece, in dimensions equal to the entire outer wall of the shop. The sky is shut out from each alley or street of shops, by means of a high arched roof, very sparingly broken with lights; the object being to keep out the rays of the sun, even at the sacrifice of daylight. Each alley is allotted to a particular trade, the products of which are lavishly displayed in the shop front; there being, apparently, no back premises, nor reserve stock. In one alley are shoes and slippers, which are exhibited in every variety, from women's ordinary yellow leggings, with their thick over-shoes to match, to veritable Sultanas' velvet slippers, embroidered with gold and pearls; from men's turned-up and pointed high-lows, with outer shoes, wooden-soled, to the magnificent *chaussures* of a Pacha; boots, too, of various make and quality—the prices varying from 10d. to £1 sterling, English. Another alley is rich in the glitter of precious stones, jewellery, &c.; another, with bullion and embroidery, applied to various fancy articles—as caps, purses, mirrors, &c.; another is decked out with the finest cashmeres, Indian shawls, worked

DANCING DERVISHES OF CONSTANTINOPLE.—(SEE NEXT PAGE.)

muslins, &c.; another displays all sorts of furs, made up into cloaks capes, hats, &c.; another delights the eye and nose of the smoker with a long array of cherry-stick pipes, amber mouth-pieces, and curiously-fashioned pipe bowls, set forth temptingly amid a soft atmosphere of smoke perfumed with pastilles.

The subject which our Artist has chosen for his sketch is the Drug Bazaar: one of the most picturesque, and also one of the most important, of its caravan compartments, as all the gums, herbs, seeds, dye-stuffs, and other precious natural products, which enter so largely into use in medicine, in cookery, and in other useful and ornamental arts.

The shops in these covered bazaars are very small; rarely measuring more than six or seven feet by four or five. The common counter upon which all business is transacted is a low bench about half a yard broad, which runs continuously down along the front of each row of shops. It need hardly be added that these places are only used as shops, and not as places of residence; and they are all closed and deserted at sunset. There is an iron door at each entrance to the Bazaar, which is shut at night.

THE DANCING DERVISHES.

The Dervishes of Turkey are religious mendicants, living in monastic seclusion; and of whom there are several orders. Their institution is of ancient date, that of the Mevlavie, or "Dancing Dervishes," dating from the early part of the thirteenth century. These have a large monastery at Galata, and another at Teonium. The "Howling Dervishes" of Scutari probably rank next; and the ceremonies of both—which are open to all comers upon payment of a small *backsheesh*—are generally visited by strangers as matters of curiosity.

Our Artist, on his recent visit to Constantinople, made a sketch of the Dancing Dervishes, from which our Engraving is taken. A Correspondent, who accompanied our Artist on the occasion of his visit, thus describes what took place:—

"We made our way to the monastery, which is situate in the neighbourhood of the Marine Arsenal, accompanied by several young officers from the British fleet, when we found that we had arrived some half-hour too soon for the performance. As it happened, however, we were very well entertained in the interval. Having taken off our shoes, we were ushered into a large saloon, where we found several of the Dervishes assembled, smoking, who regaled us with pipes and coffee. This refreshment disposed of, we were ushered across a court-yard to the Mosque, an octagonal building, with a space railed off in the midst, being the stage upon which the evolutions of the day were to be performed, the congregation being ranged outside. The Dervishes having entered within this sanctuary, began with some devotional ceremonies, in the course of which the Dervishes sometimes marched round and round their inclosure, every now and then, bobbing their heads suddenly to the ground. All this time they were clothed in their coarse cloth cloaks, and flower pot hats. Suddenly a wild strain, half waltz, half dirge, was struck up by the orchestra, in the gallery—the only instrument being a sort of shrill pipe, and a tom-tom, or drum; and immediately the Dervishes, one by one, began taking off their cloaks, and then throwing themselves into the action of the dance; turning briskly round upon the heel, with a sort of waltz step, their arms first closed upon the breast, then extended wide and fantastically in the air. The accuracy with which these evolutions were performed was truly astonishing; though always huddled close together, and spinning in and out over the same spot, neither their limbs nor their garments ever touched one another. Amold Dervish, who returned his green outer cloak, all this time walked with his arms crossed, in amongst the performers, surmounting their steps, and whenever he was not quite satisfied, he stamped his foot sharply upon the ground. This performance went on, till all the executants were fairly exhausted; and then, on a sudden cessation of the music, it stopped. More waiting and bobbing at the head was then gone through, then another devotion, and so they were still employed when, having had enough of the amusement, we left the place. One of the fraternity at the door received our "voluntary" contribution of a few piasters as we passed out, for which he appeared thankful.

THE REVENUE.

An Abstract of the Net Produce of the Revenue of Great Britain, in the Year and Quarter ended 10th Oct., 1853, showing the Increase or Decrease thereof.

	Year ended 10th Oct., 1853.	Quarter ended 10th Oct., 1853.	Year ended Oct. 10, 1853.		Quarter ended Oct. 10, 1853

PHOTOGRAPHIC FORGERIES.—The rumour which has been circulated, of photographic forgeries of Bank of England notes having been successfully attempted, is incorrect. Some experiments have recently been made at the Bank, with the view to the adoption of further precautions may be desirable, but, whatever resolution may be adopted, there is no reason to suppose that such forgeries could be presented without immediate detection. *Times*

THE AMERICANS AND SHAKSPEARE.—Some Americans having recently visited Stratford-upon-Avon, and having made a pilgrimage to Shakspeare's tomb, have originated the idea of memorialising the event by presenting some stained glass windows to the church. The windows are to come from the principal cities of the United States, as an offering by the American nation.

ELECTRIC TELEGRAPH AT GRAVESEND.—The Submarine and European Telegraph Company have opened an office at Gravesend. They have extended to that town the benefical advantages of their low tariff of charge, and are now transmitting despatches of twenty words from Gravesend to London, Dover, Calais, Paris, &c., for 2s. Ships proceeding to the Thames will receive the latest intelligence of the arrivals and departures of all vessels to and from various ports may be known at a second's notice; and it must prove a great burden taken off the minds of our mercantile classes to be aware that, for the cost of a shilling, they may become immediately informed of the exact state of a vessel's crew on departure or arrival: that the ship sailed "all well," with a clean bill of health and an undamaged cargo—that they may send a tug, should wind and tide prove contrary, or detain the doughty assistant, should its services be unnecessary.

SUSSEX ARCHÆOLOGICAL SOCIETY.—A very interesting meeting of this society was held on Thursday, the 6th inst., at the ancient town and port of Seaford. A number of visitors arrived by train, via Newhaven, among whom was the Earl of Sheffield, the Venerable Archdeacon Hale of London, Mr. W. H. Blaauw, Esq. (hon. secretary), &c. After viewing the churches of East Blatchington and Bishopstone, *en route*, the visitors—including many ladies and several clergy—met at a sumptuous repast in the Town-hall in Seaford, which was crowded. The Rev. J. Carnegie, vicar of the parish, presided. Mr. Blaauw, hon. secretary, read an able paper on the "Antiquities of Seaford," consisting of many valuable extracts from the old records of the town. Mr. Hillman, of Chichester, secretary) exhibited a Charter of King Charles VII., granted to the Cinque Port; also, the Corporation seals, mace, &c. Drawings of Queen Elizabeth), &c. After the meeting, John Fitzgerald Esq., gave an entertainment at his mansion at his residence, Seaford lodge.

THE REPRESENTATION OF WINDSOR.—On Saturday last it was currently reported and believed that Lord Charles Wellesley would resign his seat for the Royal burgh. It has been understood, for some time past, that his Lordship will not offer himself for re-election, in the event of a dissolution, but no sufficient cause has been assigned for his retirement at the present moment, unless a military appointment abroad, or private arrangements, should be considered incompatible with the due discharge of his parliamentary duties. The leaders of both parties within the borough are making active arrangements to meet the probable contingency

THE DECIMAL SYSTEM.—COINAGE.

On the 12th of April last the House of Commons, on the motion of Mr. William Brown, member for South Lancashire, appointed a Select Committee to consider the practicability and advantages of adopting a *decimal system of coinage*. On August 1st the committee, after examining some twenty-seven gentlemen, to obtain "evidence of as varied a character as possible," made a report recommending the adoption of such a system, and suggesting a method for bringing it into operation. The committee made some observations on applying a decimal system to our weights and measures; but as this subject was not especially referred to it, the committee only recommended that it should be further investigated. Than the question submitted to the committee—one more important, affecting all our daily usages—the estimated value of all property, applying to nearly all contracts already existing, and all contracts hereafter to be made—is seldom brought under public discussion; and however lightly speculative or thinking men, whose responsibility is wholly individual, may discuss such subjects, and suggest changes, a strong case requires to be made out before the Legislature alters the monies or the weights and measures—the standards of all transactions—to which the people are accustomed. The public is well aware that our present system is at once very complicated and defective; and a conviction was general, before the committee examined witnesses, that it ought to be improved. It caused no surprise, therefore, that the report of the committee established a strong case against it; and made it imperative on the Legislature to interfere; whether it adopt in detail the recommendations the committee, or some other plan.

It is obvious that there are two subjects for public consideration, one included within the other—the decimal coinage, and the general system of decimal arithmetic. We might have the former, and not the latter; but we could not have the latter complete without including the coinage. The system of which the decimal coinage is only a part, must first briefly be adverted to. In modern times, and especially since the first French revolution, when the decimal or "metrical" system was established as the result of elaborate scientific investigation, it has become more and more prevalent in Europe; and, spreading from France to Belgium, Holland, &c., has become almost general. Spain and Germany have not yet adopted it. In Portugal and Russia it is of long standing; in China it has existed for ages; and is, in fact, adopted by far the larger part of the human family. The Chinese, by using the decimal system, and by the help of a little instrument called a Swanpan—like the ancient *abacus*—have acquired (according to Dr. Bowring, who gave evidence before the committee) a marvellous facility in making calculations: almost every one of them would deserve the reputation of our "calculating boys."

The decimal system seems a natural kind of arithmetic, being based on the number of our fingers and toes. We learn it with little difficulty, and though not adhered to throughout—it is the basis of our arithmetic. We count easily by fives and tens: sixes, twelves, and sixteens give us more trouble. Most of us remember the difficulty we experienced, after first learning to count, when we entered compound addition, and, departing from simple fives and tens, got perplexed with fours, twelves, sixteens, twenties, forties, and one hundred and twelves, which some accidental circumstances, or the pleasure of our ancestors, made the integers or the multiples of our weights, measures, and coins. If some amongst us have forgotten the difficulty, they will probably become sensible of it immediately it is stated. Mr. De Morgan, the Professor of Mathematics in University College—who has devoted much time to the subject—says, "as soon as the student has mastered the great principles of decimal arithmetic—as soon as he got through his primary rules of addition, multiplication, substraction, and division, his attention is called off, not merely to another system, but to a complication of different systems." With the decimal system, Sir John Herschel thinks "compound arithmetic," "reduction and practice" need not be taught in schools—saving teachers and learners much useless drudgery. Our present system actually wastes about one-fourth of the time that youth devote to learning arithmetic, and probably wastes more of the time that the grown man employs in calculation. The use of the decimal system would, according to Mr. De Morgan, save half the time employed in some calculations, and in others four-fifths. It would dispense with many public accountants, and by sparing unnecessary toil, would be a great economy. It would substitute three columns of figures for five. All large calculations are now facilitated by making them on the decimal system, and transferring them by a short rule into the common system. All sliding-scales used by artizans and navigators are constructed on the decimal principle. Logarithms, which so much facilitate calculation and wanting which astronomers would be sadly at a loss—are on the decimal plan. The Bank of England has found it necessary to buy and sell gold by decimal weights, which saves a great deal of time; and the Mint is to adopt such a system. The majority of other nations having a decimal system—and a system founded like it in nature, being of great advantage in facilitating intercourse—our labour in dealing with them would be much abridged, and intercourse would be facilitated by our adopting a decimal system. All the witnesses examined were unanimous in saying that great advantages belong to this system; and that our system imposes on us a vast amount of unnecessary labour to learn it; renders accounts needlessly complicated; and increases the labour of keeping them; confuses questions of foreign exchange; and is the parent of many errors.

We are a quainted with only one writer of distinction who, in modern times, has advocated the retention of the old system. The late Mr. Playfair did—perhaps, if I remember right, on the ground of its having being long established, and being susceptible of division without fractions than the decimal system. A quarter of 12, for example, is 3, but a quarter of ten is 2½. Halves and quarters are more simple ideas than 5-tenths or 2½-tenths, and in the mingling of proportions with numerals lies the basis of doubt and difficulty. On the whole, however, as proportions cannot express numerals; as even proportions, for accuracy, must be expressed by numerals when they are small (one-hundredth, one-thousandth), the immense advantages of the decimal system—applied throughout, and made the basis of all coins, all weights, and all measures, the standards for all business—cannot be doubted. We may be in blame for our having first adopted and since retained the least useful system, is not now worth inquiring into; but we shall all be punished by a continuance of errors, complication, trouble, waste of time, and confusion, as long as we retain our present system.

How we are to proceed in substituting an improved system, opens to us two subjects for consideration—first, what the public should do; and secondly, what the Government should do. Mr. De Morgan always uses the decimal system in his actual teaching as to £ s. d., and probably, also, as to weights and measures; other teachers can do the same. All that belongs to teaching in private schools, saving the time and temper of learners, may be done by individuals. So every man having Mr. De Morgan's short rules for counting monies, weights, and measures by a decimal system, may keep his accounts on this system, and save himself a great deal of trouble and expense. Without the help of the Government, the Bank of England has adopted a decimal system of weight; and Sir J. Herschel, without the help of the Legislature, is about to introduce such a system into the Mint. Various systems of weights and measures existing in different parts of the empire, it would seem, as if they were not necessarily under the control of the Government; and as if the inhabitants of those places, and the local authorities, when properly informed on the subject, may follow the example of the Bank and the Mint, and improve their weights and measures. With the coinage it is totally different. The Crown forbids individuals to coin money. It takes on itself the duty of regulating the coinage. For its condition, therefore—whatever it may be—however complicated or deficient in nicety or accuracy—the Government is solely responsible, and is to be blamed for all its imperfections. If the decimal system be attended with all the advantages ascribed to it, why has not the Government adopted it? It does not suffice to say, with the committee, that "a difficulty is always found to induce the mass of the population to depart from standards with which they are familiar," because the money standard exists only by the act of the Government, which has continually made alterations in it, and has within recollection made more important changes than the useful change now recommended. For the habits of the people with respect to money, if they be bad, the Government is responsible, because the money itself exists by its authority. The longer it maintains its bad system the more rooted will the bad habits become, and the committee is scarcely urgent enough in calling on the Government to look at the consequences of its own negligence and inefficiency, and to remedy them by introducing a sound decimal system. Though the committee boasts of having "obtained evidence of as varied a character as possible," it examined no political economist of repute. Hence, it seems ill informed on the distinction just pointed out; hence, too, it raises difficulties in the way of realising the decimal scheme which have no foundation in fact; and hence it has neglected to enforce the great fact that the Government alone is responsible for all the confusion, perplexity, waste, and trouble caused by our present imperfect monetary system—and is bound as speedily as possible to improve it. When Government has any purpose of its own to effect—as when it really altered the standard of value by suspending the obligation of the Bank to pay its notes in specie—it is seldom deterred from its object by any reference to the habits of the people; and no reference to them should now prevent it from establishing, with the most expedient alacrity, such a monetary system as will simplify accounts, facilitate foreign intercourse, avoid errors, and save time and money.

We must be careful, however, not to suppose, because all persons agree in denouncing the present system, that they equally agree as to the system which should be substituted for it. They do not; and it is the want of agreement as to what should be done, that makes political calamities of so long life. The other systems suggested, are numerous. One well-informed person proposes the farthing as the unit of the new coinage; others propose the penny; some are for continuing gold as the standard, others are for a silver standard, and the Master of the Mint, who seems to prefer a silver to a gold standard, believes, "that a binary standard, half silver, half gold, at the option of either party, would be better than either gold or silver." The Government may therefore find in these different counsels an excuse for not acting at all; forgetting that it is bound, on its own responsibility, to find out from conflicting opinions the best course, and to pursue it. The plan recommended by the committee, after investigating the advantages of these contradictory suggestions, is as follows:—To take the present pound sterling as the unit of the new system of coinage. The tenth part of that already exists in the florin, and the twentieth part—a portion of the decimal system—in the shilling. There are now 960 farthings in the pound, and an alteration of 4 per cent in the farthing would give 1000 farthings to the pound. The committee suggest that alteration, and suggest that the smallest coin should be called a *mil*, to show that it is the 1000th part of a pound. They propose that another coin to be called a *cent* and of the value of 10 mils—the 100th part of a pound—and the tenth part of the florin—should be coined. Moneys of account would then be pounds florins, cents, and mils; or simply pounds and mils. The coins in circulation would be the sovereign (1000 mils), the half sovereign (500 mils), the florin (100 mils), the shilling (50 mils), the sixpence (25 mils), the cent (10 mils). The crown piece (250 mils) might be retained. Half-crowns, threepenny and fourpenny pieces, the committee say, should be withdrawn. It is thought desirable, also, to have copper coins of 1, 2, and 5 mils, and silver coins of 20, as well as 10 mils. The scheme positively recommended stands thus:—

MONEY OF ACCOUNT.

1 pound = 10 florins = 100 cents = 1000 mils.

COINS IN CIRCULATION.

1 sovereign = 2 half-sovereigns = 4 crowns = 10 florins = 20 shillings = 40 sixpences = 100 cents = 1000 mils.

We place the system recommended by the committee before our readers, merely remarking that, when a large change of this description is proposed, it ought to be founded on strictly scientific principles, carried strictly out. If science suggest a better system than that recommended by the committee, it ought at once to be adopted; for no more disturbance will be caused by the introduction of a perfect system, than by the introduction of an imperfect system. In fact, the adoption now of an acknowledgedly imperfect system will compel another change hereafter, and thus cause two disturbances when one might suffice. The committee enter largely into the question of the re-adjustment of contracts and obligations expressed in the penny and its multiples. The pound being preserved, and the shilling and the sixpence being preserved, —though receiving different names—no obligations or contracts, except those expressed in pennies and farthings, need any attention. But when it is recollected that our silver coins and our copper coins are mere counters, which circulate, not according to the intrinsic value of the metal, but according to a relation fixed by the Government to the pound sterling, which circulates, here and over all the world, according to its weight and value as a piece of gold; and that debts and obligations contracted in other coins must in the end be liquidated by gold; and when it is recollected, as was distinctly shown by several witnesses, that competition invariably causes the quantities of the articles sold to adjust themselves without difficulty to the *value* of the money received for them—the committee seem to have taken a great deal of unnecessary trouble, and have rather placed difficulties in the path of reform than removed them. Preserving the gold standard intact, it will be only necessary for the Government to make what arbitrary alterations it pleases in its counters, and leave all other matters, except its own taxes, to be settled by competition. That is for us another reason for thinking that the committee have much overstated the difficulties in the way of now establishing a perfect currency on the decimal system—though it might be gradually brought into use—which would need no future alteration. The principles of money are really as certain and precise as the principles of geometry, and nothing short now of what science says is perfect should be adopted.

We see with great pleasure that the committee recommend that all silver coins hereafter shall have "their value in mils marked upon them." We think that the same practice should be extended to the gold coins, and their relation to the other coins (the mils for example) should be marked on them. It was formerly the practice to stamp on coins d'ors, and other gold coins that they were twenty-franc pieces, but that useful superscription was abolished to make way for the head of a monarch; and money is now stamped with some petty heraldic devices that have no relation whatever to the value of the coins which we daily use in the business of life.

A National Gathering of the Presidents and Directors of American Railways is to assemble in Washington during the present month, to adopt a uniform code of laws for their management, to devise measures for the prevention of accidents, and to establish a system of careful vigilance throughout the nation.

Literature.

Despatches, Civil and Military, of the Indian Government. By Lieut.-General sir Charles James Napier, G.C.B. Edited by Lieut.-General sir W. F. P. Napier, K.C.B. London: Westerton, 1 Clark-corner

This posthumous memoir of one of England's most heroic soldiers, edited by his gallant brother, the distinguished historian of the Peninsular war, will be read with mournful interest. It tells a tale of cruel persecution against the conqueror of Scinde; and unless Lord Dalhousie can refute the grave charges brought against him, this book will imprint a dark stain on his character. The East India Company are also summoned to the bar of public opinion, which has already condemned their administration; but Sir Charles Napier has furnished additional proofs of their incompetency; indeed, he has shown that, to gratify private pique, they have endangered the efficiency of the public service. Our readers will remember that Sir Charles Napier was appointed to the command of the Indian armies at a moment of imminent peril. He accepted this responsible office with great reluctance, aware of the hostility he would have to encounter; but when the Duke of Wellington said to him—"If you don't go, I must," Sir Charles yielded; and the malevolence of his enemies was at once awakened. "Lord John Russell, at an interview, gave me to understand that doubts had arisen as to appointing me one of the Supreme Council, as all my predecessors had been. He intimated that the directors were seeking for a precedent, and would probably find one for denying it to me. Lord John was explicitly and peremptorily told, on the instant, that I also would seek, and if I did not *find* would *make* a precedent, for to India I would not go unless as one of the Council." Such was the opening scene in this drama of jealousy and intrigue. At this time a protracted war in the Punjaub—which is known to be traversed by many rivers, five of which are large and dangerous for troops—was anticipated; and Sir Charles was informed by Lord Ellenborough that Lieut. Wood, of the Indian navy, was well acquainted with those waters. The public service, therefore, required the experience and talents of that officer, who spoke the language of the native tribes; but the application of Sir Charles to have him appointed, though backed by the Duke of Wellington, was refused by the Court of Directors. The reader will naturally ask how did this inimical spirit arise? Why was the expressed wish of the Indian Commander-in-Chief thwarted? He shall answer these questions himself:—

No cause for this hostility, especially on the part of the Directors, was known to me, save my previous zealous obedience to Lord Ellenborough when he was Governor-General; for it would appear the Directors, or possibly the Whig Government, wished me, a Major-General, to disobey and thwart that nobleman. A person in office at the time wrote to me with friendly warning to forbear any expression of admiration for Lord Ellenborough, as likely to be injurious to my own interests.

Under these unfavourable auspices, Sir Charles started to take the command of the army, having received certain written instructions from the Duke of Wellington, and the following passage in those instructions will be found highly important in a more advanced stage of the narrative:—"On a station so distant, and of such magnitude and political importance, you must necessarily act in a great measure from your own discretion."

Sir Charles reached India in forty-three days after leaving London, and assumed the command His first interview with Lord Dalhousie took place at Simla, and in ten minutes the General had ample proof that he was to be made the victim of secret hostility His lordship told "that the letters from England he had been writing against my endeavouring to encroach upon his power, and had answered. he would take damned good care he should not." Within a month after the arrival of Sir Charles at Simla, a multitude of orders arising several regiments of the native Bengal army, in consequence of an order issued by Lord Dalhousie to reduce their pay. The case stood thus:—While the native regiments were quartered in the Punjaub, prior to its conquest, they were entitled to additional pay, because, having passed the frontier, they were considered as engaged on foreign service; but when the Punjaub was annexed, this right ceased. On this distinction Lord Dalhousie acted, and no doubt his view was correct, but the delicate question arose as to the time and circumstances under which the new pay order ought to be enforced. On this point Sir Charles offers the following remarks:—"The mutineers were in the midst of a warlike population ready to join them, only five months had elapsed since the Sikhs had been defeated; and there were other dangers. Our European regiments were scattered hundreds of miles asunder; single regiments in some places, in others only two together; and if the Sikh population rose while the sepoys were in mutiny, the danger would have been of no ordinary kind. The Afghan people also were at hand, and we had war with us; we had driven Dost Mahomed across the Indus only a few months before, and he could have again taken the field. These things were to be considered, and supposing the worst to happen, what action was to be adopted?"

The safety of the empire was in imminent peril. The 66th Native Infantry broke out into open mutiny, and had nearly seized the fortress of Govindghur. Lord Dalhousie was cruising at sea. There was no time for delay, and the mutineers were too strong to be put down by force. The Supreme Council was fifteen hundred miles distant from the scene of danger, and no answer could be received from them under a month. Should Sir Charles suspend the government order about the pay? That was the question promptly to be decided. Accordingly the Commander-in-Chief consulted the General of Brigade, the General of Division, and the Adjutant-General of the Company's army; and surely these were the proper persons to seek advice from at so appalling a crisis. These three officers concurred in opinion with Sir Charles Napier, that the Government order should be suspended. The General then looked to the written instructions of the Duke of Wellington, already quoted, and did suspend the order "as a dangerous measure, brought by accident partially into operation at a moment of great peril, but *only* until the Supreme Government should decide on the question to be decided." The mutiny was quelled, and Sir Charles was reprimanded by Lord Dalhousie in the following terms:—"The Governor General in Council, from a consideration of the papers before him, feels it necessary to intimate, for the future guidance of his Excellency, that the Governor General will not again permit the Commander-in-Chief, *under any circumstances*, to issue orders which shall change the pay and allowances of the troops serving in India, and thus practically to exercise an authority which has been reserved, and most properly reserved, for the Supreme Government alone."

Sir Charles complains also of the uncourteous manner in which this reprimand was conveyed. It was not sent as a private communication, nor in the handwriting of the Governor-General, nor even in that of his private secretary, but in the style of a captain's letter to a brevet-major in the army under my command; and this to a Commander-in-Chief and Member in Council, to whom Lord Dalhousie had up to that moment habitually written personally." This marked indignity was the cause of Sir Charles Napier's throwing up the command two years after his appointment, the full period being five years

Appended to the memoir of this unfortunate episode in Sir Charles Napier's military career, is an elaborate and masterly on the present state of the Indian army, which every officer will read with interest, and derive instruction from its perusel. Every department is critically examined, and various reforms are proposed, the reason for each being assigned. The state of the Soldiers and Kings Barrack will permit the following useful. "I walked through the men's sleeping-rooms there, upon planks laid in water covering the floors; and, on this point, he quotes the authority of an officer who knew them well, who thus writes:—"The Lord Mayor would appear, as destined to be the slaughterhouses of more thousands of British soldiers than would suffice for the winning of fifty battles" There are remarks on the Mimé rifles, which are not approved of; and on Arab and other horses used in the cavalry and artillery service; these particulars are highly important and necessary, as this volume will be sure to find its way into all military circles.

A Summer at Baden-Baden. (With Illustrations.) London: Mitchell.

Baden-Baden, which was a village in 1793, is still a village after the fashion of that cottage with the double coach-house of which, during his walk, the devil so much approved. But in 1799 it was a far distant region, rarely penetrated by young English pears with their bear-leaders when making the grand tour. Now it is within reach of every holiday tourist at a cost of thirty-six hours' travelling of about five pounds, if the shortest and quickest route be taken; which, however, we do not recommend. This may tend to make it vulgar, and drive the exclusive world to the hot baths of Iceland or New Zealand, in search of pleasure beyond the reach of the usual patrons of Margate and Ramsgate. Time has shown that, from its peculiar nature of its position—in a cleft of a narrow valley, whose steep hill-sides are covered with wood—and from the shortness of its season, no amount of accessibility by steam-boats or railroads can render Baden-Baden other than one of the most pleasant and picturesque retreats that the Continent affords during a hot summer. In wet weather it drips like squeezed sponge. Baden has, too, the advantage of being equally suitable to the economical and the extravagant. The railway "prince," or the Australian "swell"—the legitimate successor of the Indian nabob of the last century—can exhibit his powers of purse in equipages, entertainments, servants, horses, and equipages, without losing a single spark of splendour in the narrow bounds of the village which a duke owns, and a gambling house keeper supports. A new arrival at once commands attention; and a new carriage with gorgeous liveries is not lost in a blazing coralack, as in Hyde Park or the Champs Elysées. While the engineer, the lawyer, or the student, seeking change, quiet, and relaxation, can obtain pure air, pleasant walks, capital cookery, excellent music, and cosmopolitan society, at one-fourth the cost of our own dear, dull, inland watering places, besides dancing and flirting *ad lib*. But the economy is only conditional that he has no taste for that gambling, for which there is every temptation. It is the gambling house which builds lately colonnades, and pathways through woods, erects summer-houses for rest, and pays the magnificent bands which regale your ears at morning while drinking the waters, in the afternoon while sipping coffee, or dissolving an ice in the gardens, and in the evening while whirling in polks or waving in a mazourka. The players pay for what the non-players enjoy gratis. The great thing that renders travelling on the Continent more agreeable than in England, is economy—and this advantage you can certainly obtain in Baden-Baden. For instance, if our friend Brown, with his lately-married wife Anna Maria, takes a trip into Wales, Derbyshire, or the Highlands of Scotland, he is kept in a perpetual fever by bills for private rooms, wax-lights, and sherry he does not wantand the same with the solitary dinner and perpetual bit of fish and cutlet, at 4s. 6d. a-head. Now, in what we may call the Rhine dinners, after rejecting nine-tenths as too sweet, sour, and greasy, the remaining tenth affords a respectable dinner, at one-fourth of the English travelling price.

Therefore, without presuming to advise those who are encumbered with valets, maids, large-calved footmen, couriers, chassours, post-carriages and *fourgons*, we say to those happy pairs who have a month and fifty pounds to spend, go to Baden by Ostend and the Rhine, and return by Strasburg and Paris. Persuade Anna Maria to content herself with less than four portmanteaus, two bonnet-boxes, and two carpet-bags. Lay in a course of appropriate reading, according to your respective tastes, and start with a fixed determination to spend your spare time at one pleasant spot, instead of fevering yourself and your beloved one by a perpetual phantasmagoria of castles, cathedrals, picture galleries, strange beds, entomological bed-fellows.

Get to and out of dreary sea as Ostend as fast as possible. Take, if you like, a course of Mediævalism on Friday fish-dinners in Bruges, Ghent, and other picturesque Flemish towns. Don't go to Waterloo, but try at Brussels frogs in a white sauce, and buy Anna-Maria a dress bonnet as pretty, and one third cheaper than in Paris. Then on, with all speed permitted on Continental lines, to Bonn; travelling always by second-class, the first being only intended for Russian Princes and English Milors from the Stock Exchange. At Bonn take the steamer, and don't call for expensive wines, but follow the suit led by your German neighbours, and take the ordinary wine of the district, which you are pretty sure to drink whatever you may pay for.

At Mayence you may lay in what you need of dress boots and shoes, cheap and good. Reserve Wiesbaden for another trip, and content yourself at Frankfort, with twenty-four hours to view the Boulevards and the Jews in the Hôtel de Russie's one o'clock dinner. Remember that there is always a dear dinner provided for the English at a late hour; but that it is better to follow the advice of an ex-Railway Queen, and "when you are in Turkey, do as the Turkeys do."

At Heidelberg, the guide-book will tell you what to do, and a good deal that you should not do; but remember, if you go to the Wolf's Glen to see the famous trout ponds, where they splash about, five and six pounds' weight, that the people there have not the faintest notion of cooking the fish they sell. Carlsruhe, an appropriate capital of the Baden Dukedom, is white, dull, rectangular—neither venerable nor picturesque. It looks as if built of cards is inhabited by a little Court playing at Royalty, a little army playing at soldiers, with a sprinkling of Baden nobility, that which seems can be more inhospitable, beggarly, and ridiculous. Hasten on to Baden-Baden, and there arrange to live in public for as many weeks as you have to spare. If you decide on remaining at an hotel, call for the Government tariff. The paternal Baden government takes care that the visitors shall not be frightened away by their extortionate charges. The price of unloading your carriage is fixed, as well as of blacking your boots. Having then arranged your daily expenses—which can include all necessary comforts at the cost of about a bottle of wine a-head—you may devote yourself to your health and amusement without anxiety. At five you rise to drink the waters to the sound of soft music; but we dispense with the water, at eight return to a varied breakfast, *en table d'hôte*. Then walk or drive through the forest and up the hills, until the one o'clock dinner hour arrives, and you sit down with a hundred guests to a hundred dishes; after which, *siesta*, coffee in the gardens, and more music; and then a delightful drive to the Conversations House, where dancing, music, and watching the gamblers, prepare you for early bed. The situation of the valley allows a different expedition every day, all which may be found described in the Red Book of Murray. Hunting, too, there is, but that is a farce—only good for displaying horses and horns, and exhibiting to astonished Englishmen foreign ideas of horsemanship and costume.

It is the delicious woodland shade, the murmuring mountain streams, and the lively *réunions* at breakfast, dinner, and in the evening, which, combined with its economy and easy accessibility, give Baden-Baden an advantage over watering-places nearer home. So much for the place. As for the book which has been our text, nothing can be prettier than the illustrations, on wood and steel, from drawings by Tony Johannot, Eugene Lamy, and others. The paper is capital; the binding gorgeous and appropriate; the letter-press (which is a translation from the French), more wretched than anything ordinarily presented to our notice. French literary sketches dealing out their scarms on their style—the stuff is naught. The original may have been amusing, although travelling over ground that has been better done again and again in German and English; but the translation tastes like a glass of gooseberry champagne the day after uncorking the bottle. Sorry, Baden-Baden an advantage over watering-places nearer home. So much for the place. As for the book which has been our text, nothing can be prettier than the illustrations, on wood and steel, from drawings by Tony Johannot, Eugene Lamy, and others. The paper is capital; the binding gorgeous and appropriate; the letter-press (which is a translation from the French), more wretched than anything ordinarily presented to our notice. French literary sketches dealing out their scarms on their style—the stuff is naught. The original may have been amusing, although travelling over ground that has been better done again and again in German and English; but the translation tastes like a glass of gooseberry champagne the day after uncorking the bottle. Sorry, very sorry.

The vignettes, especially, are so beautiful that we should be glad to see them reproduced with letter-press of a less absurd quality. We particularly note the "Waterfall of Geroldsau" the "Valley of the Mourg," and the "Avenue of the Liotheithal." There are also some coloured representations of the costumes of the Baden peasantry and the uniforms of the Baden army a cavalry, by the way, which dresses well, but which cannot ride beyond a slow trot.

The Story of Corfe Castle, and of many who lived there, &c. By the Right Hon. George Bankes, M.P. Murray.

If there be a castle or mansion in the realm which has a right to be haunted, Corfe is that castle. Our readers may think it a rather curious expression to use of a house, that "it has a right to be haunted." But, unquestionably, there is intere-ting significance, and there is high prerogative in the name of any habitation to whiich, even by the usage of perverted veneration and legendary romance, such a distinction can be imagined to be attached. Among the many houses of respectability and standing there are two kinds; and of one kind it is possible, it is conceivable, according to the popular standard of *to πρεπον*, and *το καλον*, to say, that it is haunted; of the other kind, to say the same thing would be merely ridiculous. Thus, even in the wild creed of the vulgar have so much order in their very vagaries, as to take accessorial proprieties into account, to keep a standard of "esthetic" probability, and (in at least an analogical way) to discriminate among these claims and dignities the tenable from the untenable. Old post-chaises built from the Crown an allowance of a yearly but of wine. Some country-houses, in like manner, receive from the supreme hands of mystical tradition the allowance of a ghost: here a periodical ghost, there a perennial one; in one case, an occasional visitant; in another, a regularly quartered incumbent. In great cities the ghost-character is less favourable—a sour, ill-mannered, and terrific personality, of whom we do not hesitate to say that, wherever he appears, he is invariably one too many; whereas, the country ghost has a delightful mellowness of habit, which renders his presence, whenever he chooses to join the party, awful indeed, but thrillingly ornamental.

Corfe Castle, however, has far more solid claims to notice; and, long as it has stood, it will be outlived by its memories, which are imperishable. First a great residence, then a royal palace, then a historical fortress, now a town, a castle, and a borough—high and continuous has been its part in the destinies of this eventful land. Great men and lovely women, famous kings and beautiful queens, have left upon its hoary antiquity the most romantic impresses and associations of their career; until it comes, in this age, to give its name to a parliamentary borough and a peaceful town of our southern seaboard. There exists not, of its magnitude, a place in the British realm, more early, more constantly, or more remarkably connected with the national annals; while, at the same time identified with the fate, and authenticating the records of the private life of distinguished English gentlemen and English gentlewomen. It is reckoned no small honour for your dwelling, or indeed for any fragmentary portion of it to date its origin from the Norman Conquest. Corfe Castle boasts for its edifice and its records about two centuries more It claims, besides this prodigious antiquity, one of the best, noblest, most virtuous, and most famous monarchs that any country or era has produced for its founder. Alfred, the good, the wise, and the great—who is to the piece of history and to truth more than Arthur is to song, to fiction, to exaggeration, and to romance—chose, it is said, the site, and directed the foundations to be laid, of this enduring monument, the survivor of so many revolutions, and the witness of so many marvels, vicissitudes, and catastrophes.

No one could more fitly tell us its story, than he who has doubtless studied with the zealous enthusiasm of his earliest years, the whole line and progress of the stirring theme—himself in his turn the present representative of much of its heritage of recollections—the Right Hon. George Bankes. His interesting memoir is inscribed to his friend Earl Digby, and then, in the second place, to the members of a "Mutual Improvement Society," established in the country and vicinity of the reverend old pile. Well may he say, in concluding the latter address, that the incidents which he records, "refer especially to a period of our history wherein this neighbourhood was much concerned, *and the interest of which time never can pass away.*" He means the period, he means the terrible struggles of "the Great Rebellion." Certainly, neither the memory of that stupendous and glorious conflict, nor its interest, will ever perish: it is doubtful whether even its practical results will at any period be obliterated. It will "*cette vieille Europe, qui meurt*," itself become a second Asia—consumed, embowelled, eaten out—the carcase and the shell of an extinct physiological form, as obsolete and as still as one of the recovered remnants no longer represented among living animals.

Corfe Castle presents much topographical and antiquarian matter in this volume; but whatever is most sensible in English history it touches in the quick. Beyond these great and enduring funds of interest, and beyond the adventures of many a famous character, like Strafford, and the tragedy of such a woman as Lady Bankes—who, for three years, held the castle against the whole power of the Commonwealth; beyond all these and similar attractions, the memoir may boast of the more superficial charm of five brilliant engravings of objects, things as fit to be graven on the mind as on paper. This, in fine, though in a literary point of view, by no means a very eloquent or a very extraordinary work, is yet a book to be added to a library, where a library exists, and to be procured for reference and a future shelf, where a library is projected, or in process of collection.

The Etymological Compendium; or, Portfolio of Origins and Inventions. By William Pulleyer. Third Edition. Revised and Improved by Merton A. Thoms. Tegg and Co.

This work originally appeared in 1825, when it was well received, as a chatty, anecdotic hand-book, tracing the origin of many subjects of every-day interest to curious sources, with more or less exactness. The book became popular, and was reprinted; and now we have a third edition, with a sort of snow-ball accumulation of the gleanings of a quarter of a century, and the supervision of the son of the editor of "Notes and Queries;" of which advantage has been judiciously employed in correction and extension of the compendium. One of its most attractive features is in its store of London Origins and Antiquities, which, with its illustrations of inventions, localities, titles, dignities, etymologies, epithets, and colloquial phrases, form a very amusing miscellany; and, as the means of such inquiries have been largely multiplied of late years, the editor has diligently availed himself of the best sources to increase the matter-of-fact value of the compendium.

The Law of Patents, with Forms and all the Statutes. By Charles Wordsworth. London: Benning and Co.

This work has been written in order to show, in a summary form, the Law relating to Patents and Inventions, as altered by the Act 15 and 16 Vic., c. 83. It contains in eleven sections:—"Who may obtain a patent;" "For what a patent may be obtained;" "How to obtain a patent;" and a variety of other technical information digested compactly. The name of the author is a guarantee for the ability of the work, which is rendered more complete by a good index and table of cases. The low price places it within the reach of the humblest inventor.

THE CAMP AT RELFAUT.

In our Journal of last week (page 303), the visit of the Emperor and Empress of the French to St. Omer and the Camp at Helfaut was described by our Special Correspondent. We now illustrate the military spectacle at Helfaut; and append a *resumé* of the notes taken on the spot, by a competent observer:—

On the north-west extremity of the Bruyeres, on each side of the road leading from St. Omer to Arques, is a large field of gravel-pits, and the ground is excessively uneven, affording no opportunity whatever for working artillery. The Bruyeres itself is a level grass plain, and possesses every advantage for the drill and pounding of troops; though the absence of the numerous ridges, elevations, and valleys with which Chobham abounds, renders these plains less well adapted for producing those more picturesque effects of the movements of the troops which were so characteristic of the field-days in Caitlin's Valley and Chobham ridges. The movements of the troops were directed to keeping off the attack of a supposed enemy, and covering their own retreat in the direction of a large redoubt in their rear, which it appeared to be their intention to hold, and ultimately drive back the attacking forces. The artillery, which was some eight hundred yards in advance of the infantry, commenced the firing, under cover of which the infantry drew up in line of two battalions, having two lines in reserve, the rearmost one consisting only of one battalion and a half. The Chasseurs de Vincennes formed part of the first line. The left of the front line was protected by the light company of infantry placed at right angles, and fronting the northern side of the Bruyeres. The right flank was covered with half a battery of artillery, and a similar battery was placed in the centre intervals of the front line. After the artillery in advance had continued firing for some time, they ceased the fire, and passing by the right flank, took up position in rear of the infantry. The first line immediately commenced the firing with great rapidity, the great guns—supposed to be seventy-eight pounders—jumping in the attack in most effective manner. I have seldom, if ever, heard anything finer than this firing during the quarter of an hour that it lasted, the clear, loud, and resonant roar of the heavy brass guns, the rattle of musketry, and the sharp and rapid reports of the rifles mingled grandly together, and produced upon the mind the impression of a most overwhelming and destructive fire. At length, however, the firing gradually ceased, with the exception of that of one or two companies of trailleurs, as they covered the line, which but a moment before appeared so irresistible, and which was now in rapid retreat to the rear of the second line. The artillery fell back from the right flank, and from the interval covered by the Hussars, who advanced a short distance at a charge; but the immense number of persons present prevented the charge being so effective as it would no doubt otherwise have been. As they advanced, however, the Hussars rode well, and the distances were exceedingly well kept. The second line of infantry now charged front towards the south, supported by the other infantry regiments, flanked by artillery, and having the cavalry in the rear. The firing, accompanied by the artillery, was continued for some time; till at length—and it was often the case at Chobham the sons of Mars succumbed to the watery deity; and the power of Pluvius was duly acknowledged. Each regiment then formed in contiguous column; and, the Emperor having distributed decorations to the principal officers, the Imperial cortege returned to St. Omer. There are probably few, if any, men in France, who can handle a horse better than the present Emperor. The charger which he rode on Sunday was a splendid animal; and, as he passed along the lines, and came near the cadre standard of each regiment, the Emperor—with great tact and excellent judgment—turned the horse's head towards the drapeau; and, while the noble animal appeared to make his acknowledgments of it, the Imperial rider gracefully bent his head in homage to the sacred emblem of the Imperial dignity of France. The effect of this movement was not without its influence upon them; and the feat was never performed without eliciting cries of "Vive l'Empereur" Homage paid to the standards of the French army is more than equivalent to the highest compliment paid to their chief; for none of the respect paid in the first instance is invariably returned tenfold by the army.

As the manœuvres were concluding, the rain stopped, and the sun, sinking, shone out at this moment, the whole of the troops having been ~~it~~ was supposed wrongly, in order to collect the officers to hear an Imperial speech—drawn up, in an amphitheatrical way, the unexpected brightness produced effect; and the sun did what nothing else had done during the day drew from the men a good round of cheering. Immediately after the Emperor, on his prancing horse, but amid all the excitement of the exercise perfectly cool, cold, and impassible, followed by the Empress in her carriage, quitted the field, and returned to St. Omer The people followed; the troops returned to their huts.

IMPERIAL VISIT TO THE CAMP AT HELFAUT.—(SEE PRECEDING PAGE.)

GRAND MILITARY MASS AT OLMUTZ.—(SEE NEXT PAGE.)

THE CONGRESS AT OLMUTZ.—MILITARY MASS.

Olmutz, the scene of the recent meeting of the two Emperors, to which the attention of the Western Courts was so strongly attracted, is a fortified city of Moravia. It was the place of refuge of the late Emperor of Austria in his flight from Vienna, and here he abdicated the Imperial throne on the 2nd of December, 1848. Lafayette was confined here for many years. Olmütz has a fine Gothic cathedral, with the tomb of its founder, Wenceslas III., of Bohemia, and several handsome churches. It also possesses a university.

Sunday, the 25th ult., the day after the arrival of the Czar, was the first grand field-day, when 40,700 men, with 128 guns—encamped on the great plain of Olmütz, a couple of miles from the place—were disposed for Divine service and parade afterwards. At mid-day, the whole mass of troops formed a long parallelogram, in three corps, under the command of General Wratislaw: the first commissioned by General Count Clam Gallas, the second by General Count Schlick, the reserve under General Count Schaffgotsche, the artillery under General Haselap, and the cavalry under General Prince Lichtenstein.

The staffs of the Emperors were brilliant beyond all experience of former military demonstrations, and comprised a great many Imperial and Royal personages, and upwards of sixty Generals, headed by the hoary and respected Marshal Nugent. The Emperor of Russia, with his usual taste, wore the Cuirassier uniform of his Austrian regiment; thus appearing before the Austrian army as their comrade, and as a holder of a regimental command under the Sovereign of Austria. The Czar, who is gradually getting stouter as years roll over him, with his huge breast-plate, massive arm, and gigantic stature, maintained his well-known imposing appearance. The Emperor of Austria wore a white uniform, with the light blue ribbon of the Order of St. Andrew of Russia, and looked quite in the prime of youth. He is only twenty-three years of age; while the Emperor of Russia has attained his fifty-seventh year.

The two Emperors, with their splendid cortège, rode along the camp and down the columns of troops to the field chapel, which was an altar covered with a tent, where several priests officiated to perform the functions of mass. Opposite to this was a tribune, with red velvet cushions; and here the Emperor of Austria heard mass; the Emperor of Russia being on his right hand, kneeling, making the sign of the cross, and apparently joining in the divine service. The Prince of Prussia stood behind as a spectator, but did not kneel. The elevation of the host was telegraphed to the most distant battalions, so that the whole army were enabled to join at the same instant in this rite of the Roman Catholic Church. Instead of an organ, the anthem was played with astonishing precision and unity by the thirty bands united. One of the most pompous religious solemnities of the Roman Catholic Church that can be conceived, was performed this day on the plain of Olmütz.

Divine service was followed by a parade, when the whole army defiled before the two Sovereigns.

IRELAND.

Dublin.—Seldom has there been so fine an after-season as the present, more resembling summer than the interval between the autumn and the winter. The small class of farmers, in backward districts, are enabled to complete their harvest under most favorable circumstances The result is, that our farmers have nearly secured full average crops, and that the very high prices for all agricultural produce—corn, potatoes, butter, pork, and cattle—have placed them in a far better condition than they have been at any former period.

Industrial Exhibition.—The number of persons who visited the Exhibition on Monday was 6,069—that day having been the first shilling day. Several groups of well dressed peasantry arrived by the excursion trains

The Dargan Institute.—The usual weekly meeting of the committee was held on Monday. Amongst the subscriptions announced as contributed since the last day of meeting, were £20 from James W. L. Napier, of Loughorew; £10 from R. K. Jennison, Esq.; £10 from the firm of Messrs Perrier and Pollock; and from the firm of John Jameson and Son, £5; and the Right Hon. A. Macdonnell, Robert Grimshaw, Esq., J.P., D.L.; Thomas Corbett, Esq., and James Stirling, Esq., have each contributed a similar amount. All which will be duly acknowledged in the papers in due time. Messrs. Dunbar, M'Master, and Co., of Newry, have paid in £50 to the local fund, through Dean Bagot, who is an active member of the committee.

Regiments for Foreign Service.—Orders arrived in Dublin, on Monday, it is stated, for six regiments to hold themselves in readiness for the Mediterranean. The 17th and 91st Infantry, in Dublin garrison, are to proceed to Cork for embarkation. The rumour is that this sudden movement is connected with the Turkish question.

The Late Dreadful Railway Accident.—An inquest is being held at Naas, on the bodies of the unfortunate persons killed by the collision of the trains at Straffan, last week. Nothing of any importance, as regards the accident, has been elucited; but it seems that neither the driver nor the stoker of the goods train saw the light sent down the line to meet them. The inquest has been adjourned; and this is all that is not expected to be given for some days. In the meantime, some severe remarks have been made in the Irish papers as to the conduct of some persons present immediately after the collision had occurred. Some of the passengers and the peasantry appear to have acted very selfishly after the accident. "With deep shame and regret" (the *Evening Mail* thus refers to the subject) "we have heard from unquestionable authority, that many thefts were attempted, and some committed, on the luggage and personal effects of the killed and wounded passengers during the very first moments of confusion that succeeded the accident. Worse even than this, we have been informed that assistance in the removal of the sufferers was refused until gratuities for payment were secured into! And this in the civilised district of Kildare, and within a few miles of the metropolis! On the other hand, the baseness of those wretches was thrown into a deeper shade by the courage and humanity actively displayed by many others. Mr. Kennedy and the Hon. Edward Lawless are particularly mentioned as having afforded the most valuable assistance; and a young man named John Rooney is stated to have given up his passage in a train in which he was proceeding to Kilkenny, in order to do his utmost for the poor sufferers. Many others also distinguished themselves by their right feelings, and kind attentions were paid to the wounded in the houses of the neighbouring gentry. Three of them, we understand, are at this moment lying in Lyons House, their wounds being fully dressed for the excellent Matron." "But," writes a correspondent, "the person who pleased me most was a fox hunter, returning from his day's sport, whom we took up before the accident, and who belonged, apparently, to that part of the country. I should think few men possess more goodness of heart. I certainly never witnessed a more cool and effectual demonstration of it. He was in every place, arranging everything and kindly aiding the poor sufferers; and his influence with the people gave the best effect to his kindness. I will not mention his name; it might be disagreeable to him to do so; but I shall feel more respect in my cap than a red coat and a gold epaulette." The following is a list of the persons killed:—Mr. Jelly, Queen's County; Mr. Egan, Parsonstown; Mr. Bateman, Cork; Mr. M'Nally, Dublin; Miss Kirwan, Dublin; Miss Lamer, Dublin; Mrs. Lowry, of Cumberland, and his two sisters, are sufferers by the late accident, one lady seriously, Mr. Lowry and the other slightly. They are progressing favourably, and are staying at the Shelbourne Hotel. Mrs. Croker Barrington, and Mr. Berrie Jones, of Clonskilty, was also lightly injured. Mr. Jones, though much bruised and shaken, is progressing favourably; and Mrs. and Miss Jones, who were with him in the carriage, providentially escaped unhurt. Mrs. Latham Blacker is suffering so much from the effects of injuries sustained by her, as to be unable to bear the journey from Straffan to Dublin. Mrs. Croker Barrington is going on very favourably. The sufferers at Steven's Hospital are progressing towards recovery. One of them, Miss Farrel, has removed to her private residence. The children staying at Lyons are consdered out of danger. Surgeon Adams and Mr. Mouritz have both been in attendance, and they pronounce the boy nearly convalescent. Miss Kangir is still confined to her bed, but no danger is apprehended. The body of Mr. Egan was taken to Birr on Friday week, and the shops were closed as a mark of respect to the deceased. It is stated that Mrs. M'Nally, wife of Mr. M'Nally, who was killed on the railway, has died of the fright.

The City Statue of Sir Robert Peel, by Behnes.—On Monday Mr. Behnes, the sculptor by whom the City statue of Sir Robert Peel has been made, and Mr. Pite, the architect of the Royal Exchange, went to inspect the situation in which it has been decided to place the figure, in order to be able to judge of the height to which it might be proper to raise the pedestal. A board cut out in the shape of the statue was placed upon a temporary pedestal, of the height of twelve feet—the statue itself being eleven feet high—in front of the statue of the Duke of Wellington by Chantrey, as a test of the necessary elevation; and the effect was very great, if we may judge from the observations of the numbers of persons gathered together to witness the experiment. It is expected that the statue will be placed in a few days: it will be visible from Cheapside, Cornhill, King William-street, Princes-street, and Threadneedle-street.

The Spanish papers of the 4th announce the death of the young Duke of Feria, brother to the Duke of Medina Celi.

MUSIC.

ENGLISH OPERA.

Another attempt, it appears, is about to be made to establish an English Opera-house in London. We are informed that a scheme has been set on foot to open Drury-lane Theatre for that purpose early in the ensuing season; and that a musical company is in course of being formed, which already includes the eminent names of Madame Clara Novello, Miss Louisa Pyne, Mr. and Mrs. Sims Reeves, and Mr. Weiss. It is added, that the responsible parties have ample means to carry the enterprise into effect.

We should be sorry to "throw cold water" upon an object which we would gladly see accomplished; but so many attempts have proved abortive, that it is impossible to feel very sanguine as to another plan of the same kind. At any rate, the number of previous failures ought to induce the parties concerned in the present undertaking to consider well what they are about, so as to avoid the errors of those who have gone before them.

It is indeed strange, that, of all the great musical countries, England is the only one which possesses no national opera as a substantive and independent establishment. Italy was the cradle of the musical stage; and the Italians have never listened to any opera but their own. Germany and France began by borrowing the musical drama of Italy, but their next step was the creation of a national opera for themselves, and in both countries the national opera holds the highest place. This, it may be said, is the case in Germany; because Germany, like Italy, is a country pre-eminently musical. But this cannot be said of France—none but a Frenchman will assert the musical superiority of his country over England. And yet, look at the comparative state of the national opera in Paris and in London. When the Parisians talk of going to "the opera," it is the French opera that they mean—their own "Grand Opéra"—their great centre of brilliancy and fashion: while the Italian opera is merely the "Théâtre des Italiens." In London, on the other hand, "the opera" means our splendid Italian Opera, while English opera has not a house of any kind that it can call its own. Nay, more Paris has not only its gorgeous "Grand Opera," but also its "Opera Comique," a large and beautiful theatre, magnificently supported, and crowded with fashionable company every night. In London, if we have any English opera at all, it is only after a makeshift, miserable fashion: somebody gets together a few singers to perform English operas at a minor theatre—the Surrey, or the Strand, for example—for a few weeks, in an interval between the regular seasons; and it is to such poor attempts that our musical stage is entirely reduced.

Why should this be? Is it because England is deficient in musical genius and talent? On the contrary, our living dramatic composers are equal to any in Europe: the names of Bishop, Barnett, Balfe, Wallis, Macfarren, Loder, Smart, Hiort, and others might be added—form a list which we could challenge either France, Germany, or Italy to surpass. In regard to vocal talent, the English voice is second in quality only to the Italian, and our principal singers are good and cultivated musicians. To disparage them is a vulgar error, derived from our too easy acquiescence in the arrogant language of foreigners. Very different was the language of the modest and candid Weber. In one of the charming letters to his wife, written when he was bringing out "Oberon" at Covent Garden, he said, "And now, my dear love, I can assure you that you may be quite at ease both as to the singers and the orchestra. Miss Paton is a singer of the first rank, and will play *Reiza* divinely. Braham not less so, though in a totally different style. There are also several good tenors, and I really cannot see why the English singing should be so much abused. The singers have a perfectly good Italian education, fine voices, and expression. The orchestra is not remarkable, but still very good, and the chorus particularly so. In short, I feel quite at ease as to the fate of 'Oberon.'" If Weber spoke thus favourably almost thirty years ago, he could have expressed himself still more strongly had he been writing now. As to the means of establishing a national opera, as great and splendid as that of Paris, is not London the richest metropolis in the world?

London, then, might rival Paris, or any other capital, in her national opera, as in everything else, were she only to set rightly about it. The attempt has failed again and again, because it has never been fairly made. It has been made precipitately, without due preparation, and without the provision of adequate resources. It has been made with narrow-minded, short-sighted views—with a desire to gain money by a sordid and suicidal parsimony. It has been made by persons deficient in taste, judgment, and experience, who have mistaken the real wants of the public, and sacrificed to the ignorance and vulgarity of the multitude. To such causes, we confidently affirm, every recent failure may easily be traced, and we hope that the parties (whoever they may be) to this new scheme will make the errors of their precursors serve them as beacons.

The London Sacred Harmonic Society has just published a report of its proceedings for the past year. The financial result is by no means favourable. The receipts of the year, from concerts and subscriptions, have been £1088 7s. 6d, and the expenditure has been £1258 18s. 8d., leaving a loss of £170 10s. 11d., in addition to the sum of £192 10s. 9d., deficient on the previous account. The subscriptions, which in 1851 were £1186, and in 1852, £824, have in 1853 further diminished to £735. The report, nevertheless, does not speak despondingly. It concludes thus:—

The working expenses of the Society have been considerably reduced, without in any way affecting the quality of the performances; and although the number of the subscribers has in a small ratio decreased, which has slightly affected the amount received for subscriptions, the stability of the Society has nothing whatever to fear, the Committee being determined to carry on its operations upon the principle on which it was originally established, namely, an endeavour to make it self-supporting, and to encourage *native talent* in the attainment of an art elevating and improving at once man's moral and physical capacities.

A pleasant vocal entertainment, called "The Emerald Isle," was given on Monday evening by Mrs. Gibbs, at the Hibernian-hall, adjoining the Polytechnic institution. Mrs. Gibbs was Miss Gradden, in former times a favourite singer at Drury-lane and the English Opera-house. Her entertainment is a lecture containing sketches of Irish character and manners; well written, pleasingly delivered, and illustrated by national ballads and pictorial views of Irish scenery. Mrs Gibbs retains in a considerable degree the gifts which, in her younger days, made her so attractive a performer—her rich contralto voice, and the simplicity and expression of her style. She was much and deservedly applauded; and her entertainment promises to be very successful.

The improvements which have from time to time been made upon the Harmonium, have so successfully removed the original defects of its construction, that it has for some years been gradually becoming into general use as a substitute for the organ in the accompaniment of sacred music. The most recent improvements are those made by Messrs. Alexandre, of Paris, who may be said to have brought its mechanism to a state of perfection The instrument invented by them, which they have called the Model Harmonium, is almost universal in its capabilities and its application. Uniting the powers of the organ with those of the pianoforte, it is capable of giving full effect to music of every class, from the church anthem to the lightest strains of the drawing-room. Though smaller than the common square pianoforte, the harmonium possesses the depth of tone and continuity of a large organ: it is, consequently, superior to the pianoforte in the performance of sacred music, while it now rivals that instrument in the clear and brilliant articulation requisite for the most rapid passages. The harmonium, too, by means of its various stops, which can be used at pleasure by the performer, can produce the finest effects of a full orchestra. One of its great quali ies is, that *it never goes out of tune*—this being one of the properties of the beautiful principle applied by Mr. Wheatstone to the production of musical sound. Many of the greatest performers on keyed instruments—Thalberg, Lizst, Lefebure-Wely (the accomplished organist of the Madeleine at Paris) and other such artists—find in the harmonium the best exponent of their most beautiful ideas; and, as a drawing-room instrument for amateurs, its small size its compact and elegant form, and its applicability to every musical purpose, must speedily bring it into as general use as the pianoforte

THE THEATRES, &c.

DRURY-LANE.

On Wednesday, there was another morning performance. Mr Brooke played *Virginius* to a full house; and again demonstrated the reality of his success. There is, however, greater variety of opinion than usual on the excellence of his acting, arising partly from the inequality of his playing in different characters, and the decided physical advantages that he personally possesses. There are many who will set these against his intellectual claims, and tardily admit his merits in both kinds.

MARYLEBONE.

It is with much pleasure that we find that Mr. John Wm. Wallack, the Haymarket tragedian, has become the lessee of this theatre, and is shortly expected over from America to take the lead in its performances. The management at present is conducted by his wife, who has already won a reputation in the United States as a tragic actress. On Monday, the drama of "Broken Toys" was well performed; followed by Mr. Planché's drama of "The Fair One with the Golden Locks," in which Miss H. Gordon, late of the Olympic, sings and acts delightfully in the part of *Gwenyfid*.

The theatre, which has been repaired and ornamented, was well and fashionably attended during the week.

SADLER'S WELLS.

The revival of the season was produced on Saturday, in the shape of "A Midsummer Night's Dream," in which the fancy of Shakspeare is so playfully manifested in the field of the supernatural. The graceful manner in which the poet sports with his subject is within the apprehension of all. The play is seldom performed; not because, as it is vulgarly supposed, of its being too poetical, but on account of its requiring too extensive an interpretation. It demands a large company, and a variety of talent, to give it with grace and effect. The *dramatis personæ*, on this occasion, have been very efficiently provided for: Miss Cooper's *Helena* being excellent, and Mr Phelps's *Bottom* equally original and admirable. The latter, indeed, is one of those singular eccentric assumptions in which the manager of this suburban theatre has occasionally indulged, to the gratification of the select audiences that visit this well-conducted house. There is nothing conventional in Mr Phelps's performance of this part, but he has evidently conceived for himself both the idea and fashion of its embodiment. The nervous temperament of the sedentary weaver, and his anxious eagerness to enter into a new world of activity, with the sense of the importance attached to the adventure in which he and his fellow-mechanics are engaged, were all in at artistically indicated. A certain angular and fidgetty motion of the arms aided the impersonation. The perplexity into which he was thrown by his dream, and the acting of the tragical comedy, were delineated and illustrated with first-rate histrionic skill. In such creations Mr. Phelps evinces decided genius. The appointments of the play were excellent. The whole had, indeed, a gorgeous and fairy-like effect; and the scenery—some of which was moving—does great credit to the painter, Mr. Fenton. The house was crowded, and the plaudits were frequent and well-merited.

ADELPHI.

The "Discarded Son" is the title of a new piece produced at this theatre on Monday. It is an adaptation by Mr Benjamin Webster, from the French of MM. Bayard and Bévillle—a comédie vaudeville—produced at the Théâtre du Gymnase, and called "Un Fils de Famille." The drama is in three acts, each exhibiting a contrast in scenery and incidents In the first, we have the discarded son, *Albert Blondel*, the heir of a Parisian banker, enlisted as a Lancer, under the control of *Colonel Fremain* (Mr. C. Selby), and amusing himself, as he best may with his new military acquaintances. Here he meets with the *Countess de Belrose*, disguised as a peasant, so fascinates him, that he neglects his parade duty for her conversation, and thus becomes liable to punishment. A young friend, too, an artist, who conceives a plan for his discharge from the regiment and his restoration to his family, induces him to visit, in plain clothes, the château of the *Countess*. The events at the château occupy the second act. The imprudent young fellow here takes pleasure in aggravating the *Colonel*, putting upon him a series of petty affronts, until a duel is provoked, and he gets run through the arm. All this time he has been unrecognised; but next morning at barracks, when cited before the *Colonel* for examination, suspicions awaken in the mind of the latter, as to his identity; and at last, to prove it, he pinches him on the wounded arm, inflicting almost intolerable torture, which the brave young man, however, stoically endures. This is, indeed, a painful incident, and scarcely to be seen on the range of dramatic representation. In the end, *Blondel's* discharge arrives; and the *Colonel*, though stupid and cruel, has yet the grace to express his admiration of his victim's heroic qualities, and to surrender the *Countess*, to whom he had himself been affianced, to the one whom he now perceives to be her accepted lover. The acting, throughout, of this drama was excellent; and the performance, though somewhat tedious, in parts, was ultimately successful.

PRINCESS'

This theatre re-opened on Monday. The spectacle of "Sardanapalus" still maintains its place on the boards. The audience was both numerous and fashionable. On Tuesday, the comedy of "The Rivals" was revived, with new decorations and dresses. We do not recollect having seen this fine and lively play better performed. The two *Absolutes*—father and son—were equally impersonated by Mr. Addison and Mr. W. Lacy; and Mrs. Winstanley, as *Mrs. Malaprop*, was a grand example of physique and pretension. When we mention that Mr Harley acted *Bob Acres*, it will be readily apprehended that the cast of the parts was perfectly strong. There was a very good house, and the reception of the performance by the audience was, though not demonstrative, quite satisfactory.

EDINBURGH.

Edinburgh.—On her revisit to the theatre here, Miss Glyn appears to have been very successful, and to have experienced a hearty and well-deserved welcome. On Monday week she appeared as *Bianca*, and "created" in the words of the local critic, "a great impression on the audience." Classical, without being cold or formal, the frenzy of the character in the latter scenes combined a display of physical force with remarkable intelligence and the workings of mighty passions—jealousy, revenge, remorse, and the emotions that induce broken-heartedness and sudden death. We are happy to find that this gifted actress has since appeared in *Belvidera*; in which, as well as in *Julia*, in the "Hunchback," she is stated to have won "golden opinions."

Cremorne.—These gardens are now closed for the winter recess. We fear we cannot congratulate the indefatigable lessee upon a remunerative extraordinary length of the season, which has continued nearly seven months, or upon a reward commensurate with his energy, enterprise, and spirit, as a caterer for the amusement of the public. We wish him better success

Dublin.—Mr. Love, the polyphonist, has produced in this capital, we find, an entirely new entertainment, entitled a "Voyage to Hamburg," in which he relates various amusing adventures, and introduces to the audience the Captain, and some passengers of the steamer. We cannot enter into the details of this new entertainment, which, according to the account given of it by the journals, is uncommonly clever and amusing. We shall have, doubtless, an opportunity, ere long, of witnessing its performance in London, when we shall be enabled to do fuller justice to its originality and point. The ventriloquial introductions appear to have been of an extraordinary character. A man supposed to be descending by a water spout, is, apparently, encountered at the open window, and a struggle is pretended to drag him into the room. So

naturally was this managed, that the audience were completely deceived by the illusion, and "at one moment," says the critic of the *Daily Express*, "a sudden rise took place among the audience, apparently for the purpose of catching a glimpse of the person presumed to be outside." In a sort of lesson is owing to the immitable skill with which Mr. Love manages what is called "the perspective of sound," and in which he seems, in the instance, even to have surpassed himself

THE OPERA CONGRESS OF VIENNA.—A letter from Vienna says, "Since from the hoarse alarms of war to the lyric drama, the Wagner is here delighting the Vienna people, and Mr. Gye is also here elbow deep in common law and musical diplomacy. I think that I may have to see a little on the Oriental question, but what I chase the triad constellation of Lumley, Gye, and Wagner are by no fairly baffles any secret powers. Hr. Saife is also here, and has the satisfaction of seeing the "Bohemian Girl" in the play-bills every ten days. He is now bringing out his opera of "Rosamunde" at the Carnithner Thor, with a new contralto, Madame Hermann, who has a strong theatrical chest voice, and takes the *Fides*, &c., as double to Wagner; she promises well."

NEW YORK, Sept. 16.—M. Julien, the chief of the immaculate waistcoat and the silver wand, has carried everything before him. One night, on receiving an encore for some sentimental part of "La Sonnambula," he recalled the orchestra, and played all the quadrilles he ever thought. He reascended his red velvet throne on the dais, threw himself into an attitude of ecstasy—meanwhile we held our breath in silent wonder—presently the ringlets appeared to undulate, the baton almost bent beneath his convulsive pressure; throwing both hands abroad, and stamping thrice, he invoked the genius of America to listen to "Yankee Doodle," played with all the appropriate instrumentation of his well drilled band. Such a *tour de force* had the most electrical effect you can imagine. Young America gave itself up for several minutes to insane demonstrations of joy; and when the "Napoleon of music" followed up his *coup d'état* by "Hail, Columbia, happy land!" the rafters of Castle-garden echoed to a thunder of applause more loud than even in its warlike days (for it was erected as a fort) they had ever known.

A MARVELLOUS VIOLONCELLO.—M. Felicien David, the well known composer, inherited some time ago an old violoncello, with other things, left by a friend. He paid no attention to it, and it became covered with dust. A few days ago Blaisdel, the respectable instrumentmaker, paid him a visit, and discovered the violoncello. On examining it, he cried, "You have there a marvellous instrument! He took it home to repair, and then found that it bears the signature of Andrew Amatus, Cremonius. "M. David has already," says the *Siècle*, "refused 20 000f. for it."

THE DEARNESS OF COALS.—Much stress has lately been laid on the want of ships to bring coals to market; but we think the following remarks (from a morning paper) quite accounts for the increased price of that article:—"That sea should expect cheap coals while dear everything else is preposterous. There has been an increased demand for coal, and that alone is sufficient to enhance the marketable value of coal; the owner has to pay dearer for commodities he himself consumes, it is only natural that he should look for a higher price for what he sells. The same with the pitmen; they claim to participate in the high prices. Again, the shipowner in the repairs and victualling of his ship has to pay more for his beef, pork, biscuit, and all articles required by him. The seamen whom he employs also, having most of them families to support, look for better wages to enable them to meet the increased demand at home for fuel, bread, candles, and, in many cases, rent. Here then, is a combination of causes to account for the rise in the price of coal; to which may be added a slight derangement by partial strikes of pitmen. But to those who call for the entry of fore-in vessels into the coasting trade, in consequence of the reputed scarcity of vessels, there is a perfect answer at hand. The returns published by the Coal Exchange gives the following:—

COMPARATIVE STATEMENT OF 1852 AND 1853.

	Tons.	Tons.
Imported from January 1 to September 30, 1852	2,405,367	2,405,367
Imported from January 1 to September 30 1853	2,441,706	2,441,706
Increase of sales in the present year	99	
Increase of tons in the present year	36,648	

Coal Exchange London, October 1, 1853

And, for the last few markets, there have been more vessels up than could obtain a sale for their cargoes. On the 30th September there were upwards of 240 cargoes; October 3d, 250 cargoes; October 5th, 270 cargoes; so that there is no dearth of shipping at all events. As a set-off to the colliers, we will now give a report of the coals brought by railways and canals:—

COMPARATIVE STATEMENT OF 1852 AND 1853.

	Tons cwt
Coals by railways, from Jan. 1 to Sept. 30, 1853	4,[illegible] 17
Coals by railways, from Jan 1 to Sept. 30, 1852	2,[illegible]2 17
Increase in the present year by railways	[illegible]0 ..
Coals by canals, from Jan. 1 to Sept. 30, 1852	[illegible] 0
Coals by canals, from Jan. 1 to Sept. 30, 1853	[illegible] 18
Decrease in the present year by canals	12,047 2

If we deduct the decrease by canal from the increase by sea and railway, we arrive at a total increase in the coal brought to London in the first eight months of 1853, as compared to the same period in 1852, of 210,611 tons, or close upon a quarter of a million. If the coal pit owners on the one hand, prices on the other, and the shipowners against both, understand their position, the mere throwing open the coasting trade to foreign ships, and placing them on the same footing as British, will have but slight effect on the price to consumers.

NEW ROYAL STEAM YACHT.—It has been decided to build a new yacht for her Majesty. It is to be a paddle steamer, and to be built of iron, and constructed with reference to the attainment of the highest possible speed. It is said that not less than 17 knots an hour will be got out of the new vessel. Her length is to be 200 feet; breadth of beam, 7 feet; with a tonnage of 1700 tons, and engines of 600-horse power. As compared with the present yacht, *Victoria and Albert*, the new vessel will be 667 tons greater burden, 75 feet longer, 7 feet wider beam, and 100-horse power additional. The paddle principle has been adopted, although her Majesty is understood to have a preference, in some respects, for the screw; but the latter would necessarily be the cause of much vibration at the after part of the vessel; whilst her Majesty might be occasionally put to inconvenience in the case of the screw getting out of repair or deranged.

MILK AND FEVER.—It is a singular fact, which should be extensively known, that seventeen families residing at Stoke, in each of which fever, and in many cases every one of the members, have been attacked with typhus fever during the past few weeks it has been raging at Stoke, purchased the milk they made use of from a man who lived in an unwholesome part of that locality, and who himself fell a victim to the ravages of the disease. We state the fact, without further comment, or comment, hoping that the lesson which it undoubtedly teaches will not be disregarded.—*Devonport Independent*.

METEOROLOGICAL PHENOMENA IN CHOLERA.—Mr. J. Mather, of South Shields, has published a letter upon the above subject, in which he shows that the prevalence of cholera is invariably attended by marked electric derangements in the atmosphere, and that when electricity is negative, vitality is depressed, and when positive it is excited. This is proved by the fact that when the cholera was so prevalent at Paris in 1849, the deaths rapidly increased till the 8th of June, on which day they numbered 623. On that evening a great thunder-storm shook the city nearly to its foundation. Next day the cholera began to decrease, in ten days there were little more than 100 deaths a day, and in twenty days little more than thirty. "In the same year," says Mr. Mather, "when cholera of a very fatal character, was in this district, I made daily observations, sometimes twice a day, with a magnet, which, in the normal condition, carried about 2 lb. 10 oz. When the atmospheric indications were at the worst, and cholera most fatal, the magnet could only sustain 1 lb. 10 oz, varying with the virulence of the disease. My hygrometer indicated at the same time an atmosphere nearly saturated with moisture." Mr. Mather adds that the electricity of the atmosphere has lately been so very prevalent, the old cholera atmosphere has been as marked as it was in 1849 and 1832.

CAUTION TO THE PUBLIC.—NEW STAMPS.—For all payments amounting to 4*d*. and upwards, after Monday last, a receipt must be given on stamped paper, or an adhesive stamp must be affixed. A "Queen's head" will be treated as an evasion. The adhesive stamp must be obliterated by the name or initials of the person giving it, so that it may not be twice used. The penalty for not defacing a stamp is £10, and for using a stamp twice £20. It is necessary to caution the public, as it is the intention of the Stamp-office not to prosecute for not affixing receipts on unstamped paper, or for otherwise infringing the new law, and to give part of the penalty to the informers. Last year the number of receipts for sums of £2 and upwards was 2,230,000, and the duties was £185,491. It is now anticipated that by the reduction of the duties there will be a large increase in the amount to be derived from receipts. The new stamp much the appearance as the old stamp, but bears the impression, "Receipt—One Penny," with figures for the day, month, and year, in which the stamp was stamped: thus "17—9—53," meaning the 17th of the 9th month (September), 1853. The new adhesive receipt stamp is nearly one-half larger than the ordinary postage stamp. It is printed in light blue, and bears an impression of a "Queen's head," encircled by the letter. In the garter is inscribed the words, "Receipt—One Penny." The stamps are sold in sheets; and by an ingenious process, for which the inventor obtained a patent, are divided by perforations, enabling persons to separate them with ease. As a protection against forgery, the receipt stamp has the figure of an anchor very ingeniously introduced in the paper. It is only perceptible when held up to the light

CHESS.

TO CORRESPONDENTS

D. M., Motherwell.—There is an able and interesting series of Chess articles carried on weekly in the *Bowling Gazette*. We are not aware that any newspaper in the other Provinces gives a section to Chess

JEVENSIS.—There will be time enough to express such an opinion at the termination of the [illegible]

J. R. S.—Your application on the subject of the [illegible] shall be duly attended to. R. H. Brien, Esq., the treasurer, and Mr. H. George, 4, Club Chambers, Regent-street, are in possession of documents, subscriptions, &c., received by the gentleman who [illegible] on the first instant.

[illegible] Chess-room.—[illegible] Pawn [illegible] attack the White Queen, and is therefore [illegible]

T. H., Norwich.—A Pawn cannot be captured "en passing" by any piece except a Pawn.

CANTABRIGIENSIS, Marlborough.—Black could claim a second move, Rook, Bishop, or Knight for the Pawn in question. Get the "Chess Player's Handbook," published by Bohn, of Covent-garden.

D. De T. Bas.—The problem to which you refer is perfectly correct. The key move is—1. B to Q B 6th.

A. B.—Get the *Chess-Player's Chronicle*, published by Kent, Paternoster-row

C. G.—In the first edition of the "Tournament Games" the diagram you refer to like many others, contains an [illegible] but in the second edition [illegible] and is perfectly correct.

J. A. [illegible], Worcester-road.—[illegible]

G. T. M., Leeds.—Second series of Chess Lessons may be obtained, we believe, of Messrs. Bailey the publishers, Cornhill.

T. C., Wolverhampton.—Apply to the Hon Secretary of the Leamington Chess-club, No. 5, Parade, Leamington, for a copy of that Society's rules

C. B. S., New York.—Your letter reached us, but we were not fortunate enough to see the [illegible] referred before he left England

H. W., Wisbeach.—Duly received, and now on the examiner's hands

[illegible] [illegible] of the Sphynx you suggest has been repeated 3 times

AN AMATEUR CHESSMAKER.—Your suggestion of the new bevelled and engraving of the beautiful rose adorn portrait by Signor Raggi, shall not be forgotten

F. S. Ribon.—The defence given has been tried and rejected long ago. It is quite untenable.

J. P. H. Wakefield.—Your solution of Problem No. 502, in six moves, shall be examined.

[illegible] Boston.—Another A. B. and Esq. correspondent

R. G. The Pawn, in the position given, can take the Queen.

MALVERN.—Explain of a diagram what you mean

[illegible] P.—We trust our notices will in future appear without intermission; but correspondents requiring answers the same week they write, must forward their communications by Tuesday evening.

M. A., Aberdeenshire.—It shall have a place among the Enigmas

A READER.—Stalemate makes a drawn game.

BLYTHE.—Join the newly-established Chess club at Tidkestone. You may learn particulars by addressing a note to Hiram Ayr, Secretary, Mr. Goddess, of that place.

H. J. Hampton Wick.—It shall have attention

[illegible], Boston.—If the games we have lately published "have all been borne by White," it is an accidental circumstance. The colour of the pieces has not hing whatever to do with determining the first move. You should procure some good elementary work upon the Game.

CLERICUS.—In the match now pending between Messrs Löwenthal and Harrwitz, the winner of the first eleven games will be the victor

J. F. H.—If Black had taken the Kt Pawn with his Queen's Rook, White would simply have played the King to Rook's square, winning of hand in a few moves.

J. P.—They shall be again examined. CLERICUS. Look at it once more

SOLUTIONS OF PROBLEM No 500 by Jack of Shrewsbury, Rev. Dr. Harrwitzwah, R. S. L., Hertford; J. P. W. Chappell; E. S., Chetton-st.; Dereon, J. H., Sheffield, Sheddon, J. W. B., Dereon, are correct. A. Z. [illegible] are wrong.

SOLUTIONS OF PROBLEM No 503 by A. B., Dereon, C. G., J. P., T. Addison, J. Wendell, Carl Fellers, H. A. S., A Reader Gallimaufry, Rev. Dr. Harrwitzwah, R. S. L., Hertford; [illegible] P. W. Chappell; E. S., Chetton-st.; Dereon, J. H., Sheffield, Sheddon, J. W. B., Wisbeach; J. C., Bellingham, Jack of Shrewsbury, Dereon, Phiz, Cave, Martin [illegible] S. N., P. T., O. P. Q., W. H. Murdoch, Rob Roy, Philip, R. T. M., Gallimaufry, and [illegible].

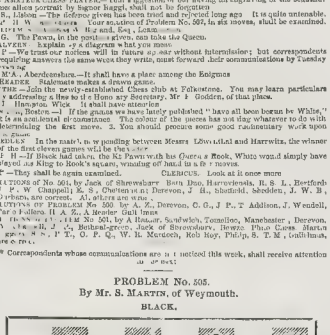
PROBLEM No. 505.
By Mr. S. MARTIN, of Weymouth.

BLACK.



WHITE.

White, playing first, gives mate in five moves.

MATCH BETWEEN MESSRS. LOWENTHAL AND HARRWITZ.

Since our last report of the progress of this contest, the Hungarian has completely distanced his opponent. In the last five sittings, he has actually won every game! and won them with a facility which shows incontestably his superiority in depth and power of combination. Up to the time we write, the score stands thus:—

Lowenthal	5
Harrwitz	2

(Ruy Lopez's Knight's Game).

WHITE (Mr. L.)	BLACK (Mr. H.)	WHITE (Mr. L.)	BLACK Mr. H.)
1. P to K 4th	P to K 4th	30. K R to Q sq	Q to her B 2nd
2. Kt to K B 3rd	Kt to Q B 3rd	31. P to Q 3rd	K to Kt 2nd (n)

15. K Kt to K B 3rd	Kt to K R 4th	44. K to Q sq (o)	R to Q Kt 5th
16. Q Kt to K B sq	Kt taken B (h)	45. K to Q B 2nd	R to Q 3rd
17. K R P takes Kt	Castles on K's side (i)	46. P to Q B 5th (ch)	K to Q B 3rd
18. Q to her 2nd	Q Kt to Q B sq (k)	47. P to K B 3rd	R to Q Kt 4th
19. Q K to Q sq	Kt to Q B 3rd	48. K to Q 2nd	R takes Q B P
20. Q takes K R P	Kt to Q 5th	49. R to Q B 3rd	K to Q Kt 4th
21. Q to her 3rd	P to Q Kt 3rd	50. R to Q 3rd	P to Q R 5th
22. Q to her 6th	P to Q 3rd	51. R to Q 4th	R to Q 3rd
23. Q Kt to K 4th	Kt to Q 2nd	52. R to Q 8th (ch)	K to Q 4th
24. Q takes B	K to K 2nd	53. K to Q 3rd	K to Q Kt 5th
25. Kt to K 3rd (m)	R to K 3rd	54. K to K 4th	R takes R
26. Kt to B 5th (ch)	K to Kt sq	55. K to Q B 5th	K to Q Kt 4th
27. Kt to Q 6th	Q to her Kt sq	56. P to Q Kt 4th (p)	R to Q R 3rd
28. Kt takes B	Q takes Kt	57. K to Q Kt 2nd	K to Q Kt 3rd
29. Q R to Q 5th	P to Q 3rd	58. K to Q B 3rd	K to Q Kt 4th
		59. P to K Kt 3rd (q)	And White wins.

(a) This mode of car ying on the game is of comparatively modern origin. It seems qu to safe and effective

(b) A favourite move, and a very bad one, of Mr. Harrwitz

(c) An excellent rejoinder to Black's last unbalanced sap

(d) Ill considered in the extreme, since it allows White to develop all his forces, and make a powerful attack upon the centre

(e) In this as in all the games since the two first, the Hungarian has proved himself an able tactician: he is ready for [illegible] and [illegible] [illegible] [illegible]

MONUMENT TO SIR ROBERT PEEL, AT MANCHESTER.

The design of Mr. Marshall's Monument, in bronze, to Sir Robert Peel, which was inaugurated, at Manchester, on Wednesday, is already familiar to a large portion of the public, the model having been exhibited during the past season at the Royal Academy; where it occupied a conspicuous position in the hall, at the foot of the stairs. It consists of a colossal figure of the statesman, standing, with, on each side, a sitting female figure—one representing Commerce and Industry, surrounded by bales of goods, a rudder, corn, &c.; the other, Arts and Sciences, having a book in her hand, inscribed "Ars et Scientia;" Music, Painting, and Mechanical appliance being typified by a lyre, a pallet, a wheel, &c. The portrait statue is treated with great simplicity and general truthfulness; the costume that of the period, with the exception of a cloak loosely thrown over the shoulders. The head is erect, as though Sir Robert were in the act of addressing the House of Commons; the right hand holds a roll of paper, whilst the left rests on the hip—the latter a position which Sir Robert Peel very often indulged in. The face is a likeness, though not a striking one. This interesting Monument has been very finely cast in bronze by Messrs. Robinson and Cottam, of Lower Belgrave-place: the principal figure, which is 10 feet 6 inches high, was cast in one piece, and contains nearly three tons of metal. The two allegorical figures weigh upwards of a ton each. The pedestal upon which the figures are placed is 12 feet high.

THE MANCHESTER MONUMENT TO SIR ROBERT PEEL, BY W. C. MARSHALL, A.R.A., INAUGURATED ON WEDNESDAY LAST.

THE CRYPT OF ST. PAUL'S.

(To the Editor of the Illustrated London News.)

Since the death of Wellington, another of our great warriors has passed away, and the remains of the conqueror of Scinde should, I think, have been placed among those of the gallant men, who have suffered for their country and contributed to its glory. St. Paul's Cathedral, now that Westminster Abbey is crowded to repletion with our illustrious dead, seems to be the most meet receptacle for the remains of our great ones; and Nelson and Wellington should be surrounded by those who shall have distinguished themselves in the field or on the wave.

There is a chilling circumstance, which deprives St. Paul's of one of the most striking effects possible. As we stand under the centre of the dome, and gaze around and see the sculptured groups, which record the names and deeds of our warriors, and other men of worth and genius, the question arises, *in what part do they lie?* For we cannot, as in Westminster Abbey, suppose them buried at the very foot of their statues or monuments. And if we descend into the Crypt to seek their graves or sarcophagi, we have to go down into a dismal series of dirty, unsightly, and obscure vaults; and can hardly distinguish the slabs, which cover their ashes, aided by the faintest ray of light through a small window, or by a rare gas-flame here and there shining amidst the gloom.

Recalling to mind the sanctuary Crypt of St. Peter's, at Rome, which forms a large opening in the floor of the Vatican Temple, immediately under the Dome, with its mysterious gloom, and the thousand tapers burning around; and remembering the numerous examples of similar arrangements in other churches of Italy, it occurred to me some years ago to blend more intimately the living and the dead, the monument and the grave; but I feared that the novelty of the idea in this country might create prejudices fatal to the proposition. However, the illustrations which have recently appeared of the Napoleon Tomb in the Chapel of the Invalides at Paris, may reconcile those, who might previously have objected; and if we would not be shamed by the adoption of an arrangement similar to the one just quoted, why should not the centre of the pavement of St. Paul's be thrown open, and the tombs of our heroes exposed to view?

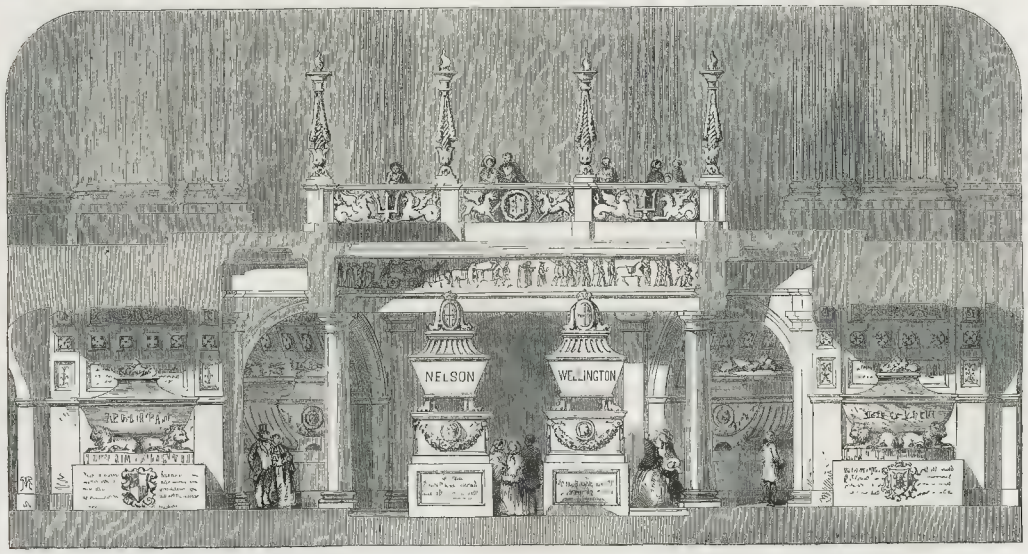
Here the original arrangement, as left by Sir Christopher Wren and now existing, lends itself to such a disposition of plan; and we should not have the expensive process to go through, as in the Invalides, of digging out the soil and strengthening the foundations. The central space below should be an open circular colonnade, of the Roman Doric order, as at present, with a peristyle six feet wide, to afford room to walk all round. There are now eight arched radiating open vaults. Leave two for accesses or passages, and convert the other six into sepulchral chapels, cased with marble, enriched with sculptures, and with a handsome sarcophagus in the centre of each, to receive the remains of the future illustrious dead—one to be aptly appropriated to Sir C. Napier. In the centre should be placed the tombs of Nelson and Wellington, as types of our naval and military heroes, and *side by side*; instead of Nelson occupying exclusively the central station of honour, and Wellington having his tomb in a remoter crypt, and *not under the dome*, according to the arrangement which, it is understood, has at present been fixed upon. To prevent draughts of air rising from the vaults, the sepulchral chapel and passages should be inclosed with iron railings, painted and gilt, and filled in with plate glass.

Let the opening above the pavement have a bronze gilt circular balustrading, with eight pedestals and noble candelabra. Thus would St. Paul's gain in sentiment and expression: a central object would be given to it; and the visit to the metropolitan cathedral would become one of still deeper interest and delight; and the stranger, resting on the bronze gilt railing, would look down into the circular court, and, at a glance, behold the tombs of our two great warriors immediately beneath, and side by side. And he would catch a glimpse of the sarcophagi in the radiating chapels around, containing the remains of men, of whom it would be a proud distinction to say, that they were next to Nelson and Wellington in this sepulchral circle of our mighty dead.

I am, sir, yours, &c.,
Thomas L. Donaldson.

Portrait of Lord Raglan.—The admirable full-length portrait of Lord Raglan, Master-General of the Ordnance, painted for the United Service Club, by Mr. F. Grant, R.A., is now on view at Messrs. H. Graves and Co., previous to its being placed in the hands of Mr. H. Cousins, for the purpose of being engraved.

Coal-mines in Catalonia.—A letter from Barcelona, 24th September, says:—"The boring of an Artesian well has been commenced in the neighbourhood of Figueras. After the borer had steadily passed through a stratum of clay, and another of chalk, it met with a bed of coal, which, on being tried, was found to burn as well as the best English coal. The borer passed to the depth of 30 feet into this bed without reaching the bottom of it, and from other indications there is reason to suppose that it is of very considerable extent. This is a discovery of the highest importance for Catalonia, where there are so many manufactories which consume a large quantity of that article."



THE CRYPT OF ST. PAUL'S CATHEDRAL.—PROFESSOR DONALDSON'S PROPOSED IMPROVEMENT.

SHAM FIGHT ON ROBOROUGH DOWN, DEVON, UNDER THE COMMAND OF GENERAL SIR HARRY SMITH.

GRAND FIELD DAY ON ROBOROUGH DOWN.

On Thursday, the 6th inst., this interesting spectacle took place on the Down, under the command of the highly-distinguished General of the district, Sir Harry Smith. The troops that took part in the proceedings of the day were the following:—

1ST BRIGADE. Brigadier Lieut.-Col. R. Andrews, Royal Artillery.—The Devon Militia Artillery, under Major W. Hole, and Capts. Russell and Harrison as mounted officers, with four 6-pounders.

2ND BRIGADE.—Brigadier Lieut.-Col. Sidley, 50th Regiment.—50th Queen's Own Regt., and 25th South Devon Militia.

3RD BRIGADE. Brigadier Lieut.-Col. Rothe, 93rd Highlanders.—93rd Highlanders and Royal Marines.

The Royal Artillery, with two six-pounders, and about 100 recruits from the several regiments in garrison, formed the skeleton enemy, under the command of Captain Elliott, Royal Artillery. The whole force on the field was about 3500.

All the troops had a rendezvous at Manadon Gate, at the junction of the Plymouth and Devonport Roads to Tavistock, at ten o'clock, and then proceeded in order of march. The 1st and 3rd Brigades kept a forward route to the Downs. The light company of the 93rd Highlanders, forming the advanced guard, followed by Captain Worth's company of Devon Militia Artillery, with four six-pounders, covered by the remainder of the regiment as a battalion, marched through the village of Jump to the Downs, and found the enemy occupying the heights commanding the village of Jump, followed by the remainder of the 93rd Highlanders and Royal Marines. Whilst the South Devon Militia and part of the 50th Regiment turned at Bickleigh Down, and, preceded by a company of skirmishers (50th), passed through lanes, under the guidance of an officer of Royal Engineers, and debouching on the Downs, advanced across the ground, manœuvring so as to turn the enemy left flank.

As soon as the several brigades arrived on the Downs, the light company of 93rd Highlanders extended to the left and laid down. On the order from the General, Captain Worth's Company, with four six-pounders (covered by the remainder of the regiment), opened their fire on the enemy. After firing some rounds, they ceased firing, and advanced towards the centre of the Downs, and again came into action, and firing on the enemy with great precision, did great service. The general, in person, conducted an advance of the South Devon over a considerable space of rough ground, which would have broken older troops, but they pushed on vigorously at the double firing, shouting supported by the 50th, and having attained the desired point, a rapid flank movement was ordered, which compelled the enemy to abandon their guns. The Devon Militia Artillery at the same time pressed for

FUNERAL OF M. ARAGO, IN PERE LA CHAISE.—(SEE NEXT PAGE.)

ward at the double, took possession of the guns, and moved forward, while the 3rd Brigade on their left and front formed line, advancing, attacked the heights and key of the enemy's position; the Highlanders leading, and dislodged them with the assistance of the Devon Militia Artillery, their firing being both rapid and successful. While these movements were in progress, the 2nd Brigade pushed forward briskly on the Tavistock-road, to prevent the enemy's retreat by it. The firing now ceased, the troops were re-formed, the enemy's retreat and movements were reconnoitred, and finding he had taken up a position, his right resting on the fence of Bickham park, his left extending along the ridge tending towards the sea, on the Downs, in order to cover his retreat. After some minutes of sharp firing from the guns, and heavy fusilade of the 2nd and 3rd Brigades, the enemy was entirely dislodged, and closely pursued, the whole presenting a morning's manœuvre of a most gratifying character to those spectators who were fortunate enough in commanding a view of the spectacle.

After the evolutions, which were gone through with great precision, the troops dined on the Common; and, previous to leaving the ground, were addressed by Sir Harry in a characteristic speech. He alluded in terms of high praise to the soldierlike appearance and the order and efficiency of the regular troops; and, turning to the militia, said, in words to this effect:—"It affords me great satisfaction to see you here to-day. You are an honour to your country; you have taken the only gun which has been captured on the field to-day, and that is a proud 'feather in your caps.' Now I have seen what I always foretold, and will say to the Secretary of State that the Militia of England is a body of soldiers to be depended upon in times of emergency. I am convinced, if such an enemy should ever invade this country, you will fight them bravely, and 'lick' them too." Previous to this, in addressing the Devonshire Militia Artillery, said, "Well done, my lads, you have fired right merrily; I never was served by better artillery in my life." Also Colonel Andrews, Royal Artillery, commanding 1st Brigade, after very close observation, expressed his astonishment at the progress made during the short training, and also his entire approbation of the whole day's proceeding. Major Holl, Devonshire Militia Artillery (commanding in the absence of Col Buck from sickness) at the dismissal of the regiment, expressed his gratitude to the officers for the manner in which they had done their duty; and his thanks to the non-commissioned officers and men for the way in which they had acted as soldiers ready at any time to fight for their country.

The military display created great interest: a very large concourse of persons was on the ground; and a number of equipages with the families of many of the officers, including Lady Rolle, Lady Yarde Buller, Miss Yarde Buller, &c.

FUNERAL OF M. ARAGO.

THE obsequies of this distinguished *savant* (of whom a memoir appeared in our Obituary last week) took place on Wednesday, the 5th, with much pomp, at Paris. At eleven o'clock the remains of the deceased were transferred to a *chapelle ardente*, under the principle gate of the Observatory, where his friends were admitted to sprinkle holy water over them. In the meantime a br gade of infantry, under the command of General Renault, drew up at both sides of the avenue of the Luxembourg, where they were soon afterwards joined by 200 men of the 18th battalion of the National Guard. The rain, which had set in early in the morning, fell without ceasing; but an immense crowd assembled on the avenue and in the streets through which the procession was to pass. At noon the procession began to move. It was opened by two companies of the 6th regiment of Infantry, the band playing a solemn dirge; next rode the General, accompanied by his staff, and an escort of horse chasseurs, attired in their uniform, green and black, with woollen bonnets. Then came two other companies of infantry; the detachment of National Guards; two mourning carriages, containing the clergy of St. Jacques du Haut Pas; a plain hearse, drawn by two horses; and followed by M. Jean Dominique Arago, the son of the deceased; other members of his family; his numerous friends; the members of the Académie des Sciences, of which M. Arago was a perpetual secretary; and a crowd of his political adherents—among whom were M. Garnier Pagès, his colleague of the Provisional Government in 1848; M. Pagnerre, one of its secretaries; M. Bastide, Minister of Foreign Affairs in the Executive Government under General Cavaignac; Col. Guinard, Colonel of the Parisian Artillery (who, having joined M. Ledru Rollin in the demonstration of the Conservatoire des Arts et Métiers, on the 13th of June, 1849, was sentenced to banishment; but was subsequently pardoned by the Emperor); Messieurs de Lasteyrie, Jules Favre, Carnot, Havin, Peupin, and other members of the late Legislative Assembly. Two Imperial state carriages came next, in which were seated Marshal Vaillant, Grand Marshal of the Palace, and M. Ducos, Minister of Marine, who directs *ad interim* the department of Public Instruction, in the absence of M. Fortoul. Two battalions of infantry closed the march.

The pall-bearers were M. Roux, Admiral Baudin, M. Flourens, and M. Lionville, jun. The cortège descended the avenue of the Luxembourg, passing close to the Odéon theatre, and, at the corner of it, then proceeded through the Rues de l'Est, Val de Grâce, and St. Jacques, to the Church of St. Jacques du Haut Pas. The edifice being small, very few, except the family and immediate friends of the deceased, could be present at the religious service which was performed by the parish priest, assisted by a numerous body of the clergy. At one o'clock the corpse resumed its march, in the same order, for the cemetery of Père la Chaise; passing through the Rues St. Jacques and Soufflot, the square of the Panthéon, the Rues Clovis, Fossés, St. Victor, and St. Bernard, the Quay St. Bernard, the Bridge of Austerlitz, the Place Mazas, the Boulevard Contrescarpe, the Place de la Bastille, and the Rue de la Roquette. On reaching Père la Chaise, M. Flourens pronounced an oration in honour of M. Arago; and the proceedings terminated.

RECOVERY OF THE HUNGARIAN CROWN.

THE recovery of the Crown and insignia of the ancient kingdom of Hungary must be regarded as an event since the Emperors of Austria, who always commence their coronations with that at Buda Pesth, could not have done so, while the Crown and Crown jewels of Hungary were missing. Various reports were in circulation as to their loss, which, at one time, was considered irreparable. It is said that only four persons—one of whom is M. de S——, late Minister of the Magyar republic—knew where they were secreted; and there are cogent reasons extant, that, after all, they have not been recovered in their integrity. M. de Karger, Major-Auditeur in the Austrian army, attempted to show at first that M. Kossuth had conveyed the Hungarian crown and insignia originally to New Orsowa: but, seeing that he could not conceal them there, he went to the Danube baths of Turkish Orsowa; and, finding there still less opportunity for concealment, he again returned to Old Orsowa, and, after keeping the treasures there a short time, had them conveyed by trusty persons, upon horseback, in the night, over the Czerna, towards the Wallachian frontier. It had been previously planned, also, that his followers had bought, on the same day, instruments for digging at Old Orssova, and had proceeded in the night towards the Czerna.

The winter, which set in with great severity on the Northern Danube, covering the whole country with snow several feet deep, did not allow immediate search in the vicinity of Old Orssova: but when, in the month of April, 1850, the snow had melted, all the traces of any digging had vanished; while the Republican party, to whom these searches had not remained unknown, did not fail to mislead the Austrian Government by false reports. Thus, things slumbered three years, until, last spring, M. de Karger received orders to seek again the lost crown. He, accordingly, started from various premises, which, by the result, prove to have been merely centres. He conjectured that the persons holding the crown and insignia had certainly selected a place retired, even after the lapse of years, would be recognised by them or their families and avengers. He further inferred that, as the Kossuth fugitives had taken the road over the Czerna, it was not very likely that beyond this the jewels could have been secreted. Having acquired a thorough knowledge of this locality in former years, M. de Karger researched the country for a full week; and in all hours of day and night, leaving no stone nor rock, no tree nor bramble, unsearched, and red times over the same ground. After having repeatedly examined several clumps of trees in the neighborhood, he found, in a sequestered part of the Allion an excavation of ten a, which had been surrounded by stripped the bark, had the branches singularly arranged, &c., proving that they had not been broken by the peasantry for fuel. The accidental finding of an elegant watch-key, and the handle of a pickaxe, suggested to M. de Karger that a person of the higher ranks of society had been there for some particular purpose. The softness of the ground, the loneliness of the place, as well as its easy access from the Danube, and the opposite Turco-Serbian shore, corroborated the judge's belief, and, although he had strict orders not to excavate the ground until the most certain indications had been obtained, he at once proceeded to that operation, on the 6th of September last. After the locality had been accurately surveyed and mapped, and a sort of network laid down to enclose and bisect the whole oasis of trees, having an area of twenty square fathoms, by seven parallel ditches, and to prolong them to the length of the Au, it was on the 8th of September, at 8 A.M., that the hoe of a workman struck some metallic substance, which proved to be a well-secured iron chest, which, on being forcibly broken open, was found to contain the lost crown of the Magyar kings, and their insignia.

The Crown contains 53 sapphires, 50 rubies of a pale red colour, 2 emeralds, and 138 pearls. The well-known Austrian historian, Count Mailath, in his "History of the Magyars," states that the Crown is composed of two parts—the inferior part, encircling the head, being of a later origin than the upper one, which is placed within that circle. The former, according to Count Mailath's opinion, is a relic of a Greek crown, sent as a present to the Duke Geiza of Hungary (afterwards King Geiza I.) by the Byzantine Emperor, Michael Dukas; the latter is preserved from the original Crown which St. Stephen received from the Pope Sylvester II., as a reward for his converting the heathenish Magyars to Christianity.

The history of the Hungarian Crown is surrounded by the most romantic stories; and, as we have before stated, the greatest value has ever been attached to its possession by every Government. Even the revolutionary Government of 1848 did not disdain the *prestige* conferred by the possession of the Crown, and secured its removal when Field Marshal Windischgratz, in the autumn of 1848, approached Ofen. A writer in the *Allgemeine Zeitung*, states, that when Kossuth and Ladislaus Madarasz demanded the Crown from the keeper Uermenyi, large crowds of people assembled in order to witness the proceeding. The Crown was at that time kept in the chapel of the Royal Palace at Ofen. When Uermenyi delivered it up into the hands of Kossuth and Madarasz, he said, "Here I deliver you the Holy Crown wherewith more than fifty Kings have been crowned." The people, seeing that Kossuth and his companion, Madarasz, a fierce radical, received the crown with covered hats, suddenly burst out into the cry—"Take the hat off! take the hat off."

The Diet of 1715 resolved "The Crown shall be kept at Presburg, and not be removed from thence without the consent of the Viceroy (Palatin)." So it remained at Presburg until the time of the Emperor Joseph II., who sought to centralise his dominions, and ordered the Crown to be brought over to Vienna, that it might be kept there in the Imperial treasury. The Crown was really carried to Vienna in the year 1784, but restored again to Hungary six years afterwards. From this time it has been ordained that in times of peace it should be kept at Ofen, and in war time it should be brought over to Mukats.

DISCOVERY OF THE NORTH-WEST PASSAGE.

CAPTAIN INGLEFIELD has arrived from the Arctic Regions, bringing with him intelligence of extreme interest and importance. The discovery of the North-West Passage has at length been accomplished by our hardy and gallant navigators; and the *Investigator*—by whose gallant captain (M'Clure) and his officers the discovery appears to have been established—is safe, and lying within easy reach, in point of distance, of Captain Kellett's parties from Melville Island. Captain M'Clure has verified the existence of a North-West Passage, by the discovery of a channel into Barrow Strait from the open sea, so frequently seen by Franklin and others from the coast of North America. No ship has yet been carried through, and it remains to be seen if the *Investigator* will be able to accomplish the passage.

Sir Edward Belcher appears to have made less progress from Wellington Channel, than might have been expected, up the newly-discovered Victoria Channel of Penny; and at the date when he was last seen, was still within that passage. Captain Kellett's position, as a starting-point for travelling parties, becomes of infinitely greater importance now that it would appear that Sir Edward Belcher's progress has been retarded. Captain Kellett's parties were to be directed north-west from Melville Island to the quarter where the anxious attention of those most conversant with this question points. It is to be feared that no intelligence of the results of Captain Inglefield's cruise will reach us before the next year.

Captain Inglefield unfortunately returns without the transport which conveyed his stores to Beechy Island, that vessel having suffered the fate which occasionally befalls the whalers, of being nipped in the ice; her entire crew, however, having succeeded in saving their lives. The season appears to have been most boisterous and severe, and the quantity of ice enormous. The character of the intelligence brought home is of an opposite and mixed nature, the loss of the transport being mitigated by the entire rescue of her crew, and balanced by the safety of the *Investigator*; while the absence of any further information respecting the Franklin expedition is altogether inconclusive, since Sir Edward Belcher's progress appears to have been limited to the mere channel through which Franklin is believed to have passed into the region beyond. Our judgment is therefore suspended for want of facts.

One event, however, has cast a shadow of gloom over the incidents of Captain Inglefield's cruise, the premature death, by drowning, of the gallant young French Lieutenant Bellot, of the boat's crew of a party, in order to reach Sir Edward Belcher, to communicate to him the important fact of the large deposit of provisions which Captain Inglefield had made at Beechy Island information which, no doubt, would materially influence the movements of the squadron. He has thus literally given his life to the cause to which he devoted himself with a zeal and ability never surpassed; and deeply will his brother officers in the noble service lament the premature termination of a life so precious to all who knew him, and so valuable to his country.

We commence our extracts from the despatches published by the Admiralty, with a few dates and events from Captain M'Clure's despatch, announcing the discovery of the North-West Passage. Captain M'Clure's ship, the *Investigator*, parted company with the *Herald* upon the 21st of July, 1850, off Cape Lisbourne:—

Sept. 1.—Off Cape Bathurst, many natives came on board, and, it being nearly calm, remained until the evening, when, a breeze springing up, we took our final leave of the Esquimaux upon the American coast, fully convinced that neither the ships nor any of the crews of Sir J. Franklin's expedition have ever reached their shores; they appear a quiet mollensive people (with the exception of those at Point Barrow, who, like the Bathurst tribe have no dealings with), and would assist any white people thrown among them.

Sept. 6.—At 11.20 A.M., being to the northward of Cape Parry, remarked high land from N. by E. to E.N.E.

Sept. 7.—At 9.30 A.M. passed and took possession of the discovery, and named it Baring Island. The land is bold upon the southern side, being upwards of 1000 feet in height, its northern being Bank's Land. Erected a signal pole with blackball, and left a notice in lat. 71° 8′ N., long. 122° 48′ W.

Sept. 9.—Observed land N.N.E. Named it Prince Albert's Land, which is continuous with Victoria and Victoria Land, and extends north to lat. 73° 21′ N., long. 112° 48′ W.

Sept. 11.—Ship beset, lat. 72° 52′, long. 117° 3′ W., but ice in motion.

Oct. 8.—Since the 11th of last month have been drifting in the pack—a narrowly escaped destruction several times—until, with a heavy N.W. gale on the 2nd A.M., which listed the ship 38 degrees, we were firmly fixed for the space of nine months, in lat. 72° 47′, long. 117° 24′.

Oct. 10.—Took possession of Prince Albert's Land, distant four miles.

Oct. 12.—And to day of the Princess Royal Isles, lying in the centre of Prince of Wales Strait, the channel which divides them. There is erected a large cairn, pole and ball upon its summit, in lat. 72° 46′ N., long. 117° 44′ W., and have deposited three months' provisions for 66 men, besides leaving a boat and some ammunition.

Oct. 21.—The captain, Mr. Court, and party, started to trace the strait towards the north-east.

Oct. 26.—*Discovered the entrance into Barrow's Strait* in lat. 74° 30′ N., long. 114° 14′ W. *which establishes the existence of a north-west passage.*

Oct. 30.—Five Musk oxen shot upon Prince Albert's Land, which terminated our operations in 1850.

April 18, 1851.—This day despatched three travelling parties to search the coast line, under Lieutenant Haswell, to the south east, towards Wollaston Land; Lieutenant Cresswell in the direction of Melville Island; and Mr. Wynniatt, mate, to the north-east, who respectively reaching the positions as noted below,* and traced the coast as per accompanying chart.

June 7.—Captain and Mr. Miertsching (the interpreter) communicated with the Esquimaux upon Prince Albert's Land about sixty miles south of our position, who had previously been met by Lieutenant Haswell; they traced the coast line as marked in the chart, and state that there are many of their people inhabiting the land towards the south, but that they know of none to the north ward; they are a kind, simple people, and have never before seen the white man, at whom they were evidently surprised.

July 14.—Ice opened without any pressure, and the vessel was again fairly afloat, but so surrounded with it that we only drifted with the pack, having been able to use our sails but twice, and that only for a few hours, up to August the 14th, when we attained our farthest northern position in Prince of Wales Strait, lat. 73° 14′ 10, long. 115° 32′ 30″ W.

August 16.—Finding our passage into Barrow's Strait obstructed by north-east winds setting large masses of ice to the southward, which had drifted the ship fifteen miles in that direction during the last twelve hours, bore up to run to the southward of Baring Island.

August 29.—Ship in great danger of being crushed or driven on shore by the ice coming in with heavy pressure from the Polar Sea, driving her along within 100 yards of the land for half a mile, bearing her up, raising her bodily one foot eight inches, when we again became stationary and the ice quiet.

Sept. 5.—Ice again in motion, and the ship driven from the land into the main pack, with heavy gale from the S.W.

Sept. 11.—Succeeded in getting clear of the pack, and secured to a large grounded floe. Lat. 74° 29′ N., long. 122° 20′ W.

Sept. 13.—Clear water along shore to the eastward. Cast off, and worked in that directions with occasional obstructions, and several narrow escapes from the stupendous Polar ice, until the evening of the 2nd, when we ran upon a mud bank, having six feet water under the bow, and five fathoms astern; hove off without sustaining any damage.

Sept. 14.—At daylight observed Barrow's Strait full of ice, and large masses setting into that bay, determined upon making this our winter quarters, and, finding a well-sheltered spot upon the south side of the island upon which we last night grounded, ran in and anchored in four fathoms, lat. 74° N., long. 117° 54′ W. This night were frozen in, and have not since moved. The position is most excellent, being well protected from the heavy ice by the projection of the reef, which throws it clear of the ship 800 yards.

A ship stands no chance of getting to the westward by entering the Polar Sea, the water along shore being very narrow and wind contrary, and the pack impenetrable; but through Barrow's Strait and Prince of Wales Strait, and by keeping along the American coast. I conceive it practicable. Drift wood in great abundance upon the east coast of Prince of Wales Strait, and on the American shore, also, much game.

In this vicinity the hills abound in reindeer and hare, which remain the entire winter: we have been very fortunate in procuring upwards of 4000 lbs.

The health of the crew has been, and still continues, excellent, without any diminution of number, nor have we felt any trace of scurvy.

It is my intention, if possible, to get home to England this season, touching at Melville Island and Port Leopold, but should we not be again heard of, in all probability we shall have been carried into the Polar pack, or to the westward of Melville Island, in either of which to attempt to send succour would only be to increase the evil, as any ship that enters the Polar pack must be inevitably crushed, therefore, a depôt of provisions, ora ship at winter harbour, is the best and only certainty for the safety of the surviving crew.

No traces of Franklin or whatever have been met with, or any information obtained from the natives, which could by any possibility lead to the supposition that Sir J. Franklin's expedition or any of his crews, have ever yet reached the shores we have visited or searched, nor have we been more fortunate with respect to the *Enterprise*, not having seen her since parting company in the Straits of Magellan on the 20th of April, 1850.

This notice was deposited by a travelling party in April, 1852, consisting of Captain M'Clure, Mr. Court, second master; John Calder, Captain of the forecastle; Sergeant Wood, Royal Marines, George Gibbs, A.B.; George Rousseau, A.B., John Davis, A.B., and Peter Thompson, captain of the foretop. Whoever finds this, it is requested it may be forwarded to the Secretary of the Admiralty.

Dated on board her Britannic Majesty's discovery ship *Investigator*, frozen in the Bay of Mercy, in lat. 74° 6′ N., long. 117° 54′ W., April 12, 1852.

ROBERT M'CLURE, Commander.

Unless there is a vessel now at Melville Island, it is not my intention to remain it, but make the best of my way down the straits.

R. M'CLURE.

This despatch was discovered at Winter Harbour, by a searching-party from Captain Kellett's vessel, and who was thus led to a knowledge of the *Investigator's* position. The meeting of Commander M'Clure from the east, and Lieut. Bedford Pim from the west, with the party from the *Resolute* sent to his assistance, is thus described in a private letter from Captain Kellett, C.B., dated "Her Majesty's ship *Resolute*, Melville Island, April 10, 1853:—

This is really a red-letter day in our voyage, and shall be kept as a holiday by our heirs and successors for ever. At nine o'clock of this day our look-out man made the signal, that a party coming in from the westward; all went out to meet them and assist them in. A second party was then seen. Dr. Domville was the first person I met. I cannot describe my feelings when I found that Captain M'Clure was among the number. I was not long in reaching him and giving him many hearty shakes—no purer were ever given by two men in the world. M'Clure looks well, but is very hungry. Lieutenant Pim's making the harbour of Mercy would have been a fine subject for the pen of Captain Barrat, were he alive.

M'Clure and the first Lieutenant were walking on the floe. Seeing a person coming very fast towards them they supposed he was chased by a bear, or had seen a bear. Waited towards him; on getting onwards a hundred yards, they could see from his gesticulations that he was not one of them. Pim began to screech and throw up his hands (his face as black as my hat); this brought the Captain and Lieutenant to a stand, as they could not imagine the necessity to make his acquaintance.

At length Pim reached the party, quite bes de himself, and stammered out, as M'Clure asking him, "Who are you, and where are you come from?" "Lieutenant Pim, *Herald*." Captain M'Clure was the more inexplicable to M'Clure, as I was the last person he should have left in Behring's straits. He at length found that this solitary stranger was a true Englishman—an angel of light. The reason was soon seen from the ship, they had only one hatchway open, and the crew were fairly hammocks, and could no longer forgot their despondency; in fact, all was changed on board the *Investigator*.

Pim had 30 men and three officers fully prepared to leave for the depôt at Point Spencer. What a disappointment it would have been to go there and find the miserable *Mary* yacht with four or five casks of provisions instead of a fine large depôt.

Another party of seven men were to have gone by M'Kenzie, with a request to the Admiralty to send out a ship to meet at Point Leopold, in 1854. The 29 men are on their way over to me now. I shall, if possible, send them on to Beechy Island, with about ten men of my own crew, to be taken home the first opportunity.

Mac.—*Investigator's* second party, consisting of Lieuts. Cresswell and Wynniatt, Mr. Piers, and Mr. Miertsching, arrived, bringing two men on their sledge. They made an extraordinary passage across for men in their state. The greater part of them are affected with scurvy, but are rapidly improving.

Commander Inglefield says in his despatch:—

Commander M'Clure had made arrangements for deserting the ship, to have been carried out a few days later than the opportune arriva. of the officer from the *Resolute*. Captain Kellett sent them to report upon the health of the crew. He also desired that should there not be among them a sufficient number of volunteer to remain another winter, Captain M'Clure was to desert his vessel. The *Intrepid* was expected at Beechy Island with the crew, and Sir Edward Belcher had ordered the *North Star* to be prepared on her arrival to proceed to England, sailing on the 1st of September, and to leave the *Intrepid* and Beechy Island, in her stead.

The intelligence gleaned from the other squadrons is as follows:—

Sir Edward Belcher wintered in the spot he had named Northumberland Sound, in lat. 76° 52′ N., and long. 97° W., near the position now marked in the charts of Wellington Channel. Sage Sir John Franklin. From Captain Pullen I learned that *not the slightest traces of the missing expedition* (of Sir John Franklin) *had been met with*, either by him or the western branch of the searching squadron, and that it was evidently the intention of Sir Edward Belcher to return to Beechy Island as soon as possible.

Captain Kellett wintered at Dealy Island, Melville Island; he had a narrow escape of losing his ship on the night of his departure from the harbour, she grounded off Cape Colbourn, and was only got off after the ice had set down upon her, causing her over on her broadside and with the loss of sixty feet of her false keel.

Captain Inglefield entered Melville Bay on the 16th July, where he was detained by the ice until the 26th. He lay for eight days in Dundas Harbour, Croker Bay, waiting for the breaking up of the ice. A light wind eased off the ice; and by pushing on under steam, he fortunately succeeded in reaching his destination, Beechy Island, on the 8th of August. Having landed his stores at Cape Riley, Captain Inglefield proceeded up Wellington Channel in a boat and sledge, in search of Captain Pullen, who had been absent from the *North Star* a month. Captain Inglefield started in his whale boat, with a month's provision, on the 16th of August. They reached Cape Kenrae, after much exertion and privation, on the 13th of August, and here they learnt by notice of Captain Pullen's return to his ship, and of his having communicated with Sir Edward Belcher.

Depositing in the cairn duplicates of their Lordships' despatches for that officer, we (says Captain Inglefield) commenced our return, and reached the tent on the fifth day of our absence, footsore and much exhausted with the new mode of journeying in the Arctic regions, having travelled 120 miles. Sleeping without shelter on the bare beach, at a temperature several degrees below freezing point was a trial for all, more especially as we could not eat the pemmican, and subsisted wholly on biscuit and tea, with the exception of a few dovekies which I shot.

Captain Inglefield mentions two remarkable discoveries adverted to in Captain M'Clure's journal—viz., some smoking hillocks and a petrified forest.—

Captain M'Clure also states that, during his intercourse with the natives, he only once met with any hostile demonstrations. This occurred at Point Warren, near the Mackenzie, where, on attempting to land, two natives with threatening gestures warned them off. It was not without much difficulty that they were pacified; and they then related that all their

I.

Hark over Europe sounding,
The first, the signal gun!
The fire has burst—the blow is struck—
A fatal deed is done!
From North to South it echoes:
From East to West afar,
Th' insulted nations join their hands,
And gather to the war.

II.

From restless slumber waking,
The thunder in her ear,
Unhappy Poland starts to life,
And grasps her broken spear
Old Rome grows young to hear it—
There's mischief in her glance!
And Hungary mounts her battle steed,
And waves her fiery lance.

III.

Not long shall last the combat:—
Though Russia laugh to scorn,
The wrongful cause, if *up* to-day,
Is *down* to-morrow morn!
When France unites with England,
Beware defeat and shame,
Ye foes of right, who force the fight,
And fan the needless flame!

IV.

Hark! over Europe sounding,
The first, the signal gun!
But when the last loud cannon-peal
Shall tell of victory won,
Be sure, ye proud aggressors,
Your hour shall not be long!
They may not, shall not, cannot win,
Who battle in the wrong.

CAPTAIN INGLEFIELD, OF H.M.S. "PHŒNIX."—FROM A PHOTOGRAPH BY CLAUDET.

(*Continued from page* 330.)

tribe, but the chief and his sick son, had fled on seeing the ship, alleging as a reason that they feared the ship had come to revenge the death of a white man they had murdered some time ago. They (through the interpreter) related that some white men had come there in a boat, and that they built themselves a house and lived there. At last the natives murdered one, and the others escaped they knew not where; but the murdered man was buried in a spot they pointed out. A thick fog coming on prevented Captain M'Clure from examining this locality, which is much to be regretted, as here is the probable position a boat party endeavouring to return by the Mackenzie would have encamped.

Captain Inglefield's despatch gives the melancholy details subjoined of the death of Lieut. Bellot:—

I received, by an official letter from Capt. Pullen, a report of the melancholy intelligence of the death of M. Bellot, who had been sent by Capt. Pullen on his return during my absence, to acquaint me of the same, and to carry on the original despatches to Sir Edward Belcher. This unfortunate occurrence took place on the night of the gale, when M. Bellot with two men were driven off from the shore on the floe; and shortly after, while reconnoitering from the top of a hummock, he was blown off by a violent gust of wind into a deep crack in the ice, and perished by drowning. The two men were saved by a comparative miracle; and after driving about for thirty hours without food, were enabled to land and rejoin their fellow-travellers, who gave them provisions, and then all returned to the ship, bringing back in safety the despatches; but three of them fit subjects only for invaliding.

A separate letter will give their Lordships further information relative to the death of this excellent officer, who was sincerely regretted by us all. His zeal, ability, and quiet unassuming manner, made him, indeed, beloved.

The total loss of the *Breadalbane* transport, under the command of Capt. Inglefield, is thus described by that officer:—

4. This unfortunate event, which occurred on the morning of the 21st of August, off Beechy Island, no human power could have averted; and my own vessel, which at that time had the transport actually in tow, barely escaped a similar fate, receiving a severe nip, which raised the stern several feet, and arched the quarter-deck, destroying the rudder and screw; one of the beams forward was sprung, and the port bow partially stove, breaking one of the riders and forcing in the planking. This latter damage, there is some doubt, may have been sustained in a heavy gale on the morning of the 18th of August, when the ship was severely nipped off Cape Riley. The ice master is of opinion it was received in Melville Bay, while forcing a passage under full steam through some heavy ice; however this may be, I have little doubt, but that for the solid nature of the stowage of our hold, and the strengthenings fitted in England, we must have shared the same fate as the unfortunate *Breadalbane*.

Captain Inglefield now resolved to lose no time in getting to England, and he arrived in London on the 7th inst., in company with Lieut. Cresswell, of the *Investigator*, who brings Commander M'Clure's despatches and journals. Lieut. Cresswell says:—

I have the greatest satisfaction in reporting that, during the prolonged service on which we were employed in search of the crews of the missing ships, we have only lost three men since the spring of the present year.

Captain Inglefield's expedition has not been without its results. He says:—

In natural history, we are able to add a large collection of minerals to our museum: nearly 1000 specimens of ores and earthy substances have been obtained at different parts of the coasts of Greenland. Specimens also of the flower, leaf, and root plants, of all the kinds we have met with, are carefully preserved; and such crustaceous and other creatures from the animal kingdom as our limited means have allowed us to collect, are prepared for the naturalists.

THE CROWN OF HUNGARY.—(SEE PAGE 351.)

THE LATE LIEUT. BELLOT.—FROM A PHOTOGRAPH BY CLAUDET.

A careful meteorological journal has been kept; a tide register at Holsteinberg; and a great many observations made on the direction, dip, and force of the magnet. These have been carried on by Mr. Stanton, and the late lamented M. Bellot, whose industry in this branch of science is well proved by the mass of valuable matter he has left behind.

Next week, we hope to Illustrate some of the localities named in the preceding Report.

RUSSIA AND TURKEY.—GREAT MEETING.

THE meeting, which has been announced for some time, to consider of the present position of affairs in the East, and the propriety of active interference in support of Turkey, was held in the London Tavern on Friday week. Long before the hour appointed for commencing proceedings, the great room was crowded; and at a quarter past seven some hundreds had left the doors unable to obtain admission. Sir Charles Napier was there to take a part; Mr. Blackett, the spirited member for Newcastle; Professor Newman, Mr. Frost, Mr. Nicholay, Captain Mayne Reid; and several well-known representatives of the working classes—William Newman, Dunford, Moore, Elt, and others—were also present.

Lord Dudley Stuart took the chair, amidst great acclamation.

The speech of the chairman was a spirited speech. It condemned the course pursued by the present Government (excepting Lord Palmerston from censure, and attacking Lord Aberdeen); it declared for war, on the ground both of honour and interest; and it comprised a full and vigorous narrative of the events which have occurred, from the first mission of Menschikoff to Constantinople to the present day. Hearty

THE EASTERN QUESTION.—GREAT MEETING AT THE LONDON TAVERN.

responses broke from the meeting when its feelings of manliness and honour were appealed to.

Professor Newman moved the first resolution. He said

I have lived, I believe, for more than forty years in this world under the delusion that it was the part of a private citizen to leave to the Government the direction of foreign affairs; but, unfortunately, I have been converted to an opposite opinion by discovering - what Lord John Russell has also discovered that there is in Europe a conspiracy of despots against liberty. Another discovery I have unfortunately made—which Lord John Russell has not made—namely, that that conspiracy of despots has put forth an influence within the Cabinet of the Queen. I look upon it as a fact that, unhappily, cannot be doubted; and it is the duty of all Englishmen to step aside from their private positions, and declare to the world, if they feel it, their shame, indignation, and disgust, at the way in which the honour of England has been cast into the dust in these recent affairs. What, then, is needed? It must be admitted that the time for persuasion and concession is passed, and the time for action has arrived (Cheers). I trust that all who are acquainted with the proceedings of the meeting will be left under no possible doubt as to what are the feelings, temper, and judgment, and will be aware that you all feel what I feel—namely, that the confidence which we have been accustomed to put in Ministers has been abused. We have looked to their position, and declare it has looked to them, to uphold the dignity of England, to perform their duty, and to fulfill the treaties into which they had entered, and to provide for our safety. They stopped the mouth of Parliament; they would not let Parliament know what they were doing, because they were ashamed of it. They put it off until they could secure for themselves six months of unprecedented executive despotism; and now if they should send their soldiers to fight against the Turkish people, the English nation has no power to prevent it (Cheers).

Mr. Newman spoke off rather abruptly, and gave way to Mr. Blackett, whose speech was neat and pointed. One passage will illustrate his sentiments:—

The Emperor of Russia counted that England would show a certain degree of pusillanimity, and he counted that the Government would expend itself in protocols, and despatches, and notes, and all the devices of diplomacy; but still he counted upon this, that an English Minister would shrink from the last extremity. He did not for a moment think that a Christian man should depreciate the casualties of war! But though he felt all the misfortunes which war would inflict upon the human race, still, when he considered the advantages of European despotism, the dreadful armament that would take place all over the Continent by the alteration in the balance of power—when he remembered that the progress of Russia was identical with high tariffs and prohibitory duties, and the injuries that resulted to British commerce from the preservation of the present state of things, which was called peace, but which, in the language of Lord John Russell, was not peace at all, but was a most serious state, to be denounced by the aggressor whenever he thought he could secure his own advantage (Cheers)—he believed that, taking the meanest and most mercantile view of these matters, it was probable that the cost of war would be but a [illegible] insurance against what was fast becoming the intolerable calamity of so-called peace (Cheers). But, even on higher considerations, he could not forget that the faith of this country was pledged to Turkey, or the assurances which the Ministers themselves had given of their determination to maintain the independence of Turkey; he could not doubt that there was a man in the room but would join the earnest prayer that England would be true to her ancient honour, and that our Government would not belie the gallant spirit of their countrymen (Loud cheers).

Mr. Nicholay gave expression to similar sentiments; particularly expressing his trust that the good old time would return when an Englishman was respected, let him go where he would, and not as now cut down, insulted, and imprisoned.

Sir Charles Napier's appearance as a speaker drew forth protracted applause. He condemned the present Ministry, and declared that our fleet would have entered the Dardanelles in May had we been prepared to meet the Russians in Yarmouth Roads. Instead of reviewing a grand fleet at Spithead, he would have treated the Russians to the old Nelson trick in the Baltic (Immense cheering).

I see there is to be a Peace Congress on the 13th, and that Mr Bright, Mr Cobden, and all the peaceable men are to be there (Laughter). I am a peaceable man, and I will be there also; I am as fond of peace as a man of peace as Mr. Cobden; I am as fond of comfort as he is; and should like to see this country happy, peaceable, and prosperous, and all of us enjoying himself (Cheers). I am not fond of bloodshed, but my way of preserving peace is very different from their mode. Mr. Cobden told you some time ago that he would put his hands and crumple it like a piece of brown paper; why does he not crumple it now? (Cheers.) Will he crumple the army in its fortresses, and its fleets at Sebastopol and in the Baltic? (A laugh.) If he can only do that, he will save an enormous sum of money.

Mr. David Urquhart here stepped in with an amendment—one-half declaring the Ministry incompetent; the other calling on the meeting to restore the prerogative of the Crown, which was usurped by the cabal, whereupon he mingled with his arguments doctrines of prerogative which the meeting could not understand. Mr. Newton supported the first half, but repudiated the second. This speaker expressed the sentiments of the working-men of London—rather a coolly war than dishonour.

Captain Mayne Reid spoke effectively against secret diplomacy:—

Secret diplomacy! There was not a phrase in the language that was more repugnant to the hearts and the genius of Englishmen. Secret diplomacy! There is no dishonour in the sound—there was positive and palpable meanness in the thought. What has secret diplomacy done for England? Was it by secret diplomacy that the mighty nation had been built up? It they looked back upon their former history, they would find that the tricksters of foreign countries had always out-tricked the tricksters of England. He could understand some mean and petty nation having resort to secret diplomacy; but he could not understand why England should have resource to it. Their first duty was to know what was right; and, having ascertained that, to demand it in the most open and straightforward manner (Cheers). He was no lover of war; he would be glad to see the sword turned into the ploughshare; but he believed it was had come when war was not only just, but a strict and holy necessity. They were bound by treaty to protect the integrity of Turkey. Throw interest to the winds, their honour on is laid upon them (Loud cheers).

Lord Palmerston's speech was always reserved with applause; but there appeared to be a strong dissentient party. Praised by Lord Dudley Stuart, he was attacked by Captain Reid, because he had not lent effective assistance to Hungary in 1849. Mr. Trelawny pointed out that in 1849 Lord Palmerston's hands were not strengthened. In the House of Commons there was a motion made to reduce the standing army. What was the use of barking if they could not bite?

On the whole, the two decided feelings of the meeting were, the one for war, the other for condemnation of Ministers.

The following were the Resolutions proposed and carried, all of them, unanimously, and with great cheering. No. 3 was the latter part of a proposed amendment by Mr. Urquhart, the first portion being withdrawn:—

1. That the series of Russian aggressions convinces this meeting that there is in the Russian Cabinet a fixed purpose not only to subdue Turkey, but to destroy over all Europe the safeguards of freedom. We look upon it as the true reason why no diplomatic settlement of the Turco-Russ an quarrel was possible, and we lament that the British Government has wasted much valuable time, damaged the just cause of the Turks, inflicted on commerce months of needless depression, and (worst of all) has it spired universal suspicion of the good faith of England, in a vain effort to protect with an extinguished and rotten power, which acted while we talked, and which, if now momentarily appeased, would only become more dangerous on some early occasion.

2. That this meeting applauds the glorious patriotic spirit of the Turkish people at the present crisis, and would deplore any attempt on the part of the British Government to suppress that spirit, as an act of unparalleled infamy; especially deprecating the many solemn ways in which England has bound herself to maintain Turkish independence.

3. That this meeting can see in no more humiliating position than this, that the servants of the Crown who now advise her Majesty are unequal to the emergency, in which shape it passed without contradiction.

4. That not only the interest but the duty and honour of England call upon her government to discard all secret and dynastic diplomacy, and to render prompt, decisive, and effective aid to Turkey

5. That this meeting is of opinion that Austria, by reason of her previous course of policy and of her recent perfidious behaviour towards Turkey, ought to be regarded as an enemy by us, and not cherished as an ally.

6. That an address embodying the foregoing resolutions be entrusted to a deputation to be presented to her Majesty.

7. That a copy of the foregoing resolutions be transmitted to the Turkish Ambassador.

A vote of thanks was passed, with universal approbation, to Lord D. Stuart, and the meeting separated.

RUSSIAN INVASION OF TURKEY.—On Monday evening a public meeting was held at the Prince Albert Tavern, Notting-hill, for the purpose of taking into consideration the present aspect of the Eastern question, and the conduct of Government in reference to it. The meeting was a very crowded one, and a large number of persons who presented themselves were unable to obtain admission. Resolutions were unanimously adopted, condemning the present system of managing the intercourse of nations, as known to be injurious by the state of events in the East, and declaring the necessity of abandoning secrecy in diplomacy, and attributing the prevailing dearth of provisions more to the conduct of Russia on the Danube than to the defective yield of the late harvest

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, OCT. 13.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperature of the Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.

Note.—The sign — denotes below the average, and the sign + above the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The reading of the Barometer increased slowly from 29·45 inches at the beginning of the week to 29·84 inches by the morning of the 10th, decreased to 29·71 inches by the afternoon of the 12th, and increased to 29·76 inches by the end of the week. The mean reading for the week, at the height of 82 feet, was 29·601 inches.

The mean Temperature of the week was 52·19; being 0·90 above the average of 53 years.

The range of Temperature during the week was 23°; being the difference between the highest reading, on the 9th; and the lowest, on the 12th.

The mean daily range of Temperature during the week was 14°. The greatest was 22·6° on the 9th, and on all the other days it was small; the least was 7·0° on the 12th.

Rain fell (on six days) during the week to the depth of rather more than nine-tenths of an inch

Thunder was heard, and *lightning* seen, during the afternoon of the 8th.

The Weather during the week has been dull; the air has been in a calm and stagnant state; fog has been prevalent every day, and the sky has been constantly overcast.

Lewisham, 14th October, 1853. JAMES GLAISHER.

HEALTH OF LONDON.—In the week ending October 8, within the metropolitan districts 1375 children were born. Of these, 727 were boys, and 648 were girls. In the eight corresponding weeks of the eight preceding years the average number were 659 boys, and 620 girls; the excesse over the average were 71 boys, and 28 girls. The number of deaths within the week was 1051, being less in number than the births by 324. The average number of deaths in the corresponding week of the ten preceding years was 862; and if this be increased in proportion to the increase of population, the number would slightly exceed 1000 as the number of deaths, showing that the health of London is at present in about its average state. The deaths in the week are principally distributed as follows:—To zymotic diseases, 224 (their average is 270): of these the [illegible] was [illegible] measles, 55 scarlatina (whose average is [illegible] hooping-cough, 71 diarrhœa (exceeding its average by 26); to cholera, 66, whose average (or thing that of the corresponding week in 1849, when 110 deaths took place) is 5: in the three previous weeks the numbers were 16, 20, 47; and in this week they are 66, of which 29 occurred to males and 37 to females. The majority of deaths were amongst persons of middle age: 36 occurred under 15 years of age, 36 at 15 and under 60 years, and 4 at 60 years and upwards. To typhus, 49, which is its average. To dropsy, cancer, and other diseases of uncertain seat, 51 deaths; to tubercular diseases, 155 (their average is 165); to diseases of the brain, nerves, and senses, 136 (their average is 102): to diseases of the heart, 31; to those of the lungs, and of the other organs of respiration, 136 (their average is 114); to diseases of the stomach, 35 (their average is 31); to those of the kidneys, 20; to age, 33; to sudden deaths, 9; to intemperance, 1; to poison, 1; to drowning, 11; to fractures, 2. From this account it will be seen that, for the most part, the deaths are at or below their averages in all diseases, excepting diarrhœa and cholera. Scarlatina was fatal, as stated above, to 57 children; and it was remarked that in some instances, it appears to have been aggravated by local causes. Diarrhœa carried off 71 persons, which is more than in any of the previous week; all the cases except 20 were among children. Cholera shows a decided increase, and shows a disposition to continue to increase. In the corresponding week of 1848—soon after the epidemic of that period made its appearance in London—the number of deaths from cholera was 20; in the corresponding week of 1849—when it was passing away the number was 110. The 66 cases of the week were thus divided over the metropolis: In the west districts, in a population of 376,427, there were 9; in the central districts, in a population of 393,256, there were 2 deaths; in the north districts, with a population of 409,896, there were 5 deaths; in the east districts, with a population of 486,822, there were 8 deaths; and, in the south districts, with a population of 616,535, there were 42 deaths. Medical informants are requested to inquire specially in all cases whether the attack of cholera commences by "diarrhœa," and to state the interval of time in hours and days between the appearance of diarrhœa and the more severe symptoms, or of the other characteristic symptoms of cholera. It is admitted that diarrhœa generally precedes cholera, and that diarrhœa should never be neglected for a single hour in a time of epidemic cholera. It is established that the latter disease is invariably, or almost invariably, preceded by a well-defined stage of illness, which is ameniable to medical treatment, it will at once allay alarm, and be a most important addition to the resources of medical art.

MARLBOROUGH-HOUSE.—The School of Design formerly maintained at Somerset-house has been abolished The system of conducting to develop a taste for practical art by state subsidies has been put under more stringent control; and vigorous efforts are being made to place, on a self-supporting basis, the special education which the Government has undertaken to supply. For this purpose, the scale of fees has been raised from £1 to £6 per annum, and, the classes being held under the same roof with the museum and the library, students been upon qualifying themselves to become accomplished designers have facilities put within their reach not hitherto possessed by them. During the past year there has been a very great increase in the number of elementary drawing-schools throughout the country. The difficulty at present experienced at Marlborough house is to find a sufficient number of qualified teachers They are guaranteed an income of £70 for the first year; yet, though sixteen have been sent down to different parts of the country, it is not expected that in a single instance the department will be called upon to make up that amount. While the highly-endowed Schools of Design could hardly keep alive in the midst of our largest manufacturing towns, those for elementary drawing, thrown on their own resources, take root and flourish at such places as Chester, Hereford, Swansea, Lunerick, Waterford, and even the Welsh village of Llanelly. In closing its rooms at Somerset house, the department virtually abandons the task of direct teaching, [illegible] education. Its efforts are now confined to the [illegible] struction in the higher branches of design. For these purposes, regular courses of tuition are prescribed, and lectures given by competent professors, the students possessing the additional advantage of the museum and library for consultation and reference.—*Globe.*

THE ROYAL ARCHIVE CHURCH.—The whole of the interior of this beautiful church has been entirely cleansed and renovated during the vacation. The directors of the Crystal Palace Company availed themselves of the opportunity, with the consent of the master and members of securing casts of the ancient and prominent monumental figures contained in the sacred edifice, for exhibition in the Crystal Palace, at Sydenham.

NEW STRAND SESSIONAL DIVISION.—The Magistrates acting for this newly-constituted Sessional Division of Middlesex (comprising the parishes of St. Martin-in-the-Fields, St. Clement Danes, St. Mary le Strand, and St. Paul, Covent garden), held their first special session at the Court-house, St. Martin's, this week. Mr. Edmund K. Antrobus, chairman—to elect a clerk for the division; when Mr. Jo[illegible] Isaacson was unanimously appointed to that office. The Be[illegible] petty sessions every Tuesday, at one o'clock, for the t[illegible] ses (other than criminal) of the division.

CHARING-CROSS HOSPITAL.—At the quarterly meeting of the board-room of this hospital on Tuesday last M[illegible] Shaw—the secretary stated that during the p[illegible] patients, and 668 in-patients, received the benefit of [illegible] have been set aside to receive cholera cases; and [illegible] the crowded neighbourhood can receive [illegible] that [illegible] requires but the aid of the [illegible] es and [illegible] become one of the most useful in the [illegible] school connected with it commenced its [illegible] with an introductory address from E. Headland [illegible] was listened to by the pupils with much attention.

THE CONSERVATIVE LAND SOCIETY.—The eleventh public drawing took place at the offices on Saturday. The Rev. Dr. Worthington was in the chair. Eighty-four numbers were drawn, and the holders of the fortunate shares resides in Oxfordshire, Kent, Middlesex, Hampshire, Yorkshire, Suffolk, Surrey, and Essex. The twelfth public drawing is to take place on the 12th of November. The shares taken up to the time of this drawing were nearly 6300, representing a subscribed capital of £315,000.

MINING EXCHANGE.—On Tuesday evening the leading brokers and agents interested in mining business—about forty in number—assembled at the London Tavern, and agreed to resolutions for the appointment of a committee charged to do upon a building suitable for an Exchange, and generally to adopt such measures as may be considered requisite for the attainment of the object in view.

ROYAL FREEMASONS' GIRLS' SCHOOL.—On Thursday a quarterly general court of the subscribers to this excellent charity was held at the school-house, Battersea-rise—Brother Patten presiding—when seven children, being the whole of the eligible candidates, were admitted into the school—thus increasing the number to the maximum under the present law, of 65. The expenses of the past quarter, £383 7s. 2d., were ordered to be paid, and some formal business was transacted.

ROYAL MAIL STEAM-PACKET COMPANY.—On Thursday the half-yearly meeting of this company was held at the London Tavern—J. Sheppard, Esq., in the chair—when a dividend of £2 per share, free of Income-tax, was declared. It appears that during the half year the company has suffered much from the high price of coal.

JUNIOR UNITED SERVICE CLUB.—It is stated that it is in contemplation to purchase the Duke of Buckingham's late residence, Chandos-house, Pall-mall, for the site of the Junior United Service Club: in which event Chandos-house will be taken down, and upon the ground a new and magnificent structure will be erected. The present building in Charles-street is totally inadequate to accommodate the members of a club numbering nearly 2000 officers of the Queen's and Company's Services and the Militia.

EIGHT TONS WEIGHT OF MONEY FOR CEYLON.—On Wednesday forenoon, four waggons arrived at the Waterloo road terminus, each containing two tons weight of current coins of the realm. The packages containing the money were placed on a special train and conveyed to Southampton, from which port the same is to be shipped for Ceylon.

BRIXTON PRISON.—The prison at BRIXTON has been purchased by the Government, and placed under the control of the Board for the Management of Convict Prisons. It is to be used exclusively as a dépôt for female convicts under sentence of transportation and penal servitude. One hundred female convicts are about to be immediately removed thither from Millbank Penitentiary; and further numbers will be sent from time to time, as the works progress. The whole of this class of convicts will be eventually removed from Millbank, whereby accommodation will be available for three hundred additional male convicts to whom this prison will, in future, be wholly confined. The new estate of the last in reference to transportation would, of itself, render these and further changes necessary in the convict department.

FALL OF A HOUSE IN PETTIFORD-COURT, STRAND.—On Wednesday night, at twelve o'clock, the roof of a house, No. 2, Pettiford-court (a narrow unwholesome court, not more than six feet broad, immediately behind St. Mary's Church), fell in with a tremendous crash, nearly killing three children and two adults, the tenants of the upper part of the premises. Fortunately, however, they were rescued from their perilous position. The next house was being pulled down—not before it was time, for both houses have been in a hazardous condition for a long time; and on the work of demolition was going on, the house No. 2, having no proper shoring put up to uphold it, from sheer weakness gave way when the support it received from the party-wall of No. 1 was removed. When the deep excavations where the roof carried on in the neighbourhood for some time past, and from the aged and tottering state of many of the buildings, the danger to the inhabitants is very imminent.

LETTER ROBBERY.—Thompson, a letter-carrier in the Pimlico district, has been committed for trial for having unlawfully detained sixty-four letters. Complaints had been made of the non-arrival of letters in the prisoner's district; he was watched, and eventually seized with sixty-four letters in his hat, which he ought to have delivered some days before. The man said it was from sheer carelessness that he had not distributed them.

NAVAL AND MILITARY INTELLIGENCE.

THE ROYAL ARSENALS—THE NAVY AND ARMY—THE CHOLERA.

Great praise is due to the Lords Commissioners of the Board of Admiralty, and the medical departments at all the principal naval depôts, for the sanitary precautions they are taking in all the Arsenals, and on board the ships of her Majesty's Royal Navy, now that the cholera has unfortunately again visited this country. The workshops are kept constantly well ventilated, and the strictest cleanliness observed in every department; and whenever any stagnant water, or any other unhealthy matter, may have accumulated, it has been instantly removed. The result has been that, notwithstanding there have been several cases of cholera and diarrhœa in the neighbourhood, there has not yet been any fatal cases from the epidemic in the Royal Dockyard.

A most satisfactory report has been received at the Admiralty as regards the men belonging to the different divisions of the Royal Marines, Royal Marine Artillery, and the crews of her Majesty's ships of war, under the Thames, the Channel, Portsmouth, Plymouth, or the coast of Ireland, in consequence of the rigid sanitary regulations in the Royal Marine Barracks on board the ships as to ventilation in the lower decks, the cleaning of the hammocks, and the cleanliness of the men and every part of the vessel. The dietary is particularly attended to, as well as warmth, and the water always kept pure by means of a simple chemical process, which destroys all animalcules that may exist in the casks or tanks.

As regards the sanatory state of the troops in London, Windsor, and other garrison towns, the reports at the War-office are equally satisfactory, as the regulations as to ventilation, proper drainage, and cleanliness in the stables and barracks, are strictly enforced. The Commanders-in-Chief, Hardinge, and a medical board of officers, have visited the Wellington barracks, Birdcage-walk, the St. George's-barracks, Trafalgar-square, the Portman-street, and Knightsbridge infantry barracks; the barracks at Hounslow, Hampton-court, Knightsbridge, and Albany-street Regent's-park; the Tower of London; and the Artillery and Royal Horse Guards barracks; and the Infantry and Cavalry-barracks at Windsor; and the report is most satisfactory as to the state of the men and their quarters

The most gratifying reports have been returned to the Board of Health with respect to the forest of merchant ships in the different docks—St. Katharine's London, East and West India Docks—British as well as foreign steam-vessels, &c., from London-bridge to the Nore.

RETIREMENT OF THE EARL OF CARDIGAN.—We are in a position to state, on authority, that Colonel the Earl of Cardigan retires from the 11th Hussars directly the drawing-down takes place. The step will go to the regiment. Major Douglas succeeds to the Lieut.-Colonelcy, Captain Edmund Peel to the majority, Lieutenant and A.-Juntant Eunis to a troop, and the riding master, Cornet R. H. R. Dangate, to a lieutenancy.—

THE WORKS OF FAITH, BRISTOL, [illegible] recommencing [illegible] turi; and his valuable stud, consisting of about thirty race-horses, is about to be brought to the hammer.

PROPOSED HYDRAULIC RAILWAY.—A new [illegible] railway, substituting water for atmospheric pressure, has been proposed both in England and France, with a view to economise, working and security of the line. The actuating power is to be obtained by means of continuous water-power between the rails by artificial pressure. The waterpower is worked by peculiar mechanical arrangement, and it is proposed to place the apparatus at distances of 300 feet along the line.

ELECTRICITY AND WHALING.—The whalers of Finland have [illegible] ssful In Abo is now exhibited to the curious a magnetic [illegible] composed of a harpoon, [illegible] which fixes a [illegible] ers, closely covered with insulated copper wire, [illegible] ed by the usual winch, &c. The effect is very [illegible] g dreadful. The harpoon is conveyed [illegible] d copper wire attached to the harpoon. This apparatus is to be [illegible] ler now fitting out in Abo. The inventor is Professor [illegible] sburg

[illegible] The HERO OF THE "LEANDER." [illegible] ed from her Majesty's ship *Leander*, [illegible] come into a fortune of £30,000. [illegible] truck upon [illegible] and succeeded in not only getting his discharge [illegible] cate is rewarded, but also in obtaining some ready cash [illegible] has been promised to befriend out of his fortune, whom he had promised to befriend out of his fortune, to make the best they could of the hoax.

CAPTURE OF A BANKRUPT, AND £7000.—Some few years ago a person named Michael Thomas, a Jewish lad, then a draper, at Romford, in Essex, was made a bankrupt; but he absconded, taking everything he could with him, and was afterwards proclaimed an outlaw. It was ascertained that he had reached Deptford, and had then gone to Australia. Here he turned gold-digger, and amassed some £8000. About [illegible] he returned, by the over and route, to England. He visited [illegible] resided in his native town, and was "traced" [illegible] to place by the "detectives." He [illegible] ppers at the Tavistock, the [illegible] ge-road Theatre, and his liveliness to [illegible] ery one to his shortcomings. [illegible] Walker (of Friday-street) [illegible] ednesday night to Southampton, whi[illegible] ferth on board the *Bahiana*, [illegible] ceived in effecting his ca[illegible] found [illegible] he was possessed of above £7000 in gold and [illegible] the receipt of her, has been examined with [illegible] committed up to London with the view to his committal to Newgate, under the bankruptcy Act.

CALENDAR FOR THE WEEK.

SUNDAY, October 16.—Twenty-first Sunday after Trinity.
MONDAY, 17.—St. Etheldreda. Sir Philip Sidney killed, 1586.
TUESDAY, 18.—St. Luke the Evangelist.
WEDNESDAY, 19.—Dean Swift died, 1745. Kirk White died, 1816.
THURSDAY, 20.—Battle of Navarino, 1827.
FRIDAY, 21.—Battle of Trafalgar. Nelson killed, 1805.
SATURDAY, 22.—Lord Holland died, 1840.

HIGH WATER AT LONDON-BRIDGE,

TO CORRESPONDENTS.

ENIGMA will find a complete account of the Eastern Question in the DOUBLE Number of the ILLUSTRATED LONDON NEWS for Sept. 24.
W.—We do not interfere in card-playing disputes
H P.—The address of the Lord Chancellor (Lord Cranworth), is 40, Upper Brook-street.
J. C. W.—Bermondsey, who proposes a ship-canal from the Thames to Shoreham, has been anticipated in his project by Charles Duke of Norfolk, about forty-five years since.
E. W. M.—Apply for the work on Ship-building, to Mr. Weale, publisher, Holborn.
A.—Brigate, Leeds.—The Leeds and Selby Railway was opened in 1834.
G. H. C.—In Galileo, the accent is on the c.
VINTAGE.—See Roberts's "British Wine-maker" (Edinburgh).
A CONSTANT SUBSCRIBER should address his letter to the Hanoverian Legation, 44, Grosvenor-place.
COMMUNICATOR, Dalston.—Declined.
A CONSTANT READER, Halifax, should apply to a dealer in pictures.
R. D., Great Scotland-yard, is thanked; but the receipt is too extensively known for repetition.
V. H.—The views suggested are in preparation
CHMSKIBE.—The Castle has not been engraved in our Journal.
A FOUR YEARS' SUBSCRIBER.—The cost of the ILLUSTRATED LONDON NEWS from Oct. 1, 1852, to Oct. 1, 1853, 65 Nos., is £4 12s. 6d.

LAUNCH AT BRIDPORT.—In the account last week, page 313, to the *Speedy*, "is the sixth of first-class shipping built by Messrs. J. Cox and Son," should have been added "*for the same Liverpool merchants.*"

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, OCTOBER 15, 1853.

We are at length in possession of more coherent and ample information from the Turkish capital than that which during the last few days has been conveyed westward in disconnected, and often contradictory, fragments by the electric telegraph. The declaration of war by Turkey against Russia is contingent upon the non-evacuation of the Danubian Principalities within fifteen days. This measure was resolved upon by the Sultan and his Council on the 25th September. But, that nothing might be done precipitately, an interval of four days was suffered to elapse before the declaration was signed by the Sultan. On the 1st of October, the document was published to the Turkish people, and officially communicated to the Russian General commanding in the Principalities. A spirited appeal was at the same time made to the patriotism of the Turks; and another was addressed to the British and French Governments, demanding their moral, and, if necessity arise, their material support, in resisting the unjust aggression of the Czar. Omer Pacha has been instructed to summon the Russian General to evacuate the Principalities, and to allow him, if required, fifteen days for his reply. Should the General require further time to communicate with his master at St. Petersburg, a sufficient delay is to be granted him for that purpose. Should he refuse upon his own responsibility, or should the Emperor, on being applied to, decline to give orders for the evacuation of the Principalities, hostilities are immediately to commence. This day (October 15th) will, therefore, be a decisive one in the history of Europe, unless—which we most earnestly hope may not be the case—the impatience of the Turkish troops should force Omer Pacha into a premature collision on the banks of the Danube. Prior to the formal demand of the Sultan for the moral aid of Great Britain and France, which had been already accorded to the fullest extent, and for the material aid which the Sultan had every right to expect, the whole of the vessels forming the combined fleets had proceeded from Besika Bay to Constantinople. When we remember the haughty and contemptuous pride of the Czar, and that the whole decision rests with him alone, it must be admitted that the peace of Europe hangs but on a slender thread; but, when we remember, at the same time, that to such minds as that of the Emperor Nicholas the argument of superior force is one of which not even wounded self-love can deaden the impression, we are not without hope that what he has refused to reason he may concede to fear. The Turkish Government, whose calm good sense and moderation, under the most trying and exasperating circumstances, it is impossible to praise too highly, is fully aware of the fatal mischief that may be occasioned by any irregular and premature outbreak of natural feeling on the part of the army under Omer Pacha. It has, therefore, given that officer the most stringent instructions to avoid any act of hostility. Within his camp lies, at the present time, the most serious known obstacle to a pacific termination of the dispute; we say known obstacle, because the feelings and dispositions of the Czar are at present merely matters of conjecture. The next week will be an anxious one for all Europe. It is painful, if not disheartening, to reflect how much depends upon the will of a man, who has shown throughout the whole of this melancholy history that he does not know how to restrain it, and upon the awakened conscience of a potentate who has hitherto evinced about as much honesty as a pirate. But if religion sway his actions to a tithe of the extent for which he would claim credit, he will think of his responsibility to God, if not to man, and save the world from the unutterable horrors which it is unluckily in his power to let loose upon it.

THE Peace Congress has commenced its sittings at an opportune moment, to test the validity of their amiable maxim, that war, under all circumstances, may be averted by arbitration. We are quite aware that argument upon the subject is quite thrown away upon members of the Society of Friends, or upon those politicians who have impaired their own usefulness by considering offensive and defensive war to be alike unnecessary and unjustifiable. But it is sometimes necessary to refute obstinate error for the sake of those who may be still wavering, and to prevent the declamation of the preachers of peace from being considered in foreign countries as the genuine expression of English opinion. Mr. Bright has refused to attend a meeting in Manchester convened to express sympathy with the Turkish cause, because he is an enemy of war. But Mr. Bright is not alone in his opinion. Every sane man in the British dominions is as much an enemy of war as he is. The Peace Society has no monopoly of that wise and generous sentiment. "If men would let their reason guide them, rather than their feelings," says Mr. Bright, "I am sure the pressure of public opinion would be for peace, and not for war." But Mr. Bright does not read public opinion aright if he imagines that the pressure of public opinion is not for peace. The pressure is so strong, both in this country and in France, that there is every possibility that it will accomplish its object. The Emperor of Russia begins to perceive that the British and French nations are in earnest for peace;—so earnest that they will coerce him into peaceable behaviour, if need be, and take security from him that he will not again disturb Europe.

For the first time within the last seven months, during which the peace of the world has been endangered, there is something like a reasonable prospect that the Emperor will withdraw from his false position and his insulting pretensions. Mr. Bright and the Peace Congress will not, we think, be bold enough to allege that mere words and arguments, or the interchange of diplomatic notes, have brought him to this reasonable frame of mind. Of what use has arbitration been, except to show that arbitration was utterly worthless—until it was made apparent that the two greatest Powers of Europe were ready to support their judgment by the *ultima ratio?* If there were no arbitrators in the quarrel between the Czar and the Sultan except the King of Holland and the King of the Belgians, and all the rest of Europe had held aloof—is it supposed, even by the most amiable enthusiast in the Peace Society, that the proposal to arbitrate would have been received by the Emperor Nicholas with any other feeling than one of contempt? Yet, if the principle of arbitration, unsupported by physical force, be good for anything, the King of the Belgians and the King of Holland, or even Mr. Henry, the Bow-street police magistrate, in default of any other potentate, should have been able to settle the Eastern question as effectually as Great Britain and France. Whatever the members of the Peace Society may say, so clear-headed a man as Mr. Bright must see that when a strong man happens to be a wicked one, or a strong nation, like Russia, happens to be an aggressive one, the only weapons with which either the one or the other can be encountered are those of which they understand the use. There is no member of the Peace Society who, if he met a wild beast in the desert, would argue with the animal. To use a favourite expression of the late Sir Robert Peel, our amiable "Friend," in such disagreeable circumstances, would have to choose between three different courses of action. He would either yield himself up to be devoured; or he would run away, and, in all probability, meet the same fate; or he would show fight with sword or gun, or oaken cudgel—or, these failing, with stones, or any weapon of offence that chance might throw in his way. We do not think that either of the first two expedients would commend itself to the reason or to the instinct of any human being, even were he President of the Peace Society; but are of opinion that the most pacific "Friend" would, in so unpleasant a predicament, fight as fiercely as a drill sergeant or a Cossack. A strong potentate may be so blinded and infuriated by ambition and cupidity, as to be among nations what a tiger would be among a party of travellers. To yield to him in the wrong, because war is a sin and an evil, would be to encourage war. The only way to keep such a disturber at peace is to be prepared to fight him; and if he *will* commence the aggression, the world must coerce him as it best can, even although such a war might, as Mr. Bright says, "brutalize our people, increase our taxes, destroy our industry, and postpone parliamentary reform." Not to resist unjust aggression, is to invite war and to incur the danger, not merely of a temporary increase of taxation and destruction of industry, but of national annihilation and a return to barbarism. We trust, with Mr. Bright, that Lord Aberdeen will succeed in his efforts to preserve the peace of Europe. We believe, as well as trust, that he will do so; but we think, at the same time, that, if Lord Aberdeen had unluckily been converted to the opinions of the Peace Society, we should, at this moment, have been embroiled in the most sanguinary war that Europe ever witnessed.

THE COURT.

The Queen and Prince Albert, with the youthful Princes and Princesses of the Royal family, left Balmoral on Thursday for the south. Her Majesty slept at Holyrood on Thursday night, and left Edinburgh yesterday (Friday) morning at eight o'clock, travelling by the Caledonian and North-Western Railways, viâ Carlisle, Preston, Warrington, Whitmore, Tamworth, and Leamington. At Leamington the Royal party took the Great Western Railway, and travelled thence to Windsor, where they arrived shortly after eight o'clock. The Duke of Newcastle was the Secretary of State in attendance

The younger branches of the Royal family, who have been sojourning in the Isle of Wight during the stay of the Court in Scotland, came to Windsor Castle yesterday forenoon.

Her Royal Highness the Duchess of Kent arrived at Clarence House, St. James's, yesterday (Friday) evening, from Abergeldie House, N. B.

The Princess Marie of Russia and her children visited the Photographic establishment of M. Claudet, in Regent-street, on Tuesday morning, and honoured him with a sitting. Their Imperial Highnesses, accompanied by the Baroness Brunnow, honoured with a visit, on Wednesday, the Diorama of the Ocean Mail at the Gallery of Illustration, Regent-street; and on Thursday the Imperial family left town to return to Torquay.

His Excellency the Hanoverian Minister has returned to London from Germany.

Lord Howard de Walden has arrived in town from Brussels.

The marriage of Lady Elizabeth Grey Egerton, eldest daughter of the Earl and Countess of Wilton, with Captain the Hon. Dudley Fitzgerald de Ros, only son of Lord and Lady de Ros, was solemnized on Wednesday, at Heaton-park near Manchester.

Sir John Pakington, Bart., M.P., and Lady Pakington, have returned to Westwood-park, from a tour in Switzerland.

THE QUEEN'S VISIT TO HULL.—Notwithstanding that the preparations for the reception of her Majesty, on her promised visit to Hull, have progressed very far, yet the town is doomed to disappointment, for the following has been received by the Mayor of Hull:—"White hall, Oct. 6.—Sir, I am directed by Viscount Palmerston to inform you, with reference to the wishes expressed by the inhabitants of Hull that the Queen might be graciously pleased to visit their town, either on her way to, or on her return from, Scotland, that her Majesty's visit to Ireland prevented her from taking Hull in her way north; and that her Majesty's arrangements for her return to London will not admit of her visiting Hull in her way south. I am your obedient servant, HENRY FITZROY."

THE PEACE CONFERENCE.

On Wednesday the Conference commenced its sittings at Edinburgh. Long before twelve the Music-hall, George-street, was crowded. At a little past twelve the chair was taken by Duncan M'Claren, Esq., Lord Provost of Edinburgh.

After prayers had been offered by Professor Brown, the chairman stated the object of the meeting, and explained that the Conference consisted of two sections—one holding all war unscriptural; the other holding simply that it was wrong, and that everything should be done to keep it down, and that arbitration should be resorted to instead. He maintained that there was no inconsistency in the two parties acting together. It had been represented they were all non-resistants. This was not the case

Secretaries and a Committee of Management having been appointed, and letters apologising for non-attendance from Mr Hume and Sir D. Brewster, having been read, the Rev. H. Richard gave an account of what had been done since the Conference was held at Manchester. A resolution was proposed, to the effect that it was an especial and solemn duty of all ministers of religion, parents, instructors of youth, and conductors of the public press, to employ their great influence in the diffusion of pacific principles and sentiments, and in eradicating from the minds of men those hereditary animosities and political and commercial jealousies which have so often been the cause of disastrous wars.

Mr. Cobden, in supporting this resolution, said he was glad the preceding speakers had explained the objects of the association. He had found that it was a great deal easier to misrepresent them than to meet them. He denied that he belonged to a party who was ready to lay the nation at the foot of the first foe. No nation was going to attack them, but we were seeking causes of quarrel and fighting; and the result was, that we were loaded with debt and disliked by every nation in Christendom. He believed that what was done in the East by the Emperor of Russia, was done in the belief that England and France could never act together again. We had supposed that the French would not like jarates; and now, not only was there no danger of war with France, but actually, as if to give the Peace party the climax of their triumph, the Queen, in her speech, declared that she was on the best terms with the Emperor of France. There had been a most marvellous change in public opinion: off the stage he had never seen such a pantomime. A popular periodical had drawn him with very long ears and a foolscap—he should like to know who wore the long ears and the foolscap now? We knew too little of the affairs of other nations to interfere. He believed it was impossible to maintain the domination of Turkey in Europe. The laws of the Koran were opposed to the laws of truth and of nature, and Turkey could not last. For four hundred years Turkey had been dominant; and, in spite of all, Turkey had been decaying. Lamartine had rightly said, Turkey was decaying for want of Turks. It had been said Russia was actuated by a sinister view. Their whole history abounded with instances in which good things had been done by people who had sinister views. If we had interfered at all, we should have joined with Russia in obtaining their rights for the Christians. The leaning towards Turkey was almost unintelligible to him. He was surprised to hear Lord Palmerston state that Turkey had made great progress of late. Why, Lord de Redcliffe had made a very different statement. A very different account had also appeared in the ILLUSTRATED LONDON NEWS, which did great credit to the writer. He failed to see what was the motive for misleading people. At any rate, we were not going to war now; nor were we, who had shut up the Great Mogul as a puppet—who had trampled down Burmah—to have the hypocrisy to pretend that we were to execute God's justice upon another country If there was not a reason for going to war with Russia, they could not go to war with her for treaties; they had no treaties binding them to fight. If America quarrelled with Turkey we were not bound to fight America. Then, if we were told Turkey was our ancient ally, so was Russia.

Mr. Hadfield, M.P. of Sheffield, then moved a resolution to the effect, that, as an appeal to the sword could settle no question of right, it was the duty of Governments to enter into treaties binding themselves to submit their differences to arbitration, instead of resorting to arms.

At the evening sitting Mr. Cowan, M.P., took the chair.

A resolution was proposed by the Rev. Mr. Burnet, to the effect that standing armies being a prolific source of disquietude and irritation among nations, the Conference urge upon the Governments the necessity of entering, by mutual consent, upon a reduction of their armaments.

Mr. Bright (who was received with great cheering) seconded the resolution. They were met, he said, to protest against the small progress which nations had made towards that consummation for which all good men hoped—when war should no longer be known among civilised communities. He stood humiliated when he considered that they were in the thirty-sixth year of peace, and yet that all the nations of Europe were in a position so prepared for war, as if but yesterday the treaty of peace had been signed. Whilst it was asserted that the probability of war was annually becoming less, the expenditure had increased to an incredible amount: it was stated, on good authority, that the nations of Europe were spending more than one hundred millions per annum in maintaining armaments which it was said they didn't intend to use. If military expenditure increased, taxes must increase also. England, having none of the reasons for maintaining a standing army which might be urged in behalf of many other nations, was adding to its military expenditure every year more than any other country on the face of the earth. After thirty-eight years of peace, seventeen millions of the taxes of the United Kingdom were annually spent in the maintenance of our army and navy, whereas in 1835 we expended but eleven millions for the same purpose. Our posterity would look back on these times with wonder. They would say, "Were there no churches? no chapels? no ministers of the gospel?" England had not the plea of other nations for keeping up a standing army The French Emperor might say, he was not very secure on his throne, and could not hazard any reduction of his army. Austria might say she had Lombardy on the one side, and Hungary on the other. But we could urge none of these things. We had a Monarch who would bear favourable comparison with any of her predecessors on the English throne. We had a people more united than for a former period of history. And yet we permitted ourselves to be frightened, now by one story, now by another, and allowed Government to extract from us, in a time of peace, seventeen millions a year for purposes of war. He felt ashamed to belong to a country which conducted itself as if it were a tribe of Red Indians. We never buried the hatchet at peace we were ever talking of war. We spent upon the army and navy alone three millions annually more than the American Union spent for all their civil and military, general, state, and educational purposes; and yet America pleaded her cause and maintained her rights in every Court of Europe most effectually. No military force was required to keep the peace of England; all that was needed was to treat foreign powers courteously, justly, and honourably, and to adhere to the great principle of non-intervention.

The resolution (after some other speakers had addressed the meeting in its support) was unanimously agreed to. At ten o'clock the Conference adjourned to the following morning.

The remaining resolutions were moved and supported on Thursday morning, by the Rev. G. W. Conder, of Leeds; Rev. Dr. Robson, Glasgow; C. Hindley, Esq., M.P.; and Lawrence Heyworth, Esq., M.P.

Now that apples are so cheap and plentiful—being in some instances only half the price of potatoes some farmers have commenced giving them to their cattle; and it is found that cows milk better from eating apples than they will when eating turnips, potatoes, mangold wurtzel, or other similar vegetables.—*Preston Chronicle*

A MILLION TESTAMENTS FOR CHINA.—The Rev. J. A. James of Birmingham, preached sermons on Sunday week, in his own place of worship, with special reference to this object. At the close of the evening service, papers, with the number of copies subscribed for, were collected by the deacons, and it was found that nearly 20,000 copies (which in money value exceeded the sum of £410) had been guaranteed.

ENGLISH AND YANKEE SHIPBUILDING.—At New York, in 1852, there were launched 69 vessels of 42,239 aggregate tonnage; and building at the close of the year, 28 vessels of 21,270 tons. This was far outdone by Sunderland. Launched there in 1852, 141 vessels of 86,465 tons; building, 75 vessels of 39,414 tonnage. Many of the New York steamers are of great bulk but of little stability, while the products of Sunderland were nearly all substantial sailing vessels of really good workmanship.

VALUE OF A PLOUGH.—Among the Kaffirs, agriculture is considered to be a mean of labour unworthy of a warrior, and is therefore left entirely to the women. When they first saw a plough at work, they stared at it for a time in astonished and delighted silence; at last one of them gave utterance to his feelings in the exclamation—"See how the thing digs up the ground with its mouth It is of more value than five wives!"

POSTSCRIPT.

FRANCE.

PARIS, Thursday Night.—We have no domestic news to-day; all the interest centres in the foreign intelligence, which is subjoined;—

"TRIESTE, Oct. 12.—The publication of an Imperial *Hatti* by the Sultan, approving the declaration of war, is confirmed. A new levy of 150,000 men is ordered.

"The Russian functionaries still remaining in Turkey are about to take their departure. The declaration of war leaves the navigation of the Black Sea open to neutral flags.

"BUCHAREST, October 1.—Prince Menschikoff is charged with the Administration of the Principalities, and Prince Paskievitch, nominated Commander-in-Chief of the Russian army on the Danube.

"VIENNA, October 8.—The last accounts confirm the rumour that the Russian troops are moving up the Danube in great force."

TURKEY AND RUSSIA.

The Sultan, at the urgent request of the diplomatic corps, including Lord Stratford, has promised not to take any decisive step until the result of the recent interview of the two Emperors at Olmütz was known. After the declaration of war the representatives of the various powers paid a visit to the Sultan. His Highness requested them to assure their respective Sovereigns that his wish was to settle his differences with the Emperor of Russ a amicably; but he added that his ancestors had captured Constantinople with sword in hand, and that, if fate ordained that it should fall to another's lot, the Turks would quit the country sword in hand, or die as soldiers for their national faith.

Redschid Pacha has been chosen by the Divan to proceed to General Gortschakoff, Commander-in-Chief of the Russian troops in the Danubian provinces, to signify to him the resolutions adopted by the Porte.

The united fleets of France and England were expected at Constantinople (where there are already five French and four English steamers of war) on the 7th or 8th.

The state of public feeling in the Turkish capital is represented to be such as is usual on the eve of a revolution. The Turkish clergy have offered the Sultan to place 200,000,000 piastres at his disposal. It is further stated that the Divan has decided on at once raising the effective force of the army to three hundred thousand men, by means of a fresh levy of seventy-five thousand.

The impression prevails that if the Principalities are not evacuated by the Russian army within fifteen days after the arrival of Redschid Pacha at the head-quarters of Prince Gortschakoff, active hostilities will succeed to the present state of virtual war. It will then be necessary for the Turks to cross the Danube, and to encounter the Russians in a general engagement. To cross the Danube in the face of so large an army will be an arduous operation; and the Cabinet Council, which sat for five hours on Wednesday, must have calculated upon the probable contingency of the discomfiture of the Turks, and the measures which it will then be necessary for France and England to take for the protection of the Turkish capital.

At Olmütz, Warsaw, and Potsdam, the Czar appears to have breathed nothing but sentiments of peace. As far as the Emperor personally is concerned, there can be no doubt that he shrinks from the responsibility of entering on war, and finding himself so totally forsaken by the public opinion of Europe.

From Vienna, we hear that Count Buol, Lord Westmoreland, and M. de Bourqueney—the representatives of Austria, England, and France—are still holding frequent conferences. That a collision between Turkey and Russia may still be avoided, is an opinion which derives some countenance from a leading article in *The Times* of Thursday:—

"The representatives of the Western Powers are at present engaged in drawing up a fresh note for the joint acceptance of Russia and the Porte. Substantially, the difficulty of this adjustment ought to be small, for the views of the Porte having been expressed in modifications of its own suggestion, and those of Russia in the admissions of the Czar at Olmütz, while very little difference now exists between the two, it can only be necessary to embody in some formal instrument terms on which both parties are already agreed. The sole obstacle to a settlement, in fact, lies in the form to be employed. The Note of the Conference, the Porte's Note at all, in place of the original Note of the Conference, the difficulty will be at an end, for the substance of the concessions has been already arranged. The concessions offered at Olmütz will satisfy the requisitions of the Western Powers, if they are but embodied in plain and unmistakable language, and, as the inability of the original Note has been occasioned by the Czar's own interpretation of that unlucky document, and the whole embroilment is due to his own violent aggressions, it is not too much to exact that he should accept conditions rendered necessary by his own proceedings. He has now learnt that the previous moderation of France and England was owing in no degree to vacillation or fear; and he has perceived by personal experience that he cannot, in a cause like the present, reckon upon the support even of those Courts whose traditional policies were more nearly identified with his own. On the other hand, although the Turkish Government is undoubtedly entitled in its intended declaration of war, it might reasonably wait before embarking in active operations for the result of negotiations conducted strictly on terms of its own suggestion. The conditions of agreement which the Western Powers are now endeavouring to put satisfactorily on record, include all these guarantees and provisions to which the modifications of the Porte were directed, and it is in a successful completion of this arrangement that the best interests of Turkey far rather than in any chances of war will be found to lie.

Advices from Bucharest, dated Sept. 30, state:—"General Liders has arrived at Bucharest. The Russian troops are in motion: 16 battalions of foot and 32 pieces of artillery have marched through the town. Prince Gortschakoff has given notice to the Hospodar Surbey that Prince Menschikoff is for the future to superintend the government of the Principalities." This appointment of Prince Menschikoff to be Governor of the Principalities seems as if the Emperor already considered them as a portion of his Russian dominions. The Russians are busily employed in increasing up entrenchments at every place where the Turks could possibly cross the river.

The exhaustion of the finances at Constantinople is described as unprecedented. Six eighths of the taxes for the ensuing year have been already collected. The pecuniary sacrifices that have already been made by private individuals, by the Ulemas, and many of the priesthood, were nearly exhausted; and the Porte was printing kaimes (bank notes) day and night, which, after the 1st of October, were to be current in all payments by and to the State.

Letters from Trebizond state that the Turkish army in Asia Minor was numerous, in excellent order, and well commanded. The Russian troops were inferior in number, and almost entirely concentrated in Georgia and Circassia; and the Russian Commander-in-Chief, who resides in Tiflis, had found it necessary to send an officer of his staff to St. Petersburg to request reinforcements.

The Persian preparations for war are well known. The Court of Teheran, warmly supported by the British Minister, has rejected the propositions of the Russian Government to commence hostilities against the Turks.

FRANCE.

It is still believed in Paris that, in the event of hostilities breaking out in Turkey, a French force would be embarked at Toulon or Marseilles for the East; but hitherto no ostensible preparations have been made. The French army is at this moment in such a perfect state of organisation that it would require very little time, and no extraordinary effort, to form a corps of 30,000 men, or more, if wanted. Orders have been given at Vincennes to manufacture 24,000 shells; and it would not be very wonderful if these shells were destined to explode over a Russian fortress or a Russian town. General Canrobert, who has been named as likely to take the command of the French expeditionary force, after having completed his tour of inspection, is performing his duties as aide-de-camp to the Emperor. It appears to be generally credited at Paris that, should hostilities break out between the Turks and Russians, material assistance will be given to the former by the English and French Governments, that it is now a matter of discussion what particular point an expeditionary force would be likely to occupy. Between the point at which the Danube makes an abrupt turn in its upward course towards Galatz and the Black Sea, the ground is the narrowest of all that extends from the river to the coast—that is, between Rassova, on the Danube, and Kustendji, on the Black Sea. In the event of the Turks being defeated, a force occupying that position might act as a check on the Russian army, which, after crossing the Danube, would continue to march towards Adrianople, and menace Stamboul. The expeditionary force would not be obliged to make any long marches by land, but could be conveyed entirely by sea, and landed on the coast. It would be high up between the Danube and the Balkan, and be in the rear of the Russians in the event of their moving southwards. That position is considered superior in a strategic point of view to either Rodosto, on the Sea of Marmora, or Roustchouk, which is nearly in the centre of the line of the Danube.

The Emperor and Empress left Paris on Wednesday, for Compiègne.

The Bourse was heavy on Wednesday, with little business done. Prices recovered, however, towards the close. The Three per Cents opened at 72f. 20c., and rose subsequently to 72f. 65c., at which they closed for the end of the month.

PRUSSIA.

The Emperor of Russia left Potsdam on Sunday night, and set off for St. Petersburg by the Orianbaum to Stettin and Konigsberg. The King accompanied the Emperor to the railway station. The Grand Duke of Mecklenburg-Schwerin and Duke George of Mecklenburg left Potsdam also for Schwerin and New Strelitz. The Duchess Pauline of Nassau and Princess Sophia of Nassau have also left Berlin for St. Petersburg.

Baron Von Manteuffel, who had been commanded to Potsdam on Sunday for a conference, was retained to dinner with their Majesties Sunday was spent at Potsdam in the quietest and most unpretending manner. The King attended divine service in the garrison kirch in Potsdam; the Emperor the same in the Greek chapel of the Russian colony Alexandrowska, near Potsdam. At eleven o'clock there was kirchen parade of the 1st battalion of the First Regiment of Guards and Hussars, and their Majesties repaired to the Palace in Potsdam, and subsequently dined at Sans Souci. There were no guests invited beyond the Russian Generals in the Emperor's suite and Baron Budberg, in addition to the more immediate Royal circle.

AUSTRIA.

Martin Koszta, the refugee seized by the Austrian Consul at Smyrna, has been liberated, and is already on his way to America.

The Emperor was about to leave Vienna for Munich.

ITALY.

Intelligence has arrived that, in consequence of the very energetic representations of Lord Clarendon, the Grand Duke of Tuscany has liberated Miss Cunninghame.

From Rome we learn of new arrests of influential individuals suspected of being concerned in the late conspiracy, and of deep-rooted dissatisfaction towards the Papal Government.

DENMARK.

On the 3rd inst. the King of Denmark opened the Diet of the Kingdom of Denmark Proper with a speech from the Throne.

It is proposed to settle on Prince Christian of Glucksburg, now styled Prince of Denmark, the presumptive heir to the throne, a provision of 50,000 r. b. thalers a year. Princess Christian of Denmark was safely delivered of a daughter on the 27th September; the family have now mounted the Royal livery of red and gold, and will soon be admitted to be mentioned in the prayers put up for the Royal family in the Liturgy.

The estates in Schleswig met in Flensburg on the 4th inst., and those of Holstein at Itzehoe on the same day, so that the united monarchy of Denmark contains at this moment three Representative Assemblies sitting, to which, in due course of time a fourth will come, namely a superior Reichstag, composed of delegates from these three representations, who will deliberate on such matters as appertain to the aggregate monarchy; these individual bodies discussing only such subjects as appertain distinctively to the kingdom of Denmark Proper, the Duchy of Holstein, and the Duchy of Schleswig. The aggregate income of the whole monarchy is to be apportioned at the rate of three-fifths for Denmark Proper, and two-fifths for the three duchies, Holstein, Schleswig, and Lauenburg; their expenditure is regulated by their separate representatives.

The Finance Minister's budget shows an income for the ensuing year of 21,857,299 r. b. thalers. Expenditure, 20,905,744 r. b. thalers. The separate income of the kingdom and the duchies are for the first time brought into one general account. According to the showing of the Finance Minister, the national debt amounted in—

AMERICA.

We learn that Mr. Guthrie, the Secretary of the Treasury, has spent some days in New York, to make investigations to guide him in such alterations in the American tariff as he may propose to the next Congress. The Treasury rejoices as the Czar rejoices at income over expenditure, estimated at 20,000 dollars: and as some reductions of Customs duties will become necessary, and as Mr. Guthrie's views are known to be favourable to a more liberal tariff, the prospect of the relaxation of the United States' tariff in favour of British manufactures is encouraging.

The amount of Custom-house duties collected at the United States ports for the Fiscal year was 58,187,000 dols.

The political excitement of the country is becoming intense. The Union Democrats have led the way in New York, where they have proclaimed their uncompromising hostility to Governor Marcy and the whole Free-soil faction of the north, and the Secession faction at the south. The Secretary of State must, it is said, be driven from office, unless the President goes over entirely to the Factionists, and becomes their avowed head. If the President should dismiss the Secretary of State, the National men of the whole Union would come to his rescue.

President Pierce was labouring under an attack of fever, which it was hoped would be a mild one.

During a ratification meeting of the "Hard Shell" democracy at New York, a platform on which the principal speakers were assembled gave way with a tremendous crash, precipitating all upon it pell-mell among the ruins. Several persons were seriously injured, but none were killed.

The yellow fever at New Orleans had nearly died out. The deaths from that cause on the 1st instant did not exceed fifteen.

The comet had created a sensation among the negro population of New Orleans. On a recent Saturday night about 300 of them assembled on an open space, and, stretching forth their arms, commenced singing. It turned out that a fanatical negro preacher had told his congregation that at eleven o'clock on that night the comet would come in collision with the earth and demolish it; but, those who were found with their arms stretched to heaven, watching the coming of the catastrophe, and singing a hymn of welcome, were to be translated bodily into Paradise. In consequence the mobassembled; but the police made a descent on them, arrested 60, and the rest fled. The prisoners were fined 5 dollars each, or, in default, sentenced to 15 lashes each!

Letters from Newfoundland report the total failure of the potato crop. This, in connection with the unprosperous fishing season, caused fears of a famine to be entertained. A very severe gale had occurred on the northern coast, and a number of fishing-vessels, with their crews, are reported to have been lost.

BERMUDA.

Accounts from Bermuda, to the 24th ult., state that a malignant fever had broken out on board the convict hulk *Thames*, and communicated to the troops in barracks. Out of 200 convicts, only 30 escaped the fever, and 78 died. The detachment of the 50th Regiment, consisting of 500 men, had lost 4 officers, 103 men, 16 women, and many children. The Sappers and Miners had lost 9 men. Among the deaths reported are the acting Lieutenant-Governor, Col. Phillpotts; Col. Robe, Royal Artillery; Capt. Harefoot, Adjutant, and wife. There were a number of the officers sick, lying in the hospital, and in a church converted for the purpose into an hospital. Among the sick was Major Oakley.

THE OVERLAND MAIL.

The India Mail arrived at Marseilles on Wednesday, at ten a.m. By it we learn that the English squadron has destroyed a number of piratical junks on the coast of China.

WEST INDIES.

SOUTHAMPTON, Two a.m., Thursday.—The West India Mail steam-packet, *La Plata*, has just arrived. She brings gold and silver amounting to upwards of £84,000, besides other cargo. The *La Plata*'s latest dates are—Cruces, September 23; Trinidad, 25; Jamaica, 26; and St. Thomas's, 30.

At Jamaica, fever had considerably abated; and all parties were anxious for the arrival of the Governor. On the 19th September an earthquake was felt at St. Thomas. The number of passengers brought the *La Plata* was 41.

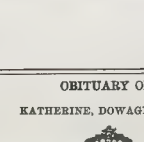
LISBURN.—Mr. Jonathan J. Richardson, the Liberal candidate, has been elected M. P. for this borough.

THE NEW RECEIPT STAMPS. We understand that no less than 6,500 000 receipt stamps have been already issued to the public.

THUNDERSTORM AT DEAL.—On Thursday afternoon, about five o'clock, Deal was visited by one of the most awful thunderstorms known for some years. It continued for more than an hour, and was accompanied by heavy rain.

OBITUARY OF EMINENT PERSONS.

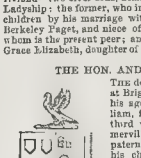
KATHERINE, DOWAGER VISCOUNTESS GUILLAMORE.



THIS lady, who died at Monkstown, near Dublin, on the 30th ult., was the relict of Standish, first Viscount Guillamore (the learned and accomplished Chief Baron O'Grady), and was herself member of a family not unknown in history. Her brother, John Waller, Esq., of Castletown, was M.P. for the county of Limerick, in the stormy days of the Union, which he warmly opposed, and suffered a long incarceration in France under Bonaparte, rather than owe his release to an enemy of the British flag, his former friend, Arthur O'Connor. Mr. Waller was the descendant of the celebrated Republican General, Sir Hardress Waller of Castletown, M.P. for Limerick, &c., under Cromwell, and one of the Judges of King Charles I. Sir William Waller, Commander for the Parliament in the West of England, and Edmund Waller, the poet, represented junior branches of this family, which descends from Sir Richard Waller, the captor of the Duke of Orleans at Agincourt.

In those palmy days of Dublin society, when the Duke of Richmond and Earl Whitworth were Lords-Lieutenant, and before London had become the metropolis of the Irish aristocracy, the lady whose death we record, filled a leading place in the Irish capital; and her hospitable mansion (now the United Service Club), was the constant resort of a brilliant circle, of whom scarcely any now survive. Viscountess Guillamore had attained her eightieth year. Of her large family, the eldest daughter is the present Viscountess Gort. The eldest surviving son is the Hon. Richard O'Grady, Chief Examiner of the Exchequer, in Ireland—two elder sons, Standish and Waller, having predeceased her Ladyship: the former, who inherited as second Viscount, leaving several children by his marriage with Gertrude Jane, daughter of the Hon. Berkeley Paget, and niece of the Marquis of Anglesey, the eldest of whom is the present peer; and the latter also leaving issue by his wife, Grace Elizabeth, daughter of Hugh, third Lord Massey.

THE HON. AND REV. SOMERVILLE HAY.



THE death of this lamented gentleman occurred at Brighton on the 27th ult., in the 37th year of his age. He was the last surviving son of William, fifteenth Earl of Erroll, by Harriet, his third wife, sister of Kenelm, present Lord Somerville. Of noble and distinguished ancestry, paternally and maternally, Mr. Hay derived his chief pride and pleasure from the correct performance of his duty as a minister of the Christian religion, and from the constant exercise of kindness and benevolence to all his fellow-creatures.

He married, 6th June, 1843, Lady Alicia Diana Erskine, youngest daughter of Henry-David, Earl of Buchan, by Elizabeth, his first wife, daughter and co-heir of the late General Sir Charles Shipley.

THOMAS ROBERT WILSON FRANCE, ESQ., OF RAWCLIFFE HALL, LANCASHIRE.

THIS gentleman, who died at Fleetwood, on Friday, the 7th inst., was a considerable landed proprietor, and a Deputy-Lieutenant and magistrate of the county of Lancaster, having also served the office of High Sheriff in 1842. Mr. Wilson France was well known in the county as an active and useful member of the Magisterial Financial Committee. Few, also, have been more zealous in efforts tending to the improvement of agriculture, in proof of which is his reclamation of a vast extent of what was previously barren moss land. As a landlord and neighbour, Mr. France was justly esteemed; whilst his affable disposition and good old-fashioned hospitality rendered him very popular; and his loss is generally regretted. The estates pass to an only son; besides whom the deceased leaves a widow and three daughters.

HENRY NICHOLSON, Esq., late of Furnival's-inn, who has died possessed of large property, has left on trust to nine public institutions and charities following, a legacy in each of £100, viz.:—The Law Clerks' Society, Law Society for the Benefit of Widows and Children of Professional Men, Society for Promoting Christian Knowledge, Middlesex Hospital, Bloomsbury Dispensary, Royal Free Hospital; the incumbent of St. Nicholas, Liverpool (his native town); the incumbent of St. James', Clerkenwell; and the vicar of Islington, to be distributed among the poor of their respective parishes.

The late Lieutenant-General Sir Charles Napier's property has been estimated for stamp-duty at £200,000.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Deaneries*: The Rev. E. LANCE, B.A., to Crewkerne, Somerset, the Rev. J. S. Coles, assistant, Crewkerne. *Rectories*: The Rev. W. Howard, to St. Peter's, Nottingham; the Rev. E. Hotham, M.A., to, Crowcombe, Somerset; the Rev. S. C. Lord, D.D., to Farmborough, Somerset, the Rev. R. M. Scott, M.A., to Borchester, Isle of Wight, the Rev. T. Simmons, to South Dalton, near Beverley; the Rev. W. C. Rawlinson, to Chedburgh, Suffolk; the Rev. T. Hervey, to Colmer, Alton, Hampshire; the Rev. F. Trench, to Worlingworth, Suffolk; the Rev. S. Andrews, to Chasby, near Horncastle. *Vicarages*: The Rev. T. Cain, M.A., to Kirk Loman, near Douglas, Isle of Man; the Rev. J. C. Wharton, to Burton, near Aylesbury; the Rev. J. Leaden, to Mulford; the Rev. G. Shaw, to Merthyr, Cornwall. *Incumbencies*: The Rev. E. A. Julian, to Holy Trinity, Plymouth, the Rev. G. T. Hoare, to Tunbridge; the Rev. J. Schofield, to St. Paul's, Portwood, near Stockport; the Rev. H. Austen, to the new church of Tarrant Keynstone. *Curacies*: The Rev. J. Carr, M.A., to Weston Chapel, South Shields; the Rev. H. St. George, to Billing, in order as Curate of Wigan; the Rev. C. R. Pearson, M.A., to Mark, Somerset; the Rev. J. B. Wakefield, to Southshore, near Blackpool.

THE parishioners of Newton-on-the-Hill have lately presented to the Rev. W. G. Cockesley, M.A., late Master at Eton College, an elegant tea-kettle, in grateful remembrance of his services during his residence amongst them as their pastor.

THE CHOLERA.—This disease is certainly diminishing in Newcastle and Gateshead, where it first commenced; but many other towns are on the list of having cholera patients; and it is somewhat on the increase in the metropolis and vicinity.

GERMAN GREAT EXHIBITION.—The Munich official journal publishes the regulations drawn up for the "General Exhibition of German Industry and Trade Productions," which will take place at the Bavarian capital next year. The King will lay the first stone of the building in a few days.

STAMPS ON PROMISSORY NOTES.—A question having been put to the office of Inland Revenue whether a promissory note payable on demand, but not to bearer, drawn on a penny stamp with the inscription, "On demand," be a legal security, Mr. Keogh has replied:—"I am directed by the Board to inform you that the promissory note referred to is wholly worthless, and cannot be properly stamped even on payment of a penalty. The recent Act of Parliament imposing a duty of 1d. on draughts or orders for payment of money to the bearer, or to order on demand, has nothing whatever to do with promissory notes, the duties on which are unaltered by that Act.

SOUTH ESSEX GAS COMPANY.—The erection of the works of this company is actively proceeding on a site adjoining the Northern and Eastern Railway in the Lea-bridge-road; and numerous exertions are being made to obtain permiss on to lay mains in Hackney parish.—*Journal of Gas-Lighting.*

THE MIDLAND OBSERVATORY.—We understand that the deputation who recently waited upon Mr. Lawson, of his residence, in Landown-crescent, obtained from him an extension of time for raising the required sum. The subscription list will now be opened until January.

MR. PEEL'S YACHT.—Very considerable apprehensions are entertained for the safety of the yacht belonging to S. M. Peto, Esq., M.P., which recently conveyed from Lowestoft several gentlemen engaged on the railway undertakings now being carried out at Christiania, in Norway, which place the little vessel had left just before the gale of Sunday se'nnight, and since which time no tidings of any kind of her have reached here. Among the gentlemen who were on board when she left Christiania was Mr. George Badder, the celebrated arithmetician

PROVINCIAL INTELLIGENCE.

THE CHANCELLOR OF THE EXCHEQUER AT MANCHESTER.

In another part of our impression will be found an Engraving of the Statue of the late Sir Robert Peel, the inauguration of which took place on Wednesday. The ceremony was further enhanced by the presence of the Right Hon. W. E. Gladstone, the Chancellor of the Exchequer.

The inauguration was fixed to take place at twelve o'clock on Wednesday. Long before that hour crowds of persons began to gather round the Infirmary—at the upper end of which, fronting Market-street, the statue is placed. By twelve o'clock these groups had swelled into a dense crowd, which completely filled the broad area in front. The central flat collected was so great, that, coupled with the imperfect arrangements made for preserving order, it had nearly led to serious consequences. The officers in authority, however, did their best; and, in spite of occasional collisions, general good humour prevailed.

About twelve o'clock the Corporation and subscribers came in procession upon the ground, headed by Mr. Harvey, the Mayor. Among those present were the Bishop of Manchester, Mr. Brown, M.P. for the county; Mr. Brotherton, M.P. for Salford; Mr. Bazley, President of the Chamber of Commerce; Mr. Edmund Potter, F.R.S.; Mr. Acraman, President of the Commercial Association; Mr. Entwisle, late member for the county and others. Neither of the city members was present.

At a quarter past twelve Mr. Gladstone arrived, accompanied by Mrs. Gladstone and Mr. J. C. Hatton with whom he remained. The Bishop of Oxford and some other friends. It was received by the crowd with hearty cheers as soon as its approach was perceived.

After an Ode Potter commenced the proceedings by stating that it was an event of great importance to Manchester. It was the inauguration of the best public statue that had ever been erected in Manchester and the statue was dedicated to the memory of a great statesman, and of the purest philanthropist that had ever adorned the annals of any country. Not to the fellow-creatures, the weaknesses inherent in the nature of the Turkish Government, and the eventualities that surround the future of that dubious Empire are not the things with which any British Government—were most ably handled. On the latter subject, the substance of the Chancellor's remarks:—"We are not engaged in maintaining the independence and integrity of the Ottoman Empire. We might as well those words with reference to the integrity and independence of England or France. The anomalies of the Eastern Empire, the political solecism of a Mussulman faith associating a dominion over twelve millions of our

No. 650.—VOL. XXIII.] SATURDAY, OCTOBER 22, 1853. [PRICE, WITH A SUPPLEMENT, SIXPENCE.

THE GREAT REVOLUTION IN CHINA.

MEAGRE and incoherent as are the details of the progress of the Revolution in China, it is evident that the days of the Tartar dynasty in that magnificent empire are rapidly drawing to a close. Ere long a new political, and perhaps religious, system, will be established. The second city of the empire has already fallen. The capital is at the mercy of the rebel chiefs, who only delay marching upon it in the mere wantonness of their power and caprice. The Imperial forces are either apathetic or disorganised. The reigning Monarch seems to lack even the ordinary courage of despair which other Sovereigns have sometimes found in circumstances as perilous.

China is the richest and most venerable state on the globe, and has been so long sealed against the world that the fall of its dynasty and of its ancient and unprogressive principle of government, are matters of more than ordinary importance to all civilized nations. Even the proverbial indifference with which the statesmen of Europe regard the politics of all nations, that are remote and but little understood, yields in the case of China to a warmer feeling of hope and anxiety. It is not only statesmen, politicians, and men of business, but Christians and philanthropists who speculate upon the future fortunes of a region which is believed to contain nearly one-third of the human race; and upon the influence which change of circumstance and line of conduct among them may exert upon the rest of the world. The very name of revolution, or of change among a people hitherto so perversely conservative, is strange and startling. We live in an age so productive of unexpected and extraordinary results, that the minds of reflective men are guarded against incredulity, as against a vice, which at a future time may render them ridiculous. It is not considered safe to meet with absolute denial the most astounding speculations either in science or social politics; so that when it is affirmed that the three or four hundred millions of people who live apart from the rest of the world in the far east of Asia have suddenly become converted to the religion and to the ideas of the West of Europe, the statement meets with ready credence not unmingled with astonishment.

At the first apparently authentic confirmation of the rumour that Tae-Ping and his followers desired not only to overthrow an alien dynasty, but to establish Christianity, imagination ran somewhat riot in this country. One class of minds saw only the social and political results that might be anticipated; another dwelt exclusively upon the religious blessings that were to overflow upon a long-benighted region. We were told in glowing language of an indefinite extension of our commerce with a thriving and punctual people. Incredible numbers of British ships, laden with the most remunerative productions of British industry, were to visit every port and harbour in the Celestial Empire. Nankin and Pekin were to be lighted with gas provided by British gas companies; railroads were to be laid down from north to south and from east to west, and the shares were to be at a premium on the Exchange of London and the Bourse of Paris. The names of Stephenson and Dargan were to be familiar sounds in the mouths of mandarins; the scream of the steam-whistle was to be heard in the land; and British tourists—weary of Margate, sick of Boulogne, *blasé* of Cairo, and too much at home in India on one side of the world, and in the United States on the other—were to seek change of scene and climate in the swarming towns and villages of the *Yang-tse-Kiang*, or take their wives and children to pass the winter among the gaieties of Pekin. The visions conjured up by those who gather about Exeter-hall in the month of May were equally brilliant. The gospel was to be preached in the remotest villages and hamlets between the Great Wall and the Ocean. The Bible in Chinese was to be printed not by thousands but by millions. The missionary was to be the most honoured of men amongst our "flowery" brethren. Tuscany, the uncongenial, was to be left to its obstinacy, and honest John Bunyan was to be introduced into a new country and among sympathetic readers, without entailing upon the fair introducer the penalties of persecution and imprisonment. Churches, chapels, and Sunday-schools were to replace the ancient temples of the land; and Buddhists in China were to become as obsolete as Druids in Great Britain.

It does not appear, however, on further investigation of the principles and doctrines of the insurgents, that either the social or

DUDLEY, AND ITS IRON-WORKS, FROM THE CASTLE.—(SEE NEXT PAGE)

the religious change is likely to be so sudden or so complete as was anticipated. The Tartar dynasty may be overthrown, as it possibly is by this time, without effecting a total revolution in the moral and religious life of the Chinese. The Christianity of the rebels appears, on the most favourable interpretation of it, to be spurious, corrupt, and imperfect. Wherever it has been introduced beyond the confines of the rebel camp, it has been thrust upon the people by fire and sword. The mode in which it proselytises is not to be approved by those who look upon the Sermon on the Mount to be more Christian in its character than the commands of Samuel to Saul. From the practice, no less than from the teaching, of Tae-ping and his followers, it is but too evident that they consider the Mosaic command to "Kill and spare not," to be more binding than the newer precept, "Love one another." They have taken from the Old Testament, and followed, in their literal meaning, those passages which foment their warlike propensities, their revenge, or their love of aggrandisement and dominion. They ignore the divine precepts of the New Testament, which speak in the plainest and most affecting manner of the duty of forgiveness and the holiness of humility; and cling to those of Moses, which demand an "eye for an eye, and a tooth for a tooth." Yet, while it is thus evident, from these and other circumstances, that the Christianity of the insurgents is scarcely worthy of the name, it must be admitted that their recognition of the Gospel, and their respect for it, even while they pervert or misunderstand it, is a circumstance full of hope for the future. The present state of their knowledge and faith does not realise the sanguine expectations that were first formed, or warrant the belief that the old system is about to be abolished; but it justifies the reasonable expectation that those who know Christianity by name and have ceased to regard it with aversion, will gradually become better acquainted with it; and that in the fulness of time the little seed will grow into a tree, and the faint grey dawn be replaced by a noon-tide brightness. We do not think, however, that the present generation is likely to witness so desirable a consummation. Dynasties and forms of government are easily overthrown, but religious systems, however erroneous, are tenacious of life; and when we consider how much of Europe at the present moment is Christian only in name, we do not think we are hard of belief in arriving at the conclusion, that the Christianization of China is at present a thing to be desired, rather than expected.

The political results of the approaching change in the Government, are likely to be more satisfactory. They are more at the command of kings and men in authority than religious creeds. A new monarch cannot convert his people to his own religious opinions, but he can open the ports of his dominion to foreign commerce. He can remove the barbarous police regulations which prevent strangers and "outer-barbarians" from entering or trading in his territories: he may send his envoys and plenipotentiaries to the principal States of the world, and may receive their ambassadors at his Court: he may make treaties of alliance and commerce with his neighbours near or remote: he may cultivate good fellowship, and may invite the science of Europe to establish itself in China. He may order steam-ships to be built for him in the Thames or in the Clyde, and prove to the densest of his subjects on the banks of the Yellow River the superiority of the new craft to the old junks of their forefathers. He may introduce the steam-engine, the railroad, and all the wondrous art of Europe; and may teach his subjects in a thousand ways that they are not the only people on the face of the earth, and that they have been asleep while other nations have been at work. All this and much more he may do with comparative ease; and it is not only possible, but probable, that much of this will be attempted, if not achieved, by the successors of the worn-out and tottering dynasty of the Mantchous—whether those successors be Tae-Ping and his subordinate "kings," or whether they emerge from the ranks of the army now fighting under the rebel flag. There is evidently a chink in the great intellectual wall that formerly hid China from the rest of the world; and there is no saying how much social and political, if not religious, light may one day enter by it.

THE COAL AND IRON DISTRICTS OF SOUTH STAFFORDSHIRE, VIEWED FROM DUDLEY CASTLE.

The quarterly meetings held during the week concluded last Saturday evening, at Dudley. The ironmasters persevere in their determination neither to advance nor recede from the prices of last quarter; notwithstanding which resolution, orders are so plentiful and the works throughout the district already so fully employed, that they are generally reluctant, and some of them positively refuse to accept orders or sell at present; still, in the words of the *Birmingham Journal*, "in the face of something approaching to a national war—with the labour-market in a excited condition, and with the prospect of still higher rates of discount—there can be but one opinion of the prudence of the course adopted by the iron-masters." The demand for coal continues to be remarkably brisk, and the turn-out of a considerable portion of the colliers creates great inconvenience in the manufactories. Of this interesting district, the Illustration upon the preceding page presents a picturesque view.

Let the reader imagine himself standing, at night-time, upon the elevated ruin of Dudley Castle, which commands a wide expanse of country, covered with huge columnar structures, whose forms are made dimly visible by the lurid and flickering flame that issues from their lofty summits. These grim monsters may be said to live upon burning materials, for they are fed continuously with coal or coke; and, as their consumption is enormous, the mere breath of their nostrils, so to speak, serves to light up the horizon for miles around, and imparts to every object within their reach a gloomy and indefinable aspect. The night view from Dudley Castle of the Coal and Iron Districts of South Staffordshire reminds the spectator of the smithy of Vulcan, which Homer has so strikingly described; or of the palace of the Prince of Darkness, which Milton has painted with such vivid grandeur.

On whichever side the view is taken in open day, the evidences of mining industry present themselves. The grass of the fields shows no disposition to grow, nor are there waving many pleasant undulations of country; but the crust of the earth has been pierced in so many directions, and there are such a number of red structures, and there is so much black smoke, that the eye has little to rest upon of beauty, which is the main source of pleasure in landscape views. The objects presented by this view, however, have their peculiar attraction, and are suggestive of a peculiar train of thought; for it is impossible to look upon that vast number of smoking, fiery, and ever-active works, without concluding that you have, within the compass of your eye, the greatest concentration of man's industry that the world presents.

The name of South Staffordshire ought, strictly speaking, to be applied to only a portion of the district in view; but as geologists have adopted that term in their description of the great mineral beds which completely substrate it, there is little use in objecting to it. Taking Dudley Castle, however, as a centre, we have to the north Tipton, Gornal, Sedgley, Bilston, Wolverhampton, Willenhall, and Wednesfield—all of which are in Staffordshire, and within a distance of eight or nine miles. More easterly we find Great Bridge, Toll End, Darlaston, Wednesbury, West Bromwich, and Swan Village, which is a similar group to the former, and marked with precisely the same features—smiling perforations, red brick houses, and black smoke. Turning towards the south, we find the iron towns fewer and wider apart, and lying, as it were, confusedly in four counties—Birmingham, for instance, is in Warwickshire; while Smethwick, Rowley Regis, Wordsley, and Kingswinford are in Staffordshire; Oldbury and Halesowen, again, are in Shropshire: while Dudley, Dudley Port, and Stourbridge, are in Worcestershire. So singular, indeed, is the intersection of these four counties, that a group from Birmingham to Dudley Castle (the size of our engraving) by way of Oldbury—a distance of about eight miles by coach-road—we pass out of Warwickshire into Staffordshire, thence into Shropshire, thence again into Staffordshire, thence into Worcestershire, and a third time into Staffordshire; for although Dudley town is in Worcestershire, Dudley Castle and grounds are in Staffordshire.

These several towns belong to the mining and manufacturing district, known by the general name of South Staffordshire, and are comprised within the view which we have taken from Dudley Castle. Geologists call this district a *coal-field*, because it has layers of coal running, so far as is known, beneath its entire surface. This coal-field forms an irregular oblong, extending nearly from Rugeley, in the north, to Halesowen, in the south; the northern half of the district, however, is not so rich in coal and iron as the southern, so that Wednesfield and Halesowen may be considered as the north and south limits of the effective coal field. The western limit approximates to Wolverhampton, and the eastern nearly to Birmingham. Taking the extreme limit up to Rugeley, the district measures about twenty miles long, by six or seven broad. The coal-field is encircled on all sides by the new red sandstone formation.

The old Castle, whence the view is taken, belongs to Lord Ward, who is also proprietor of a considerable portion of Dudley and its mines. It is situate in a large and highly picturesque park; and, with its warder's tower, watch-tower, triple gate, keep, vault and dungeons, sally-port, octagon-tower, justice-hall, dining-hall, and chapel, though in a state of dilapidation, must be considered as a fine old ruin. The view from the summit of the keep is wide-spreading and singularly interesting: to the north-east you have Lichfield Cathedral; to the east, the busy hive of Birmingham; to the south, Hagley—the seat of Lord Lyttelton, and memorable for the monody on the death of his lady, by a predecessor of his Lordship; whilst in the south-west, nature has formed the Malvern Hills. These several objects are all visible, and form an interesting background to the busy environs of Dudley. The castle owes its origin to Dodo, a Saxon prince, who is said to have built it in the year 700. In the reign of Henry II., it belonged to Gervase Paganell, and was demolished by that King, in consequence of Gervase's taking part in the rebellion of Prince Henry, his son. In 1644, the castle was bravely defended by Colonel Beaumont against the Parliament forces for three weeks, when it was relieved by a party of the Royal army from Worcester.

As the eye sweeps over the horizon, to discern the precise character of each object and locality, the mind is struck with one particular fact—that almost every town and village, every house, every man, woman, and child, every occupation and station, are more or less dependent on, and are at the mercy of, lumps of coal and lumps of iron; and that the human race will mainly owe their moral regeneration to these two simple materials. The miner digs, the roaster calcines, the smelter reduces, the founder casts, the blacksmith forges, and the whitesmith files: these are but parts of that vast hive, whose busy hum of industry is heard far and wide, and whose skilful handiworks find a ready reception in every quarter of the globe. Leave Birmingham to itself, and direct your eye to West Bromwich—which has sprung up as it were but yesterday—and there you will perceive the best *puddlers* at work—the converters of pig iron into its barred state—by far the most important of all the processes in the manufacture of that metal. Wolverhampton, Wednesbury, Bilston, and Dudley have long been famous for tin-plateing, and carry the division of labour to the minutest degree. Bloxwich is almost exclusively employed in making awl blades and bridle-bits; Wednesfield keeps to its locks, keys, and traps: Darlaston to gunlocks, hinges, and other locks, keys, and bits; and Bilston to buckles, snaffle-bits, and bits: Sedgeley, its pig pipes, couch-springs, axles, screws, hinges, and bolts; Bilston, its japan-work and tin-plating; Sedgeley and its neighbourhood, its nails; Willenhall, its locks, keys, curry-combs, bolts, and gridirons; Dudley, its vices, fire-irons, nails, and chains; Tipton, its heavy iron-work; while Wolverhampton nearly includes all these employments in metal work. Looking farther south, there may be descried Oldbury, Smethwick, Rowley Regis, Halesowen, and Stourbridge—all of which are engaged, in one form or other, in the manufacture of iron.

We have not space to enlarge upon these facts, which are only a few in the vast multitude that are comprised in the area over which our engraving extends, therefore must content ourselves with laying a single one before the reader. The quantity of cast-iron produced throughout England and Scotland in 1851 amounted to nearly three millions of tons, and the share in that production by the district just described may be estimated at the one-third of that quantity, or five millions in value. Assuredly this limited area presents the most remarkable concentration of industry that the world can boast of.

FOREIGN AND COLONIAL NEWS.

FRANCE.

It is believed in Paris that both France and England have sent fresh notes to Russia, desiring further negotiations, but upon the express understanding that the Danubian Provinces must be first evacuated by the Russian troops.

The *Moniteur* contradicts the rumour that orders have been despatched to Toulon to prepare ships sufficient for the conveyance of a body of troops who are to be sent to the Dardanelles. From Toulon the official journal declares is destitute of foundation. It appears, however, that all the steam frigates laid up in port were visited by the maritime engineers, who, in conformity with orders received from Paris by telegraph, informed them of the state of each steam-ships as could within a short time be fitted out for sea if necessary. The Government had demanded of the Maritime Commandant of Toulon what number of vessels he could dispose of, and that officer replied by sending up the names of the following steam-ships:—viz., the *Vauban*, *Descartes*, *Asmodée*, *Cacique*, *Mont-cenis*, and *Panama*

A letter from Cherbourg, of the 13th inst., states that the *Duguesclin* and the *Hercule* were practising on the previous day with ball-cartridge.

Iskander Bey is said to have arrived in France charged with a mission to Paris and London: he is aide-de-camp to Omer Pacha.

The agents of France in foreign countries have received a circular from M. Drouyn de Lhuys, recommending them to watch more attentively than ever the proceedings of the refugees, the Government having reasons to believe that Generals Changarnier, Lamoricière, and Bedeau entertained hostile projects.

A great sensation was excited in Paris on Monday by the arrest, at his own residence, of M. Goudchaux, formerly Minister of Finance under the Provisional Government, and under General Cavaignac. An examination was made for two hours among his papers, but no case against him was discovered, and he was accordingly set at liberty. The cause of M. Goudchaux's arrest was a suspicion of his being engaged in a plot against the State, of being a member of secret associations, and of being engaged in illegal subscriptions. It is not denied that he has been the intermediate party in forwarding considerable sums from the Republicans of Paris to the French refugees in England, Belgium, and Switzerland. It is said that the Ledru-Rollin party, and last which probably were also the general Council, in Algiers, met at Algiers to form a fusion, and that the Government is uneasy at the closing of union which the movement evinces. It was the hope that something would be found among M. Goudchaux's papers to throw light on these supposed leagues. Twenty-five other persons or individuals were really arrested; among them an ex-Prefect of the Indre and Loire under the Provisional Government, as also a printer and his son at Nantes. A domiciliary visit has also been paid, it is said, to the residence of the Minister of Foreign Affairs under the Republic. Copies of a pamphlet of Ledru Rollin, for which the present state of political affairs was no doubt considered a favourable occasion, are said to have been introduced into Paris and distributed; and this, in all probability, gave rise to the domiciliary visits. Five other persons making an appeal to the Republican party to unite, and the title of the work is, it appears, "Union contre le Tyran."

Preparations are already making for the reception of the Emperor and the Empress at Fontainebleau.

Compiègne is unusually animated, in consequence of the presence of the Imperial party at the Palace. The Emperor and Empress engage daily in field sports.

WAR BETWEEN TURKEY AND RUSSIA.

We are as yet without news of hostilities in the East, although the telegraph may, at any moment, bring the momentous intelligence that the thunder-cloud has burst, and that the long threatened conflict in South-Eastern Europe has begun. The Sultan's declaration of war has been conveyed to his Commander-in-chief; Omer Pacha has communicated to Prince Gortschakoff his instructions; and the Russian General has laconically replied, that he has no orders either to commence hostilities, to conclude peace, or to evacuate the Principalities. The fifteen days of conditional suspense have by this time nearly expired, and if the Turks do not in a day or two cross the Danube, the delay can only have arisen from secret instructions from Constantinople. Up to the period of the Sultan's declaration of war, the Eastern question appeared to be approaching a pacific solution. After an interview between the Emperor of Russia and the King of Prussia, the former declared he was ready to accept the Interpretation of the Vienna Note, as given by England and France; and it is even asserted that by his orders a courier was despatched to M. de Bruck, the Austrian internuncio at Constantinople, announcing that fact. On receiving the news of the Turkish declaration of war, however, the Czar declared that he retracted all his concessions, that there was no solution except by arms, and that nothing now remained but war to the knife and a war of extermination.

The two great Powers confront each other upon the theatre of war under circumstances which forbid the hope that hostilities will not break out either upon the Asiatic or European frontier. The approach of winter, however, affords some ground for believing that war, although it may be commenced, may not be pushed to extremities before negotiations for a treaty of peace can be prosecuted. The Danube still rolls between the belligerent forces. Great efforts will be made by the European Ambassadors at Constantinople to cause instructions to be sent to Omer Pacha, forbidding him to cross the Danube; and so long as that river divides the two armies no great disaster can occur to either. The delay accorded by the Sultan will prolong the *status quo* until November, when the heavy rains which usually fall in Bulgaria must render military movements difficult, if not impossible. No winter operations above the rank of skirmishes are considered likely to take place, and little mischief will be done in the field until the diplomatists have had another and a prolonged opportunity of protecting their resources. Money is wanted by all the great European Powers; and it is expected that after the Russian troops have gone into winter quarters in Wallachia, strong efforts will be made to bring about a pacification. All parties, perhaps, will be delighted to find or make a way of escape from their increasing difficulties.

The tone of some of the letters from Constantinople is less warlike than might have been expected. The Turks, satisfied with the energetic attitude assumed by the Divan, may be more tranquil and more disposed to await the conclusion of this serious conflict, and this confidence of the Mussulmans in their Government is well calculated to facilitate the pacific endeavours of the mediating Powers.

The following is a translation of the letter from Omer Pacha to Prince Gortschakoff:—

Monseur le General, It is by the order of my Government that I have the honour to address to a letter to your Excellency.

While the Sublime Porte has exhausted all means of conciliation to maintain at once peace and its own independence, the Court of Russia has not ceased to raise difficulties in the way of any such settlement, and has ended with the violation of treaties—invading the two Principalities of Moldavia and Wallachia—integral portions of the Ottoman Empire.

True to its pacific system, the Porte, instead of exercising its right to make reprisals, confined itself even then to protesting, and did not devise from that way that might lead to an arrangement.

Russia, on the contrary, far from evincing corresponding sentiments, has ended by rejecting the proposals pronounced by the august mediating Courts—proposals which were alone necessary to the honour and to the security of the Porte.

There only remains for the latter the indispensable necessity of war. But as the invasion of the Principalities and the violation of treaties which have attended it, are the veritable causes of war, the Sublime Porte, as a last expression of its pacific sentiments, proposes to your Excellency, by my intervention, the evacuation of the two provinces, and grants for your decision a term of fifteen days, to date from the receipt of this letter. If within that interval the negative answer shall reach me from your Excellency, the commencement of hostilities will be the natural consequence.

While I have the honour to make this intimation to your Excellency, I embrace the opportunity to offer the assurances of my high esteem.

To this note, the Russian General Gortschakoff has intimated, as above stated, that he "has no orders to commence hostilities, nor to conclude peace, nor to evacuate the Principalities."

The Sultan's manifesto, which has been looked for for some days past, was published in Constantinople on the 16th inst., the first day of the Mouharem, the new year of the Mussulmans. Copies were handed over to two Chamberlains of the Imperial Palace, one of whom, Ahmed Pasy, is the son of Redschid Pacha; and these functionaries departed immediately for the camp of Omer Pacha, where they will read the document to the troops assembled. The manifesto was communicated to the different foreign legations, and about 20,000 copies in various languages will be widely distributed. It is a strong and unanswerable state paper, and establishes a powerful case against Russian violence and aggression, as entirely to justify the Turkish declaration of war. "From the very beginning," the Sultan says, "his conduct has furnished no motive of quarrel; and, animated with the desire of preserving peace, he has acted with a remarkable spirit of moderation and conciliation from the commencement of the difference." The question of the Holy Places, the manifesto observes, was settled to the satisfaction of all parties, and Russia has only sought a pretext for quarrel in insisting upon the question of the privileges of the Greek Church, granted by the Ottoman Government. Turkey has faithfully observed the promises given in the treaty of Kainardji, and no one can allege that objects have been offered by the Turkish Government to the exercise of the Christian religion The object of Russia (says the manifesto) is—

To insert in a diplomatic document the paragraph concerning the active solicitude of the Emperor of Russia for the maintenance in the states of the Sublime Porte of *religious immunities and privileges which were granted (octroyes) to the Greek rite by the Ottoman Emperors before Russia so much as existed as an empire*; to leave in a dark and doubtful state the absence of all mention between these privileges and the treaty of Kutschuk Kainardji; to employ in favour of a great community of subjects of the Sublime Porte a professing the Greek religion expressions which might make allusions to treaties concluded with France and Austria relative to the French and Latin religions. But this would be to incur the risk of opening up the hateful question of vague and obscure paragraphs, some of which are contrary to the reality of facts, and would offer to Russia a solid pretext for her pretensions to a religious surveillance and protectorate pretensions which that power would arrogate to produce, after all, that they are not derogatory to the sovereignty and independence of the Sublime Porte.

The Sublime Porte defends itself from having caused the haste with which the Vienna Note was brought up by its backwardness to propose an arrangement, by stating that it was the very act of making such a proposition when the invasion of its territories took place; and its sole answer to all active steps was the preparation of the Vienna note. It concludes

Since the Cabinet of St. Petersburg has not been content with the assurances and explanations that have been offered; since the benevolent efforts of the high powers have remained fruitless; since, in fine, the Sublime Porte cannot tolerate or suffer any longer the actual state of things, or the prolongation of the occupation of the Moldo-Wallachian Principalities, they being integral portions of its empire—the Ottoman Cabinet, with the firm and praiseworthy intention of defending the sacred rights of sovereignty and the independence of its Government, will employ just reprisals against a violation of the treaties which it considers as a *casus belli*. It notifies, then, officially, that the Government of his Majesty the Sultan finds itself obliged to declare war, that it has given most precise instructions (*les instructions les plus categoriques*) to his Excellency Omer Pacha to demand from Prince Gortschakoff the evacuation of the Principalities, and to commence hostilities if, after a delay of fifteen days from the arrival of his despatch at the Russian head-quarters an answer in the negative should be returned.

It is distinctly understood that should the reply of Prince Gortschakoff be negative the Russian agents are to quit the Ottoman States, and that the commercial relations of the respective subjects of the two Governments shall be broken off.

At the same time the Sublime Porte will not consider it just to lay an embargo upon Russian merchant vessels, as has been the practice. On the contrary, they will be warned to return either to the Black sea or to the Mediterranean Sea, as they shall think fit, within a term which shall hereafter be fixed. Moreover, the Ottoman Government, being unwilling to place hindrances in the way of commercial intercourse between the subjects of friendly Powers, will, during the war, leave the Straits open to their mercantile marine.

Omer Pacha has declared that vessels sailing under a neutral flag will be allowed to pass on the Danube till the 26th inst.

The fanaticism on either side is "tremendous." Every private in the Russian army is ready to suffer martyrdom for his faith, while the Turks feel convinced that the very existence of Islam is at stake. There were no longer parties among the leaders of Turkey—all were animated with the spirit of resistance to the attack on their country's independence. Letters from Constantinople of the 5th inst. are full of accounts of the military preparations which are going on with an activity that never tires. Patriotic gifts are coming in from all quarters; jewels, money, horses, houses, lands, all are offered for the national service. Eight thousand Redifs were clothed and equipped in one day from the proceeds of these gifts. The Turkish steam frigates *Rutsi*, *Subri*, *Orfi*, *Feridjé*, and *Medjedjé*, had just received orders to proceed at once to Beyrout, to take on board 12,000 regular troops, of the army of Syria Exclusive of the reserves, orders have been issued for the formation of a corps of 50,000 men, taken from the Redifs who are still disposable. Of that corps of 50,000 men, 18,101 were to be armed and equipped by the city of Constantinople. These 18,101 all answered to the summons, and crowded to their standard in one day. The arsenals produced in the course of a single week the cannon, muskets, and ammunition necessary for the 50,000 men; and the horses requisite for the cavalry of the same corps were forthcoming in one day at Constantinople Twenty thousand irregular Druses were expected every moment. They have at their head the famous Chief Cheibli, who so long withstood Mehemet Ali Pacha. One half of the Turkish fleet was about to leave for the coast of Asia, between Trebizond and Batoum. Two battalions of Chasseurs, armed, equipped, and drilled as the Chasseurs de Vincennes, have been organized, and have left for the army of Omer Pacha; and a third battalion was expected to proceed on an early day to Batoum. Orders have been sent to the Governor of Adrianople to send without the least delay to Constantinople Sefer Bey, the Circassian Chief, who was residing in that city. Hassan Jaadji had marched at the head of 4400 horsemen for the army of Asia; and it was affirmed that Abbas Pacha, after leaving a sufficient force for his garrisons, could still place 15,000 men at the disposal of the Sultan.

The warlike activity of the Turks seems indeed to have reached its acme. During the last month they have cast 100 cannon of various calibre, and these cannon, with all their accoutrements complete, and the horses to drag them, were sent to Adrianople, where an army of reserve is being formed of 80,000 men All the horses necessary were furnished by the Pachas of Constantinople. This army of reserve will be composed of 25,000 Redifs, who are now in Constantinople, chiefly small tradesmen; of 30,000 volunteers, who inscribed their names at the Seraskeral within eight days; and of 25,000 Kurdish horsemen, all mounted and equipped at the expense of the Beys of Kurdistan: these latter are irregular horsemen. It is probable, however, that on a field of battle the only troops Turkey will find worthy the name of soldiers are her regulars and her organised militia, both as yet untried, and that the Bashi Boyouks, the Spahis, and the Kurds will prove themselves again terrible warriors in village forays, but very prudent braves when brought face to face with artillery and regulars

There are now under arms about 300,000 Mussulmans—viz., 120,000 between the Danube and the Balkar, 15,000 in Bosnia, 6000 men near Pristina, on the Servian frontier; 80,000 men, who will be mustered within twenty days at Adrianople; and from 80,000 to 100,000 men on the frontier of Asia.

With regard to the Russian army, immense barracks are being constructed on the banks of the Danube, where the Russians intend to pass the winter. General Gortschakoff has demanded of the Hospodar a heavy sum of money for the construction of these barracks, which has been paid. This expense will be included in the debt imposed on the country for the occupation of 1848 to 1851. The Wallachian Government is obliged to contract a debt of six millions of piasters (about £60,000), to meet the demands of General Gortschakoff. There has been no well-authenticated case of cholera in the Russian army, but they are said to suffer much from dysentery. About 7000 Russian troops are in the Wallachian hospitals

The activity of the Russians in the Principalities is represented to increase. Government messengers come and go in hot haste, troops advance, and reviews are held in various parts of the Principalities. The sick list appears to be getting larger and larger, as the roomiest buildings in the Wallachian capital are taken for hospitals. The citizens complain bitterly of the number of officers and men quartered in their houses. They say that there is a great scarcity of inferior qualities of bread, and the country people are half ruined by the continual post and transport service which they are forced to do. Desertions are not unfrequent in the army of occupation; but whenever one of the unfortunate fugitives is caught, he is condemned to powder and ball. Columns of troops of all arms, with their baggage-waggons, are hastening towards the Danube. As to the Wallachian officers, they lead a very retired life, and it is evident that no very kindly feeling exists between them and the Russians.

Admiral Barbier de Einan left Constantinople during the night of the 5th, on board the *Gomer*, for Besika. The *Niger* and *Niger* had likewise left, but the *Mersdland* had returned, together with the Austrian and the steam-frigate *Mogador*. The allied fleets were preparing on the 6th to enter the Dardanelles. The Admirals of the French and English fleets are instructed at the embassies of their respective nations at Constantinople, whence they send orders to their fleets.

The maritime powers of Europe have all sent vessels to the various Turkish ports to take the Christians on board, should it appear necessary. The Russian subjects in Turkey are, from the 1st of October, to be placed under the protection of Austria.

A young Polish Jew, named Wolowski, has been arrested near Schumla. An important correspondence with Russian officers was found on his person, with detailed notes concerning the Ottoman army It appears he was also in correspondence with several persons of the democratic party in Poland He was taken before Omer Pacha, who, it is said, was about to hang him forthwith.

From Schumla it was stated that Omer Pacha had made all necessary preparations for commencing his operations upon the expiration of the appointed delay.

The city of Constantinople has been besieged twenty-four times; it has been taken six times. It was so strongly fortified by nature and by art, that many thousands of Greeks defended it for fifty-three days against the 250,000 soldiers of Mahomet II., and at a period when the Turks were eminent in the military science.

The Turkish Government, warned upon increasing the army in Asia; and it is thought by many that hostilities will commence there, a junction with the Circassians being naturally considered very desirable.

It is said that a command in the Turkish army has been offered to Abd-el-Kader, but that previous to accepting it the Emir had asked the opinion of the French Government on the subject.

RUSSIA.

A letter from St. Petersburg of the 10th announces that the Emperor Nicholas had adopted warlike measures of the highest importance. The Russian army is formed into two divisions. The first army is intended for grand operations in Europe, and is reserved for local service. It is said that the "army of Europe," which is at present stationed in the west of Europe—of which the principal corps occupy Russian Poland, and the other corps, stationed in the rear, form the reserve—is called to active service. General Field-Marshal Prince Paskewitsch has been appointed to the command of the army in the Principalities The Marshal has already left for the Danube, and is by this time at the head quarters of the army. General Gortschakoff will now become only chief of the staff. Paskewitsch is about seventy-six years old, and is known for his campaigns in Poland and in Persia. The portrait, and a biographical memoir of this, the most distinguished of the Russian commanders, appeared in the ILLUSTRATED LONDON NEWS of July 9, 1853. The Prince, it is said, has obtained permission from the Emperor to have under his orders 40,000 men from the army of Poland, which are considered to be the best troops in the Russian service.

A letter from Warsaw, of the 7th inst., states that the corps, under the command of General Panjutin, stationed near that city, has received orders to proceed to the Pruth.

From St. Petersburg we learn that the reports of the friendly feeling of Persia towards Russia are totally unfounded. Since it has become known that the united fleets are to go up to Constantinople, the inhabitants of the Russian capital have grown silent and dejected.

GERMANY.

The Austrian and Prussian Governments have lately agreed to observe a strict neutrality as long as the war (should it break out) is confined to Russia and Turkey.

The Emperor of Austria has published an order for a considerable reduction of the Austrian army. In the present situation of Europe, and while war is imminent upon her frontiers, such a measure can only be regarded as a public proclamation of the resolve of the Austrian Government to observe the strictest neutrality. Nothing would be so likely to conciliate the goodwill of capitalists to a new loan as the prospect of diminished expenditure on the part of the Austrian Government. Every year since 1848 there has been an enormous deficit in the balance-sheet of the Finance Minister at Vienna, in consequence of the excessive military expenditure. The promised reduction, however, is regarded as little more than a bait to the unwary, and no doubt exists that if Austria should succeed in raising a loan she would immediately afterwards increase her army

The birthday of the King of Prussia, on the 15th, was kept with exuberant loyalty on the part of his Berlin subjects. All the Generals and Ministers proceeded to Potsdam to pay their respects The public buildings were decorated with festoons, and at night the town was illuminated. The three wishes with which the King has refused to lend himself to the designs of Russia has made him extremely popular with his subjects

ITALY.

The Grand Duke of Tuscany has published a decree reconstituting the municipal institutions of the country. Councils-General are to be established in all the communes, on the representative system.

A letter from Florence states that Miss Cunninghame had to be forced out of prison—morally, at least, if not literally—before she would not accept of her liberty as a favour, but as a right. The official who communicated to her the order for her liberation was obliged to inform her that he had full power to make her leave her prison; whereupon she demanded a certificate in due form, stating that she had been forcibly ejected.

SPAIN.

Letters from Madrid, dated the 13th, state that the Queen had expressed her repugnance to have Marshal Narvaez either for her Minister or for President of the Senate. Her Majesty is reported to have said that she was fully aware of her mother's understanding with the Lersundi Ministry; that such was the real cause of her dismissing them, though she was pleased to ascribe it to other reasons, and that though she is by no means partial to constitutional government, yet that she was advised that any attempt just now to upset it would place her crown in jeopardy. The present Administration is not expected to last, notwithstanding it is preparing a few popular laws of little moment, such as the abolition of passports. The name of Sartorius is so thoroughly disliked that no good will be received at his hands.

The anniversary of the Queen was celebrated on the 10th inst. by salvo of artillery and a grand review of the troops in the capital. The public buildings were illuminated at night, as were several private houses. The Queen, moreover, placed 60,000 reals at the disposal of the Governor of the province to relieve the indigent.

Generals Lersundi and Aspiroz had left Madrid, in compliance with the orders of the Minister of War, to proceed the first to Seville, and the second to Valencia—to take the command of those military divisions. General Concha had likewise taken the direction of the cavalry.

The *Madrid Gazette* contains a Royal order, to the effect that, in compliance with the request of newspaper proprietors, original political and literary articles published in their papers shall be considered private property, protected by the laws, and shall not be quoted or copied without the permission of the journal in which they originally appear.

PORTUGAL.

Advices from Lisbon of the 10th instant state that the Government has obtained a loan from a house in Paris of 12,000,000f. for the improvement of the means of internal communication. The railway scheme is proceeding but slowly, and very opposite opinions are entertained respecting its success.

SOUTH AMERICA.

The news from the Plate confirms the intelligence that Sir Charles Hotham and Mr. St. George (who have both returned to England by the *Tay*), had, on the 10th of July last concluded treaties on behalf of their respective Governments with Urquiza for the free navigation of the rivers which pass through the Argentine States and empty themselves into the Plate, a little above the island of Martin Garcia; and a similar treaty was also signed by the United States Minister. Against these treaties the Government of the State of Buenos Ayres had issued a long protest, in which it denies the power of Urquiza to bind the Argentine Confederation, accuses the English and French diplomatists of duplicity and bad faith, and points out stipulations in the treaties to which it can never assent. As, however, the protest concludes with a solemn recognition of the free navigation of the rivers by the State of Buenos Ayres, it is not the policy of that State, but rather the time and manner of their conclusion, and the especial character of their contents, that the Government of Buenos exclaims against.

THE WAR IN BURMAH.

The overland despatches and letters, the purport of which was anticipated by the telegraphic despatch published in our last, do not bring any additional information of importance

The Burmese intelligence is most unsatisfactory. Though the famine is abating, its effects are likely to endure much longer; sickness prevails among the troops, and discontent also. The country beyond sight of our posts is everywhere infested with organised gangs of dacoits, who, there is great reason to fear, are encouraged by the Government of Ava to lay waste, as far as possible, our newly-acquired territory, and to drive the inhabitants into Burmah proper. Another campaign seems almost inevitable, it being the universal opinion among the officers of our army that no solid peace can be obtained with the Burmese except under the walls of Ava.

The Marquis of Dalhousie remains at Calcutta. His Lordship's intended journey to Pegu has been postponed until the cold season.

PROGRESS OF THE CHINESE INSURRECTION.

Though the accounts we have of the rebellion are general, they agree as to the successful progress of the insurgents northwards. It was reported there had been hard fighting in the Honan province; but the rebels forced their way through without apparently sustaining any severe reverses, and had crossed the Yellow River into Shangtung province, the capital of which, Tsi-nanfoo, it is given out, had fallen. They were pushing on towards Pekin in great force; and it was the current belief that a division of the rebels was not far from that capital; but the vague reports of its having been taken seem premature. Accounts had arrived that the Yellow River had burst its embankments at the same place where it was repaired last year, and which would require a million of dollars to restore.

The insurgents retain Nankin and Chin-kiang-foo. At the latter place there had been a smart engagement with the Imperialists, in which the latter were completely routed and obliged to retire, the insurgents taking a place towards Soochan, which caused great consternation in that city, and which would no doubt shortly be obliged to submit. In Kwangsi the insurgents held the Poyang Lake and the principal cities, and are advancing south towards the Canton province; and the Imperial Government are active in fortifying the "Meiin Pass," the route they must take.

Canton remains quiet, but there are indications of uneasiness, and the greatest precautions are taken by the Mandarins to prevent surprise; but, should Pekin fall, it will, no doubt, be a signal for an immediate rise and outbreak, which must put a stop to trade for some time. The Emperor, it is said, has called upon the Mongol Princes to assist him, and they have promised troops to meet the rebels.

At Foochow all was pretty quiet on the 4th ult., owing to the stringent measures adopted by the authorities.

Amoy, up to the 10th ult., remained in the possession of the rebels, but the Imperialists were to make another effort in force to retake it in a few days. In an attempt to take the Imperial fleet, the rebels were unsuccessful, and very unfortunate in having several of their vessels driven on the Mandarins' possession and taken, when all on board were beheaded. The place had been visited by a severe typhoon, causing great damage to houses and property.

When the mail left, there were conflicting rumours at Hong-Kong, as to the state of affairs in the vicinity of Pekin. Credible information had, however, arrived, that the army of the insurgents was in the vicinity of Pekin, when the last scouts left; and our next accounts will, in all probability, bring us news of its siege, and possibly its capture.

CAPE OF GOOD HOPE.

The peaceable aspect of affairs on the frontiers continues uninterrupted. The result of the commission of inquiry into the Kaffercorn rebellion has appeared in a Government notice, issued by Sir George Cathcart, to the effect that the forfeited lands of the rebel Kaffirs were to be disposed of among the "trustworthy, loyal, and patriotic population." Sir George Clarke had reached the Sovereignty. The greatest alarm is felt there at the probable abandonment of that territory. The wool it produced last season was upwards of 2000 bales, and that of the present season is likely to exceed it by 100 per cent. The death of Kreli's favourite son has caused great consternation amongst the whole tribe, and induced that chief to put his principal witch-doctor to death.

THE UNITED STATES' EXPEDITION TO JAPAN.

(From a Correspondent.)

HONG-KONG, Aug. 10, 1853.

Commodore Perry arrived here, after his first visit to Japan, on the 7th inst. The U S. squadron under his command—consisting of the flag-ship *Susquehannah* (steamer), the *Mississippi* (steamer), *Plymouth* (corvette), *Saratoga* (corvette), and *Supply* (store-ship)—rendezvoused at the Loo-Choo Islands in June last; and on the 2nd of July, all, with the exception of the *Supply*, sailed for Japan. The *Saratoga* was towed up by the *Susquehanna*, and the *Plymouth* by the *Mississippi*. On the 8th, the squadron reached Jedda Bay, and anchored off a town called Uraga, about thirty miles from the city of Jeddo.

After a few days' negotiation, Com. Perry landed a force of 300 or 400 men, and presented the letter of the President of the United States, and his own credentials, to a Prince of a province, the member of the Emperor's Cabinet appointed to receive them. The above force was met on shore by four or five thousand Japanese troops, drawn up upon a crescent beach. Both parties were ready for an encounter at a moment's warning; for the Japanese had apprehensions of treachery, as well as the Americans, and had guarded against it. However, everything passed off peaceably, and it was arranged that the squadron should return in the spring for an answer. Intimations were received, unofficially, that it is quite probable the Emperor will return a favourable response to the letter of the President. On the day succeeding this interview, some Japanese officers went on board the flag-ship, and gave and received a number of presents.

After the ceremony of presentation, the ships moved farther up the bay, and made a general survey of a portion of it. The city of Jeddo was not seen, but only the junk anchorage, a few miles below it. The people did not appear to mind the sailing vessels, but they were evidently dreadfully afraid that the steamers would discover too much, and could not understand their moving about against wind and tide. Jeddo Bay is represented as being the most beautiful and extensive in the world, with scenery in the vicinity unsurpassed for magnificence. Of course, there was not much opportunity for close observation; but, as to the Japanese—their manners, customs, their dress—all appear to remain precisely the same as described two centuries ago. Most of the troops met were armed with spears, and bows and arrows. There were thirty flint-lock muskets, and two or three hundred old-fashioned fire-locks amongst them. On the day of the landing, a few women were seen occasionally, but none of the upper class. No beauty was discovered, although they appeared delicate and modest.

On the 17th the squadron left Jeddo Bay; the *Susquehanna*, *Mississippi*, and *Plymouth*, returning to Loo-Choo, and the *Saratoga* proceeding to Shanghai.

THE ARCTIC EXPEDITION.

We are indebted to the courtesy of Captain Inglefield for two of the accompanying Sketches; and to Mr. W. H. Fawckner (late agent for the *Breadalbane*) for placing at our disposal his private journal, with two illustrative Sketches. We hope, in a future Number, to be able to present to our readers some interesting Illustrations connected with the discovery of the North-West Passage by Captain M'Clure, from the pencil of an officer attached to this Expedition

We last week announced the gratifying intelligence of the return of Captain Inglefield, with news of the safety of the *Investigator*, the discovery of the North-West Passage by Captain M'Clure, and despatches from Sir Edward Belcher, in Wellington Channel

The following are extracts from Mr Fawckner's Journal:—

Captain Inglefield left Cork on the 26th of May. 1853. in the *Phœnix*, accompanied by two or three transports, carrying stores. On Friday, July 8, they made the island of Disco in Davis's Strait, off the west coast of Greenland, lat. 70 deg N., long 55 deg. W. At midnight they anchored in the harbour of Lively, which is described as a beautiful little harbour, completely land-locked, and the water of course very smooth (See Illustration). They then proceeded on their way to Cape York, that being the usual route followed for Lancaster Sound. On Saturday the 16th July the *Phœnix* struck the first ice at six p.m., she being then towing the transport. The shock brought both vessels to a stand-still, but, by putting on full power, both vessels managed to get through. The next piece of ice they encountered was fully half-a-mile wide and three feet in thickness. The crews of both vessels looked on this as an astonishment to see the steamer forcing her way through the ice, and crushing it without injuring either ship, although at the time of the concussion they were going at the rate of six miles an hour. Until 10 p.m. the vessels were by turns threading and forcing their way through the ice, which was both novel and exciting, and officers and men could not forget that had they been without steam, the first ice they took would have been their resting place. At 10.30 p.m. it came on very thick; so Captain Inglefield ran the ship into the ice, and secured them with the ice anchors, where they lay as quiet as if in dock. On the following morning, Sunday, it was discovered that the ice had closed around the vessels during the night. Divine service was performed on board the *Phœnix*, which was attended by the crew and officers of the transport, who walked across the ice. The men from both ships were on the ice in the afternoon. The lowest range of the thermometer was 31 deg. The glare from the ice when the sun shone upon it was so great as to be distressing Some strange contrasts were observable in the apparel of the voyagers, which would have made a sensation in Pall-mall; long sea boots, for instance, being worn to keep the feet and legs warm and dry, and upon the heads a straw hat and veil to keep off the sun.

Monday, July 18.—The first bear was seen tramping over the ice, and muskets and bullets were immediately got ready to give him a warm reception. Brum, however, did not come nearer than within a mile. At 6 p.m., *Phœnix* made another start, with the transport behind; and succeeded, by running full speed at the ice, and by blasting, cutting, and sparring it, to get about ten miles by two a.m. (the 19th). Sometimes it would take an hour to clear two ship's-lengths; then there would be clear water for a mile or two, when another passage had to be forced, in order to get into clear water again. It was very very exciting work. The blasting was found to be of great service; and the spirits of all on board were cheered by the reflection that what they had done in a few hours a sailing vessel would have taken weeks to accomplish. The ice-master, indeed, who had had experience in these waters for twenty years, declared that no sailing-vessel could have done it. The way in which the steamer crushed up the ice under her sharp bow—some of it being four feet and upwards in thickness—the wonderful

Saturday, July 23.—Up to this date we have been daily at work blasting, cutting, and clearing a passage for the ship. Sometimes parties have been employed upon the ice tracking ship (hauling her along by ropes). Since entering the ice this day week, the average distance gone each day does not exceed fifteen miles. To-day found the ice much thicker, some being from six to seven feet thick. It made the ship tremble in every timber, when running into it. The transport fouled the *Phœnix* once, and did her some damage, knocking her bows about a little. In the afternoon, found the ice too heavy to force a passage, so secured the vessels to it. Three bears were seen about three miles from the ship: a party, armed to the teeth, went after them—of which I numbered one. On approaching them, however, they made off, having thus given us a long tramp for nothing. On returning from the bear-hunt, I was crossing on the ice from one ship to the other, with my gun upon my shoulder, when the ice—being too weak to sustain my weight—gave way, and I was immersed in the water. I easily got out, however, without even the loss of my shooting-iron. It was the coldest bath I had ever had, and will teach me to be more cautious in future. It is exceedingly heavy and fatiguing work to traverse the ice on foot, or rather the snow, with which the ice is covered. Distance, too, is very deceptive, from the clearness of the atmosphere, every object appearing to be not more than a third of its actual distance. One day during July, just week a party started for some small islands which appeared about a mile or a mile and a half distant, but which proved to be quite five. It took them four hours before they returned to the ship, and quite fagged they were when they arrived. They found on the islands a human skull and a bear's head. We have seen and been among a very great number of icebergs, some in very critical positions. When drifting they crush everything before them. Fortunately, it has not blown hard, or we might have had some unpleasant squeezes from the ice. On the 23rd we saw some very large icebergs about a mile in length, and the highest about 400 feet in height.

LIKELY HARBOUR, ISLAND OF DISCO, GREENLAND.

Their depth under water is generally considered equal to from six to seven times their height.

July 27.—It only occupied two days crossing Baffin's Bay. At four p.m. sighted Cape Liverpool, the southern cape at the entrance of Lancaster Sound.

July 28.—This day commenced with a little sport among the bears. One fellow was making his way towards the ship across the ice; but, on two or three persons landing on the ice from the ship, bruin made off. They cut off his retreat, and the bear then took to the water. The boat chased him, and with one shot he was killed. Two more were shot in the water in the course of two hours. They swim fast, but a good gulling-boat easily overtakes them. The water all the way across from the shores of Greenland has been as smooth as a mill-pond. The glaciers on the northern shore of this sound look magnificent when the sun is shining on them.

July 29.—At 2 a.m., ice was seen apparently stretching quite across the sound. Finding the ice setting up the sound, we steered for Dundas Harbour. Within a few miles of it found some natives settled on a low point. It was imagined that they were a wandering tribe, but no information could be gained from them. At noon we secured to the ice in Dundas Harbour, which was completely choked with ice. There was a little sport to-day, in catching, or rather hunting, walruses. They are rather difficult to kill, but a boat from the *Phœnix* succeeded in getting one in an hour. I thought I might as well try my luck, and started in a boat with two fowling-pieces, harpoons, and lances. I succeeded in putting two balls into one big fellow, but that was not nearly sufficient to kill him. We persevered for nearly six hours firing at him, and about twenty shots struck him before we captured him. They often attack a boat, and stick their two fearful looking tusks into her; but the one we caught did not attempt it. It was the hardest work, or sport, I had had for a long time. We were about a mile and a half from the ship, when we captured the walrus, and had to tow him that distance through the water. It required a powerful pulley to hoist it in, as it weighed more than a good-sized bullock. The walrus was no sooner on board, than knives were at work skinning it. All but the skin and head was then committed to the deep. The flesh is not unlike that of a bullock; and the flesh of a bear is equally as good as beef.

Saturday, July 30.—At Dundas Harbour, North Devon, Lancaster Sound.—On visiting the shore, found a number of Esquimaux graves, with human bones and skulls in them, which is a proof of natives having visited the place many years since. The graves or stones are built up in the form of a box; within which the body is placed. No hole is dug in the ground, according to the European custom of burial. The natives here are a primitive race, living principally on blubber from the seal and walrus. Their habits are extremely filthy. They are evidently a wandering tribe, living in temporary tents, but well pitched. They are formed of skin, stretched tightly over four poles, with a lamp burning in the centre of the tent, composed of a stone hollowed out and filled with oil and blubber. There being little ventilation in the tent the heat and smell are very unpleasant.

Friday, August 5.—Walked to the Esquimaux village, a distance of about five miles. Found several preserved meat tins, and various other indications of their having seen Englishmen before, or of the Esquimaux having fallen in with some of the provisions that have been landed in this sound. Their tents present a disgusting sight, from the walrus or seal flesh lying in its blood, and the entrails by its side, close to the beds or skins on which they sleep. The stench of these rude habitations is the most offensive that can be conceived. Their dogs must consume much more than they do themselves; but, when short of food, they often keep these useful animals without anything to eat for a week. Clothing is an object of barter they do not value, always pointing to their own seal-skin dresses, which they think, and perhaps correctly, preferable to ours; but iron-work, particularly knives, is their chief aim. I did not see many spears, but a few rough bows and arrows, so that they must use a great deal of stratagem in hunting and fishing. The smallness of their feet is worthy of notice, the whole of them having much smaller feet than those of any civilised persons I have seen.

Monday, Aug. 8.—At four p.m. passed Cape Riley, and saw the *North Star* beset in the ice, with the whole bay (Erebus and Terror Bay) one mass of ice. Could not get nearer to the *North Star* than one mile and a half. It was gratifying to see the surprise and delight evinced by the officers and crew of the *North Star*. They were at the time employed in sawing a canal wherby the vessel might get out. The saws were immediately dropped, and they ran like madmen to meet us. Much greater delight even was shown by two lieutenants of the *Investigator*, which had discovered the long-sought-for North-West Passage, and is now 400 miles distant from this. They had travelled the whole of that distance on the ice. They had been absent from England nearly four years; had passed three winters in the ice; and, what was worse, had been for two winters on a reduced allowance of food. Many of her crew have suffered and are still suffering from scurvy. Those in the most delicate state of health were taken to the *Resolute*, which vessel had wintered and was at Melville Island in May last, the Captain (Kellett) of that vessel having communicated with the *Investigator*. The latter is now in Mercy Bay (Baring Island), which formerly bore the name of Banks Land, with very heavy ice surrounding her, and not the slightest chance of her getting out. It is, therefore, supposed she will be abandoned and that the crew will have to travel over the ice to one of the ships in these regions.

Tuesday, August 9.—Shifted down to Cape Riley, a distance of two miles, and lay close to the rocks, with ice on either side. Commenced discharging coals.

August 10.—At two p.m. were obliged to run, or rather were drifted by the ice about two miles.

August 11.—Discharged a few sledge-loads of bread, which were

INTERIOR OF AN ESQUIMAUX HUT.

"BREADALBANE." "PHŒNIX."

HER MAJESTY'S SHIPS "PHŒNIX" AND "BREADALBANE" LANDING STORES AT CAPE RILEY.

dragged over the lee, a distance of about three miles. About ten a.m. the ice set upon the transport, giving her a nip which raised her about five feet, and did not "ease" for about an hour. She did not suffer much by it. One piece of ice got under the keel, and kept her stern raised two feet until four p.m., when, by setting sail on the ship and heaving on ropes laid out on the ice (which was at the same time driving) the transport slipped off. We then ran up about a mile, and moored in a bight of the ice. The next day commenced discharging, working night and day, dragging the provisions on sledges to Beechy Island.

August 16.—The ice having opened out, the *Phœnix* towed the transport to Cape Riley. Moved to the rocks and commenced discharging.

Sunday, Aug. 21.—The ice (very shortly after midnight) to which we were secured started, obliging our moving out in tow of the *Phœnix*. I felt exceedingly uneasy in my bed, and got up; the ice was setting to the westward, and grating against the sides, but after rising, the thermometer then at 26 deg. I entertained no doubt of the ship's safety; and after moving about until three a.m. secured to the ice, midway between Beechy Island and Cape Riley. I again went to bed, but fortunately did not get in a sound sleep.

LOSS OF THE "BREADALBANE."

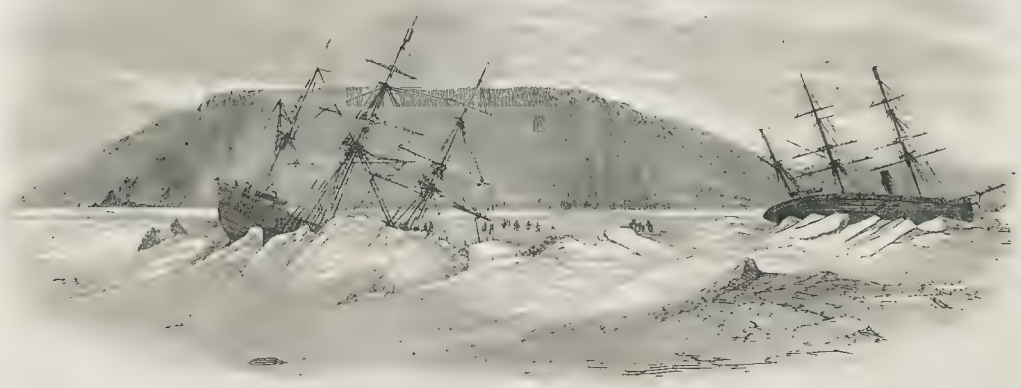
Sunday, Aug. 21.—About ten minutes past four, the ice passing the ship awoke me, and the door of my cabin, from the pressure, opened: I immediately hurriedly put on my clothes, and on getting up found some hands on the ice, endeavouring to save the boats, but they were instantly crushed to pieces; they little thought, when using their efforts to save the boats, that the ship was in so perilous a situation. I went forward to hail the *Phœnix*, for men to save the boats, and whilst doing so, the ropes by which we were secured parted, and a heavy nip took the ship, making every timber in her creak, and the ship tremble all over. I locked in the main hold, and saw the beams giving way; I hailed those on the ice, and told them of our critical situation, they not for one moment suspecting it. I then rushed to my cabin, hauled out my portmanteau on the deck, and roared like a bull to those in their beds to jump out and save their lives. The startling effect on them might be more easily imagined than described. On reaching the deck those on the ice called out to me to jump over the side, that the ship was going over. I left my portmanteau and jumped over the side on the loose ice, and with difficulty and the assistance of those on the ice, succeeded in getting on the unbroken part, with the loss of the slippers I had on when quitting the vessel, with wet feet, &c.; the cold was little thought of at the exciting moment—life, not property, being the object to be saved. After being on the ice about five minutes, the timbers, &c., in the ship cracking up like matches would in the hand; it eased for a short time, and I with some others returned to the ship, with the view of saving some of our effects. Captain Inglefield now came running towards the ship. He ordered me to see if the ice was through the ship; and on looking down in the hold found all the beams, &c., falling about in a manner that would have been certain death to me had I ventured down there, but there was no occasion for that (I mean to ascertain the fact of the ice being through), it being too evident that the ship could not last many minutes; I then sounded the well, and found five feet in the hold, and whilst in the act of sounding, a heavier nip than before pressed out the starboard-bow, and the ice was forced right into the forecastle. Every one then abandoned the ship, with what few clothes they saved—some with only what they had on; I merely saved a portmanteau, with a few things in it. The ship now began to sink fast, and from the time her bowsprit touched the ice, until her mastheads were out of sight, did not occupy above one minute and a half. It was a very sad and unceremonious way of being turned out of our ship. From the time the first nip took her, until her disappearance, did not occupy more than fifteen minutes.

I, as well as all the spectators of the last of the *Breadalbane*, were astonished at the rapid manner in which she went down. I could not have credited a ship sinking so fast, had she been laden with iron, or any other dead weight, whereas she was in ballast trim. My loss amounted to about £160 or £170. I hope the Admiralty may repay me; but it is a very doubtful case. The loss to Government amounted to about £700.

This loss will hasten the *Phœnix*'s departure, that being the only object (clearing the transport) she had in remaining so long. The ship-wrecked crew, of course, are all anxious to get home: their pay ceases the day the vessel is lost.

I can now easily imagine the way the two missing Arctic ships have never been heard of, and it is but too probable in my mind, they were lost not many miles from my old vessel, and that all hands met with a watery grave.

Wednesday, August 24th.—Having received letters, &c., from *North*



LOSS OF THE "BREADALBANE."

Star, for England, left about 4 p.m.; there were very few on board that ship, but wished they made one of our number; one winter in these regions being quite sufficient for any person. But it is likely, should she be joined by any of the Arctic ships, before the winter sets in, that she will bring a portion of the *Investigator's* men and other invalids from the squadron.

The Sketches of the Esquimaux Hut, and the *Breadalbane* and *Phœnix* landing stores, are from the pencil of Capt. Inglefield; and the Sketches of Disco, and the loss of the *Breadalbane*, are by Mr. Fawkner.

Commander R. J. Le Mesurier M'Clure, in command of the *Investigator*, Arctic discovery ship, has been promoted to the rank of captain, for services performed in search of Sir John Franklin, and the discovery of the certainty of a North-West Passage. Commander Inglefield is also promoted to the rank of captain.

CAPTAIN KELLETT'S SEARCH FOR FRANKLIN.

THE tardy arrival of the *Phœnix* at Woolwich, and the retention of the letters brought by her from the Arctic regions, has prevented the publication of the following extracts before now:—

"Melville Island, April 3, 1853; lat. 74 56, long. 108 48.

"My dear Sir,—Excuse this hurriedly-written note—I have only ten minutes' notice. I can merely state that we have done nothing wonderful. We have reached Melville Island, certainly; but what of that? Parry did so thirty-four years ago, without the aid of steam, gunpowder, or galvanic batteries.

"*Intrepid* and *Resolute* parted company with Sir E. Belcher, Beechy Island, August 15, 1852. Sept. 7: Landed provisions at Winter Harbour. Sept. 8: Left Winter Harbour for Bridport Inlet; and on the 9th cut the ships into an old floe, about half a mile from the land our present 'winter quarters.' From Sept. 10 to Nov. 1: Parties laying out depôts of provisions for travelling in the present spring (1853). Oct. 14, 1852: Party return from laying down a depôt of provisions in Winter Harbour; brings the astounding news of Captain M'Clure, in the *Investigator*, having discovered the North-West Passage; bring with them a journal and chart of proceeding left by him in Winter Harbour, April, 1852. Sad mistake; did not see them in September when we landed the provisions there.

"A Lieutenant and party is now absent, to ascertain whether the *Investigator* is still fast in the ice in Mercy Bay, Baring Island the Banks Land of Parry. We are anxiously waiting for the return of the party to know the news.

"We all start to-morrow (4th) on our grand travelling search—one party west, another north west (M'Clintock): also parties to the north-east and north; and a party will also go to Beechy Island, in order to communicate with the *North Star*, which lies there. The object of the north-east party is to meet Belcher in the Wellington Channel.

"You will receive this letter per *North Star*. I do not think we shall return this season (1853). The coldest day was the 9th January: *Intrepid*'s thermometer, in-board, 52½; *Resolute*'s, on the floe, 61½; that is, min. Fahrenheit, or 84½ and 93½ below the freezing point."

"Winter-quarters, Melville Island,
Monday, April 4, 1853, Six a.m.

"In an hour's time the following sledges start on the grand search after our missing countrymen

"Captain Kellett, and seven men, to the N.E.

"Commander M'Clintock, ten ditto, to the N.W.

"Mr. Delsee (Frenchman), eight men, under the order of M'Clintock.

"Mr. Meecham, to the westward, seven men.

"Mr. Naves, seven men, under Meecham's orders.

"Mr. Roach, seven men, auxiliary to Captain Kellett or several days, then to Beechy Island (*North Star*)

"Mr. Hamilton will complete Captain Kellett's route; and, if possible, to meet Belcher, having with him seven men. Kellett returns in a few days. Mr. Pym, having entered on the 10th March to Mercy Bay, in order to ascertain whether the *Investigator* is still fast in the ice there. Not yet returned.

"Since we left England, the *Intrepid* has lost one seaman—the *Resolute* one marine."

"Winter quarters, Melville Island. April 22, 1853.

"My dear Sir,—Time will not permit me to tell you a long story, as I start to-morrow, in a north-east direction, to meet Belcher if possible. On the 19th, three days ago, we had the pleasure of receiving Captain M'Clure, of the *Investigator*, and eight of his crew. Thirty-one more of them are on their passage to our ships. M'Clure looks rather worn; but when we consider the extraordinary labour and privations he has undergone since he left England, he really looks wonderfully well. Whether he intends to abandon his ship this season or not, I cannot say; it is not yet settled. However, I believe all the invalids will visit our ships to recruit their strength. At all events M'Clure is determined not to abandon his ship until the spring of '54; consequently some ship will stop by him, while the sickly portion of his crew will return to England.

"Captain M'Clure asked me particularly about your welfare. I have given him some fifty or sixty numbers of the *Morning Herald*. I go away to-morrow for seventy days."

"Routes of Search.—Commander M'Clintock, N.W.; Lieutenant Meecham, west; Lieut. Hamilton, N.E.; Lieut. Pym, returned from Mercy Bay, Baring Island. Commander M'Clintock started 4th April, with ninety-five days' provisions; Lieut. Meecham, 4th April, with ninety-five days' provisions; Lieut. Hamilton, 23rd April, with seventy days' provisions."

FRIENDSHIP.—Friendship is a vase which, when it is flawed by heat, or violence, or accident, may as well be broken at once; it can never be trusted after. The most graceful and ornamental it was, the more clearly do we discern the hopelessness of restoring it to its former state. Coarse stones, if they are fractured, may be cemented again; precious ones never.—*W. S. Landor*.

TOADS AND BEES.—At the last meeting of the Entomological Society, the following singular case was related:—A stock of bees was observed to grow weaker day after day, until it was so impoverished that the hive was removed, and the bees turned adrift; but, upon examination, nothing appeared to have attacked the interior of the hive. Shortly afterwards another stock began to exhibit similar symptoms, and, on visiting the hive by night, a large toad was found on the alighting board, and killed, when eight still living bees were found in its stomach. Several other toads were found in the vicinity, and killed; after which, the stocks throve as before.

A MODERATE MAN.—Dr. George Fordyce contended that as one meal a day was enough for a lion, it ought to suffice for a man. Accordingly, for more than twenty years, the doctor used to eat only a dinner in the whole course of a day. This solitary meal he took regularly at four o'clock, at Dolly's Chop-house. A pound and a half of rump-steak, half a broiled chicken, a plate of fish, a bottle of port, a quarter of a pint of brandy, and a tankard of strong ale, satisfied the doctor's moderate wants till four o'clock next day, and regularly engaged one hour and a half of his time. Dinner, over, he returned to his home in Essex-street, Strand, to deliver his six o'clock lecture on anatomy and chemistry.

SHAVING BY MACHINERY.—Mr. William Johnson, of North Shields, joiner, has invented a shaving machine. In appearance it is not unlike an old-fashioned arm-chair. But the most unique feature is the arrangement of the razor-blades, which are fixed longitudinally on cylinders, from three to six inches in length, four on each cylinder, at an angle of 60 degrees, with fine camel-hair brushes between; for you are lathered and shaved at one and the same time, the lather being slipt from the interior of the cylinders, which are hollow. The machine is put in motion by the weight of the patient, the seat gradually giving way beneath, and sinking with him until he reach the ground, when the operation is completed. The seat rising immediately it is released from his weight, is ready to commence again without any preparation. A musical box, of Mr. Johnson's construction, is appended to the machine, and can be attached or detached according to the pleasure of the individual undergoing the operation. Experiments have been tried and found satisfactory.—*Durham Advertiser*

BIRMINGHAM.—An illustration of the present state of trade in this town is furnished by the subjoined return, compiled by Mr. Co-der, clerk to the guardians of the poor:—

	Paupers.	Increase or Decrease.	Rate in £.	Wheat per Qr.
1847	16,852	1,968	17	119s. 11d. per qr.
1848	17,820	968	17	80s. 7d. "
1849	17,172	648	17½	74s. 2d. "
1850	16,524	648	17½	69s. 2d. "
1851 (Estimated at)	15,000	1,524	17½	67s. 4d. "

Thus it appears that during the past year of Free Trade the pauperism has more than trebled in about fifty years, pauperism has greatly decreased during the same period of Protection, and in the last year, with 1851, there is an increase of 1,524 paupers, and 1,000 persons, yet there is a diminution of 711 in the number of 10*l.* and 61 lists in the out-door list.

RUSSIAN AND TURKISH SOLDIERS ON THE DANUBE

AT this moment, again standing face to face, and, to general appearances, on the eve of measuring their adverse forces, it cannot be otherwise than interesting to form some idea of the Russ and Ottoman combatants, and the elements of which they are composed. To enable our readers to do this, we make the following extracts from the correspondence of a gallant British Hussar, whose devotedness to his profession led him (as numbers of volunteers are now led from various countries) to proceed as an amateur to the Lower Danube, at the period of the last Turkish war, in order to observe the character of the troops and study the tactics of their leaders. As there is no change in the Cossack and Moslem to the present day, the descriptions apply as accurately in 1853 as they did in 1828; and if the battle is fought on the same ground, these remarks will be found to have an essential bearing on the conduct of the struggle and its issue. Their writer has risen to high rank and honours in the army, and the lessons he learnt in Wallachia have not been lost in the service of his native land. We have only to add that on such expeditions the adventurer is obliged to attach himself to one side or other, to avoid the treatment and fate of a spy, our informant joined the Russian army, and was a party to its operations.

I have (he says) been nearly jolted to death by the bad roads of Hungary, and narrowly escaped breaking my neck by the viler passes of the Carpathians of Transylvania on the frontiers of Wallachia. I have been almost poisoned by filth, devoured by vermin, exposed to the contagious fever of the country, and to that infernal disease the plague, which has been committing its ravages in Bucharest; indeed, have almost gone through fire and water to attain the fulfilment of my wishes, but have only as yet succeeded in reaching the banks of the Lower Danube.

Such is the seat of war.

Having obtained leave of the Governor of the Principalities, I have attached myself for the present to the corps of the Russian army encamped be ore the fortress of Giurgevo, whence the troops of Kutchuck Achmet are making frequent sorties, and are partaking the hospitalities and sharing the black bread and inconveniences of the Cossack and Russian soldier in his bivouac before the enemy, in the midst of war, and among total strangers. . . . I cannot tell you what I eat or drink, for it has become a rule with me of late never to inquire into the composition of a mess, or even to look at it if it can be avoided; but I have a soldier's fare, and experience the greatest civilities from the officers.

The state of the river and the works upon its banks are depicted with military precision, and also three Muscovite camps, and the open plain between the belligerents covered with small brushwood, long grass, and high thistles, "affording localities for skirmishing to the foragers and outposts of both parties;" and the writer proceeds:—

Thus disposed, the troops may be said to be continually under arms. The infantry are always in square: they eat, drink, and sleep in square; and in the night, in the most inclement weather, never quit that form. The general and field-officers only have tents; sheds or temporary huts, composed of branches and hay, are erected for the other officers and the troops close to their stations; so that, in the event of an alarm, it requires but little time to put the whole force in march for its position. * * * There is no scarcity of provision, though the quality of the bread "of the darkest" is bad; and the water, which is the thing country very indifferent, is supplied from the neighbouring wells. * * *

But the Russian soldier is of tough material, and ordinarily calculated to bear the fatigues and hardships of war. In the manner alluded to, subsisting on food of very inferior quality, constantly exposed to all weathers, burning heat by day, succeeded by cold, damp, chilly nights, and thunder-storms and torrents of rain which instantly deluge the country with water. These to ordinary constitutions would be fatal, but on him they seem to have comparatively no effect. With an implicit obedience to orders, the Russian is, as it were, a complete machine. Careless and thoughtless of danger, indeed, without exercising his reasoning faculties, he moves when he is told, and halts when he is commanded; nor will he, under the severest fire, retire, unless ordered to do so. It was surprising to see the perfect indifference with which a regiment, the other day, stood under a rather severe cannonade, and the apathy with which the men looked at the balls and shells that fell around them; and it is a fact that at the siege of Ibraila, a considerable column, which was destined to storm the place, missed its way, and got into the ditch, where there was not the slightest vestige of a breach. In this situation they were nearly annihilated; nor would they, notwithstanding the mistake was evident, move, until a positive order from the Grand Duke Michel was sent to recall them

We thus see that Russian fanaticism is quite upon a par with the predestinary belief and obstinacy of the Turkish soldier.

But (continues our Volunteer) the Cossacks excite most my curiosity and interest. Equally brave and hardy as the Russian soldier, they possess a sagacity and cunning which is not the characteristic of the former. When the firing commences, it is easily observed that the Cossacks around begin instantly to assume an alacrity, and to be alive to what is going on. They take their horses in hand—never remain quite stationary—keep a sharp look-out in the direction of the fire of the cannon—and watch the result of the ball and flight of the shell, so as to be in readiness to avoid them. They are an incongruous set, certainly. Some old fellows, with long grey beards; some smart young lads; some almost in rags and patches of various colours; while others are in very decent attire. Plunder is their grand object; and some of them, notwithstanding their riches in their own country, voluntarily leave their families and comfortable dwellings, and expose themselves at an advanced age to all sorts of danger, in quest of more. They are marauders, and at times merciless; and so accustomed to the slaughter of their prisoners, that a reward has been proclaimed for bringing them in alive, in order to mitigate the atrocities of a body whose services are so essential to the army of which they form a part. They are divided into regiments of 500 each, have a standard and Captain for every 100, independent of junior officers; one, two, or more field-officers for the whole, according to circumstances; and a Lieutenant-Colonel, or Colonel Commandant, whose name the regiment bears. They observe little or no regularity, and sleep in the rudest huts of branches, or under three pikes or poles, with their burkas, or cloaks of skin, thrown over them, and their small, bony, but hardy horses picquetted in front. Armed with a pistol stuck under each arm in a girdle, a firelock slung across their shoulders, and sword, or long twelve-foot pike they are, on the least alarm, ready for the combat; and, on the cushion of their high-backed saddles, seem to delight in the fray. For the duties of out-posts, I suppose the Cossacks the best troops in the world. They do not, in general, use the pike like the lance; but couch it, and ride full gallop, like the knights of old, at their antagonists. The Turk justly fears it, as the instrument, should it not kill, inflicts a dreadful gash; and the unfortunate sufferers have been known to implore their enemies, by signs, to put an end to their misery by an effectual thrust.

The outposts have skirmishes almost daily; but the Cossacks and Turks seem to have a good understanding between them, for they often meet, talk to each other, and carry on war in a more civilised way than formerly.

The Turks, I have seen, do not correspond with the ideas I have formed of them, from all I have heard or read of that nation, indeed, I believe we have generally a very imperfect and erroneous knowledge of that nation, and most of the accounts we receive of them are very much misrepresented or exaggerated. There is a nobleness of disposition, an openness and truth, in the Turk individually, that is not to be found in his Christian tributary. The word of a Turk is sacred—if he pledge it, you are safe. The specimen before us are degenerate as warriors from the days of the invincible Janissary and daring Spahis; but the flower of the army is organised at Schumla, behind the Balkan. Their arms are a long knife, called a handjar or yatagan, used for cutting off heads, a brace of pistols carried in a broad leathern girdle, a gun slung across his shoulders, and a curved sabre, his dexterity in the use of which is such, that with a single blow, or rather cut, he will sever the head from the body.

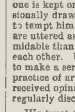
This description applies now only to the more irregular troops, the regular army being disciplined in the European manner, and having, at present, not a few European officers to lead them:—

They have little or no method in their movements, or in their mode of warfare—sometimes advancing in detachments of 100 or 150 men, to endeavour to surprise a Cossack outpost; and sometimes, with a larger force, making a dash at the camp itself, where they have been killed in the very bivouac of the Cossacks, attempting to carry off some stores and waggons in the rear, which they suppose to be treasures. Thus, every one is kept on the alert. The Pasha is, indeed, very active, and occasionally draws out 5000 or 7000 men to penetrate to the enemy, or try to tempt him to an attack. The war-shouts of "Allah! Allah! Allah!" are uttered as if infuriated by opium; and they are at first more formidable than when firmly received by the Russian squares, supporting each other. Upon these—even when only three deep—their cavalry fail to make a serious impression. They are by no means so deficient in the practice of artillery as is generally imagined; for their shot, contrary to received opinion, are thrown with an accuracy that would do credit to regularly disciplined artillerists.

We trust that this picture of the battle-field, now so interesting to the world, and of the hostile bands occupying it exactly as they did before, with arms and characters very partially changed, where changed at all, will help our readers to "realise," in their mind's eye, the coming events which so vividly cast their shadows before.

OBITUARY OF EMINENT PERSONS.

CHARLES BARING WALL, ESQ., M.P., OF NORMAN COURT HANTS.



THIS gentleman, M.P. for Salisbury since 1847, died on the 14th inst., at his seat, Norman-court, Hampshire—of which county he was a Magistrate and Deputy-Lieutenant. Previously to his election for Salisbury, Mr. Baring Wall sat in Parliament for Guildford, Wareham, and Weymouth, giving at all times a consistent support to liberal opinions. He was born in 1795, the only child of the late Charles Wall, Esq., by Harriet, his wife, eldest daughter of Sir Francis Baring, Bart. The beau ful estate of Norman Court, which was purchased in 1805 by the late Mr. Charles Wall from the Thistlethwaytes, was formerly the property of Richard Whitfield, Esq., who had the great misfortune of the estates of Richard Norton, Esq., and succeeded in setting aside the will of that gentleman, who had devised the bulk of his property from his own right heirs to "the poor, hungry, and thirsty." Mr Baring Wall died unmarried.

SIR JAMES THOMSON, K.C.B.

THE last Overland Mail from India brings the intelligence of the sudden death, on the 25th of August, of Sir James Thomson, K.C.B., Physician-General at Calcutta. He was struck with apoplexy, while presiding at the medical board, and, despite of every effort that medical skill could suggest, breathed his last within a few hours after.

With the exception of a few months' leave on his return from five years' foreign duty in Java, Sir James had never, during more than forty-two years in India, been a day absent from his post. A considerable part of his service was passed, with distinction, in Java, in Afghanistan, in Assam, in the first Burmese war, and in China. Throughout the whole of the operations against the last-named country, this indefatigable public servant rendered the most zealous, able, and effective aid; and, in requital, was rewarded with the decoration of a Companion of the Bath. No officer in the Indian military service was more generally esteemed. His loss will be severely felt, for the sphere of his benevolence was most extensive.

EDGELL WYATT EDGELL, ESQ.

THIS venerable and respected gentleman died on the 1st inst., at his seat, Milton-place, Surrey, in his eighty-fifth year. Mr. Wyatt Edgell, who was grandson of Richard Wyatt, Esq., of Ingham, by Francis, his wife, daughter of Peter Burrell, Esq., of Beckenham, Kent, represented one of the oldest families in the county of Surrey. His son, the Rev. Edgell Wyatt Edgell, Rector of North Cray, Kent, is married to the Hon. Henrietta Otway Cave, daughter of Baroness Braye, and has, with other issue, a son, Edmund-Verney, who will, in all probability, should he live, become Lord Braye.

Mr. Wyatt Edgell, whose decease we record, was highly esteemed for his charitable disposition and his Christian virtues. In politics he was a Conservative; but, at the same time, the unceasing promoter of all social and ecclesiastical reforms.

LONGEVITY.—A tenant of the Earl of Bessborough, Mr. James Nolan, of Knockdiran, county Carlow, born on 22nd July, 1742, is now, of course, in his 112th year, and has lived within the reign of five Sovereigns. The Countess of Bessborough, while lately on a visit near the residence of Mr. Nolan, went to see him, as she had heard him mentioned at the table of the Queen as being the oldest subject of her Majesty. The Earl of Bessborough often as he comes to the neighbourhood visits him. Mr. Nolan's eldest sister, Mrs. Byrne, lived to be 104, another sister to be eighty-five, a brother to be ninety-four, and another brother to be eighty-two.

GENERAL LYING-IN HOSPITAL, YORK-ROAD.—The quarterly court of the governors of this charity was held in the board-room of the hospital, York-road, on Monday. According to the report the out-patients for the last quarter numbered 80, and the inters 88, and that all but two of them recovered. The out-patients received since January last numbered 315, and the interns 192. The receipts for the quarter amounted to £606 1s. 4d., and the expenditure to £332 2s. 9½d. The balance amounted to £264.

NEW MEDICAL SCHOOLS.—It is in contemplation to establish two new medical schools, in addition to those already in existence in different parts of the metropolis. One of these, and possibly the first to be opened, is intended to be attached to St. Mary's Hospital, Paddington, which is now undergoing considerable enlargement, partly with this object in view, and partly for the purpose of affording further clinical and chapel accommodation to the inmates of the hospital, besides other appendages calculated to increase its efficiency and usefulness in that populous neighbourhood.

CORPORATION REFORM.—A preliminary meeting of liverymen of London was held at the London Tavern on Tuesday, on the requisition of Mr. Sheriff Wallis, when resolutions were carried, pledging the meeting to give every assistance to her Majesty's Commissioners in their inquiry into the position of the Corporation of London; and calling upon the Lord Mayor to convene a public meeting of the livery in common hall, to consider the subject.

THE MILTON CLUB.—The proposed Milton Club has obtained a site on Ludgate-hill, under the shadow of St. Paul's, and about midway between the well-known Chapter House and London dwellings in St. Bride's Churchyard and in the Old Jewry. The structure, which should add a new ornament to Ludgate-hill, is to cost £30,000; about five-sixths of which sum, we are given to understand, have already been subscribed by parties connected with the Nonconformist body.

THE LATE LIEUTENANT BELLOT.—Sir Roderick Murchison has consented to preside at a public meeting, to be called together for the purpose of expressing, in a practical manner, the deep regret felt in this country, by all classes, at the early loss of the noble French officer, who had already, years ago, in the Eastern seas, won for himself the name of "L'Ami des Anglais," and who, by his devotion, even in death, has fully proved his right to so endearing an epithet.

ROYAL NAVAL BENEVOLENT SOCIETY.—On Monday the general quarterly meeting of this charity was held at the Thatched-house Tavern. The chair was occupied by Vice-Admiral Lord Radstock, C.B. From the financial statement, which was agreed to, it appears that the total receipts were £1213 4s. 1d., and all expenses being paid, there remained a balance in hand of £686 17s. 1d. The chairman called their attention to the fact that they had to regret the loss of two of their vice-presidents, viz., Sir George Cockburn and Sir Charles Adam. He had applied to the Duke of Northumberland, but had not as yet received his assent to allow himself to be appointed. His Lordship concluded by intimating that he had applied to Admiral Dundas to fill the other vacancy. A resolution, unanimously agreed to, was then carried, appointing Admiral Dundas to fill the vacancy. An auditor was also elected in the room of Mr. Chippendale, and the proceedings terminated.

PROVINCIAL INTELLIGENCE.

THE PEACE CONFERENCE AT EDINBURGH.—The Conference brought their proceedings to a conclusion on Friday week with a soirée and promenade in the Music-hall. Between 400 and 500 ladies and gentlemen were present to enjoy the entertainment provided. Messrs. Cobden and Bright were the lions; and the promenade, refreshments, and chat becoming fatigu ng, speeches were called for as a supplemental recreation. Mr Cobden and Mr. Bright complied with the demand, and indulged the fair promenaders with a recharge of their former speeches.

THE LAWSON OBSERVATORY.—The committee appointed to carry out this project have reported that a mistake had until lately been made with regard to the gift of Mr. Lawson—that gentleman stipulating that £10,000 shall be raised in addition to his gift. The committee (which formerly numbered more than fifty members) has been concentrated into a working body of fourteen, and an appeal is now being made to the Royal Society and other learned bodies for assistance.

NEW DOCK AT SOUTHAMPTON.—The foundation-stone of a new graving-dock, wh ch has been a progress for some time past, was laid last week by Mr. A. Giles, engineer to the Southampton Dock Company. The usual form alities were gone through, and the dock, which will be 400 feet long and 80 wide at the gates, is according to the terms of the contract, to be finished by the 1st March, 1854.

THE REPRESENTATION OF SALISBURY.—On Saturday last General Buckley, of New-hall, Wilts, issued an address to the electors of this city, offering himself as a candidate for the seat rendered vacant by the death of Mr. C. B. Wall. His general views on the questions of the day are in accordance with those of the present Government; but he declines to give any specific pledge with regard to any question which may be brought before Parliament. The name of Mr. Torrens M'Cullagh has also been mentioned as a Liberal candidate.

UNIVERSITY FOR WALES.—A movement was commenced a short time ago for the purpose of establishing a university in Wales, and y stions for this object were drawn up by the Anglo-Welsh clergy. In which the suggestion that a degree university existed for the establishment of a university at which the natives of the principality might receive a liberal education in all the different branches of literature. It is now proposed that under the title of "University of Wales" the colleges of Lampeter, David at Lampeter, the Llandovery Institution, the Brecon College, and the endowed grammar schools of the principality, shall all be united and incorporated—students from all the above to be admitted for degrees in arts and divinity.

HINCKFORD AGRICULTURAL AND CONSERVATIVE CLUB.—The annual meet ng of this association was held last week at Castle Hedingham. The ploughing and land-ditching took place in a field belonging to Mr. Ashurst Majendie; and at the termination of the out-door proceedings the prizes were distributed by Mr. George Round, who addressed appropriate remarks to each of the successful candidates. The dinner took place at the Bell Inn, and was attended by about fifty of the leading Conservatives of the county. Mr. George Round occupied the chair. Sir J. Tyrrell and Major Beresford sent letters of apology.

NORTHAMPTONSHIRE RELIGIOUS AND USEFUL KNOWLEDGE SOCIETY. The Bazaar held on the 4th, 5th, and 8th inst., in the Lecture-hall of the above important Society, in aid of its funds, we are happy to learn, realised the sum of £270; including liberal donations from the Marquis of Exeter, Lord and Lady Burghley, and others. On Wednesday evening, the 12th inst., the Lecture-hall was used for the first time. The Rev. J. B. Owen, of Bilston, delivered a most interesting and able lecture to an overflowing audience, on the "Ins and Outs of Young England." At its conclusion, the president, the Rev. Chancellor Wales, returned the sincere thanks of the audience to the rev. lecturer, and congratulated the members on the flourishing condition and prospects of the Society.

HOP INTELLIGENCE.—Hop-picking in the Maidstone district has commenced. The produce throughout is stated to average less than five cwt. per acre. Prices, however, are generally good, with a prospect of an advance upon the present quotations. At Brenchley, picking, with few exceptions, is also finished. We are very fortunate in crop and quantity this year, and our hops are inquired after at an advanced rate from last week. Duty at our market is quoted £135/£90. In Sevenoaks hopping is nearly finished, and although short in quantity, the price will make up the deficiency.—*South Eastern Gazette.*

SIR JAMES COLQUHOUN AND THE STEAMER "EMPEROR."—The action of suspension and interdict at the instance of Sir James Colquhoun against the owners of the steamer *Emperor*, to prevent that vessel carrying passengers on Sundays to the quays on Garelock, came last Saturday before Lord Robertson. His Lordship, after hearing counsel on both sides, declined to grant any interdict; and in respect of the great general importance of the question at issue, reported the case to the Inner House, who will dispose of it on an early day after the sitting of the court in November.

MANCHESTER ATHENÆUM.—The *Times* says.—We are requested to state, with reference to the letter to Mr. Bright, inviting him to attend a preliminary meeting in the room of the Athenæum to denounce the conduct of Russ a, that the directors of the Athenæum disclaim having authorised or sanctioned the holding of any such meeting.

FRENCH v. THE VICTORIA DOCK COMPANY.—An inquiry before the Sheriff of Kent and a jury, to assess the amount of compensation to be paid for sixty-seven acres of marsh land, required for the purposes of the Victoria Docks, was concluded on Saturday last. The case occupied two days. The points in contest chiefly was whether the land was to be paid for as agricultural land only, or as building-ground. Upon the part of the claimant it was valued at £22,000, and £26,00 , and by those who valued for the company at £9000. The jury retired for some time, and gave a verdict for £16,000.

THE NORTHERN COAL TRADE.—Between 300 and 400 sail of coal laden vessels left the Tyne on Friday week, the greater proportion for the London market. London coal freights are from 10s. 8d. to 11s 6d. per ton. A letter, from Cronstadt, states that there are a great number of British vess ls there, and that vessels which left Newcas le with coal at high freights have some difficulty in finding a market. The high freights to London do not appear to be consequent upon our English shipowners having a monopoly of the coasting trade, for during the past three months coal-freights have been equally high in the ports in the north of Europe, the carrying-trade to which is open to all the world.

THE SHIP-BUILDING TRADE.—Owing to the launches and completion of a number of vessels on the Clyde lately, and a paucity of fresh orders, the ship building trade just now can get plenty of men. A reduction in the rate of wages amongst carpenters, joiners, rivet-ers, &c., is therefore being looked forward to. This will enable our shipbuilders to compete more effectually with other ports in the w r ld on contracts, and we hope thereby will enable them to give employment to their handicraftsmen during the winter.

UNPLEASANT JOKE.—A serious practical joke was played at the expense of the pub lic during the Lord-Lieutenant's visit to Ballinasloe. Some one climbed into the gas-works and turned off the main cock, involving the whole town in total darkness. The greatest consternation prevailed in the hotels until the affair was rectified.

THE MORMONITES IN WALES.—The ranks of the adherents to Mormonism are at present being greatly strengthened, especially in the districts in South Wales. Numbers of these misguided people have lately owned the sect, including many persons of high respectability and middle class station. A well-known Welsh lecturer, named Robyn Ddu, whose influence with the people is very great, has lately joined the ranks, and his eloquence is irresistible. Immense numbers have lately left South Wales for the Salt Lake, and many others are now preparing for departure in the spring.

CITY OF LONDON SCHOOL.—A new scholarship, called "the Lambert Jones Scholarship," has just been founded in connection with this school. The school committee have received the sanction of the Common Council to erect, at the City expense, a memorial of the gift in a conspicuous part of the school, and accordingly it has been determined to have executed, in appropriate marble, a tablet, with the armorial bearings of Mr. Jones, and a suitable inscription.

LONDON AND NORTH-WESTERN RAILWAY.—At a monthly meeting of the board of the above Company, held at the Euston station, on Saturday last, the Marquis of Chandos was unanimously elected a director of the company, and subsequently as the chairman of the board of directors, which is, as heretofore, an unpaid office.

"AS GOOD AS A PLAY."—I note this very ordinary phrase as having Royal origin, or, at least, authority. It was a remark of Charles II., when he revived a practice of his predecessors, and attended the sittings of the House of Lords. The particular occasion was the debate, then interesting to him, on Lord Stafford's trial.—*Notes and Queries.*

SUGAR AND RUM.—A Parliamentary return has been printed of the quantities of unrefined and refined sugar, of molasses and rum, imported and cleared for consumption in each year ended the 5th July, from 1842 to 1853, with the a ount of duty received on the same in each year, and the average price per cwt. of Muscovado and of Havannah sugar during the same period. In the last year given the duty received on sugar and molasses amounted to £4,081,279; of which £3,281,142 was on British possessions, and £800,128 on foreign. In the first year mentioned (1842) the aggregate receipts of duty on sugar was £5,485,013. It appears that in 1842 the duty on rum received in the United Kingdom was £1,069,186; in 1843, £1,217,079; in 1844, £961,269; in 1845, £1,066,368; in 1846, £1,145,809; in 1847, £ ,000,000; in 1848, £1,164,709; in 1849, £1,[illegible]; in 1850, £[illegible]; in 1851, £1,088,857; in 1852 £1,103,775; and in 1853, £1,171,211.

CHESS.

TO CORRESPONDENTS.

C. L., Eastbourne.—The new President of the Brighton Chess-club is Mr. Paul Peckett, a great man admirably adapted by his skill at the game, his knowledge of public business, and the urbanity of his manners, to promote the interests of this excellent institution.

BELLE HORNU.—Good and vital moves add more than fifty-fold to the value of fine games, but it is very few writers on Chess who have either the skill or industry to make [illegible]. The importance indeed, of Chess "Aids to Reflection," is now so well appreciated, that many hundred amateurs will never play over a printed game at all, unless it is illustrated by endless explanatory comments.

QUEEN'S PAWN.—His numerous friends owe a deep debt of gratitude to Mr. Kipping for his unrivalled contributions to our store of Chess Problems, and should show their sense of the obligation by patron sing his newly-established rooms at No. 40a, *New Oxford-street*. [illegible] 2,000 games, particulars of the match now pending, as the score is posted [illegible] after each day's play.

SPECTATOR.—The unreasonable, the absurd, condition in the terms of the match between Löwenthal and Harrwitz that, for absence on any play-day, no matter how unavoidable, whether occasioned by sickness, sickness of the near and dearest relations, or business, should be the forfeiture, not of one, two, or five guineas, but of a game in the match, is an exaction imposed by Mr. Harwitz himself, who is rightly punished in being the victim to his own presumptuous and unfeeling stipulation. It was an injustice, no doubt, that the Hungarian should be beaten to a standstill in the first half-dozen games, and would require quite a few days' rest to recruit his health and give tension to his shattered nerves; but this was to be dealt him, exempt at a cost (the forfeiture of a game per day!) which no man with the least regard for his bankers' interests, would dare to risk. As matters have turned out, it is not Löwenthal, but his opponent, who required change of air and a cessation from the terrible strain upon the nervous system which a great match at Chess involves. Let us cordially thank for his obliging contributions. The problems are, as usual, excellent.

H. H., Manchester.—If you advance a Pawn two steps under the circumstances mentioned, your adversary may, or may not, as he chooses, capture it in passing.

H. L., Hampton Wick.—It shall have attention.

STRONG.—We are not greatly interested for the establishment of a university at which the natives of the principality might receive a liberal education in all the different branches of literature. It is now proposed that under the title of "University of Wales" the colleges of Lampeter, David at Lampeter, the Llandovery Institution, the Brecon College, and the endowed grammar schools of the principality, shall all be united and incorporated—students from all the above to be admitted for degrees in arts and divinity.

H. H., Manchester.—If you advance a Pawn two steps under the circumstances mentioned, your adversary may, or may not, as he chooses, capture it in passing.

H. L., Hampton Wick.—It shall have attention.

STRONG.—We are not greatly interested for the establishment of a university at which the natives of the principality might receive a liberal education in all the different branches of literature. It is now proposed that under the title of "University of Wales" the colleges of Lampeter, David at Lampeter, the Llandovery Institution, the Brecon College, and the endowed grammar schools of the principality, shall all be united and incorporated—students from all the above to be admitted for degrees in arts and divinity.

HINCKFORD AGRICULTURAL AND CONSERVATIVE CLUB.—The annual meet ng of this association was held last week at Castle Hedingham. The ploughing and land-ditching took place in a field belonging to Mr. Ashurst Majendie; and at the termination of the out-door proceedings the prizes were distributed by Mr. George Round, who addressed appropriate remarks to each of the successful candidates. The dinner took place at the Bell Inn, and was attended by about fifty of the leading Conservatives of the county. Mr. George Round occupied the chair. Sir J. Tyrrell and Major Beresford sent letters of apology.

NORTHAMPTONSHIRE RELIGIOUS AND USEFUL KNOWLEDGE SOCIETY. The Bazaar held on the 4th, 5th, and 8th inst., in the Lecture-hall of the above important Society, in aid of its funds, we are happy to learn, realised the sum of £270; including liberal donations from the Marquis of Exeter, Lord and Lady Burghley, and others. On Wednesday evening, the 12th inst., the Lecture-hall was used for the first time. The Rev. J. B. Owen, of Bilston, delivered a most interesting and able lecture to an overflowing audience, on the "Ins and Outs of Young England." At its conclusion, the president, the Rev. Chancellor Wales, returned the sincere thanks of the audience to the rev. lecturer, and congratulated the members on the flourishing condition and prospects of the Society.

HOP INTELLIGENCE.—Hop-picking in the Maidstone district has commenced. The produce throughout is stated to average less than five cwt. per acre. Prices, however, are generally good, with a prospect of an advance upon the present quotations. At Brenchley, picking, with few exceptions, is also finished. We are very fortunate in crop and quantity this year, and our hops are inquired after at an advanced rate from last week. Duty at our market is quoted £135/£90. In Sevenoaks hopping is nearly finished, and although short in quantity, the price will make up the deficiency.—*South Eastern Gazette.*

SIR JAMES COLQUHOUN AND THE STEAMER "EMPEROR."—The action of suspension and interdict at the instance of Sir James Colquhoun against the owners of the steamer *Emperor*, to prevent that vessel carrying passengers on Sundays to the quays on Garelock, came last Saturday before Lord Robertson. His Lordship, after hearing counsel on both sides, declined to grant any interdict; and in respect of the great general importance of the question at issue, reported the case to the Inner House, who will dispose of it on an early day after the sitting of the court in November.

MANCHESTER ATHENÆUM.—The *Times* says.—We are requested to state, with reference to the letter to Mr. Bright, inviting him to attend a preliminary meeting in the room of the Athenæum to denounce the conduct of Russ a, that the directors of the Athenæum disclaim having authorised or sanctioned the holding of any such meeting.

FRENCH v. THE VICTORIA DOCK COMPANY.—An inquiry before the Sheriff of Kent and a jury, to assess the amount of compensation to be paid for sixty-seven acres of marsh land, required for the purposes of the Victoria Docks, was concluded on Saturday last. The case occupied two days. The points in contest chiefly was whether the land was to be paid for as agricultural land only, or as building-ground. Upon the part of the claimant it was valued at £22,000, and £26,00 , and by those who valued for the company at £9000. The jury retired for some time, and gave a verdict for £16,000.

THE NORTHERN COAL TRADE.—Between 300 and 400 sail of coal laden vessels left the Tyne on Friday week, the greater proportion for the London market. London coal freights are from 10s. 8d. to 11s 6d. per ton. A letter, from Cronstadt, states that there are a great number of British vess ls there, and that vessels which left Newcas le with coal at high freights have some difficulty in finding a market. The high freights to London do not appear to be consequent upon our English shipowners having a monopoly of the coasting trade, for during the past three months coal-freights have been equally high in the ports in the north of Europe, the carrying-trade to which is open to all the world.

THE SHIP-BUILDING TRADE.—Owing to the launches and completion of a number of vessels on the Clyde lately, and a paucity of fresh orders, the ship building trade just now can get plenty of men. A reduction in the rate of wages amongst carpenters, joiners, rivet-ers, &c., is therefore being looked forward to. This will enable our shipbuilders to compete more effectually with other ports in the w r ld on contracts, and we hope thereby will enable them to give employment to their handicraftsmen during the winter.

UNPLEASANT JOKE.—A serious practical joke was played at the expense of the pub lic during the Lord-Lieutenant's visit to Ballinasloe. Some one climbed into the gas-works and turned off the main cock, involving the whole town in total darkness. The greatest consternation prevailed in the hotels until the affair was rectified.

THE MORMONITES IN WALES.—The ranks of the adherents to Mormonism are at present being greatly strengthened, especially in the districts in South Wales. Numbers of these misguided people have lately owned the sect, including many persons of high respectability and middle class station. A well-known Welsh lecturer, named Robyn Ddu, whose influence with the people is very great, has lately joined the ranks, and his eloquence is irresistible. Immense numbers have lately left South Wales for the Salt Lake, and many others are now preparing for departure in the spring.

CITY OF LONDON SCHOOL.—A new scholarship, called "the Lambert Jones Scholarship," has just been founded in connection with this school. The school committee have received the sanction of the Common Council to erect, at the City expense, a memorial of the gift in a conspicuous part of the school, and accordingly it has been determined to have executed, in appropriate marble, a tablet, with the armorial bearings of Mr. Jones, and a suitable inscription.

LONDON AND NORTH-WESTERN RAILWAY.—At a monthly meeting of the board of the above Company, held at the Euston station, on Saturday last, the Marquis of Chandos was unanimously elected a director of the company, and subsequently as the chairman of the board of directors, which is, as heretofore, an unpaid office.

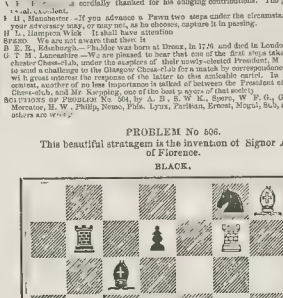
"AS GOOD AS A PLAY."—I note this very ordinary phrase as having Royal origin, or, at least, authority. It was a remark of Charles II., when he revived a practice of his predecessors, and attended the sittings of the House of Lords. The particular occasion was the debate, then interesting to him, on Lord Stafford's trial.—*Notes and Queries.*

SUGAR AND RUM.—A Parliamentary return has been printed of the quantities of unrefined and refined sugar, of molasses and rum, imported and cleared for consumption in each year ended the 5th July, from 1842 to 1853, with the a ount of duty received on the same in each year, and the average price per cwt. of Muscovado and of Havannah sugar during the same period. In the last year given the duty received on sugar and molasses amounted to £4,081,279; of which £3,281,142 was on British possessions, and £800,128 on foreign. In the first year mentioned (1842) the aggregate receipts of duty on sugar was £5,485,013. It appears that in 1842 the duty on rum received in the United Kingdom was £1,069,186; in 1843, £1,217,079; in 1844, £961,269; in 1845, £1,066,368; in 1846, £1,145,809; in 1847, £ ,000,000; in 1848, £1,164,709; in 1849, £1,[illegible]; in 1850, £[illegible]; in 1851, £1,088,857; in 1852 £1,103,775; and in 1853, £1,171,211.

PROBLEM No 506.

This beautiful stratagem is the invention of Signor A. F., of Florence.

BLACK.



WHITE.

White to play, and mate in six moves.

MATCH OF CHESS BETWEEN MESSRS. LOWENTHAL AND HARRWITZ

Since we last reported progress, there has been a brief cessation of hostilities, but even this has improved the position of the Hungarian. Among other arbitrary and unusual stipulations enforced by the opposing party, was a clause which made the penalty for absence, no matter how urgent however the cause of it, the forfeiture of a game for each non-attendance. The consequence of this has been that Mr. Harwitz, who is no more exempt than other players from the "ills which flesh is heir to," being indisposed, and requiring relaxation, has been obliged to purchase it *at his own price*, that of a game for each day's absence. As Mr. Löwenthal has since won another game, the score at the time we go to press stands—

Lowenthal	..	..	..	..	8
Harrwitz	..	..	..	..	2
Drawn	..	..	..	..	1

The following interesting Game was the sixth played in the Match.

(King's Bishop's Game)

BLACK (Mr H.)	(WHITE Mr. L.)	BLACK (Mr. H.)	WHITE (Mr L.)
1. P to K 4th	P to K 4th	18. Q to her 2nd	R to Q K 3rd (ch)
2. B to Q B 4th	Kt to K B 3rd	19. R to R sq	Kt takes B
3. Q to K 2nd (c)	B to Q B 4th	20. R takes Kt	B to K 6th
4. P to K B 4th	P takes P (b)	21. R takes K (i)	B takes Q
5. Kt to K B 3rd	Castles	22. P takes P	B to K B 4th
6. Kt to Q B 3rd	Kt to Q B 3rd	23. R to K 2nd	B to K B 6th
7. P to Q 3rd	B to Q Kt 5th	24. Q R to K sq	P to K Kt 3rd
8. Castles	R to K sq (c)	25. P to K Kt 3rd	B to Q 3rd
9. Kt to Q 5th	Kt takes B	26. Kt to Q 4th (k)	Q to her B 2nd
10. B takes Kt	Kt to K 2nd (d)	27. Kt takes B	Q takes Kt
11. B to Q Kt 3rd (e)	Kt to K Kt 3rd	28. K to K 2nd	B to B sq
12. P to Q B 3rd	B to Q R 4th	29. P to K R 3rd	P to Q Kt 4th
13. Kt to Q 4th	P to Q B 4th	30. R to K 3rd (l)	R to Q sq
14. Kt to Q Kt 5th	P to Q 4th	31. P to K Kt 4th	B to her sq
15. Q R takes K B P	P to Q E 3rd	32. R to K B 3rd	B to Q Kt 2nd
16. Kt to Q R 3rd (f)	P to Q B 5th (g)	33. R to K 6th	Q takes R
17. Q P takes P	R takes K P (h)	34. P takes Q	R to Q 6th

And Black surrendered.

(a) When the second player has brought out his King's Kt, as in the case, we do not think it advisable for him to attempt to turn the opening into a Lopez gambit.

(b) This was not prudent, as Mr. Löwenthal ought have found so his cost that his adversary made the most of his game afterwards.

(c) Although this move may be said to have won White the game, we doubt the propriety of it, because it leaves the K B Pawn too much exposed.

(d) A very natural move, but as we shall presently see, a very injudicious one.

(e) Mr. Harrwitz occupied more time in reflecting upon this move than on any other in the game, but yet he failed to perceive the very obvious advantage to be gained by now taking the K P Pawn with his Bishop. Let us suppose—

11. B takes K B P (ch)	K takes B
If White, instead of taking the Bishop, recruit his King, Black comes off, winning a Rook and Pawn for his Bishop	
12. Kt to K Kt 5th (ch)	K to K sq

White, apparently, has no better move. If he play the King to the 2nd, Black regains with Q to K Kt 5th, and must win

13. Q to K R 8th	P to K R 3rd
14. Kt to K 3rd	P to K Kt 3rd
15. Kt takes K B P (ch)	With a decisive superiority

(f) Black neglected the flood-tide of the game, and his course now is bound in shallows and in difficulties

(g) This is cleverly played; for if Black r[illegible] Rook to Q B 2nd, the Queen gives check at her Kt 3rd and then wins a piece by taking the Q Kt Pawn; and if, on the other hand, the Bishop goes back to Queen's sq, White [illegible] Q Kt Pawn, and, on the Queen retaking, gives check with the Queen, and again [illegible] the Q Kt P, having by far the better game.

(h) From this point Black cannot escape the [illegible]

(i) Desperate, indeed! but could he do anything [illegible]

(k) With the intention of playing R to K 8th (ch), and winning the Queen and Bishop for the two Rooks.

(l) To prevent the Bishop going to Q 6th and Q B 8th afterwards.

CHESS ENIGMAS.

No. 848.—By A. KEMPE, Esq., University College.

White: K at Q R 3rd, R at Q 8th, B at Q B 7th, Kts at K 3rd and Q 6th; Ps at K B 4th, Q 2nd, and Q R 4th.

Black: K at Q B 4th, Q at K R 8th, R at Q R sq; Ps at K B 4th, Q 6th, and Q B 3rd.

White to play and mate in five moves

No. 849.—By Mr. MACE.

White to play, and mate in four moves

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The friends of Colonel Outram will be glad to hear that he has been appointed Resident at Baroda.

Lord Onslow has revoked the munificent bequest which he had made to the nation of his fine collection of pictures by the old masters. He has taken this step in consequence of the very unsatisfactory nature of the Report from the Select Committee on the National Gallery.

Havannah advices of the 27th ult. mention the failure of Messrs. Diago, planters of that city, with liabilities amounting to 1,250,000 dollars.

Count Salis, and several other persons, have been arrested in the Valtoline, and taken to Milan.

Major-General Napier is very unwell, and unable to continue his inspection of the troops in Scotland this week.

A miner, named Hugh Hughes, was lately working at the bottom of a shaft, driven in the rock, in a mine at the new harbour, Holyhead, when an enormous stone from the top fell with tremendous force upon the unfortunate man, killing him on the spot. He has left a widow and family.

The Hon. W. Stuart, second paid attaché to her Majesty's Embassy at Paris, has been appointed first paid attaché there. Mr. Odo Russell, second attaché to the mission at Vienna, has been appointed second paid attaché at Paris, in the room of Mr. Stuart.

Boston advices announce that Mr. McKay's monster ship, the *Great Republic*, of 4000 tons, was successfully launched on the 4th inst. in the presence of 30,000 people from all parts of the country.

Signor Gaetano Giardini, the eminent jurisconsult, condemned to death by the Criminal Court of Naples, for political offences, has arrived at Turin, having been concealed four years in his native country.

The receipts of the theatres, balls, concert-rooms, and other public places of amusement in Paris, during the month of September amounted to 933,163f.; being more by 224,676f. than those of the month of August. This increase is principally to be ascribed to the re-opening of the Opera and of the Odeon.

The well-known residence of George Hudson, Esq., M.P., at Scarborough, Knightsbridge, has been let for five years to Count Walewski, the French Ambassador, at a rental of £1800 per annum.

The attractive entertainment given by the extraordinary troupe of native Zulu Kaffirs closed on Monday, at the St. George's Gallery; and they departed for Paris on Tuesday.

The master-attendant of the pearl banks at Ceylon holds out confident hopes of a valuable fishery in 1856 or 1856. The revenue derivable from this source will be particularly valuable, as many works of great utility are now stayed for want of funds.

The Lord-Chancellor of Ireland has appointed Richard Espinasse, Esq., Newtown Mount-Kennedy, to the Commission of the Peace for the county of Wicklow.

Professor Jameson has been compelled, by reason of protracted illness, to resign the chair of Natural History in Edinburgh University, of which he has been for so long a distinguished ornament.

The newly-born son of Don Miguel was baptised on the 4th, in the château of Heubach. The godfather was Don Carlos, Infant of Spain, who was represented by the Prince Charles Henry de Lowenstein-Wertheim-Rosenberg. The child received several names, the principal one being Miguel.

The apprehensions entertained for the safety of Mr. Peto's yacht, with the board, amongst whom were Mr. Bidder and family, are unfounded. the vessel having arrived in safety.

A letter from Lord Beaumont to Lord Dudley Stuart, dated Geneva, 9th Oct., has been published, in which the Lordship testifies to the constant spirit and progress in character of the Turkish Government, and urges the justice of upholding the Sultan's independence.

The mansion of the late Earl Ducie, in Belgrave-square, has just been disposed of. Its estimated value was £14,000.

Intelligence has been received of the death of Lieut. Hutchinson, R.A., whilst cruising in his pleasure yacht in the Australian rivers—a sudden squall of wind catching the sails and upsetting the boat, the whole of the hands on board perishing.

On the 1st inst. the coast of New Brunswick was visited by one of the heaviest gales experienced during the last twenty years. Ten English and Norwegian vessels are reported to have been driven on shore.

A German operatic company has been engaged for the Royal Soho Theatre, which is to open on the 10th of November.

The Austrian Government are about to re-organise the Consular service in the ports of Queenstown, Russia, Zoghai, and Skibbereen.

On Monday next the long vacation will terminate, when pleadings in action in the superior courts will be resumed. The Common Law Procedure Act has diminished the force of the vacation.

The *Sydney Gazette* announces that the surveys for the Savoy Railway, between Modane and St. Michael, are completed, and are to be laid before the Piedmontese Minister of Public Works forthwith.

It is arranged that no change shall be made in the uniform of the army for the year commencing the 1st of April next.

At a public meeting held at Sydney (Australia), resolutions have been passed for the formation of a railway between the towns of Newcastle and Maitland, in the Hunter river district. It is stated that the capital of 20,000 shares of £5 each has been subscribed for.

A curious accident occurred from the breaking of the telegraph wires at Reading. Immediately upon the fall of the railway shed the wires snapped and rebounded with such force as to catch a man riding on his horse along the Caversham-road, and pull him off. He was not much hurt, but was at a loss for some time to discover the character of his assailant.

The first meeting under the new commission, appointed to inquire into the law of bankruptcy, will be held on the 1st of November.

A great line to connect the capitals of Germany and Illinois (U.S.) is under contract, and is to be completed in two years time.

In workhouses in Middlesex there were, on the 1st of January last, 141 married couples above sixty living separate; while only forty of that age were living together in workhouses.

The Russian war-corvette *Niemen* was wrecked a few days ago at the southern part of Oebra Inholm, near Gothenburg. All the crew, eighty in number, were saved. Shortly after the last man was got on shore the vessel went down.

It has been erroneously stated that the reduced duties on servants took effect from the 10th instant, the fact being that they will not come into operation until the beginning of the next fiscal year (April 6, 1854).

The Magnetic Telegraph Company's line—being a second—between London and Liverpool and Manchester, is now completed. There are ten wires in our route.

The anniversary of American independence was celebrated at Melbourne (Australia) on the 4th July by the American capt

THE SULTAN'S NEW PALACE ON THE BOSPHORUS.

We this week give an Engraving of the *façade* of the New Palace of Dolmabaghdasche, on the Bosphorus, near Constantinople, now building for the Sultan; of the gateway of which we gave a View the week before last. The Palace is of stone and marble; and rather gaudy in effect. The architect is an Armenian, whose father was a builder employed by the Sultan.

Some idea of the size of this Palace may be formed from the fact that the river front is about 1000 feet long, the depth and arrangements of the back premises being upon a proportionate scale.

The View shows the centre of the Palace, which contains one large hall, 125 feet in height to centre of dome; inside measure, 180 feet by 130. This is intended for receptions; it is magnificently decorated in ornamental painting and gilding. The dome springs from coupled columns of the Corinthian order. Over the columns on three sides of the hall, called the Divan Yerry, and under the arches which support the dome, are galleries for museums. The principal floor comprises vast halls and apartments fitted up in a most costly manner in gilding and painting, executed by Italians and natives. The taste of some of the interior finishing is questionable. The baths are fitted up with Egyptian alabaster. The roof is covered with lead: all the Sultan's palaces, and only these are covered with that metal. The great staircase is lighted by a large skylight of crimson-colored glass. The ceilings are generally low. The harem of the Palace contains apartments for 300 or 400 women.

OMER PACHA.

Omer Pacha, the Commander-in-chief of Turkish troops along the Danubian frontier, is an Austrian subject; being a native of Croatia. He was born in 1801, at Viaski, a village situate in the circle of Ogulini, thirteen leagues from Fiume. His family name is Lattas. His father was Lieutenant-Administrator of the circle; his uncle was a priest of the United Greek Church. Admitted, when very young, into the School of Mathematics of Thurm, near Carlstadt, in Transylvania, after having completed his studies with distinction, the young Lattas entered the corps of the Ponts et Chaussées, which in Austria is organised on a military footing. In 1830, in consequence of a misunderstanding with his superiors, he left for Turkey, and embraced Islamism. Khosrew Pacha, who was then Seraskier, took him under his protection, procured him admission into the regular army, and attached him to his personal staff. He even gave him his ward in marriage, who was one of the richest heiresses of Constantinople, and the daughter of one of the Janissaries whose head he had caused to be cut off, in 1827, when that corps revolted against the Sultan Mahmoud. In 1833, Lattas, who had taken the name of Omer, was chief of battalion, and was appointed aide-de-camp and interpreter to General Chrzanowski, who had charge of the instruction of the Ottoman troops encamped near Constantinople. Omer was thenceforward actively employed in the re-organisation of the Turkish army, and, still protected by Khosrew Pacha, obtained successively important missions and command in the army. The troubles of Syria and the Albanian insurrection of 1846 gave him occasion to distinguish himself, and attracted to him the attention of the Sultan. He was sent to Kurdistan, and succeeded in obtaining the submission of that province, which was nearly independent of the Porte. Named in 1848 to the command of the army sent to the Danubian provinces, he made the authority of the Sultan respected, while at the same time he respected the susceptibilities and privileges of those provinces, placed as they were under the double protection of Turkey and Russia. The year 1851 was the most brilliant period of the military career of Omer Pacha. Named Commander-in-Chief of Bosnia, the principal chiefs of which had refused to recognise the Tanzimat—that is, the new organisation of the empire—he combated successfully, though with an inferior force, the Beys of that country. At last he was sent to Montenegro, where he found himself for the first time commanding a regular army of 30,000 men. The intervention of Austria, as is known, put a term to that expedition before decisive operations could be commenced.

OMER PACHA, COMMANDER IN-CHIEF OF THE TURKISH ARMY OF THE DANUBE.

The writer of a work recently published, entitled "The Frontier Lands of the Christian and the Turk," gives some extremely interesting particulars of Omer Pacha's campaign in Bosnia, which redound highly to the credit of the latter in his official capacity. Throughout the campaign his military achievements were of the most brilliant kind; but we prefer quoting a few instances illustrative of the fine sense of justice and clemency with which he treated those whom the fate of arms had subjected to his will.

After the taking of Jaitza—deputations of submission, praying for pardon, and promising obedience, arrived from the two districts of Banja Luka and Klimtch; and Omer Pacha exercised no vindictive feelings towards them, or the inhabitants of Jaitza, all those who submitted to the Sultan's authority being at once forgiven.

At Jaitza the rebels had forced the Christians of the surrounding villages, as well as of the town, to bring everything they possessed — money, provisions, household utensils, and other moveable property—into the fort; and, when they evacuated it, they carried all this away with them. Most of the women and children had been removed from the town to the more distant villages for safety; and they now returned, half starved, to their rifled homes, where they found no means of subsistence. Omer Pacha distributed among them 20,000 okes of Indian corn, and 80,000 piasters in money. When this sum was exhausted, he gave them 100,000 piasters more; and an equal amount was subsequently divided among the Christians of Banja Luka, then similarly situated. In both these cases, lists of their losses were taken, and Omer Pacha made the rebels refund them, by levying an indemnity from all those chiefs who had signed manifestos and proclamations calling on the Sipahis to take up arms.

The next place in which the rebels were attacked was Ivanaka:—

When the Albanians approached, with Juleca, the former rebel chief of Albania, at their head, the Sipahis commenced firing on them. The Albanians charged them, while the artillery opened a tremendous succession of volleys to intimidate them. The rebels abandoned the ditch, and ran into the town, but they did not stop there, but attempted to form on the plain beyond it. Ibrahim Pacha had gone round the town with the cavalry, and attacked them; he completely routed them, and fortunately the hedges and other inclosures prevented the dragoons from pursuing them far, otherwise a great massacre might have taken place. The Albanians, meanwhile, were pillaging the town. The loss was six Albanians killed, and thirteen wounded; two lieutenants, one corporal, and three privates of the dragoons were wounded; while twenty-five rebels were killed, principally by the lances of the cavalry; but the number of their wounded, which must have been considerable, was not ascertained.

When Omer Pacha came up, he found the action over, and only twenty of the one thousand Albanians with their bairac, or standard. He ordered Juleca, their commanding officer, to recall them to their colours, but the Albanian chief replied that it would be impossible to get them in for some time; he therefore sent Dervish Pacha with two companies of infantry to bring them out of the town. The latter found them ransacking the houses, and burning them when they were empty. He brought them to Omer Pacha, driving before them the live stock they had carried off, and transporting, as they best could, all the spoil of every kind which they had taken. Omer Pacha then summoned the whole population to appear before him, and the unfortunate people came in fear and trembling; they were, however, agreeably surprised when they were told to claim their property.

Three hundred and ninety-five cows, oxen, buffaloes sheep, goats, and swine, were thus restored to their rightful owners; and all the clothes, cash, arms, money, and other articles, which had been seized, were conveyed to the town with shouts of joy. A general order was then read to the Albanians, informing them that if such conduct should ever occur, the persons robbed would be indemnified out of their pay. Fifteen Greeks were arrested for following the irregular troops, with the view of purchasing their booty. What they already bought from them was restored to the townspeople; and, after they had each received a severe beating, they were dismissed from the camp with ignominy. Omer Pacha paid 1500 piasters on the part of the Government to each of the proprietors of the houses which had been burnt by the Albanians; and several of the soldiers, who belonged to these families, obtained leave of absence to assist in rebuilding them, while a larger sum was given to them in order that recruiting might be encouraged.

The writer paid a visit to Omer Pacha's camp at Travnik. A slight sketch which he gives of the *personnel* of the Field Marshal and his family may now be interesting. He says:—

I stayed the whole day at the camp with the officers, who showed me every possible attention in their tents. When the retreat was beat, the whole troops turned out, and gave three cheers of "Padishah chok yashi!" and I then returned to town. On my way I met Omer Pacha in a small open carriage, drawn by four very handsome Hungarian horses, with his little daughter Emine on his knee, and a brilliant staff following him on horseback. His wife and her mother occupied a chariot and four, and a caleche came next, with the daughter's French governess, the wife's German ladies'-maid, and two female slaves; and the cortège was closed by armed retainers of the Pacha on horseback, and a half-squadron of lancers. They were taking their usual evening exercise "on the slopes." Emine is a pretty child of nine years old, already betrothed to the son of

THE GARRISON OF ALEPPO IN THE BURNING DESERT. (SEE PAGE 361.)

THE SULTAN'S NEW PALACE OF DOLMABAGHDSCHE, ON THE BOSPHORUS.

a distinguished Turkish statesman. Omer Pacha's wife is young, fair-haired, and good-looking, as far as I could judge through the semi-transparent yashmak.

Omer Pacha is about fifty-two years of age, below the middle height, but with a martial expression of countenance. He speaks with the same facility the Servian, the Italian, and the German tongues. After the insurrection of Hungary he undertook the defence of the refugees whose extradition had been demanded by Austria and Russia. He proceeded to Schumla, where he made acquaintance with the principal refugees; and, on his arrival at Constantinople, he interfered zealously with the Sultan in their favour. He took several of them with him to Bosnia and Montenegro, and confided to them important posts. Some of them have distinguished themselves greatly, and have remained in the service of Turkey. At the present date Omer Pacha is at Schumla, at the head of nearly 100,000 men. He is described as displaying great activity in its organisation, and is occupied with fortifying the country which may become the theatre of war. He is much liked by the soldiers under him, whom he mixes with with great condescension of manner, often entering their tents and addressing them individually by their names.

Major-General Sir Charles O'Donnell, who recently visited the Turkish head-quarters at Schumla, thus speaks of the condition of the troops in the course of a few "Memorandums from the Sabre-tache of a Hussar," published in the *Naval and Military Gazette*:—

The Turks are physically a fine race of men, capable of enduring fatigue, sober, patient, intelligent, and altogether well conducted; but the halo of romance which once surrounded them has completely passed away. You look now in vain for the Spahis and Delels, with his fiery steed, curved sabre, gaudy turban, and flowing robe. The Turkish peasant of Bulgaria, who is always armed, does appear somewhat in the old costume; but the military show nothing of a Moslem or Oriental aspect except, perhaps, in the Fez &c.—in their commissariat. All is completely European, and the spectator may here fancy himself amongst the Prussian or French soldiers and their encampment.

Much enthusiasm prevails amongst the troops; many of the battalions are already above their complement, on account of the eagerness of the volunteers to come forward; and so anxious are they to get through their drills, that they are seen *con amore* to drill each other when an opportunity presents itself. Animated by a laudable fervour for the cause of their religion and their country, they seem disappointed, nay, discontented, at the probability of a pacific termination to the impending negotiations; and it is not without murmuring that some of them state that they have divorced their wives, sold their little stock, &c., and finally left their homes, some 300 hours distant, to come and fight, and they are determined to fight. They are aware of the consequences to them of the coming events, their imams have prepared them for the worst, and some even from Bokhara, have come to join their ranks. Their fatalism has exalted their courage, and they say that they will conquer or die with arms in their hands. Awful, therefore, will be the moment of collision!

The Turks have adopted for their cavalry and infantry the French system, and for their artillery the Prussian system of organisation and manœuvre. In their encamp. ments they now observe the principle of the European order; and as Asiatics, and accustomed to tents, they are in these respects naturally expert, neat in their arrangements, and very much at home.

The force is well armed, equipped, and organised; and, upon the whole, in good order. Instructed by Europeans in the various branches of the military art, the Turks have given up their former system of warfare, and have made rapid strides towards efficiency in European tactics. Their marches and movements, chiefly of a simple nature, are made with steadiness and precision; and as for the performance of the manual and platoon exercises, no troops of the Continent can surpass them. The cavalry is all light, and a squadron in each regiment is furnished with the sabre; but the artillery is the arm in which they most excel: it is numerous, and seems to be well managed and understood. The equipment of the short mountain guns, which are carried on mules, is well arranged.

Provisions are in great abundance in Bulgaria, and the soldier is well fed and paid with tolerable regularity. His medical wants and his comforts in camp and quarters are attended to, and very little sickness prevails; in fact, not three per cent.

MILITARY MOVEMENTS IN EGYPT.

(*From our own Correspondent.*)

ALEXANDRIA, October 6, 1853.

THE state of the Eastern question has produced a considerable degree of stagnation in the commerce of Egypt, which state of things has been much increased by the unprecedently high rise of the Nile this year, which has, of course, much impeded the proceedings of the agriculturist.

The Pasha has forbidden, to a great extent, the export of corn, being apprehensive, it is said, of a scarcity.

There are at present comparatively few merchant vessels in harbour. The Egyptian Admiral's flag-ship, a fine three decker the *Feid Cahed*, the new iron steam frigate; three smaller steamers, and two corvettes, are the only vessels of war at present in port, the rest of the Egyptian fleet being at Constantinople

The forces already sent by Abbas Pacha to aid the Sultan amount to 22,000 men, exclusive of sailors on board the Egyptian fleet; and it is said here that a further auxiliary force will shortly be sent.

The subjects of Abbas Pacha have been forbidden to speak of the Turkish question. Nevertheless, it is evident that the people here, though they are to some extent flattered by the compliment paid to the efficiency of their fellow countrymen by the Sultan, consider it hardly fair that they should be sent forward, as it were, to bear the first shock of the war, being so small a force when compared to their opponents the Russians.

The Pacha has at present under arms about 40,000 men, exclusive of the 22,000 at present in Turkey. The garrison of Alexandria consists of 8000 men.

The Egyptian army is clothed in the Nizam uniform, of blue coarse cloth in the winter, and white cotton in summer; the line, generally, is armed with flint-lock French muskets: indeed, it is for physical strength, rather than equipment, that they seem chiefly to be remarkable.

The railway works, though retarded by so many men, having been withdrawn for service in Turkey, still proceed.

The accompanying Sketch represents a morning drill of a part of the garrison of Alexandria, on the parade-ground, near Fort Caffarelli, which is said to have been raised by the French troops in a single night. The soldiers are in summer costume, of cotton; in the background is seen the military hospital, guard-house, and huts of the soldiery; in the foreground a well, with peasant women carrying water.

RUSSIAN CENSORSHIP OF THE PRESS.—It is impossible to conceive anything more ridiculous than the report of the censorship of the press under Prince Menschikoff's administration. It is true that the general board in Russia has never been distinguished by any great amount of perspicuity and luminous enlightenment, but it was reserved for Prince Menschikoff to render it supereminently absurd. . . . The words "Liberty" and "Freedom," with all the adjectives and adverbs derived from them, are prescribed, and expunged from the Russian vocabulary; and the following indicrous anecdote will show the manner in which the censors act upon this proscription:—Some time since a professor of mathematics sent in the manuscript of a work on mechanics for the inspection of the board, soliciting permission to publish it. Now it happened that in describing the action of some mechanical apparatus, the author stated that the wheels, springs, &c., worked freely; and further on he wrote that a straight line could be elongated into infinite space without the slightest limit. Whereupon the censors struck out both words the first without any comment, the second on the ground that the Russian Emperor's authority was the only thing without limit in this world.—*L. L. le Duc*

NEW LINE TO AUSTRALIA.—The Australasian Pacific Mail Steam-packet Company's fourth screw-steamer was launched on Tuesday, at noon, from the building-yard of Messrs. Reed, at Port Glasgow. She is named the *Dunrobin*. Her admeasurement is 2000 tons, or by register 1580 tons. The engines, by Messrs. Watt and Co., of the nominal power of 300 horses, are ready for fixing. There now remains but one vessel to be launched for the main line from Panama to Sydney, and she is nearly ready to be despatched from the stocks. The 5th, or reserve vessel, which is to be employed between Sydney and Melbourne, is also progressing. As the ships of the Australasian Pacific Mail Steam-packet Company are not intended to run for a long period again, great care is exercised in seeing that they are properly prepared for the work for which they are intended, and this has retarded their departure.

SUBMARINE TELEGRAPH FROM CUBA TO FLORIDA.—The privilege for a submarine telegraph from the island of Cuba to the United States has been granted by his Excellency General Canedo, with the unanimous approval of the Real Junta and Telegraphic Committee, for a term of thirteen years and a half. The proposed route for the submarine line is from Puerto Carnas, near Cardenas, to Cruz del Padre, thence to Double-headed Shot Keys, from thence to Cape Matacumbe, and from Old Matacumbe to the mainland of Florida; the whole distance about 122 miles, being divided into four sections. The longest cable required will only be about 56 miles.

MUSIC.

NEW PUBLICATIONS.

Considerable activity is now manifested by the music-publishers, in preparation for the season about to commence. Among the multitude of new things which are beginning to load their shop counters, there is the usual proportion of a grain of wheat to a bushel of chaff. The largest and by far the most profitable portion consists of waltzes, quadrilles, polkas, and other appliances to keep in motion "the light fantastic toe." Then there are mountains of trivial songs and ballads, in which the -

Blest pair of Sirens, Voice and Verse,

unite their charms to the delight of musical masters and misses, to whose taste and capacity namby pamby rhymes and mawkish tunes are quite suited. Next we have the achievements of those professors of legerdemain, the fashionable pianoforte-players, who pass their time in torturing favourite opera airs into interminable fantasias, capriccios, variations, and so forth—in the production of which the great problem is to crowd into one bar the greatest possible number of unmeaning notes. This kind of note-splitting, miscalled composition, is the fashion of the day, and too often renders the drawing-room performances of our young ladies a vain, frivolous, and tiresome exhibition, instead of being (as they ought to be) a graceful and interesting entertainment This will be the case so long as the preposterous notion is entertained that good music must necessarily be difficult. At present, ten times as much expensive teaching and laborious practice are required to enable an "accomplished" young lady to clatter at railway speed through some noisy, nonsensical fantasia, than would have made her an intelligent musician, capable of playing with taste and expression the most beautiful works of the really great masters.

Such are the productions which at all times form the great mass of musical publications. They are not worth the notice of the critic or the real amateur. But, mixed up with, and almost lost among the heap, are things of a superior order—works of true artists. To pick out, from time to time, a few of those is, we think, to do some service to the musical public; and this, therefore, we propose occasionally to do.

Among the vocal compositions, in the first place, we find several songs by eminent native musicians, especially Macfarren, whose name we are particularly pleased to see, because we meet with it by far too seldom. The "Lily and the Stream" is a graceful little ballad, of a somewhat Irish cast of melody, the effect of which is heightened by an expressive transient modulation, from D (the primary key) to F sharp, minor, immediately before the cadence. It is very simple, not exceeding an octave in compass, and it demands from the singer nothing but taste and feeling. "Eveline," and "I'm happy as a little bird," both of them written for and sung by our favourite young vocalist, Miss Kathleen Fitzwilliam, are also quite simple and easy, but have those artistic traits which show the musician of genius. "I would I were a breath of air" is a beautiful and imaginative melody, composed for a tenor voice, and sung by Herr Reichardt. It is printed not only in its original key, A flat, but also in E flat (a fifth higher), for a mezzo-soprano voice

Vincent Wallace, whose fertile imagination and rich vein of original melody have been amply tested by his operas, has produced four canzonets, which are worthy of his name. Their titles are—"In the Happy Summer Time," "Joyful Spring," "The Spring and Summer both are past," and "Autumn." They are all beautiful; but we are inclined to give the preference to the last, as being the most highly-wrought of the number. It is in A minor; and the style of the melody, with its peculiar changes of key, and the instrumental accompaniment in the rhythm of a bolero, give it the romantic character of Spanish national music. There are also two ballads by Mrs. Wallace—"Say, my heart, can this be love?" and "I passed away to heaven"—of slighter construction than the canzonets, but full of elegance and feeling.

"Hopes of my heart," by Henry Smart, is rather a pretty song, but not worthy of the composer's reputation. The melody is somewhat common, and the first four bars are identical with the beginning of a familiar Scotch air.

The "Sabbath Lays," by the Hon. Mrs. Norton, are six in number, in a very elegantly-printed volume. Four of them are entirely from her pen, both poetry and music; of the other two, the poetry is her own, and the music by Mr. Charles Glover. The work does much honour to this accomplished lady. The songs breathe a devout and pious spirit; the verses are gracefully written, and the melodies to which they are united are simple, expressive, and in the purest taste. They evince the genius of a poet with the attainments of a musical artist.

Among the vocal music by *foreign* composers, we find a song by Silas, "O would I were yon silver moonbeam," with German words; and an English version by Mr. Oliphant: a gem of melody and expression. We find, also, two songs by Kücken—"Sweet, blissful dreams of home," and "The Tear" ("Die Thrane"), with German and English words. Kücken's reputation is founded on a vast number of beautiful songs and ballads, which have become popular in England as well as in his own country. There are three German ballads, by Franz Abt—a composer whose name is new to us: their titles are—"Sweet Maiden mine" ("Du Schöne Maid"), "Marie," and "The Flowrets" (Herzaled). They are pleasing specimens of the modern style of German song-writing.

The new pieces for the pianoforte are, for the most part (we regret to say), such as we have already described. We have, however, met with some worthy exceptions. There is a set of three marches by the celebrated Ferdinand Hiller, which are excellent. One of them, in the elegiac style, is pathetic and beautiful. Beethoven's superb march in the "Ruins of Athens" has been arranged by Mr. Benedict as a duet for two performers—we need scarcely add, in a masterly manner. Mr. Brinley Richards has written a pianoforte piece on the subject of the well-known melody, "The Vesper Hymn," and variations on "Rule Britannia:" both pieces are brilliant and effective. Mr. Vincent Wallace's "Pluie d'Or" is too palpable an imitation of Osborne's "Pluie de Perles" Stephen Heller's "Improvista" on a melody of Mendelssohn's, was lately performed at a concert by Miss Arabella Goddard with great effect; but we would not advise an amateur to attempt it. On the other hand, we recommend to the attention of amateurs two duets for two performers on the pianoforte, by M. Silas—one in D major, the other (a Turkish march) in A minor. They are exceedingly beautiful, and quite free from unmeaning difficulties.

The celebrated composer, George Onslow, died a few days ago at his native place, Clermont, in Auvergne. He was in his 69th year. Mr. Onslow was of a noble English family; his father, the second son of Lord Onslow, married a French lady of rank and fortune, and settled in France. Onslow studied music as an accomplishment, and became one of the most eminent composers in Europe. His numerous instrumental works, his quintets, quartets, trios, solos and concerted pieces for the pianoforte, &c, are in the hands of every amateur, and hold a place inferior only to the works of Haydn, Mozart, and Beethoven.

Madame Jenny Lind Goldschmidt means to be in London next spring, for the purpose, not of appearing on the stage, but of singing at concerts

A series of concerts on a great scale, under the title of the London Wednesday Concerts, is to commence next week at Exeter-hall. They are to be under the direction of Mr. Benedict; and a host of eminent performers, both vocal and instrumental, are announced

THE THEATRES.

DRURY-LANE

On Wednesday, the house was crowded to reward the lessee Mr. E. T. Smith, for his unexpectedly prosperous management of this doubly hazardous and once patent theatre. Mr. Brooke played *Macbeth* on the occasion—a character on which hitherto he has not been inclined to risk his reputation. Certainly, it requires a subtlety of delineation, alien from his general style, and not quite in accordance with the peculiar physical power to which his effects are generally due. Wisely, however, he has adopted an interpretation of the character which gives him, at the beginning, an opportunity of assuming the noble and brave bearing predicated by the poet of the warlike Thane previous to his fall. The rumorse that accompanied the progress of the assassination was something, therefore, very different from, and much better than, that craven fear with which the act is absurdly accompanied by performers in general

Mr. Smith made a speech after the performance, in which he intimated the probability of Mr. Brooke being permitted by the Americans to appear on the boards of Old Drury lane again in the course of the next year, and as soon as possible after the run of the pantomime. The applause during the evening was tremendous—the multitude assembled beyond all precedent

ADELPHI.

A new farce, founded on the articles in the *Times* as to the alleged hotel extortions, has been produced here. So much reference, indeed, has it to the arguments on the subject maintained in that paper, that the critic of the theatrical department felt himself thereby disqualified for all assertion regarding the piece except that of unqualified praise. Not being bound in any such claims of gratitude, we may be as theatrically just in the present occasion as Godwin would have us politically to be on the Bill.

Be it, then, permitted us to state that the new farce, denominated "Hotel Charges," by Mr. Selby, is a fair enough specimen of the *pièce de circonstance* and is not without the merit of some little plot to support the stage situations. The Correspondent of the *Times*, under the signature of "Biffin," forms the motive-spring of the incidents. This name is supposed to be assumed for the nonce by *Captain Fitz-chizzle*, a haunter of hotels and a customer for their best fare, who ostentatiously exposes letters addressed to the aforesaid "Biffin," and thus impresses the terrified hotel-keepers with the notion that he will in turn expose them in the columns of that journal if they should charge him at the usual rate. This little device is successful. The price of accommodation is seriously reduced, much to the annoyance of the waiter and maid-servant, who cannot bear, though for a limited interval, to be thus confined within the narrow bounds of moderation. By flirting with the *soubrette*, however, the Captain sets matters right with her; but excites the jealousy of her *colaborateur* (Mr. Rogers), whose suspicious furnish in part the humour of the scene. The other guests at the establishment are, of course charged proportionably high, in order to compensate the relative loss incurred by this supposed literary visitor—who, in the end, however, declares his real cognomen, and recommends the homely virtue of honesty to his Brighton host.

OLYMPIC.

On Monday, at seven o'clock, this theatre re-opened, under the management of Mr Wigan, to a numerous and fashionable audience. The first piece, by Mr. Planché, was entitled "A Camp at the Olympic," comprising an elegant *revue* of the state of the drama. Tragedy. Comedy, Farce, Opera, Melodrama, and Spectacle, were permitted to urge their respective claims, and maintain an amicable altercation, to the great amusement of the audience. Mr. Planché had, indeed, thrown much wit and humour into the dialogue, which was rendered more interesting by being interpreted by the chief performers of the establishment. Consequently, Mrs. Sterling, Miss P. Horton, Mr. Emery, Mr. Robson, Mr. and Mrs. Wigan, and Miss Turner. The war of words concluded with a moral promise, to attempt a new species of drama that should combine the opposite excellencies of those that threatened to become obsolete. The drama that followed, the joint production of Mr. Tom Taylor and Mr John Lang, may be accepted as an example of what the management intend. It is a new and original piece, entitled "Plot and Passion," in which an incident in the spy-system of the celebrated *Fouché* is dramatically conducted through three acts with much force of style and cleverness of detail. A lady of station, who has come within the sphere of the minister's fatal influence, is made the decoy to effect the return to Paris of a young Creole who has offended the *Duke of Otranto* by a libel, reflecting on the different phases of his prosperous career under revolutionary difficulties. The "passion" that was feigned to carry out the "plot" becomes a real passion; and the lady returns alone to Paris to demand compassion and assistance from *Fouché*, or to use some evidence against him, in relation to his interference in the affair of the Austrian marriage, which ultimately she is driven to do, and accordingly despatches the document in question to the *Emperor Napoleon*, who, in consequence, demands his Minister's resignation. Much of this result is brought about by some ominous underplotting, undertaken by *Fouché's* secretary (Mr. Robson), who, inspired by two passions—that of overreaching his master, and love for the lady—is naturally occupied with some villainous project, some amorous declaration, or some treacherous interference; and ultimately puts the finishing touch to the Duke's misfortunes. In the delineation of this part, Mr. Robson displayed so much of the actor's art—so much of subtlety, passion, refinement, and power—that the audience became ecstatically demonstrative, and the triumph of the actor was complete. We have no hesitation, now, in declaring our conviction that, for genius and true art, Mr. Robson has not his superior on the English stage. Indeed, we were asked to name his equal, we should hesitate, for at present our memory is sadly at fault in this particular. The new play was perfectly successful, and the new management has been most favourably inaugurated.

MARYLEBONE.

On Wednesday, the tragedy of "Macbeth" was performed; Mr. and Mrs. J. W. Wallack performing the parts of the Scottish Thane and his ambitious wife. The public are already acquainted with Mr Wallack's merits as an actor, and we have more than once expressed our admiration of his performance of *Macbeth*. Enough if we now add that he has greatly improved since we last witnessed his acting: he has become more rapid in his style, and more decided in his conceptions. The great novelty of the evening was Mrs Wallack's *Lady Macbeth*. Cast in one of nature's grand moulds, Mrs Wallack has many personal qualifications for this character, and she supported it with a force, originality, and majesty which furnished warranty that she has in her all the elements of a great actress. With the ambition, the power, and the intelligence to become one, we have no doubt of her ultimate triumph, and, therefore, content ourselves now with recording the perfect success of her début. The house was full and fashionably attended.

EDINBURGH.—Miss Glyn has added to the characters already stated those of *Queen Katherine*, in "Henry VIII.," and *Isabella*, in Southern's tragedy. The *Edinburgh Guardian* presents us with a philosophical article on her acting, which it classes as eminently statuesque; adding, that "this sculpturesqueness is most in keeping with her peculiar intellectual organisation. She can afford," he says, "to act with perfect calmness, as a consequence of the extraordinary power which she can throw in her features." In relation to this point, he ventures on the following description:—"It is in the play of her countenance, and chiefly in the expression of her eyes, that she is unrivalled." Her acting, accordingly, in his opinion, "displays great intellect, for we commonly find that while the expression of the emotion belongs chiefly to the mouth and lower part of the face, that of intellect belongs to the eye and upper part" In illustrating the peculiar defects of the classical or statuesque style of acting, he concludes with stating that "the words seem to hang fire—you seem not to hear what is said until some time after the words are spoken. The countenance of Miss Glyn in such scenes speaks long before her tongue moves."

LITERARY MISCELLANIES.—No. VII.

SKETCHES OF THE MANNERS AND CUSTOMS OF A CLNTEEL LITTLE SEA-SIDE TOWN.

OUR CELEBRITIES—FOREIGN AND RESIDENTIARY

It is not without adequate warrant and authority that we have assumed the title of a "Genteel Little Sea-side Town!" Happily, owing to our distance from the Great Babylon, and some local peculiarities, we are fortified, as it were, both by sea and land, against the incursions of those predatory tribes who inhabit the fastnesses of East Cheap. But for these natural bulwarks, there is little doubt that every autumn we should be overrun—such are our attractions, marine and rural—by a host of carpet-bag men from Aldgate, Ludgate, Bishopsgate and other civic gates, with all their connubial attachments, neat as imported. Difficult of access, however, either by boat or rail, we set at defiance the nomadic races of Aldermanbury, who, not satisfied with smelts and whitings, would swallow up the very air ("Nature's Entire!") in their thirsty pursuit of health and enjoyment. It is true that now and then a stray Cornhill-clerk, with spectacles and a pink nose, may be caught on the beach; but the species never invade us by shoals as they do some sea-girt shores, having, we fancy from the fragility of their structure, a wholesome dread of coming into collision with our recognised, and more robust, visitors. These visitors are the farmers' daughters, of whom, every season, we have a splendid collection—culled from all the adjacent counties. Indeed, at the latter end of August, when we are in full bloom, we could challenge all England to display more indigenous and substantial beauty.

Some places, like some men, have greatness thrust upon them. That, however, is not our complaint. We are genteel, and pretend to be nothing more. We breathe with freedom, never feeling oppressed by a sense of honour conferred upon us by highly aristocratic patronage. The most *distinguée* of our visitors—in fact, the only one that Burke (not the "Sublime and Beautiful") would think himself constrained to render homage to, is that sweet extract from his "Peerage"—Lady Adeline Zamper. She, with her consort, plain—very plain—Mr. Bond Zamper, stay with us for three months certain every summer We will not describe the remarkable husband of that fascinating young Peeress in her own right. All who have seen Talleyrand, or his portrait, have seen Zamper. The only difference is, that Zamper looks like a new and improved edition done into English of that wily diplomatist, hot-pressed and elegantly bound. Some people pronounce him old and ugly, but we will never believe it; for Lady Adeline, a fair, slender, impressible girl, is not blind, and she married him, not for his money—though he holds, or held, a good appointment in the Treasury—but from devotion—sheer, downright boarding-school infatuated devotion. And they are happy—horribly happy; he is distressingly attentive to her, and she never smiles on any one but him. No wonder, therefore, that every body envies and hates them. We have heard vulgar-minded nurse-maids couple them with "Beauty and the Beast!" Much, however, as we admire Lady Adeline, and approve her choice, she has committed, we must own, one great sin; and the English nation will not lightly exonerate her for causing the death of one of its bravest officers, poor Ensign Redwing, whom she rejected for Zamper; and who, stung to the quick at being "cut out" by *such* a rival, positively went to India, and fell at Aliwal with his sword in his hand.

Orthodox and conservative as we are, strange to say, there is only one pillar of the Church to be seen on our sands, and that is Archdeacon Blot. The Archdeacon is a blithe-looking, farmerly man; as little as possible like what an Archdeacon should be, except in vigour of digestion, which, we understand, is strictly canonical. We never had the pleasure of conversing with his reverence, but we once had the felicity of a *tête-à-tête* with his niece, whose appearance and manners are rigidly ecclesiastical, hard, angular, keen, and polemical. We met, not in a crowd, but in a shower. Loitering about the beach one morning, for the amusement of our landlord's dog, who encouraged us to throw stones into the water, that he might show his experness in extracting them with his teeth, we were surprised by a violent shower of rain. Looking despondingly around in quest of shelter, we descried a tall lady with drab boots, crouching under the lee-side of a yawl, where, drawing a portion of the contiguous sail over her classical features, she sat like patience on a sand-heap, an uncomplaining martyr to the pitiless storm. Seeing, however, as well as we could through the blinding rain that the lady had some trouble in preventing the extempore marquee from crushing her black straw-bonnet, we hastened to her aid, and taking up a position beside her, politely proposed to support the superstructure with our walking-stick. The proposition being carried, a long and animated conversation ensued, in which, after touching lightly upon various ephemeral topics, we were at length fairly drawn into the maelstrom of theological disputation. Our fair but uncompromising adversary in the black straw-bonnet and drab boots, was marvellously dexterous in the use of the weapons she had borrowed from the Oxford armoury. With St. Ignatius she was playfully familiar; but she took up with fervour the great surplice controversy. In the writings of the Fathers, and in mediæval literature, she was full even to tediousness. With respect to singing-boys, her position was firm; and her prejudices in reference to candles, were highly scented—it was useless to shut our eyes to the fact—with Tractarianism. The rain somewhat abating, however, we dropped the sail and the subject together; but it was not till the following Sunday, when we saw at church the black straw-bonnet in the Vicar's pew, that, on inquiry, we discovered that we had been engaged in logical warfare with the niece of an archdeacon!

Most persons who have had the misfortune to be detected poaching in this part of the country are well acquainted with Jeffreys Hoyle, the Chairman of Quarter Sessions—a man universally respected for his wealth, and detested for his severity. He is one of our celebrities residentiary, having a house on the Esplanade, furnished in magnificent style. A clever, active man of business—we are told that a cobra-di-capella has less venom under its tongue. A great whist-player—as soon as he takes his seat on the magisterial bench, the doomed culprits can trace the night's disasters in his morning face: every ten-pound rubber that he loses is an extra month's incarceration for somebody. The delinquents all know this, and can read their sentence on his visage before it issues from his lips—it assumes such a hyena-like blandness.

Some years ago—ten, or it may be more—Jeffreys Hoyle met with a tragical calamity. One calm September evening, the Spanish captain of an outward-bound brig was summoned on deck by the distant cries of one apparently in imminent peril. On looking through his glass towards the cliffs, which at that part of the coast are of marl, and are from seventy to eighty feet high, he perceived two men in murderous conflict: one was an elderly gentleman, whose hat had fallen off, showing his white hair; the other was a ruffian in a green canvas frock. They were wrestling together on the very edge of the precipice. Another moment, and the old man was swayed over, and rolled down the rugged incline of the cliff, to all appearance lifeless. The Spanish captain instantly had the ship's boat lowered, and went ashore, where he found the magistrate lying insensible, his hair stained with blood which issued from a wound in his head. He had sustained a skull-fracture, and was obliged to undergo the operation of trepanning He now wears a silver plate where the organ of Adhesiveness ought to be His assailant was a desperate poacher, who fled the country, and has never since been heard of.

The tall and important-looking gentleman whose deportment always attracts so much notice on the jetty, is Mr Pongo. You will observe that he invariably carries a dog-whistle in the breast of his buttoned frock-coat, and a remarkably well-bred pointer follows his steps, or goes before, as he may direct When our dear but very inquisitive friend Mrs. Gingell implored us, some weeks ago, to tell her who that stately person was, we informed her that we fancied he was a military man retired independent, and particularly fond—as most retired officers are—of field sports. And even to this hour might we have cherished this fond delusion, had we not seen Mr. Pongo with his dog-whistle and his pointer on the jetty on the 1st of September. Then a new light illumined our mental horizon. We gave a slow whistle of suspicion, followed by a protracted "Oh, oh!" Distrust once awakened, no time was lost nor energy wanting to secure a clue to the mystery. After many days breathlessly pursuing our inquiries, we at length had the gratification of learning, from the crop-eared cetier at the Royal Hotel—where man and dog were quartered—that Mr Pongo was a highly-respectable tailor, and had never shouldered a fowling piece in his life. We have since ascertained that Mr. Pongo has a first-rate business near some square in the metropolis, which, during his absence, is creditably managed by his son.

We have very few "distinguished foreigners" amongst our celebrities. There is not excitement enough for them here. We have no *jardins*, no *cafés*, no balloons; and are altogether a dull, lumpish, fishy set of people. There is a German family, however, who seem to like our quiet ways; and really there is nothing more charming, in this best of all possible worlds, than to see that fair, good-looking father (in a black velvet jockey cap), with five daughters and one small son, and his dark, intellectual, lady-like wife, when they all go out together with us for a sail. The patriarch, you perceive, has a book—Humboldt's "Cosmos"—over which he glances while we lie becalmed on the glassy sea. Meantime the young ladies—they are so industrious these Germans—draw forth from inscrutable repositories, unfinished pieces of needle-work to occupy their leisure; while the little boy in the blue cloak amuses himself, under the smiling influence of his mamma, with a puzzle-lock.

What a contrast between these excellent Teutons and that degraded specimen of an Anglo-Saxon, who, drowsy with drink, is lying at full length on the fore-deck of the yawl! But now the wind freshens—the sails fly out, and our boat as if waking from a reverie, trembles for a moment, gives a bow to leeward, and rushes through the joyous waters at the rate (like that languid young lady with her crochet) of fifteen *knots* an hour. The Anglo-Saxon now raises his animal head, and calls for more beer, which, not being promptly supplied by the crew—who seem to have a publican's license to vend porter and pipes—he threatens to go and get it somewhere else; a joke at which all the passengers—our pure, model patriarch excepted generously laugh. The patriarch looks up from his "Cosmos," grave and reproachful, till the reveller, staggering to the boat-side, attempts to ascend the rigging at the peril of his life. Then, as the head and responsible father of a family, the patriarch deems it his duty to interpose—and firmly, but kindly, expostulates with the inebriated Saxon, endeavouring to persuade him to come down and go to sleep. His advice though neither graciously received nor promptly adopted has some beneficial effect; for the unthankful recipient soon subsides into a sulky silence, and retires as much as poss ble from the public gaze—disgusted with himself, with Germans, and beer-shops everywhere.

Ought we to pass by with haughty scorn that well-known commercial traveller, our walking Pieman, because he is of humble estate? We should both disdain to exhibit such a piece of moral yellowplush. Supported almost entirely by our carnivorous long-shore-men, that celebrated *chef de-cuisine* wanders about our maritime district, all through the season, with his shining can upon his arm. We had a little chat, not long ago, with the worthy man about his private affairs, when he told us we having congratulated him on his healthy aspect—that he was not "naterally strong," that he suffered "at times a good-ish deal from windy palpitations about the chest," and that his doctor, in consequence, advised him to take as much air and exercise as possible. That he had been brought up to the muffin trade, and lived thirty or forty mile off. That in the winter he stayed at home and made muffins—in the summer he didn't, but started off to a watering-place, where the air is good, and company respectable. That he always left his wife at home—he had no family—never had—to keep herself, which she did by mangling. His pies—which he had made for thirty year with his own hands—and could warrant, were highly approved by the gentry, as we might ascertain upon inquiry. That Archdeacon Blot had taken two that very morning, and pronounced them "very good." That Mr. Bond Zamper had also tried to prevail on Lady Adeline to taste one, but hitherto without success: though he (the manufacturer) still had hopes of seeing her Ladyship do him that honor

There is one little trait of eccentricity about this erratic but judicious Quixotism which we should not mention. He is often observed repairing himself with common bread and cheese, but has never yet been seen dining off his own pies.

Our town-crier, we regret to say, is the most insipid orator (out of Parliament) we ever listened to. He has neither a twisted nose, nor a comet eye, nor a hitch in his gait, nor a stutter, nor a snuffle, nor a blink, nor a sneeze, nor anything else, to raise him above the dismal swamp of commonplace bellmen. How such a man ever got installed into the office we can't conceive, without a single infirmity to recommend him. A public crier ought to be a study for Hogarth—wheezy, puffy, tetchy, and capable of affording infinite diversion to all beholders—one upon whose head you might conscientiously place your hand and say, "Here is a man worthy of chalk and cardboard." And then for his speeches! He "mouths" them precisely as the Town-crier of Elsinore did in Hamlet's time. Scrupulously exact in the performance of his moral and vocal duties, there is not a salient point about him, on which we can safely hang a remark. He is one of those flat, stale, and unprofitable productions that are carelessly printed at the Great Humanity Press, in the oldest type. For what purpose, regarded in an artistic view, such things exist, is, as our irritable friend Easel contends, one of this world's most heart-depressing mysteries

Quitting this ungrateful subject, we gladly invite our fair readers' attention to a person well deserving of their notice (confidence is another matter)—one who is almost universally admired and beloved. We allude to Mr. Gaff, of her Majesty's Honourable Coast Guard Service. He is beyond question the most popular and handsome man we can boast of, and pleasant withal; so that his company is courted by gentle and simple—by the latter particularly. He has not been on our station six months, and yet his portrait at Easel's door is as easily recognised as the Great Duke's or Bond Zamper's or Lady Adeline's, or Miss Furyland's, or X. Y. Gong's, as the tufted seamen. Behold him there with his dark merry eyes, his brilliant teeth and whiskers, smart naval cap and jacket, white duck trousers, and a telescope under his arm. Miss Hoops, the great brewer's daughter (firm "Butts and Hoops"), who contributes to the poet's corner of the "Alarmist," under the *nom de plume* of "F. A. N." has given a magnificent description of Mr. Gaff in those exquisite lines of hers, called the "Smuggler's Widow." Want of space alone prevents us from quoting them entire. Gaff certainly merits the beautiful figure which represents him as the "Gallant Guardian of our Coast," notwithstanding that one or two persons, exercising the right of private judgment, have no hesitation in pronouncing him a "great rogue" Everybody, excepting the one or two just mentioned, believe Gaff to be a single man—Miss Hoops believes it—poor thing! So does Miss Petiteau; so does Miss Ruth Forty; so do the two Misses Griggle, so do many others too numerous to mention. We know better, and make this solemn declaration, conscientiously believing the same to be true, as those imaginative persons the lawyers say. The fact is that Gaff has a wife living in Jersey (no shrieks! no shrieks, ladies!), and a daughter—sweet seventeen—who is staying there for the benefit of her health. Sweet seventeen!—you would ever suppose that Gaff, who don't look much above thirty, could have a child of that age—is a bright and beautiful girl, with auburn hair curling like honeysuckle. We saw her once at Clifton riding on a donkey. Gaff, the monster, laughs in his sleeve at the strenuous efforts that are being made by various parties to reduce the fortress of his affections. The "forlorn hope" (apt sorrow-inspiring name!) is headed by Miss Petiteau, the *spirituelle* French governess of "Minerva House," Miss Ruth Forty, sister to the Rev. Caleb Forty, of Salem Chapel, and the two Misses Griggle, daughters of the postmaster. Miss Hoops, by virtue of her genius, stands as it were upon an eminence, and anxiously watches the engineering operations going on below. A very flighty sort of widow, who has been hovering about the coast all through the summer, has disappeared, and it is supposed gone back to Leicestershire, from whence as from a battery she harasses the enemy with mysterious letters, one of which Gaff showed us, signed "Clara." The handwriting was evidently disguised, being quite girlish, but the tone of the projectile betrayed its author: it showed tact, and experience. More than once we have remonstrated, and that rather warmly, with Gaff, for his scandalous duplicity, which after all though, is more passive than active. His moral sense seems dead. "Be quiet," he will say, in his facetious winking manner, "all in good time. I've got a son in California, twenty years old—you'd take him for my younger brother—I'm keeping the place warm for him by this time he comes back. Do you think I haven't got the feelings of a father?" How can we answer such arguments as these? We feel humiliated and vexed; but Gaff is a man of the world, and smiles at all dreamers. Where he picked up this refined philosophy puzzles us, as we can't suppose that he ever went to school in St. James's-square We look forward with deep interest, on Miss Hoops's account, to the return of his heir-apparent.

Much as we like our genteel little town, and esteem its inhabitants, there is one grave objection which many highly sensible people raise to it, and perhaps not without justice. We refer to the number of young couples, chiefly connected with the farming interest, who come over here to spend their honeymoons. Of course we can't make by-laws to prevent this sort of thing, no more than the House of Commons could or would think of prohibiting pastrycooks from exhibiting tarts in their shop windows, though we know the suffering which is inflicted upon the destitute by the hopeless contemplation of those delicacies. Still we deem it our duty to call the attention of the local authorities to our defenceless condition. In the battle of life, happiness is undoubtedly a grand trophy to secure; but we think it cruel for the victorious to be constantly fluttering their little banner of bliss before one's eyes, and bidding us to rejoice whether we will or not. Even at this moment—this sunny afternoon—in the balcony of the "Dove Hotel," overlooking the bowling-green, there is a *tableau vivant* that must have a most matrimonializing tendency. A tall, straight-limbed, flaxen-headed young maltster, from High Wycombe, and a serene lady in a light muslin dress, with a rose in it, are sitting together. The young maltster looks down at the people playing at bowls, and would like to join them, or would have no objection—dinner being over—to smoke a cigar: but etiquette and Maria forbid it. So, having nothing to do, and tired of cracking filberts, he proposes to himself a nap: observing which, the bride—for that is her proper name, they have been down here a fortnight—gently drops her perfumed handkerchief over his dear head, to prevent the gnats, if there are any, from teasing him, and inclines her little blue-fringed parasol at an angle of twenty-two degrees and a half to prevent the ardent beams of the sun from tanning his left ear. He sleeps! And there for hours the young bride, with calm, unwearied, almost tearful tenderness would, if necessary, watch over the young maltster's cereal-visioned slumbers, even as Zoa, watches over Hafez in a Persian poem. It is a pretty picture, thoroughly English in composition; and Easel—whom the great Brewer Hoops patronises, having brought him over here from Swansea—has been very happy in placing it on canvas It may be seen, any day from 10 to 4, above one of the bins at the Corn Exchange. A. A.

OFFICIAL STATIONERY.—In pursuance of an order of the Lords Commissioners of her Majesty's Treasury, the principal officers of the Customs at the several ports throughout the kingdom have been informed that the stationery required by the officers of Customs who act as shipping-masters at ports where there are no local marine boards, is to be furnished out of the stock supplied to them from the Customs department.

PERPETUAL THIRST.—The Boston *Medical and Surgical Journal* states, that there is a man in Fairhaven, Mr. James Webb aged 48, who, from infancy, has lived in a state of perpetual thirst. Under ordinary circumstances, three gallons of water is rather a short daily allowance for him, and it would be impossible, it seems, for him to live through the night with less than a pailful. With this amount of cold water daily poured into the stomach, Mr. Webb has been in good health and spirits.

EXCISE DUTIES.—It appears that the duty on silk, which the Manchester people urged on the Chancellor of the Exchequer to remove, amounted last year to £222,936. —In the year ended the 5th of January last, the duty on spirits was—on foreign, £1,477,904; on British, £6,226,716; and on rum, £1,169,884.——In 1851, the stamp-duty on newspaper-and advertisements amounted to £262,224; in 1852, to £296,514; and in 1853 (year ended the 5th January), to £304,152.——Last year the malt-duty realised £5,323,936.——The soap-duty (which has been entirely removed) last year produced to the revenue £1,127,259.

VISIT OF THE CHANCELLOR OF THE EXCHEQUER TO MANCHESTER.

IN our Journal of last week we recorded the very interesting visit of the Chancellor of the Exchequer to Manchester; including the Inauguration of the Peel Monument, and the Presentation of the Addresses at the Town-hall The right hon gentleman then had an interview, in the Mayor's Parlour, with the traders of Manchester dealing in goods subject to the payment of Customs duties; when an address was presented, and the right hon. gentleman expressed his willingness to give the subject his best consideration.

The déjeûner then took place in the Mayor's Parlour. The Mayor occupied the chair: on his right sat the Chancellor of the Exchequer; on his left, the Bishop of Oxford. Among the company were the Rev. Archdeacon Wilberforce, brother of the Bishop of Oxford; the Rev. Canon Clifton; Sir Stephen Glynne; Mr. W. Brown, M.P.; Sir W. Heathcote; Sir John Potter; Sir Elkanah Armitage; Mr. Joseph Brotherton, M.P.; the Mayor of Salford, &c. The déjeûner was elegantly served by Miss Laidlaw, of the Clarence Hotel. The Mayor having proposed the health of "the Queen," which was drunk with cheers, his Worship then proposed the health of "the Chancellor of the Exchequer," which was drunk with three times three cheers, the Town Clerk acting as footman. In returning thanks, Mr. Gladstone said he regarded as a new favour, added to other favours too many to enumerate, the kindly intimation that, on the present occasion, he might confine himself to the simplest form of acknowledgment. He should have been hard pressed if they had not given him that intimation, because already he had felt the inadequacy of words to say what he felt, and ought to say; and it was quite evident that such thanks ineffectually expressed became poorer and poorer by repetition. He felt that he need not detain them longer on that subject: he had already detained them too long (No, no) on that in which he himself of necessity appeared a more prominent figure than might be desired. He concluded by proposing, in highly eulogistic terms, "The health of the chief magistrate" (Applause) The Mayor returned thanks, and then proposed "Health and long life and prosperity to the Lord Bishop of Oxford," who, in a few wledging the toast, said that, during the visit he had made to Manchester, the idea above all others that had been suggested to him was, an increased value for that which he had not been in the habit of undervaluing—the necessity of educating tho-

roughly the great masses of the country. His Lordship alluded to the improvements in machinery which he had witnessed in the city, and which required more skilful hands to work them, and pointed out the necessity of having the great masses he had seen that day educated, as they were almost self-governed. If Manchester had not thought it too much to lay out £1,200,000 in providing pure water from the distant hills to supply the physical necessities of her people, she should not, God helping her, be lacking when the question of bringing better water to the higher nature of countless multitudes is mooted; and it was one of the greatest questions to work out, "How are the English people to be thoroughly educated?" (Applause). The Mayor then proposed the health of Sir W Heathcote, Archdeacon Wilberforce, Mr. C. Greswell, and Sir E. Glynn, who had favoured them with their presence. Sir W. Heathcote returned thanks, and the proceedings terminated.

Our Artist's Sketch portrays the Chancellor of the Exchequer in the act of speaking, after his health had been proposed. Mr. Gladstone then returned to Mr. Harter's residence, at Higher Broughton, where he met a large circle of the leading inhabitants at dinner. The company included the Lord Bishop of Oxford, Archdeacon Wilberforce, and the Mayor of Manchester, &c.

The right hon. gentleman on Thursday morning was present at the consecration of the new church at Denton, about five miles distant from Manchester, where the Bishop of Oxford and Archdeacon Wilberforce assisted the Bishop of Manchester in the service. The church is a handsome but small edifice, in the Early English style of architecture. It has been mainly promoted and built at the cost of the Rev. Richard Greswell, tutor of Worcester College, Oxford. It was in order to visit his friend, Mr. Greswell, we believe, and to be present at the consecration, that Mr. Gladstone undertook his journey on this occasion into Lancashire. The church was exceedingly crowded by a congregation, including, besides the Chancellor of the Exchequer and Mrs. Gladstone, many of the most wealthy and distinguished families of the neighbourhood. Among them were Lord Robert Grosvenor and the Earl and Countess of Wilton. A number of the clergy of Manchester took part in the ceremony. The Bishop of Oxford delivered the consecration sermon, taking as his text the words —"For I have much people in this city." Acts of the Apostles, chap. xviii, verse 10. The collection after the sermon produced £427. After the service the principal portion of the congregation retired to the school room, where they partook of luncheon; and speeches, relating to local matters, or merely of a complimentary nature, were made by the Earl of Wilton, Mr. Gladstone, and the Bishop of Oxford. About four o'clock, the company proceeded to the site of some new schools, of which the Bishop of Oxford and Mr. Gladstone assisted in laying the foundation-stone; after which, Mr. Gladstone ascended the stone, and addressed the assembly, the right hon. gentleman concluding as follows:—

I am sure there is not one of us who does not heartily re-echo, with all the powers of his soul, those prayers which have been offered up to Heaven, that it may please Almighty God to bless this great work in its beginning in accordance. I will not say in its termination, for I trust it will never end. I believe, on the contrary, that every blessing this neighbourhood derives from these schools, will have within itself a multiplying power, and that each generation as it grows up to manhood, will derive from them, if they be conducted in the spirit in which they have been founded, a continually growing power, both to discharge the duties that belong to man upon this earth, and likewise to lay up for himself in heaven a better treasure than any that this world can confer. The right honourable gentleman concluded, and descended from the stone amid much cheering.

THE RIGHT HON. W. E. GLADSTONE, M.P., CHANCELLOR OF THE EXCHEQUER.—SKETCHED AT THE RECENT DEJEUNER, AT MANCHESTER.

The Bishop of Oxford then said: My friends, before we break up let us remember what is learnt in school, and what English people are, I must say, glad to practice—that two things go together—fear God and honour the King. Let us, for our beloved Queen, passing, I believe, this day through your good county of Lancaster, give three hearty English cheers.

The call was responded to most heartily, and Mr. Gladstone, the Bishop of Oxford, Mr. Greswell, Mrs. Gladstone, and others, then departed in a carriage to inspect some works in the neighbourhood, and the proceedings terminated.

On Friday morning the Chancellor of the Exchequer inspected the extensive mill of Sir Elkanah Armitage, at Charlestown, Pendleton; after which the right hon. gentleman proceeded to the Peel Park, inspected the statue of Sir Robert Peel, and the Museum and Library, where he was presented with a catalogue of the Library. The company were then addressed by Mr. Brotherton, M.P., Mr. Gladstone, and the Bishop of Oxford. The distinguished visitors then took leave of the Mayor and the company who assembled to receive them, and left the park *en route* for the Victoria Railway Station.

"THE GOLDEN AGE"

AMERICAN STEAM-SHIP.

This fine ship is the property of the New York and Australian Steam Navigation Company, who propose constructing four or five more vessels of the same class. For the present she is to ply between Australia and Panama; and eventually between Australia and San Francisco. Whilst lying at Liverpool her splendid appearance excited great interest. In outward appearance the *Golden Age* is very much like the Collins' steam-ships. Her dimensions are as follow:—Length, 285 feet: breadth, 45 feet 6 inches; depth of hold, 32 feet; and 2854 tons register. She has a beam-engine of somewhat peculiar construction, with a diameter of cylinder of 85 inches, and 12-feet stroke. The boilers constitute the chief peculiarity. They are each 40 feet in length, and are fitted up with furnaces at each end, the smoke-funnel ascending from the centre. By this arrangement it is claimed that economy in both space and fuel is gained; and the truth of the proposition is very evident as far as regards space. There are eight furnace doors at each end of the boilers. The hull of the ship was built by Mr. W. H. Brown, of New York. The lower frames are of live oak, and the top frames of locust and cedar. The entire hull is double, diagonally braced with iron bars five inches wide by three-quarters of an inch thick, and four feet apart. She is ceiled with eight inch plank; the bilge keelsons are 14 inches square, and planked outside with six-inch plank; 13 keelsons run the whole length of the ship.

The *Golden Age* has accommodation for 1200 passengers of all classes, the steerage alone being fitted up for the accommodation of 600. Two of the saloons, of which there are three, one above the other, are paneled in rose, satin, and zebra woods; with crimson and gold plush and rich hangings, and adorned with mirrors. In the upper saloon the same general arrangements prevail; although, in place of the satinwood paneling the sides are finished in white and gold. In this saloon are two "family rooms," one finished in gold, the other in blue.

THE GOLDEN AGE AMERICAN STEAM-SHIP

THE PONIES OF EXMOOR.

PONY CATCHING ON EXMOOR.

(From our Special Correspondent.)

At a time when, if we are to believe our most enthusiastic amateurs in agriculture, all the operations of the farm are very soon to be performed by machinery, and the raising of crops is to be as complicated a performance as the manufacture of calico—when a perfect mania seems to prevail on the subject of pure bred short-horns, and a bull and cow sell for the price of a small estate, there is something refreshing in discovering a spot in England where nature still has sway, where wild scenery is enlivened by the presence of animals indigenous to the soil, and where simple means, applied, not without skill, are found sufficient to obtain satisfactory agricultural results.

It was with these feelings that I set out, accompanied by the Artist who has illustrated this paper, on my first visit to Exmoor—the last resort of the wild deer in England, and the scene of some of the most successful attempts at the reclamation of waste land, made since peace brought moderate prices. The war time, with war prices, was the period to which we must date back the most extensive conquests made by culture over heaths, moors, and morasses.

Ten years ago a journey into the heart of Devonshire was a very serious matter; now, thanks to Mr. Brunel and the broad gauge, it can be comfortably accomplished between breakfast and dinner; an express train whirling you from Paddington to Tiverton in five hours and a half—the half hour being fully consumed in the little bit that intervenes between the station on the main road and the branch which conveys you to the hill and valley, watered by the river Exe, where that town—so famous for Heathcoat's bobbinet, and its evergreen M.P., Palmerston, the bland and the terrible—Tiverton stands smiling, embowered in the luxuriant orchards of Devonshire.

If the purpose of our tour had been architectural instead of equine, if we had been intent on archæological and antiquarian researches instead of excited by a sale of Exmoor Ponies at Simon's Bath, twenty-eight miles off, on cross roads, to be reached the following day, we might have lingered a long time at Tiverton—for there is a church consecrated by the first Bishop of Exeter, Leofricus; and there are almshouses of most tempting appearance; besides "Blundell's Free Grammar-school," rendered classic to every roving and romantic schoolboy by the name of Bamfylde Moore Carew, who was there taught and dogged until he ran away, and abandoned the prospect of succeeding to his father's pleasant living of Bickleigh, in order to be King of the Gipsies. But, instead of studying Gothic architecture, or cross examining the oldest inhabitants, we ordered dinner at the Angel—a comfortable house at the top of a steep hill, built at some remote period for the benefit of stage-coaches, in a situation remarkably suitable for encouraging accidents. As hotel charges are now not undeservedly exciting attention, it may not be out of place to mention, that for a dinner of four capital Exmoor five-year-old mutton-chops, with excellent vegetables, a roast partridge, tart, Devonshire cream, celery, cheese, and an honest bottle of Dublin stout, we paid 8s.; that is to say about half the charge of many hotels where neither the

LEADING AWAY PONIES FROM EXMOOR.

viands nor the cookery is so good. In returning, I lunched at the other head inn, the Three Tuns, and found the charges equally reasonable, with great civility. Posting on to South Molton—for there is only one conveyance per day to North Devon, and that meets the morning mail at the untimely hour of three a.m.—our road lay through a rich undulating country of hills, streams, and orchards brilliant in the red and yellow of autumn-coloured fruit. White, clay-walled, thatched cottages (more picturesque than clean or comfortable)—neglected gardens—small, ill-shaped enclosures, bounded by thick hedges and banks shaded by timber trees—showed how much remained to be done in the social education of the peasantry, and the progress of the commonest principles of agriculture. A picturesque slovenliness is the distinguishing feature of Devonshire roadside scenery.

Two hours and a half passed over a nefarious mile of hilly road brought us to South Molton—a long, clean town, with nothing of special interest beyond other market towns, built of brick and paved with stone. We had now nine miles between us and our point of rendezvous on Exmoor—so we arranged with two farmers bound to the same quarter, to join them in hiring a four-wheeled spring-waggon, with a pair of ponies, driven tandem-fashion, from a very decent fellow of the name of White, instead of posting genteelly and exclusively at eighteen-pence a mile.

At half-past six the following morning we started—a very jolly party. Our companions, from the neighbourhood of Kingsbridge—in the extreme west of Devon—had come up some seventy miles in order to buy a couple of the famous Exmoor Ponies, in preference to the ill-shaped, ugly animals bred close by their farms on Dartmoor. One of our party—a thorough farmer in appearance and costume, a man considerably beyond the middle age—was an instance of how little individual efforts can do towards agricultural improvement of a district, without the assistance of general education, and the publicity of the press. More than twenty years ago he had used agricultural implements—amongst others, a threshing machine, driven by water-power, which have not made their way fully into several of the midland counties yet. And he had a distinct recollection of being interested in Bell's Threshing Machine, when its ingenious inventor first made it public, more than thirty years ago. Yet, when M'Cormack's Threshing Machine was first exhibited at the Great Exhibition, few remembered Bell's discouraged invention.

We left South Molton at a smart trot—not without risk, as our leader evinced a decided inclination to examine the contents of his load, and to turn down all manner of streets—amid the undisguised astonishment of the boots, waiter, and chambermaid of our hotel, that those who arrived in a post-chaise should condescend to depart in a shandrydan!

The road from South Molton to Exmoor is a gradual ascent over a succession of hills, of which each descent, however steep, leads to a still longer ascent, until you reach the high level of Exmoor. The first six miles are through real Devonshire lanes; on each side high banks, all covered with fern and grass, and topped with shrubs and trees; for miles we were hedged in with hazels, bearing nuts with a luxuriance wonderful to the eyes of those accustomed to see them sold at the corners of streets for a single penny the dozen. In spring and summer wild flowers give all the charms of colour to these game preserving hedgerows; but a rainy autumn had left no colour among the rich green foliage, except here and there a pyramid of the bright red berries of the mountain ash.

So, up hill and down dale, over water-courses—now merrily trotting, anon descending, and not less merrily trudging up, steep ascents—we proceeded by a track as sound as if it had been under the care of a model board of trustees—for the simple reason that it rested on a natural rock. We pushed along at an average rate of some six miles an hour, allowing for the slow crawling up hills; passing many rich fields wherein fat oxen of the Devon breed calmly grazed, with sheep that had certainly not been bred on mountain land—for we passed a deserted copper-mine; which, after having been worked for many years, had at length failed, or grown unprofitable, under the competition of the richer mines of Cuba and South Australia. A long chimney, peering above deserted cottages, and a plentiful crop of weeds, was the monument of departed glories—in shares and dividends—and mine-captain's promises.

At length the hedges began to grow thinner; beeches succeeded the hazels; the road, more rugged and bare, showed the marks of many winter's rains had ploughed deep channels; and, at the turn of a steep hill, we saw, on the one hand, the brown and blue moor stretching before and above us; and on the other hand, below, like a map, the fertile vale lay unrolled, varying in colour, according to its cultivation, and divided by enclosures into every angle from most acute to most obtuse. Below was the cultivation of centuries; above, the turnip—the greatest improvement of modern agriculture—flourished, a deep green, under the protection of fences of very recent date.

One turnpike, and cottages at rare intervals, had so far kept up the idea of population; but now, far as the horizon extended, not a place of habitation was to be seen; until, just in a hollow bend out of the ascending road, we came upon a low white farm-house, of humble pretensions, flanked by a great turf-stack (but no signs of corn; no fold-yard full of cattle), which bore, on a board of great size, in long letters, this imposing announcement, "The Foltmore Arms." Our driver not being of the thirsty disposition of his tribe, we did not test the capabilities of the one hostelry and habitation on Lord Foltmore's Moor and State, but, pushing on, took the reins while our conductor descended to open a gate in a large turf and stone wall. We passed through—left Devonshire behind us; and the famous Exmoor estate of 20,000 acres, bounded by a wall forty miles in length, the object of our journey, lay before us.

The dreary was this part of our journey, although, contrary to the custom of the country, the day was bright and clear, and the hot sun defeated the fogs and kept at distance the drizzling rains which hold a sort of chronic sway on Exmoor. We had now left the smooth, rocky-floored road, and were travelling along what must resemble the dry bed of a torrent: turf banks on each side seemed rather intended to define than to divide the property. As far as the eye could reach, the rushy tufted moorland extended, bounded in the distance by lofty, round, barbed hills. Thinly scattered about were horned sheep and fawn-red oxen. For about two miles we jolted gently on, until, beginning to descend a hill, our driver pointed in the valley below to a spot where stacks of hay and turf guarded a series of stone buildings, saying, "There's the Grange." The first glance was not encouraging to any sheep station in Australia could seem more utterly desolate; but it improved on closer examination. The effects of cultivation were to be seen in the different colours of the fields round the house, where the number of stock grazing showed that more than ordinary means have been taken to improve the pasture—means which will presently be described. Soon a magnificent field of turnips came in view, close adjoining a heavy crop of oats. On the hill side beyond, the white faces of the bullocks gave evidence of the forbearance of the autumn sun and seed.

After lunching at the Grange, with appetites well set by our early drive, we started on Exmoor ponies, to ride to Simon's Bath, reserving an agricultural survey for another day.

Coming from a part of the country where ponies are the perquisite of old ladies and little children, and where the nearer a well-shaped horse can be got to sixteen hands the better, the first feeling on mounting a rough little unkempt brute, fresh from the moor, barely twelve hands (four feet) in height, was intensely ridiculous. It seemed as if the slightest mistake would send the rider clean over the animal's head. But we learned soon that the indigenous pony, in certain useful qualities, is not to be surpassed by animals of greater size and pretensions.

From the Grange to Simon's Bath (about three miles) the road, which runs through the heart of Exmoor proper, was constructed, with all the other roads in this vast extra-parochial estate, by the father of the present proprietor, F. Knight, Esq., of Wolverly House, Worcestershire, M.P. for East Worcestershire (Parliamentary Secretary of the Poor-Law Board, under Lord Derby's Government). In the course of a considerable part of the route, the contrast of wild moorland and high cultivation may be found only divided by the carriage-way—on the right hand fields and crops worthy of Lincolnshire Wolds, on the left the brown and purple moor.

At length, descending a steep hill, we came in sight of a view—of which Exmoor and its kindred district that soon will be among things of the past—Wild Stag Hunting. In this wood more than once the red monarch of Exmoor has been roused, and bounded over the rolling plains beyond, amid the shouts of excited hunters and the deep cry of the hounds, as with a burning scent they dashed up the steep breast of the hill.

But there was no defiant stag there that day; so on we trotted on our sure-footed nags, beneath such a burning sun as does not often shine upon Exmoor in the autumn of the year—a sun that sparkled on the flowing waters as they gleamed between far-distant hills, and threw a golden glow up on the fading tints of foliage and herbage, and cast deep shadows from the white overhanging rocks.

Next we came to the deep pool that gave the name to Simon's Bath, where some unhappy man of that name, in times when deer were more plentiful than sheep, there drowned himself for love, or in madness, or both. Here fences give signs of habitation and cultivation. A rude ancient bridge, with two gothic arches, partly covered with turf, let us hunt side but lements or rails, stretches across the stream, and leads to a small house built for his own occupation by the father of Mr. Knight, pending the completion of a mansion of which the unfinished walls of one wing rise like a dismantled castle from the midst of a grove of trees and ornamented shrubbery.

A series of gentle declivities, plantations, a winding, full-flowing stream, seem only to require a suitable edifice and the hand of an artist gardener to make, at comparatively trifling expense, an abode on which almost equalled in luxuriant and romantic beauty. We crossed the stream—not by the narrow bridge, but by the ford; and, passing through the straggling stone village of Simon's Bath, arrived in sight of the field where the Talented Man of the West was to sell the wild and tame horse stock bred on the moors. It was a field of some ten acres and a half, forming a very steep slope, with the upper path comparatively flat, the sloping side broken by a stone quarry, and dotted over with huge blocks of granite. At the base the stream we had found the way and found the gaining our route. A substantial, but as the event proved, not sufficiently high stone fence bounded the whole field. On the upper part a sort of double paling united by a narrow neck with a gate at each end, had been constructed of rails, upwards of five feet in height. Into the first of these pounds, by ingenious management, all the ponies, wild and tame, had been driven. When the sale commenced, it was the duty of the herd to open the gate at the bottom, and drive them through into the narrow neck into the pound before the auctioneer. Around a crowd of spectators of every degree were clustered—squires and clergymen, horse-dealers and farmers, from Northamptonshire and Lincolnshire, as well as South Devon, and the immediate neighbourhood.

These ponies are the result of crosses made years ago with Arab and thorough-bred stallions, on the indigenous race of Exmoors, since carefully culled from year to year for the purpose of securing the utmost amount of perfection among the stallions and mares reserved for breeding purposes. The real Exmoor seldom exceeds twelve hands; has a well-shaped head, with very small ears; the thick round shoulder peculiar to all breeds of wild horses, which is specially adapted for resisting the inclemencies of the weather; indeed, the whole body is round, compact, and well-ribbed. The Exmoor has very good quarters and powerful hocks; legs straight, flat, and clean; the muscles well developed by early racing up and down steep mountain sides while following their dams. In short, they lots the prevailing colours—bay, brown, and grey; chesnuts and blacks were less frequent, and not in favour with the country people, many of whom seemed to consider that the indigenous race had been deteriorated by the sedulous efforts made and making to improve it—an opinion which we could not share after examining some of the best specimens, in which a clean blood-like head and increased size seemed to have been given, without any diminution of the enduring qualities of the Exmoor. The sale was not considered equal in its money results to previous years. The recent alterations in the assessed taxes, which have abolished the exemption in favour of ponies drawing low-wheeled carriages, have decidedly affected the value of this kind of stock, and rendered it necessary for the breeders to go for size as well as strength and beauty.

The sale was great fun. Perched on convenient rails, we had the whole scene before us. The auctioneer rather hoarse and quite matter-of-fact; the ponies, wildly frantic about the first enclosure, were with difficulty separated into pairs to be driven in the sale section: when fairly hemmed in through the open gate, they dashed and made a sort of circus circuit, with mane and tail erect, in a style that would draw great applause at Astley's. Then there was the difficulty of deciding whether the figures marked in white on the animals' hind-quarters were 8 or 3 or 5. Instead of the regular trot up and down of Tattersall's, a whisk of a cap was sufficient to produce a tremendous canter. A very pretty field, leave the whole work to be recommenced. Sometimes when the feat was cleverly performed, pony and pony-catchers were to be seen all rolling on the ground together; the pony yelling, snorting, and fighting with his fore feet the men cringing on like the Laputan and the Centaurs, and how escaping thrashed ribs or broken legs it is impossible to imagine. On one occasion a fine brown stallion dashed away, with two plucky fellows hanging on to his mane: rearing, plunging, fighting with his fore feet, away he bounded down a declivity among the huge granite blocks, the encouraging cheers of the spectators; for a moment the contest was doubtful, so tough were the sinews, and so determined the grip of Davy, the champion; but the steep bank of the brook, down which the brown stallion recklessly plunged, was the death of him (in a moment they all went together in the brook), but the pony, up first, leaped the opposite bank and galloped away, whinnying in short lived triumph.

After a series of such scenes as well worth the study of artists not content with pale copies from marbles or casts, the difficulty of halting these snorting steeds—equal in spirit and probably in size to those which drew the car of Boadicea—was diminished by all those uncaught being driven back to the pound; and there, not without furious battles, one by one enslaved.

Yet even when haltered, the conquest was by no means concluded. Some refused to stir, others started off at such a pace as speedily brought the holder of the halter headlong, as a flying jump, over the bars out of a pound upward of five feet from the ground, only just touching the top rail with his hind feet. In a word, this Exmoor breed, in beauty, strength and endurance, does credit to the pains which have been taken by the owner of the soil and his intelligent agent, Mr. Robert Smith. The question which remains to be solved, is whether size can be obtained without sacrificing the enduring qualities.

We returned pleased and wearied, leaving the pony-catchers and their friends preparing to drink out the results of their prowess, according to custom, we should be glad to find enabled on our next visit. A church is about to be erected on the very spot where the missioner performed his duties—the first ever built on the 20,000 acres that form Exmoor. A dame-school has for some time been maintained in Simon's Bath, by Mr. Knight, and already the children begin to be useful, by making out the bills of their parents—village tradesmen.

We returned to Emmett's Grange, well prepared to enjoy the hospitality of its enterprising tenant, and passed the evening in cross-questioning, to prepare us for the morrow's agricultural survey.

TO CORRESPONDENTS.

E. W.—See Bechstein's "Cage Birds."

S. H. G., Bridport.—The accident in question occurred to Mr. Brunel, son of Sir I. Brunel.

Photo.—Address Mr. E. M. Clarke, Pampticon, Leicester-square.

J. J. Berlon.—See the Answers Pens may be had of the patentees, Myers and Son, Birmingham.

A Subscriber, Reading.—Mr. Britton, F.S.A., has nearly completed his Autobiography.

J. Y., Strand.—See the List of Unclaimed Dividends at Deacon's Coffee-house, Walbrook, City.

Electro, Dublin.—See Mr. A. Smee's work on Electro-Metallurgic Processes.

A. W.—Sir John Sebright's Treatise on Hawking.

J. T., Huddersfield.—Apply at the office of the Asylum for Idiots, Poultry.

J. S., Knutsford.—A view of Woolsthorpe, the birth place of Sir Isaac Newton, appeared in No. 41 of the Illustrated London News.

A Monmouth Subscriber.—See the "Treatise on the Steam Engine" By the Artisan Club.

A Subscriber, Taunton.—Wenham Lake, whence the pure ice is obtained, is eighteen miles from Boston, U.S. A minute description of the lake and the ice-trade is given in No. 159 of the Illustrated London News.

R. C. states that, to the surviving sitters to Sir Joshua Reynolds, named in a recent Number, should be added Mr. W. Cribb, of King-street, Covent-garden, who sat to Sir Joshua for his celebrated *Puck*.

R. W., Newport.—See Mr. Walker's notice of the Electric Telegraph.

Hooker.—In a work on Greenhouse Plants, published by Orr and Co.

A. D., Preston.—The town and castle of Carrickfergus were attacked by the French (about 800 men) on the 21st February, 1760, and were carried, after a smart action, the same day. Five days after, the French forces re-embarked, and were captured on the 28th off the Isle of Man, after a severe action with Commodore Elliot, in which Thurot, the commander of the expedition was killed, and 300 of his men were killed and wounded.

A Subscriber, Plum Bridge.—The Sketch sent (of one of three bridges) seen in your neighbourhood) is from a Brent Goose which visits England every winter; but not, we believe, in large numbers.

Nauticus, Wolverhampton.—The number of vessels which entered the port of London in the year 1850, including the coasting and foreign trade, was 21,689.

Indiana.—Your excellent suggestions, upon more than one occasion have been received, and a portion of them already acted upon. The others are under consideration.

A Subscriber.—The first and only patent taken out for the Daguerréotype has expired. The Calotype, patented by Mr. Fox Talbot, was given to the public by his gracious gift last year, with the sole exception of the right of taking *portraits for profit*; and the Collodion process has been free from all restrictions, this beautiful medium having been subsequently discovered, and as free as the rays of light for the use of "A Subscriber."

D. F.—The best books of instruction for the violin that we know are Spohr's new work "Violin School;" Campagnoli's "Method for the Violin;" and Hamilton's "Catechism of the Violin." English editions of the works of Spohr and Campagnoli, translated by Mr. Bishop, of Cheltenham, have been published by Addison, Hodges, and Co. There is another English edition of Spohr's work, published by Messrs. Wessell and Co. But no book of instructions for the violin, or any other instrument, is sufficient without the assistance of a master. The best violin music may be had from any of the principal publishers.

An Inquirer.—Production has not increased in the same ratio in Jamaica as in Cuba, since the date of the Sugar Act of 1846. The cause of the falling off in Jamaica is much disputed; but it could not be the act of 1846 which has affected all our West Indian colonies alike; and there has been an increase of sugar in Barbadoes, and some others.

J. F., Birkenhead.—You may obtain the Staunton Chessmen at Hausburg's, Liverpool.

E. B. H.—The representations of Abelard in the Gothic chapel at Père la Chaise, are, probably, authentic; as the tomb was built for Abelard by Pierre le Venerable, at the priory of Marcel. It may be as well to inspect the copies of Abelard's works in the British Museum.

A Constant Subscriber, Oxford-street.—The predicted Earthquake referred to by our Correspondent was that foretold to occur March 17, 1842, asserted at the time to be contained in the Harleian MSS., in the British Museum, but since proved to have been altogether an experiment upon public credulity.

S. E., Cork.—There are nearly 3000 omnibuses plying in London daily (the population of Manchester by the last census was 228,477 persons.

Goose Quarter-day.—The custom of eating goose on Michaelmas has been traced long before the destruction of the Spanish Armada. Brand has found it in the reign of Edward IV.; hence, the Elizabethan origin of the practice is a popular error. It is by some reserved to its being customary for the Lord to present a fat goose for his Michaelmas enclosure or quarter day dinner. On the Continent, a fatted goose is commonly St. Martin's-day (November 11) dinner.

A Subscriber, Brighton.—Christ's Hospital is free to children between the age of seven and ten, on the presentation of a governor. A list of the governors may be obtained for 2s. 6d. at the Hospital counting-house. Besides the Lord Mayor, Court of Aldermen, and twelve members of the Common Council, there are between 400 and 500 other governors, at the head of whom are her Majesty, Prince Albert, the Prince of Wales, and Prince Alfred. About 1200 boys annually leave in a year.

G. W. T.—The germ of "Tempora mutantur, et nos mutamur in illis," is to be found in the "Delitiæ Poetarum Germanorum," Vol. I., page 689, under the poems of Matthias Borbonius, who considers them as a saying of Lotharius I. (flour. cir. 850)

Omnes mutantur, omnia mutantur in illis.

See, also, Cicero de Officiis, lib. I., cap. 10; and Ovid's Met. lib. xv. 165, et seq. The question has, however, lately been re-opened.

R. W.—We will engrave the subject.

Medicus.—The temperature of the air on Wednesday, February 12, 1845, was observed by Mr. Glaisher, at Lewisham, to be 14° below zero; at the same time, the retaining of a thermometer placed on flax on snow was 12° below zero.

T. T. B.—The statement that the sea immediately around the North Pole is never frozen, rests upon theory alone.

E. W. S., Carmarthen.—We have not room for your communication.

R. J. N.—We do not know of such a work as you require.

S. H. W.—A marriage license costs about £3. Apply to a proctor in Doctors' Commons.

Rodolph.—See "Hints on Etiquette" (Longman and Co.).

S. A. M., Plymouth.—In Henry-street, near Hampstead-road, are Rogers, Industrial, Sabbath, and Free Day schools, which may meet our Correspondent's requirements.

H. J. M.—Webster's "English Dictionary" is preferable.

Belissa.—The several works in question are by Sir Edward Bulwer Lytton, Bart.

An Old Subscriber is thanked; but we have not room for the Sketch.

M. I. J.—The price is 2s. 6d.

E. D., Norwich.—The "ticking" to which you refer is made by an ingenious man, named Accolay, subjectionally called the "death-watch"—a small beetle belonging to the timber boring genus, *Anobium*. Its beating was once believed to denote that some inmate of the house would die before the end of the year.

M. L. S., Apollo-street, Bombay.—We shall be glad to receive specimens of the news.

Florence Gray.—Wooden rail, trams, or waggon-ways, were introduced in the early half of the 17th century in the collieries of the North of England. Iron rails were introduced in 1776. The locomotive engine dates from 1804; in 1826 the Liverpool and Manchester Railway was projected, and opened in 1830.

H. B.—Information on Hawking may be obtained in Leadenhall Market.

S. G., Leamington.—Mr. Bankart, of Saracen's-head, Hampstead-road, and Perkins's Brewery in No. 250 of the Illustrated London News.

A. K., Ardrossan, should apply to Mr. Jaques, worker in ivory, Hatton-garden.

A Subscriber.—1. Personal attendance at the Foreign-office is not necessary to procure a passport. 2. An application, with an introduction or recommendation from a banker, must be sent in the day before the passport is applied for. The cost on delivery is 7s. 6d. 3. The old system of procuring passports from Foreign Consuls is not given up; but, as the Foreign-office passport has many advantages over any others, unsmuch as many visas in London are dispensed with in regard to it.

Denmark.—1. The question as to the descent of the property could not be answered without a knowledge of the family settlement, &c. 2. The title of baronet does not pass through females, unless specially limited. 3. The son of a Baronet's daughter, and her husband, cannot be claimed to quarter the Baronet's Arms, but not to use his crest.

G. V. B.—A lady should not under any circumstances use a crest.

Cognomen.—A name is not changed by marriage, nor by an expense, including every thing, of about fifty guineas. The form of procedure is this:—A petition is presented to the Crown (generally through a member of the Heralds' College) setting forth the grounds on which the change of name is required, and praying her Majesty to grant her Royal license and authority for such change. The petition is then referred to the Kings of Arms to report on it, and, if their opinion be favourable, a Royal license is granted and gazetted. An act of Parliament, or a testamentary injunction, is not at all necessary.

Sakinensis.—Unless the arms which were granted to the knight were limited to the descendants of his father, or to his brothers specifically, the brothers would not be entitled.

F. Y., Woolwich.—An Engraving or Description of the Sewing Machine appeared in the Illustrated London News for October 1, 1853.

Omega.—The Visitations of the Heralds—at all events, a great many of them—and all heraldic works connected with the Western Counties, can be consulted in the library of the British Museum.

NEW BOOKS, &c.

Just published, 12mo, cloth, 3s., Second Edition,

MANUAL of ASTRONOMY. By JOHN DREW F.R.A.S., Ph. D. This work, which is illustrated by Seventy Engravings on Wood and Steel, is intended for readers who are not extensively acquainted with mathematics. It conveys a general knowledge of the stupendous phenomena of nature, including all the modern discoveries down to the present time; directs those who possess telescopes how to use them, what objects to look for in the heavens, and where they are to be found; and gives familiar directions for the use and adjustment of the transit instrument, astronomical circle, and equatorial. It is peculiarly fitted for a text-book in schools and in private instruction for those who wish to obtain a knowledge of the present state of astronomical science.

"A very good little manual, with a number of well-engraved views and diagrams, and written in a brief and clear style, but with sufficient fulness to preserve it from dryness. Guardian
London: GEORGE BELL, 186, Fleet-street.

WORKS BY GEORGE COMBE.

A SYSTEM of PHRENOLOGY. Fifth Edition, revised by JAMES COX, M.D. With four Plates, and about seventy Woodcuts. Two vols. 8vo. Pp 1057. 24s. cloth. This work has been translated into the French and German Languages.

* * The fifty-two pages reprinted in this edition, may be had separately, price 1s.

ELEMENTS of PHRENOLOGY. Seventh Edition, improved, with numerous Illustrations. 12mo. Pp 320. 5s. 6d. boards.

The CONSTITUTION of MAN. Eighth Edition, enlarged. 12mo. Pp 507. 5s. cloth; or 12 Copies for 50s. The People's Edition, 'Royal 8vo. 1s. 6d. sewed.

The work has been translated into French German, and Swedish, and 50,000 copies have been printed in the United Kingdom.

MORAL PHILOSOPHY; or, the Duties of Man Individual Domestic, and Social. 8vo. 2d edition. Cr 8vo. Pp. 446. 7s. 6d. boards. "The People's Edition," 12mo. Pp. 316 2s sewed.

LECTURES on POPULAR EDUCATION. Third edition, enlarged. Pp 82 8vo 1s. 8d sewed.

ST. MARGARET'S COLLEGE, CRIEFF, PERTHSHIRE.
FOR THE EDUCATION OF YOUNG LADIES.
Visitor—The LORD BISHOP of ST. ANDREWS.
Principal—The Rev. A. LAURIE, M.A.
Lady Superintendence—Mrs. LENDRUM.
Head Governess—Miss Aitken Assistant-Governess, Miss Bryand.
Teacher of Drawing, and Dancing—Miss Clark.
German and Music—Professor Proche.
Singing—Frederick Helmore, esq., Choir Master to his Royal Highness Prince Albert.

The great deficiency in sound religious instruction, and the neglect of the moral education of young persons, has induced the Ladies of St. Margaret's College to open another establishment in Crieff.

Crieff possesses every advantage that can be desired for an establishment of this kind. Situated in the Vale of Strathearn, at the foot of the Grampians, the salubrity of its climate and the grandeur of its scenery, are the theme of admiration. It is on the high road from Edinburgh to the Highlands, on the Scottish Central, the communication with Edinburgh, London, and all parts of the country, is both speedy and sure.

Terms, payable Half-yearly in advance, for Young Ladies under Twelve, Fifty Guineas a Year. Above Twelve, Sixty Guineas.

Entrance Fee, two Guineas.

These Terms include Medical Attendance, and every other expense, except Books and Stationery.

A Reduction of Twenty per cent. on the foregoing Terms, on Clergyman's Daughter will be received at half the amount.

The Spring Term commences Jan. 10, and ends on the Wednesday nearest to June 20.

The Autumn Term commences (this year) September 1, and ends December 20

The Pupils may remain at the College, free of expense, during the Christmas Holidays.

PRECAUTIONS AGAINST CHOLERA.

The advanced scientific information of the day shows that Cholera and Fever are as capable of being prevented as that once fatal malady the Small pox. By the introduction of Vaccination, the latter calamity has been driven from amongst the higher and more intelligent classes of the community. Cholera also can be prevented by proper sanitary arrangements. This direful pestilence has for the third time visited our shores; on two former occasions it has gone nearly over the same ground, it then seized on those parts remarkable for their ill-judged position, or from the great neglect of means of cleanliness, adequate to extent and progress of the population.

Since the last visitation of Cholera, Newcastle upon Tyne and Gateshead have made but little improvement in their condition, the numbers of persons have increased, particularly amongst the poor. The house in many instances are so peculiarly placed that the one catches the refuse of the other. The river Tyne is even polluted with filth; and, without entering into distressing particulars, these towns were in 1853 the ready vehicle to convey this scourge once more to England. The pestilence has passed over its regular course. Who can say if Newcastle had been put into a proper state of defence to meet the enemy which will sweep away many thousands, this island might not have altogether escaped the visitation. The Plague, before the Fire of 1666, found constant harbour in London, and spread itself in different directions. After the Fire it only slightly attacked the metropolis and was speedily banished from the country.

We do not mean to state that the disease so fearfully known by the name of the Plague was at all similar in symptoms to Cholera; yet they both took up their abodes in the midst of filth, misery, and neglect.

Cholera is spreading itself in its two well-known directions around Newcastle; and London has not escaped the visitation. Much, however, may be done to alleviate its extent, by directing attention to one or two matters which most materially affect the public health.

The London Grave-yards are important considerations, and so clearly has the abomination of intramural interments been shown, that Parliament enacted a measure for their suppression. This act, however, does not provide as it ought to have done, for the immediate closing of places which are shown to be most unwholesome. Many grave-yards have, nevertheless, been closed by an order from Government. The effect of this is to add to the number of funerals in those grounds which remain open.

The neighbourhood of Old St. Pancras Church on Sundays presents a sad scene. There are here two burial-places (St. Giles'-in-the-Fields, and Old St. Pancras) which extend over an immense space already closely packed with dead. Originally, Old St. Pancras ground was level with the footpath. It is, however, now raised by the accumulation of bodies, level with the wall. The place is, in fact, a mass of human decomposition. St. Giles'-in-the-Fields, immediately adjoining, is nearly as bad; some parts having the coffins packed like bricks, until they come within a few inches of the surface; yet, when we have Cholera at our very door, the masses are week after week being added to in the most wholesale manner—there being, probably, not fewer than twenty persons of various ages buried in each ground every Sunday. The numbers in the week days in St. Pancras is, probably, not short of thirty. To those who think of the evil effects of this system, and already know the crowded condition of the place, and think of the probable increase of the burials here (for, no doubt, many more graveyards will be at once closed), look at the continuance of burial here as being fraught with the greatest danger. The parish authorities of St. Pancras are preparing a cemetery out of town, but it will be twelve or fifteen months before it is ready, by even the shortest of these periods, there will have been at the very least 2500 bodies added to the present number. There is plenty of ground in the surrounding cemeteries, and we submit that these old and packed grounds *should be shut up at once*, regardless of cost.

The unwholesome condition of the dwellings of the poor in London and other large towns is a fearful source of evil. Our illustration represents an actual examples of too many lodgings which are still to be found in London in spite of the regulations of the police. Let us consider a house, with floor above floor, packed as shown in the engraving: the cellars filled with either refuse or wretched inmates: the ventilation shocking—the drainage bad—the parts adjoining filled with filth and refuse—these spread over many parts—and who can wonder at the visitation of fever and cholera. The people inhabiting the room shown in the Engraving are mostly Irish—those we meet in the streets at the crossings, and with onions, oranges, &c.; those near the smouldering fire have, probably, been driven out from some other place, and are thus sheltered by their friends. These people are too poor to pay for proper lodgings. Can no means be found of lodging them and their families in a wholesome manner, at a small yet remunerating cost.

A worse sanitary state of things could not well be than that in the neighbourhood of the Coal-yard, Drury-lane. Here are from fifteen to eighteen large families living in small, inconvenient apartments. There are sheds, donkey and horse stables &c. Sometimes a cart-load of refuse are allowed to remain in the yard: the pavement is uneven, and filled here and there with stagnant water. It is shocking to see the squalid children attempting to play in such a place; and yet this place is within a stone's throw of the spot on which the Great Plague broke out, as may be seen by reference to the Parish-clerk's Reports, the Diaries of Evelyn and Pepys, and De Foe's Account of the Plague.

To the miserable condition of this filthy place, called "King's Arms-yard," attention has been lately called. The residences, in a sort of gallery, are ranged about what has been one immense rotting dung-heap. Some efforts have been made to improve its condition; and there has been carted out of it a mass of decomposed filth, the stench of which was scarcely endurable. Close to the place, the approach to which from Drury-lane has now, appropriately enough, a coffin-maker's shop on each side, the Great Plague of 1665 broke out; and here neglect, ignorance, and *laissez faire* prepare the way for a fresh pestilence. Most deeply is it to be regretted that at such a time as the present men should be found to lend the weight of an official position to obstruct endeavours to obtain improvement in the neglected portions of this two-sided metropolis, instead of giving their earnest aid, as they should do, in furtherance of them

THE KING'S ARMS YARD, COAL-YARD, DRURY-LANE.

MARITIME CASUALTIES.—From the Admiralty register of wrecks, it appears that in 1850 there were 681 British and foreign vessels wrecked on the coasts and in the seas of the United Kingdom, and 784 lives lost: that in 1851 there were 701 wrecks, and 760 lives lost; and that in 1852 there were no fewer than 1100 vessels wrecked, and about 900 lives lost. The greatest havoc took place at the end of last October and beginning of November. In this interval no fewer than 200 ships sought refuge in the Humber. Many more, however, could reach no shelter; and the unprecedented number of 200 vessels were lost or damaged, with the fearful loss of 217 lives. The greater part of this work of destruction took place on the east coast of England, off Flamborough Head.

TREASURES SUNK AT NAVARINO.—The *Official Gazette* of Savoy states that an inhabitant of Chamberry has just quitted that place to attempt, in concert with a company organised for the purpose, to save some contents of the vessels which were sunk at the battle of Navarino, particularly the Admiral's ship, a three-decker, which, it is said, had on board at the time she went down a sum of six millions of francs in gold. All the necessary apparatus has been embarked, a number of divers have been engaged, and, in addition to the ordinary diving-bells, all the recent inventions for such purposes will be put into requisition.

INTERIOR OF A LONDON LODGING-HOUSE.

POSTSCRIPT.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The wonder of the day is the new piece of Alexandre Dumas, "La Jeunesse de Louis XV." We last week informed our readers of the *entrave* placed to the performance of "La Jeunesse de Louis XIV," on political grounds. Its author, being informed of its fate, and of the necessity of making such alterations as would render it fit for representation—that is to say, of re-writing it, arrived from Brussels, and addressed to M. Arsène Houssaye, the Director of the Théâtre Française, the following letter:—

My dear Director—I arrive from Brussels on learning from the Theatre that the "Jeunesse de Louis XIV." is stopped by the Censor. To-day (Tuesday) I ask you to accord me a reading next Monday. I will read you five acts. I do not know yet what I shall read, for the news has found me unprepared; but the five acts will be called the "Jeunesse de Louis XIV.;" I shall arrange so that the decorations which you have ordered, and which I hear are ready, shall serve. Of course there will not be in the "Jeunesse de Louis XV." a word nor a situation of the "Jeunesse de Louis XIV.," which will remain intact, in case it should one day please the Censor to restore you the work. If I am ready before Monday, I will let you know.

Tout à vous,

Tuesday, 11 Oct., 3 o'clock. ALEXANDRE DUMAS,

Use diligence on your part; the piece may pass in three weeks.

It is said that Dumas will be as good as his word, and that the boxes taken for Louis XIV. will serve for his successor. The "Memoires" of this singularly fertile writer continue to be published daily in the *feuilleton* of the *Presse* newspaper; they display, in the most marked degree, the energy, the verve, the power of interesting the reader, the wit, and versatility of the author; but it must be owned that discretion and good taste are qualities of which he seems not to have the smallest conception. The result, as may be supposed, is the constant appearance of reclamations, contradictions, and corrections from those persons who find themselves and families mentioned in a manner frequently calculated to cause pain and annoyance; while there is no doubt but that there are a much larger number who keep silence, in order not to draw attention to the very disagreeable and compromising private details related concerning them.

Liszt has arrived in Paris, where it is expected he will give concerts during the winter.

The statement which appeared some time since, asserting that the Princesse Belgiojoso had fallen a victim to the wounds inflicted on her a certain time previously by a discharged servant, has happily been contradicted, by letters written by herself to her friends in Paris, in which she states that she has suffered but little from her injuries, and that her health is now quite restored.

A plan has been proposed by the Maréchal St. Arnaud, Minister of the military school at St. Cyr. It suggests that not only the *élèves* destined for the cavalry service shall learn to ride during the four years' training requisite to render them eligible to enter on their duties; but that those intended for infantry regiments shall, during the two years spent in the establishment, also receive lessons in equitation—in order, says the report, that they may be able to ride *convenablement* when they become adjutant-majors, or superior officers. There is little doubt that the plan will be adopted, as such a regulation is much needed; the young men at present destined for the former service learning equitation late, those for the latter rarely acquiring the art at all.

The autumn meeting of races at Chantilly took place the beginning of last week. They went off tolerably well, but were not very brilliantly attended, most of the *beau monde* being still in the country. It was noticed that their places were, for the most part, occupied by actresses, in *toilettes* even more resplendent than those usually displayed by *ces dames*.

The vintages in the vicinity of Paris have had a certain attraction for the inhabitants of the metropolis during the last ten days. The crop has been better than was expected, but as, unfortunately, the wine grown in those localities is proverbial for its badness, we fear the public will not be greatly benefited thereby.

One of the amusements at Compiègne consists in theatrical representations. Among those chosen for the purpose is an operetta, composed by M. Offenbach, the words by M. Léon Battu, and *la corde de pendu* by M. Ferdinand Langré *fils*. The bad weather of the last few days has taken off much from the pleasures of the Chasseurs.

An ordonnance of the Archbishop of Cambrai, in the *Echo de la Frontière*, excites much discussion. In this document the prelate orders that Christian burial shall be refused, not only to suicides and those who die from the effects of intoxication, but to such persons who shall have neglected or refused to submit to the rites of the Church in the celebration of marriage, and who shall have died in the bonds of only a civil union, without having expressed their repentance or endeavoured to repair the evil.

The researches of M. Rogani for a *troupe* to open the Italian Opera have been crowned with as much success as could have been expected in the present dearth of Italian singers, male and female. The names of Mario, Tamburini, Rossi, Alboni (the Comtesse Pepoli, whom an engagement of £30 a night has tempted to abridge the honeymoon), Frezzolini, E. Grisi, De Lugi, &c., appear as engaged for the whole season; and it is said that certain other stars are to appear as *entrées volantes* during the campaign. A new opera of Pacini, "Gli Arabi Nelle Gallie," which has never appeared in France, but which has had a brilliant success in Italy, is to be performed early in the season. At the Théâtre Lyrique, "Le Diable à Quatre"—an *opéra comique*, consisting of a new version of the old legend which, time out of mind, has appeared on stages of all classes in France—has considerable favour. It is well arranged, well played, and well sung. The Palais Royal is giving a charming piece, from the pen of M. Gabriel—"Les Deux Princes Indiens."

"Les Memoires d'un Bourgeois de Paris," by Dr. Véron—such is the title of a book of which the first volume has just appeared, and which is being seized upon by readers of all classes and all opinion with the utmost avidity. Few men of the present day have had the same opportunities of seeing events and characters behind the scenes that have been afforded to M. Véron; few have the same quickness of perception and keenness of observation to note them, and few have been less scrupulous in taking advantage of them, and exposing the actors when the time for so doing arrived. With such qualifications, it may be supposed what a fund of singular interest the work contains.

A telegraphic despatch from Turin reached Paris on Wednesday, giving an account of a corn riot. After the arrest of some of the perturbators, order was restored.

A letter from Bucharest, which has been received in Paris, states that the weather there is very dry and fine, and that there is nothing to prevent the crossing of the Danube by the troops of Omer Pacha. According to this letter, the Russians are not in sufficient force to resist the Turks if they should advance at once.

The *Patrie* declares in the most positive manner, that the statements in the St. Petersburg journals of the successes of the Russians in the Caucasus, are utterly unfounded.

Amongst the recent arrests in Paris is that of M. Delescluze, the intimate friend of Ledru-Rollin, who had gone over to Paris as the delegate of Ledru-Rollin and the Central Democratic Committee. All his papers were seized; and it appears that he is still in custody. Some more political arrests have been made in Paris; but they are few in number, and without importance. Indeed, in almost every instance, the detention of the parties did not exceed a few hours.

The funds were on the previous day even more heavy than on Wednesday, and there was another slight decline in prices. The Rentes and Industrial Shares are fortunately now in the hands of persons few of whom are compelled to make sacrifices. But for this, the depression in the money market would be much more considerable.

A deputation from the Chamber of Commerce of St. Quentin having, in an interview with the Emperor, represented that the threatening aspect of the Eastern question had necessarily an unfavourable influence on commercial affairs, the Emperor is said to have replied, "This is perfectly true; but I have every reason to believe that the measures on the Danube, to the number of 35,000 men, with 251 guns."

The Sultan's manifesto against Russia was read in all the mosques in the capital on the 7th.

It was not expected that the hostilities would commence before the 25th inst.

The son of Redschid Pacha, who has left Constantinople for Schumla, has, besides the summons to Prince Gortschakoff, despatches instructing Omer Pacha what steps to take if it seem the Russians refuse to evacuate the Principalities. Similar instructions have been sent to the commander of the army in Asia.

Lord Stratford de Redcliffe received important despatches from his Court on the 3rd; but, unfortunately the Divan had just sent off instructions to Omer Pacha to notify the opening of hostilities in the event of the evacuation of the Principalities not taking place within fifteen days.

Prince Gortschakoff returned the following reply to the summons of Omer Pacha to evacuate the Danubian Principalities:—

"My master is not at war with Turkey, but I have orders not to leave the Principalities until the Porte shall have given to the Emperor the moral satisfaction he demands. When this point has been obtained, I will evacuate the Principalities immediately, whatever the time or the season. If I am attacked by the Turkish army, I will confine myself to the defensive.

It is believed that hostilities will commence in Asia, on account of the lateness of the season, and the theatre of war will probably be in the direction of Batoum, on the south-eastern shore of the Black Sea. Volunteers abound in Constantinople, but only Albanians are employed. They will be formed into a corps of irregulars. Every one knows the valour of these Cossacks of Roumelia, and Turkey counts on them to oppose the Cossacks of the Don. Two steamers, freighted with heavy artillery, have left Constantinople for Batoum, and letters from Erzeroum state that the army collected there already amounts to 50,000 men. Reinforcements are continually arriving. The Syrian contingent is estimated at 17,000 men.

We find in a letter from Constantinople, dated the 6th,—

It is difficult to give you an idea of the enthusiasm of every one here; it would appear as if war was a fête; and if the Government desired to enrol men, I do not think there is one in Stamboul who would refuse to quit, and the city would be abandoned for the camp. Otherwise everything is tranquil. Two regiments of regular troops have arrived this day from Syria. A deputation of Armenians has offered to the Porte all the services in their power, and another deputation of Greeks is preparing to do the same. The Porte has issued an address to the troops, whom it calls on to support the honour and the rights of the nation. Those whose courage may fail them are invited to avoid the fact without hesitation, and they will be employed at a distance from the scene of combat. A similar notice will be addressed to the people, calling on them to remain tranquil, and to give their aid to those who go forth to the combat.

It is stated that an application has just been made to the French Government, in the name of the Sultan, for two general officers (one a General of Division, the other a General of Brigade) to be attached to the Turkish armies—the former to that of the Danube under Omer Pacha, the latter to the army of Asia under Abdi Pacha; and, further, that two superior officers and three or four captains of the staff, two or three superior officers of Engineers, three or four majors of infantry, shall be also attached to the staffs of the two armies respectively. Little doubt is entertained that the Emperor will grant this application when it is clearly ascertained that the negotiations for a pacific solution of the Eastern dispute has failed.

It is announced from Trieste that the Sultan has granted a firman for the construction of a canal from Rassova, on the Danube, where the river bends to the north, to Kustendjé on the Black Sea. By this canal, the difficult navigation of the mouths of the Danube will be spared to vessels descending the river to gain the Black Sea. The concession is to an English company.

AUSTRIA.

The ill success which has attended the negotiations for a foreign loan has placed the Government in a position of considerable temporary difficulty. The half-yearly interests of several of the loans contracted for become payable in the month of November; and, in order to procure the necessary funds, the finance department is necessitated to issue paper bonds, hypothecated on the Gmünden salt mines. We read in a Genoa journal

The telegraphic despatch announcing the reduction of the Austrian army may be a stratagem of the Government, which, on the point of contracting a loan, endeavours to inspire capitalists with confidence. The reduction of a measure, otherwise inexplicable, is corroborated by recent letters from Lombardy, stating that, so far from reducing the effective force of the army, Austria has actually recalled the soldiers absent on furlough.

DENMARK.

The Volksthing, on the 13th instant, formed itself into a committee, composed of the whole of its members, for the examination of the new constitutional project for the kingdom of Denmark. It decided unanimously, after a short discussion, to reject the project of the Government, and to take for the base of its deliberations the fundamental law of the 5th of June, 1849. There will be three discussions.

THE EMPRESS OF THE FRENCH.—The Paris Correspondent of the *Morning Chronicle* opines that Empress Eugénie is again in an interesting situation. "It has," he says, "been remarked, since the Emperor has been at Compiègne, that his Majesty, when driving out with the Empress, when at the theatre, and on other public occasions, places her on his right hand, in place of on the left, where he generally sits. According to one of the ancient usages of the French monarchy, it was only when the Queen was *enceinte* that she was placed on the right hand of the Sovereign. That custom was restored by the present Emperor a few months ago, when the Empress Eugénie was in an interesting situation; and it is consequently concluded that her Majesty is once more in a position to hold out to Louis Napoleon an expectation of an heir to his throne. It is also remarked that the Empress, contrary to her ordinary habit, goes to the chase in a carriage, and not on horseback."

THE NEW RECEIPT-STAMP.—In consequence of some doubts having been entertained on one or two points connected with the New Stamp Act, the following queries were submitted by a firm in the City to the Chancellor of the Exchequer:—1. Does the purchase of goods for money over the counter of a shop or elsewhere, where no bill is desired or given, require a stamped receipt should the purchase exceed £2? 2. Does a stamp attached to the bottom or back of a common banker's cheque, and written over with the name of the party receiving the money, fulfil the requirements of the new act as to the use of the stamp? Mr. R. W. Wickham, by direction of the Chancellor of the Exchequer, has given the annexed replies:—1. That whatever pecuniary transactions have hitherto required a receipt-stamp when amounting to £5, will now require the penny receipt-stamp when amounting to 40s. and upwards: the alteration made by the recent Act of Parliament consisting in fixing the price of the stamp at 1d., and altering the amount of money requiring a stamp from £5 to 40s. 2. That the Chancellor of the Exchequer apprehends that either a cheque or any piece of paper with a receipt-stamp attached, suffices for a valid receipt.——A question has also been raised as to whether a letter by post acknowledging the receipt of bills of exchange, &c., required a stamp, a correspondent raises a contemporary to the 55th of Geo. III. c. 184, by which "letters by the general post, acknowledging the safe arrival of any bills of exchange, promissory-notes, or other securities for money," are specially exempted from stamp-duty, and such exemptions are declared by the new act to be still in force—*Shipping Gazette*.

THE CENSUS OF 1851.—The original census returns extended, in manuscript, over some 40,000 volumes; which occupied the Census Department upwards of two years to reduce to the form in which the first portion of the census was published, viz., to the limits of three thick folio volumes.—*Results of the Census, by E. Cheshire.*

NORFOLK ESTUARY.—The opening of the inner channel of this important work, leading to the harbour of Lynn, took place on Monday, and proved of much service to the vessels which availed themselves of the passage.

LATEST INTELLIGENCE.

ARRIVAL OF THE BELGIAN ROYAL FAMILY.—The King of the Belgians, accompanied by the Duke and Duchess de Brabant and the Count de Flandres, and attended by a numerous suite, arrived at Dover yesterday (Friday) morning from Ostend, and passed through London to Windsor on a visit to her Majesty and the Prince Consort.

SALISBURY.—Major-General Bulkeley, of New Hall, Wilts, has been solicited to stand for Salisbury, in the room of Mr. C. Baring Wall. The general has very considerable personal influence there, and is much respected for his upright and benevolent character.

RETENTION OF TEMPLE-BAR.—Last evening a meeting was held at Anderton's Hotel, Fleet-street—Alderman Sir James Duke, Bart., M.P., in the chair—for the purpose of passing resolutions for the keeping up of Temple-bar. Some seventy or eighty very respectable gentlemen living near the Bar attended, and resolutions were passed in accordance with their views. A drawing of a proposed new Bar was laid before the meeting; certainly—besides obtaining an addition of seven or eight feet to the carriage-way—a very handsome-looking open iron gateway; but the "oldest" inhabitant carried their own propositions unanimously. As we may have something more to observe in our next Number on this subject, we need not go farther, at present, into detail.

NEW CHAPEL.—The foundation-stone of the new dissenting chapel to be erected in Camden New Town was laid on Thursday afternoon, by S. M. Peto, Esq., M.P., in the presence of a large and respectable assemblage.

SOUTH-EASTERN PACKET COMPANY.—At a special meeting of the South-Eastern and Continental Steam-Packet Company, held on Thursday, it was resolved to dissolve the undertaking, the property and management passing into the hands of the South-Eastern Railway. Another meeting is called for the 3rd November to confirm the resolution.

THE MAIL TO INDIA AND CHINA.—The steam-packet *Indus*, Capt. Soy, left Southampton, on Thursday, with the outward portion of the East India and China mails. She had on board about 100 passengers, a large general cargo, and a great amount of specie.

THE "*RIPON*."—This vessel has arrived at Southampton, with a heavy portion of the India mail. Capt Fitzgerald (H.E.I.C.) died on the morning of the 17th on board the *Ripon*. He was returning to England after an absence of eighteen years. His funeral rites took place on board, and a feeling of regret was expressed that it was not possible to convey his mortal remains to England.

LONDON, BRIGHTON, AND SOUTH COAST RAILWAY.—Official notice has been given, that, in consequence of a slip upon this line of railway, near Balcombe, the trains will be passed on a single line for the next few days; but this will be done with perfect safety, with a delay of a few minutes only, and without any necessity for passengers leaving their seats.

NEW GOLD DIGGINGS.—The *Sydney Empire* reports rich diggings having been found at Burrandong, to which numbers were flocking. "Our digging (it adds) have never yet had a fair trial; their resources are inexhaustible, and only require being properly developed by the many thousands who will yet visit our auriferous districts."

SHIPWRECK AND LOSS OF LIFE.—The *Dalhousie*, Butterworth, from London to Sydney, sank off Beachy Head on the morning of Wednesday; when the passengers and crew, except one boy, were drowned.

FOREIGN.

From the Danube we hear that Omer Pacha has nearly completed all the *matériel* for throwing a bridge across the Danube, but it is not expected he will make any movement until the Spring. Things are going on well in the Turkish army; while the commissariat of the Russian army is so infamously managed, that sometimes there is no bread. From 10,000 to 12,000 men are constantly in the hospital with dysentery and typhus. Generals Gortschakoff and Dannenberg are also ill. A thing hitherto unheard of in the Russian service has occurred. Generals Sutler and Kotzebue have written to St. Petersburg, and declared that, in consequence of the *sonchalance* of Prince Gortschakoff, the army will be ruined before the campaign begins. Prince Paskiewitch is loudly demanded by the army. The Russian forces are being largely increased in the Russo-Caucasian provinces

In Paris on Thursday, it was rumoured that M. Emile de Girardin had been arrested. The Russian Minister, in Paris, has contradicted in the most absolute manner the statement that the Emperor of Russia threatened a war of extermination against Turkey. His Russian Majesty, on the contrary, still affects great moderation.

A remarkable report appeared in the *Moniteur* on Thursday, from M. Ducos, the Minister of Marine, in which he shows that with a budget of 100 millions less in amount than in the time of Louis Philippe, he has increased the power of the French navy to an extent that was never before witnessed in the same period of time, and has, nevertheless, a return surplus of ten millions on the budget of 1853. He proposes to return half that surplus to the Treasury, and to apply the other half to the present budget. The increase of the naval resources of France shows the determination that exists of making France a great maritime power.

The long-forgotten subject of the coronation of Louis Napoleon is being talked again to be revived. It is said that on the Emperor's return to Paris the date of that solemnity will be decided, and, of course, announced.

The Emperor Napoleon has granted a pension of 2000f. out of his private purse to the father and mother of Lieutenant Bellot, who perished in the Arctic expedition. This pension is to descend to the brothers and sisters of Lieut. Bellot after the death of their parents.

The Paris Bourse was more firm on Thursday, but, although it was fully attended by speculators, there was not much business transacted. The Three per Cents opened at 72f. 40c., rose to 72f. 50c., fell subsequently to 72f. 20c., and closed at 72f. 45c. for the end of the month.

The laying of the foundation-stone of the New Berlin Waterworks by the King of Prussia took place yesterday (Friday).

NAVAL AND MILITARY INTELLIGENCE.

THE QUEEN'S NEW STEAM-YACHT.—The drawings submitted to her Majesty and Prince Albert at Windsor Castle on Tuesday were for the construction of a vessel of 2850 tons, to be built of wood in one of the Royal dockyards. Her Majesty has decided on this plan, and the new yacht is to be ready by the summer of 1855.

PORTSMOUTH, Oct. 19.—The following important appointments are current here to-day:—Rear-Admiral Sir Edmund Lyons to the second post of command in the Mediterranean, to hoist his flag in the *Agamemnon* (screw), 91, at Plymouth. Rear-Admiral Lord Adolphus Fitzclarence to be Lieutenant-Governor of Greenwich Hospital, vice Gordon, promoted to Governor. Captain Sir Thomas Maitland, C.B., from the *Agamemnon* to the *Victory*. Captain Shepherd, of the *Victory*, to be Superintendent of the Woolwich Dockyard, vice Eden, retired. Captain Fremantle, of the *Arrogant* (screw), 46, to the *Juno*, 26 (sailing-frigate), at Sheerness, to relieve Captain Sir Everard Home, in command of the Australian station. Captain W. H. Henderson, C.B., late in command of the *Blenheim*, 60 (screw guard-ship at this port), to be Controller-General of the Coast Guard, vice Bittes, deceased. Commander Robert J. M'Clure and Edward A. Inglefield, for their service in the Arctic seas, to be Captains.

REAR-ADMIRAL BELL.—We regret to announce the demise of Rear-Admiral Christopher Bell, C.B., which took place on the 15th inst. The gallant officer entered the navy in 1795, and between that and 1811 took an active share in many a daring capture and "cutting out" expedition; although he was not fortunate enough to share in the glory of any of the great naval victories of the time. Admiral Bell having been on the retired list, his death causes no promotions

ONE of the relief battalions for service in the Mediterranean is to be ordered immediately by the *Leopold*, 18, Captain G. Elford. Accommodation is at once to be provided for 400 men.

GENERAL ALEXANDER MACKENZIE, BART.—The death of this venerable and distinguished officer, the oldest commander in the British service, occurred on the 17th inst. A memoir of this gallant veteran will appear in the ILLUSTRATED LONDON NEWS of next week.

NARROW ESCAPE OF A MAIL PACKET.—The mail steam-ship *Despatch*, which carries the mails between Jersey and Southampton, was nearly lost off Jersey, shortly after leaving that port on Monday last. It appears that when about half a mile from the Corbière, she carried away her intermediate shafts, and also both her eccentric rods. A very heavy sea was running at the time, and much difficulty was had to keep the vessel clear of the rocks, which render the navigation at that part very dangerous; but, unfortunately, her helm would not answer. Guns were at once fired as signals of distress; and her Majesty's ship *Dasher*, which happily was lying in the docks at the time, with steam up, immediately proceeded to her assistance, and after some difficulty towed the distressed vessel back to Jersey. The *Dasher* in her exertions became nearly filled with water, and also carried away a boat. The *Despatch* had on board 100 passengers, all of whom were, of course, in a position of the greatest danger. The mails, which should have reached Southampton on Monday night, arrived by the *Courier* at eight on Wednesday evening

IRELAND.

DUBLIN.—The Maynooth Commissioners are still pursuing their inquiry with unremitting activity, sitting from twelve to four o'clock each day, and examining witnesses, chiefly professors, or other officers connected with the Roman Catholic College.

BANQUET TO MR. DARGAN.—At a numerous meeting of the exhibitors in the Industrial Palace, held on Tuesday at the Music-hall, Abbey-street, it was unanimously agreed that, in order to record in a practical manner their sense of the valuable services rendered by Mr. Dargan to his native country, that gentleman should be invited to a public entertainment at the expense of the general body of exhibitors; and a committee was appointed to carry out the requisite arrangements on the occasion.

THE INDUSTRIAL EXHIBITION.—The number of persons who have visited the Exhibition during the week has averaged nearly 10,000 daily; and we are happy to add that the receipts were considered very satisfactory.

THE LATE FATAL RAILWAY COLLISION.—The inquest on the persons who lost their lives by the accident on the Great Southern and Western Railway was brought to a termination on Monday, the seventh day of the inquiry, at the Coroner's office at Naas. At the close of the evidence, Mr. Fitzgibbon addressed the jury for Berry, the guard; after which, Mr. Curran spoke on behalf of Gass, the engine-driver, and O'Hara, the stoker. The coroner then charged the jury, who retired, and, after an absence of nearly three hours, returned a verdict, finding that the deceased, Thomas W. Jely, and others, came by their death from a collision caused by the negligence of James Gass and John O'Hara, and therefore that the said James Gass and John O'Hara are guilty of manslaughter." The jury attached a rider to the finding, however, which gave it the character of a special verdict. They declare—"That the rules and regulations of the company reflect the highest credit on the judgment of the authors; and they are well calculated to secure the lives and property of the passengers, and that no culpability can attach to the company on account of the late collision." Berry was then ordered to be discharged, but the coroner refused to accept bail for Gass and O'Hara, on the ground that he had not the jurisdiction. [We are sorry to state that, since the verdict was given, Stevie Peck, one of the sufferers, has died at Stevens's Hospital, making the fifteenth on the melancholy list of lives lost by this shocking railway collis.on.]

NATIONAL SPORTS.

WARWICK RACES.—TUESDAY.

Sweepstakes of 5 sovs. each.—Census, 1. The Jealous One, 2.
Great Warwick Handicap Little Fawn, 1 Annie Sutherland, 2.
Sweepstakes of 5 sovs. each Pram the Third, 1. Ada, 2.
Leamington Welter Cup.—Janey, 1. Sally, 2.
The Committee Stakes.—Grub, 1. Blakeley, 2.

WARWICK STEEPLE-CHASES.—WEDNESDAY.

Scurry Handicap.—Little Davie, 1. Priam the Third, 2.
Free Handicap Hurdle-race.—Needwood, 1. Sir Philip, 2.
Hunt Cup Steeple-chase.—Fourteen-year-old, 1. Dandy Jim, 2.
Grand Open Steeple-chase.—Oscar, 1. Bourton, 2.
Free Handicap Steeple-chase.—Needwood, 1. Escu'aplus, 2.

HIGHLAND RACES.—WEDNESDAY.

Aske Triennial.—Comfit, 1.
Hat Stakes.—Happy Joe, 1.
Handicap.—Grapeshot, 1. Lerrywheut, 2.
Sweepstakes.—Ivan, 1.
The Easby.—Tros walked over.

THURSDAY.

Sweepstakes.—Ivan, 1.
Queen's Plate.—Anne Sutherland, 1. Comfit, 2.
Scramble Handicap.—Jealous One, 1. Tourgeeals, 2.
Wright Stakes.—Loupdeha, 1. Eryeina, 2.
The Cup.—Grapeshot, 1. Folly, 2.

KELSO RACES.—TUESDAY.

Tyro Stakes.—Wild Huntsman, 1. Garrulity, 2.
Kelso Plate.—The Sapper, 1. Mary, 2.
Roxburgh Handicap. Lough Bawn, 1. Audubon, 2.
St. Leger.—Bairownie, 1. Goorkah, 2.
Caledonian Cup.—Goorkah, 1. Harold, 2.
Hunters' Stakes.—Clatman, 1. Abbotsford, 2.

WEDNESDAY.

£10 Plate.—Goorkah, 1.
Caledonian Handicap. Testator. 1. Audubon, 2.

THURSDAY.

Sweepstakes.—Wild Huntsman, 1. Garrulity, 2.
Angler's Plate.—Testator, 1. Maney, 2.
Stewards' Cup.—Audubon, 1. Lough Bawn, 2.
Plate.—Mary Aisiable, 1. Helen Faucit, 2.

BRIGHTON RACES. FRIDAY.

Selling Plate.—Honesty, 1
Brighton Handicap.—Stamford, 1. Madame Wharton, 2.
Hunt-keepers' Plate.—Jullien, 1. Penelope, 2.
Hurdle Race.—Timothy, 1.

TURKISH QUESTION—FINSBURY MEETING.—A crowded assemblage of the inhabitants of Finsbury was held on Tuesday evening in the Small Star-street, for the purpose of calling upon the Government to aid the Turks in compelling the Russian army to evacuate the Danubian Principalities. Mr. T. S. Duncombe, M.P., on taking the chair, said: Looking at the requisition which had called them together, he found that it was for the purpose of calling upon her Majesty's Government to assist, by every means in their power, to expel the Russian troops from the Danubian Principalities, which they had committed a most unwarrantable aggression upon an old ally, the Sultan. Looking at that requisition, it was quite clear that if it meant anything it meant war (Cheers); and it was well worth the consideration of the people of this country whether they should or should not express, in terms not to be misunderstood, how far they would sanction the Government of the day in proceeding to extremities of any description. That there had been a most unwonted and unjustifiable aggression upon the part of Russia no one could doubt; and every hour the Russians remained in the Danubian Principalities, they committed, not only a wrong towards Turkey, but an insult towards Europe at large (Cheers). They had, doubtless, read the accounts of what was called the Peace Conference at Edinburgh (Laughter), and a volce, "Old women!")—most amiably and delicately conducted; but he must say that, looking at the materials with which we had to deal—the Nicholases of the North—he did not believe that conference would make much impression upon those autocrats. If the people of this country were for war, let them know what that war was to be for, and what it would cost us. They were aware that at the commencement of the last century—before all those wars took place which he might almost say disgraced the close of it and the beginning of the present century—the taxation of this country was about £2,000,000; and in 1815 it had risen to £70,000,000, while the annual public expenditure, which had been about £20,000,000, rose in 1815 to £120,000,000 (Hear hear). Nevertheless, though those sums were great and the sacrifices had been large, we must not conclude a dishonourable peace or submit to any disgrace from the Autocrat of the North. Mr. Sharp proposed the first resolution:—"That the invasion of the Turkish Empire by Russia is not only a wanton and unprovoked outrage, but a violation of international law; and we therefore call on the Government to assist the Turks in driving the aggressive army immediately to evacuate the Danubian provinces."—Dr. Epps seconded the resolution; and Mr. Urquhart, in speaking to it, impugned the whole system of diplomacy pursued by this country. The proposition which he wished to submit to the meeting was that there would be no escape from a war with France if we persisted in intermeddling with affairs in the East. Mr. Sharp proposed the first resolution.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

We purpose week after week to supply, for the information of our readers, a column—sometimes more, occasionally less—of the gossip of literary circles, mixed with the talk of the artist and amateur. The gossip of the day generally dwells, is at least sure to touch, on passages of moment. Whatever is passing, or is about to become a fact, is sure, at least, of some notice among literary men. Chance conversation in the street, casual allusion at a club, before and after dinner talk—one and all are certain to embrace topics of general conversation connected with authors and artists. It shall be our rule in what we write to represent the present condition and prospects of literature and art; in England especially, with as much truth as possible. We shall never betray a conversation—what is told in confidence shall be treated as such. He is, indeed, a dangerous man—

> Who tells whate'er you think, whate'er you say,
> And if he lies not, must at least betray.

Spence and Boswell, to whom our own generation, in common with after-generations, owe an increasing debt of gratitude, were in some respects dangerous men. The world has a desire to get at secrets. Who would not like to rob the wires of the electric telegraph carrying a Stock Exchange fact to Baron Rothschild, or a St. Petersburgh secret to the Earl of Aberdeen?

In literature, the chief fact of moment engaging the attention of literary men is the acceptance by Sir Edward Bulwer Lytton of the munificent offer of Mr. Routledge of two thousand a year for the monopoly of his works for the next ten years. At first sight, the tender and the acceptance seem equally remarkable. Mr. Routledge is a young publisher, apparently without any extravagant source of wealth: Sir Edward is an old author, and a landed gentleman. Nor is this the worst position in which the case may be put. Many of Bulwer's works have been already published in a cheap form. The market has, therefore, in some measure been supplied. But then, on the other hand, it is asked (and with great reason) surely Mr. Routledge knows what he is about? He has had ample experience among cheap purchasers. As education spreads, readers increase—purchasers increase. Every ragged school is supplying fresh buyers of books, at the rate that will best suit their pockets. What writer of fiction now alive Mr. Dickens excepted—has been a more successful author than Sir Edward Bulwer? He has held, and still continues to hold, the public ear. His latest novels, in the eyes of some critics of repute, have been his best. No one, in our day, has written better story-telling first act pieces for the stage. We believe, Mr. Routledge, that you have made a good investment of your money; yet we do not see, however, in your scheme, what Johnson saw in Thrales' brewery—"the potentiality of growing rich beyond the dreams of avarice."

The thirst for knowledge and the love of letters is not only taking a cheap, but also—apparently, at least—a costly turn. As a love of books increases, a love for the best authors assumes the proper shape of having those authors in the best editions, and with the greatest luxury of type and paper (accuracy, above all, included), commensurate with size and price. We do not want folios and quartos now—but there is a very proper desire prevalent, both in England and America, for the possession of what are called library editions of the best authors: that is, editions in large octavo size. To such an extent has this desire run, that the best existing library editions of our best authors are realising extravagant prices. Have you a desire to possess a good copy of Sir Walter Scott's edition of Swift, in the second edition, you must digest into your pocket to the extent of fifteen guineas. A like sum will hardly procure you a good copy of Scott's Dryden. The library edition of Goldsmith, published in 1837, in four volumes, octavo, sells—when it can be obtained—for something like four guineas and a half. Hurd's edition of Addison, accounted the best edition of our great essayist, is not to be bought. To use the language of Manchester, you may "give your order, but the article cannot be had." The work is in demand, and out of print. We know, then, to what prices articles will run, when people who *will* have a thing contend with those who want it chiefly because it is scarce.

To meet this demand for library editions, at reasonable prices, of the best authors, Mr. Murray is about to issue a series of reprints of some of our best and most-wanted English Classics. He is to give us Scott's editions of Swift and Dryden, with corrections and much new matter, at one-half the present price.

A third revolution in literature is announced by Mr. Bentley. We are no longer to have guinea-and-a-half novels. All that Mr. Bentley will ask for will be the half-guinea. He will leave the former guinea attendant on the half-guinea in his customers' pockets to buy two more novels of him. For your guinea and a half he will give you nine volumes instead of three. The mercantile success of his announcement is much questioned. His reduction, it is urged, is rather a gift to the circulating library keepers than to the public. Will Mr. Bentley, it is asked, increase by this reduction of price, the number of library keepers? Will Mr. Mudie, where he took his two thousand copies of a novel, take six thousand? Will the number of circulating libraries increase at Leamington and Cheltenham, at Margate, and at Gravesend? Will Bailey-pond have a circulating library of its own for the first time? and will Mr. Peabody, who sells so many things on the Sands at ——— add the half-guinea novel to his library at once, and not wait, as before, for Mr. Hockham's reminder? Above all, will the gentlemen purchasers outright of novels—people who buy to *read*, and not to *lend*—increase to any sensible degree?

The new numbers of the *Quarterly* and *Edinburgh Reviews* are just out. The *Quarterly* is an excellent number; and if it will only maintain its present excellence, the proprietor will have no occasion to regret (friendship forgotten) the temporary loss of Mr. Lockhart, its ostensible writer. The present editor is the Rev. Whitwell Elwin, the writer, it is understood, of the admirable article on Wordsworth, published about a year ago. The selection of subjects for the present number is understood to be wholly his, and it must be admitted that he has catered with great care and skill.

The *Quarterly* and *Edinburgh* have each an article on Haydon's life. That in the *Quarterly* is understood to be by Mr. John Wilson Croker, that in the *Edinburgh* is said to be by Mrs. Jameson. They are unlike in treatment. An after-dinner remark which we heard made about them, we take to be true, that Mr. Croker shows more knowledge of human nature, Mrs. Jameson more knowledge of art. Both critics agree that Mr. Tom Taylor has done his editorial portion of the work with great good judgment. He had, it is true, not much to do—but that little he has done well. We have had some recent instances of gross editorial neglect, when there was still less to do than was required of Mr. Taylor. The Whigs assert that Mr. Taylor is praised by Mr. Croker, to make his sarcastic cutting up of Lord John Russell, in the former number, all the more severe.

A shilling *brochure* for the railway, called "The Guillotine," just published, has formed the subject of conversation in literary and political circles. The writer is Mr. Wilson Croker, and the work itself is an enlarged and revised reprint of an article of its author, printed some three years ago in the *Quarterly Review*. The revision, however, has not excluded some bitter remarks on the omissions of Sir Archibald Alison, in his famous History. This, it is said, is to be lamented, inasmuch as the omissions so properly pointed out when the article first appeared, have been supplied by Sir Archibald, in all subsequent editions. The reasons for the retention are self-evident.

Sir Archibald is accused of stepping out of his way to defend Mr. Macaulay against Mr. Croker; and Mr. Croker, his friends assert, is countenanced in the retention of his early charges by the example of Mr. Macaulay himself, who, in his Essays, has reprinted all his censures in Mr. Croker's edition of Boswell, though such once censures he cannot but feel are no longer just. These nursings of literary wrath are much to be lamented.

The National Gallery of Pictures has lost an intended gift, and art a patron during the present week. Lord Onslow has revoked the bequest he is said to have made of his pictures to the nation; and Mr. C. Baring Wall, the well-known collector, died on the 14th inst. Lord Onslow's withdrawal is in consequence, it is alleged, of the very unsatisfactory nature of the recent report of the Select Committee on the National Gallery. A poor reason, in our opinion; if his Lordship was at any time serious in his intention, it was easy for Lord Onslow to have attached to his bequest certain stipulations which would have protected his munificence from all chance of injury by at least overdone cleaning. The importance of the collection is much overrated in the paragraph which proclaims the withdrawal of the bequest. It is not by any means an important collection; though we must admit that we speak from distant recollection, which his Lordship has not, however, allowed us to strengthen, by imitating the example set him by his brother Peers and by the late Mr. Baring Wall, of lending some of his treasures to the yearly Exhibitions of the Old Masters at the British Institution. Mr. Wall was most liberal in allowing his treasures to be seen. His house in Berkeley-square is a choice example of the skill of its architect, William Kent.

In science we hear that Professor Jameson has resigned the Professorship of Natural History in the University of Edinburgh, and that among the many candidates for the vacant chair, Professor Edward Forbes is the prime favourite. Professor Forbes will be a great ornament to Edinburgh circles, and a real loss to science in London.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, OCT. 20.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperatures of the Day.	Departure of Temperatures from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.

Note.—The sign + denotes above the average, and the sign — below the average.

The reading of the Barometer decreased from 29·85 inches at the beginning of the week to 29·07 inches by the afternoon of the 17th, increased to 29·89 inches by 9 p.m. on the 18th, decreased to 28·98 inches by the afternoon of the 19th, and increased to 29·89 inches by the end of the week. The mean for the week, at the height of 82 feet, was 29·385 inches.

The mean daily temperatures have ranged from 4½° *above* to 7° *below* their average values.

The mean temperature of the week was 48·8°, being 0·9° below the average of 38 years.

The range of temperature during the week was 27·0°, being the difference between the highest reading on the 14th, and the lowest on the 17th and 19th.

The mean daily range of temperature during the week was 14.7°. The greatest was 20° on the 17th, and the least 9.7° on the 20th.

Rain fell in six days during the week to the depth of 1.3 inches.

The weather during the week has been wet, dull, changeable, and unseasonable.

Lewisham, Oct. 21, 1853. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending October 15, 1573 children were born within the metropolitan districts; of these, 812 were boys, exceeding the average of the same week by 19; and 761 were girls, being less than the average by 7. The number of deaths was 1039. In the same week of the ten preceding years the average number was 949: to this, if raised in proportion to increase of population, would give 1044, showing that London, during the past week, suffered only its ordinary rate of mortality. The number of births exceeded the deaths by 534. The deaths were distributed as follows:—In the west district, with a population in 1851 was 376,427, there were 147 deaths; in the north districts, out of a population of 490,396, there were 192 deaths; in the central district, with a population of 393,256, there were 171 deaths; in the east district, with a population of 485,522, there were 233 deaths; and in the south district, in a population of 616,635, there were 296 deaths. The deaths attributed to particular diseases were as follows:—Zymotic diseases, 291 (their average is 256): of these small pox carried off 3; measles, 18; scarlatina, 54; hooping-cough, 32; diarrhœa, 51 (its average is 34); cholera, 45, to this disease in the same corresponding week in 1849, there were 2 deaths; in 1844, none; 4 in 1848, 2 in 1846, 2 in 1847, 45 in 1848, 41 in 1849, 4 in 1850, 1 in 1851, and none in 1852; to typhus, 52 (its average is 54). To dropsy, cancer, and other diseases of uncertain seat, 60 (their average is 46). To tubercular diseases, 173 (their average is 170). To diseases of the brain, spinal marrow, nerves, and senses, 98 deaths (their average is 101). To diseases of the heart and blood-vessels 39 (their average is 32). To diseases of the lungs and of the other organs of respiration, 150 (their average is 124): of these 51 were bronchitis and 79 pneumonia—both exceeding their average by 15 and 14 respectively. To diseases of the stomach, liver, and other organs of digestion, 61 (their average is 64). To premature birth and debility, 24; to age, 40; to sudden death, 7; to poison, 1; to burns, 1; to drowning, 5; and to fracture, 2. Of the 45 deaths of last week to cholera, 31 were males, and 14 were females, and were thus distributed over London:—In the west districts, 6; in the north, 3; in the central, 2; in the east, 6; and in the south, 28.

Cholera, which has made its presence felt in various parts of the metropolis, and during the four weeks that followed Sept. 10, showed a small but continuous increase, does not thus appear latterly to have gained ground. The deaths were 6 in the first week of October; last week they reached to 45. It is a somewhat remarkable coincidence that 45 was the number registered in the corresponding week of 1848; for many weeks thereafter the deaths rose and fell, dropping so low as one and two in the spring of 1849, till the epidemic broke out with violence in summer. The fluctuations which mark its previous history may attend its course again; but experience affords sufficient warning that a temporary abatement should not lull into security those whose business it is to prepare for the attack.

JUDGES' CLERKS.—Instead of fees, the Judges' clerks are now paid by salaries. The three associates to the Chief Judges have each £1000 a year; the three senior clerks to the associates each £160; the three junior clerks to the associates each £100; the principal clerks to the three Chief Judges each £700 a year; the principal clerks of the other twelve Judges each £600; and the other clerks of the Chief and Puisne Judges, 18 in number, £400 a year each.

RAGGED SCHOOL SALE.—According to the arrangements of the ladies' committee of the King Edward Ragged and Industrial Schools, of which the Lady Mayoress has the principal direction, the first of the two days' sale of ornamental articles took place on Wednesday morning, at the house of the committee, Ludgate-hill. Although the weather was very unfavourable for visitors, several of the gentry visited the rooms, and made purchases. At the conclusion of the sale on Friday, the premises will be occupied by the Milton Club.

CATHOLIC SCHOOLS IN SHOREDITCH.—A public meeting of the congregation of St. Mary's, Moorfields, and of the friends of Catholic education in the neighbourhood, was held on Tuesday evening, in what has heretofore been known as Union Chapel, Curtain-road, preparatory to the opening of that place for educational purposes. The premises, which are extensive, and consist of a spacious chapel, school-room, and house, and which have, until lately, and for nearly a century past, been occupied by Dissenters, have now passed into the hands of the Catholics. They will be opened as schools for boys and girls on Monday next, the 24th inst. The meeting, a very crowded one, pledged its support.

COMMITTAL OF THE OUTLAWED BANKRUPT, WELSH.—On Wednesday, the prisoner, Michael Thomas Stacey Welsh, was brought up on the charge of feloniously absconding from his creditors, and failing to surrender to the Court of Bankruptcy (and who afterwards went to Australia, and made a large sum of money). Evidence of identity having been given, the prisoner was fully committed to take his trial at the forthcoming sittings of the Central Criminal Court for felony, under the provisions of the 221st sec. of the 12th and 13th Vict., c. 106.

THE ROYAL COLLEGE OF PHYSICIANS ON CHOLERA.—The following notification has just been issued by the Royal College of Physicians:—"The Cholera Committee of the Royal College of Physicians have received from various quarters applications for some plain directions calculated to be of service to the public during the prevalence of epidemic cholera, when medical advice may not be immediately at hand, and before such advice can possibly be obtained. For this reason the committee deem it right to offer to the public some instructions, which, on account of an extended 'Notification' having been issued by the General Board of Health, on the 2.th of September, 1853, may be brief; and are in no case intended either to supersede the necessity of having recourse, as speedily as possible, to further medical assistance, or to impose any authoritative restriction on medical practitioners. During the prevalence of cholera:—1. No degree of looseness of the bowels should be neglected for a single hour. Medical advice should be at once sought when the looseness begins; and, previous to the arrival of a medical attendant, some of the medicines, at other times used for checking diarrhœa, should be taken; for example, the chalk mixture, the compound cinnamon powder; or, the compound chalk powder with opium, in doses of from twenty to forty grains for an adult. 2. No saline aperients or drastic purgatives should be taken without the advice of a medical man. 3. Intemperance in eating or drinking is highly dangerous. But the moderate use of vegetable as well as animal food may be recommended; and, in general, such a plan of diet as each individual has found by experience to be most conducive to his health. For any considerable change in the diet to which a person has been accustomed is seldom advisable during the prevalence of an epidemic. 4. Debility, exhaustion, and exposure to damp, render the poor especially subject to the violence of the disease. The committee urge upon the rich the necessity of supplying those in need with food, fuel, and clothing. 5. The extreme importance of removing or counteracting all impurities, whether in the air, water, or soil, as by ventilation, cleanliness, and the free use of the chloride of lime or chloride of zinc, cannot be too strongly insisted upon. Lastly, since the reports made to the College of Physicians show that of the persons who were engaged about the sick in the last epidemic, the number of those who were attacked by the disease was in proportion exceedingly small, the fear of infection may be practically disregarded. The committee forbear to dwell upon the extreme importance of providing medical attendants at dispensaries for the treatment of the diarrhœa among the poor; of organising in every district affected by cholera what is called the system of house-to-house visitation; and of establishing temporary hospitals for the reception of patients who cannot be properly treated at their own homes: because these measures have been strongly and properly enforced in the 'Notification' published by the General Board of Health."

MIDDLESEX HOSPITAL.—During the present year extensive alterations have been made in the building of this institution. A large house in Norfolk-street has been added, chiefly with a view of improving the residences of the medical officers. The wards have been re-painted and cleaned, and, by the adoption of an ingenious contrivance, all the windows have been fitted so as to prevent the possibility of any downdraught entering, an arrangement of the greatest importance to the comfort of the suffering inmates. The works have necessarily proceeded slowly, so as not materially to disturb the operations of the hospital; but they are at length completed, and both externally and internally reflect great credit on the contractors, Messrs. Holland, of Bloomsbury.

CRIME, CRUELTY, AND STRONG DRINK.—The second of a series of monthly meetings, called by the National Temperance Society, was held in the public hall of the Whittington Club, on Wednesday, the 19th inst., the particular object of which was to point out and show the connection of the common use of strong drink with crime, especially that description of which is manifested in brutality to women. Mr. C. Gilpin occupied the chair; and addresses were given by Messrs. T. S. Smith, Edmund Fry, and G. W. M'Cree, who, as a domestic missionary, detailed several cases of fearful depravity and misery which had come under his own observation. Several signatures to the total abstinence pledge were recorded.

GAS EXPLOSION IN THE CITY.—On Wednesday forenoon an explosion of gas took place in the lower room of the premises of Messrs. Revill and Co., Manchester warehousemen, Gresham-street West. It originated through an escape from one of the pipes near the window, and during the temporary absence of some of the firm, who had just left the room. Fortunately the damage was confined to the blowing out of the window-frame and glass.

NEW CHURCHES IN MARYLEBONE.—Arrangements are in progress for the immediate erection of two new churches in the parish of St. Marylebone. One will be in Nutford-place, Edgeware road, the site for which is now being cleared. The church will be dedicated to St. Luke the Evangelist. The other church will be in Orchard-street, Portman-square, about a mile and a half from the parish church, and comprising an enormous population. The site for this church has been given by Lord Portman.

THE IMAGINARY POLISH FIREBRANDS IN LONDON.—M. C. Szulczewski, the resident secretary of the Literary Association of the Friends of Poland, has published a statement, dated 18th inst., absolutely denying an absurd letter that appeared in the *New Gazette of Prussia*, which set forth (as facts—that the Polish Literary Society had 6000 muskets on board two vessels at Southampton, ready to be conveyed to the Hungary-Polish Legion in Turkey—that 500 Poles, completely armed, and commanded by the Colonel Oporski, were on the eve of leaving Southampton; that the street in which the Literary Society holds its meetings (Bulstrode-street, St. James's) was blocked up by Polish refugees; and other ridiculous fables. Colonel Wiercinski has published a contradiction to the statement in the above veracious print, that he directs and superintends the depôt of the workmen in the name of the National Committee, and that he causes a certain number of young Polish refugees to practise military exercises, &c., daily.

FALL OF A HOUSE IN LAMBETH.—On Wednesday, as some workmen were engaged in repairing an insecure and uncoupled house in Tower-road, Lambeth, they observed the alarming unmistakable symptoms of a speedy downfall, and had hardly time to make their retreat when the building came to the ground with a loud crash. In its fall it dragged down a considerable portion of an adjoining dwelling, but the occupants of this latter, having taken timely warning, had quitted it some days before.

THE MINISTERS.—The Earl of Aberdeen and the Earl of Clarendon returned from Windsor on Thursday, where they had been on a visit to her Majesty.

POST-OFFICE ORDERS.—The Post-office authorities have issued a notice that Post-office orders over 40s. are NOT subject to the penny-receipt duty.

MEETING OF CARPENTERS AND JOINERS.—On Thursday evening a great meeting of these trades was held in Exeter hall. Mr. Hooper in the chair. The first resolution, as follows, was moved by Mr. Perry:—"That in order for operatives to become skilled workmen, honest citizens, and good men, it was requisite that there should be some time set apart for the development, cultivation, and improvement of their mental faculties; and the meeting felt fully assured that much overtime necessarily incapacitated them for the full attainment of that which was essential to quality them for the discharge of their moral, social, political, and religious duties of life." This was ably seconded by Mr. Seacombe; when Mr. Nettidge moved, as an amendment, "That systematic overtime was prejudicial to workmen, but to that was not carried on to such an extent as to call forth the interference of the carpenters and joiners, as a body." (Loud hisses and cheers.) This amendment was seconded by Mr. Jackson; but after some very warm discussion, the original resolution was carried unanimously. The next resolution was, "That systematic overtime be abolished except in cases of emergency, when time and a half should be paid." This was also carried; and so was another resolution, in which the meeting pledged itself to adopt a general plan of organisation. A vote of thanks to the chairman terminated the proceedings.

CITY IMPROVEMENTS.—On Thursday twenty houses were sold for pulling down, in Coppice-row, to assist in forming the new street to Clerkenwell; but the buildings will not go on till the new railroad from King's-cross is decided on.

FIRE.—A large fire broke out on Thursday evening, about seven o'clock, and which was not subdued till midnight, on the premises of Mr. Dudin, granary-keeper and wharfinger, on the land side of Shad Thames. Very great damage was done, and a fireman named Heffnegry was so much injured that he was taken to Guy's Hospital. The premises were wholly destroyed, except the lower floor. Mr. Dudin is not insured sufficiently to repay the loss sustained.

CHLOROFORM.—A young woman named Munden, aged twenty, died at St. Bartholomew's Hospital on Thursday, while under the influence of chloroform. This is said to be the first instance at that hospital out of hundreds of cases weekly.

LONDON AND WEST KENT.—A meeting of landowners and residents of Maidstone and its neighbourhood was held on Tuesday, at the Star Hotel, Maidstone, for the purpose of considering the outline of a project for the formation of a railway from Sydenham to Bromley, by Lford to Maidstone, with branches to Lewisham, Greenwich, Eltham, and Newington Causeway, for local and suburban traffic, and with duplicate lines and independent termini for Crystal Palace traffic. Lord Holmesdale was called to the chair; and, after some discussion, in which Sir Charles Fox took a part, Mr. P. Cator proposed, and Mr. Simmons seconded, a resolution to the effect, that the projected railway was deserving of the best support of the landowners and inhabitants of Maidstone and its neighbourhood, was carried unanimously.

CALENDAR FOR THE WEEK.

SUNDAY, Oct. 23.—22nd Sunday after Trinity.
MONDAY, 24.—Edict of Nantes revoked by Louis XIV., 1685.
TUESDAY, 25 St. Crispin. Battle of Agincourt, 1415.
WEDNESDAY, 26.—Riots at Bristol, 1831. Hogarth died, 1764.
THURSDAY, 27.—Sir Walter Raleigh beheaded, 1618.
FRIDAY, 28.—St. Simon and St. Jude.
SATURDAY, 29.—Morland died, 1104. Hare hunting begins.

TIMES OF HIGH WATER AT LONDON-BRIDGE,

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, OCTOBER 22nd, 1853.

THOUGH the great question of peace or war is still undecided, by the individual who, unfortunately for Europe, has the power of settling it as best suits his conscience, or his want of conscience, the various parties to the dispute are defining their own positions with more precision than has hitherto been apparent. Turkey has declared war, and Great Britain and France have determined, if need be, to support and aid her to the utmost extent of their resources. Prussia and Austria have determined to maintain a strict neutrality, and to exercise as mediators whatever influence they may happen to possess with one or other of the belligerent parties. The only person who has not yet declared in explicit terms what he means to do is the Czar. It is possible that before this sheet meets the eyes of our readers, the uncertainty that still enshrouds the intentions of that powerful individual, may be removed. But whatever be the result, the neutrality of Prussia and Austria is a fact of good augury. If strictly maintained, it will prevent the war—should war arise—from becoming a general one, and will render future pacification all the less hopeless than it might otherwise be. Those two Powers have exercised a wise discretion. To Austria, a war on the side of Russia would be absolute destruction. To Prussia, a war in support of the Emperor Nicholas would be in the highest degree perilous. To have taken part with Great Britain in defence of the outraged independence of Turkey—though a safer, because a just policy—would have exposed both of those states to no inconsiderable dangers at the hands of the Czar, who, whatever the Germans may think, is virtually the master of Germany, as well as of Russia. Their neutrality will thus be useful to themselves, and may be highly beneficial to Europe, in enabling them to advise and mediate both before and after the commencement of hostilities.

Great Britain and France, though anxious to give the Emperor of Russia every possible facility for withdrawing his unjust pretensions—though they would build him, not only a bridge of gold, but would stud it with diamonds, if he would only do them the favour to retreat—are determined to make their defence of Turkey a real and effective one, should Turkey think fit to demand it. We have already said, on a previous occasion, that Turkey is not so weak as Russia would make the world believe. The Turks are confident in their own strength. Pachas and Viceroys, in Asia and in Africa, who, when no danger menaced the Empire, were rebellious and intractable, and yielded small allegiance, and still smaller tribute, to the Porte, have rallied round their Sovereign in the day of his peril. Both Asia and Africa will pour into Europe countless swarms of admirable soldiers, with a courage exasperated by fanaticism, to assist and uphold the Padisha of the Faithful. It may be that the very extremity to which Turkey is reduced, may be the means of bringing out all the latent force and all the pristine energies of the national character, awaken heroic virtues that have long slept, and be the means of the regeneration, rather than the ruin, of the Empire. This were a consummation that would indeed frustrate all the long-cherished schemes and ambitious projects of the Czar, and prove his boasted wisdom to be no better than foolishness. It would be a result as grateful to the public spirit of the Turks as it would be to the sound commonsense of the people of Western Europe. In such a case, the part to be played by Great Britain and France would reduce itself to that of spectators—spectators prepared to assist the rightful side, if, unfortunately, it should prove to be the weaker one, and offering their best wishes and most fervent prayers for the defeat and punishment of selfish and unwarrantable aggression. Were it possible for statesmen to mould events to their own will, there can be little doubt that this is the result to which all the efforts of the Governments of France and Great Britain would be directed; and in which they would be unanimously supported by public opinion in their own countries, and by every right-thinking and honourable-minded man in Europe. As for the arguments of those incomprehensible writers who maintain that a Mahometan state existing in Europe has no claim to the support or sympathy of Christian nations, we hold them to be utterly worthless. They defile the mouths which utter and the pens which write them. Were it conceded that Turkey were as bad as, or worse than, they have represented her to be, the fact would plead no justification for the aggression of Russia, or the acquiescence of Europe. We may not love an idle vagabond who whines at our door for charity, who is clothed in tatters, and whose moral character may be a disgrace; but, if such a vagabond were wantonly knocked down and cut, or bruised and maimed, we would rescue him from his assailant; and, if his life were sacrificed, would consider that life, ignoble as it might have been, to be as sacred in the eyes of the outraged Law and Gospel, as if its owner had been a prince and a potentate among men. There are writers amongst us who depict Turkey in colours even darker than these; but they forget that even if their calumnies were true, the justice of the case would remain the same; and that it would be as much the duty of Europe to resist the covetous despot who makes war upon her as if Turkey were a Christian nation. But such arguments scarcely merit notice—the common sense of the multitude rejects them. Turkey will, perhaps, vindicate herself—not by words, but by gallant deeds. If she, unaided, could but humiliate the pride, and repel the power of Russia, the result would be well worth all the anxieties and perplexities of the last few months—even if they had been increased ten-fold. Such a triumph lies within the contingencies and calculations of the game. We are certain that it would be hailed with delight in every civilised state in both hemispheres.

THE Court of Aldermen have been reversing the precedent of that famous Irish jury which found the prisoner "guilty of murder," in spite of the personal evidence of the presumed victim, "because, sure, he stole Tim Doolan's grey mare." The public complain that Temple-bar is very much in the way of the traffic to and from the City—that it creates, many times a day, and many days in the week, a dead lock between Bridge-street and the Strand; and Aldermen report, and reply that Temple-bar is no obstruction at all; that all the difficulty arises from Chancery-lane: and then, without proposing to alter Chancery, or any other lane, they go on to recommend that Temple-bar should not be widened, but beautified—washed and scraped, we presume; provided with a new oak door, and perhaps a brass knocker; the little windows in the archway replaced by plate-glass, or coloured panes; and the rooms made more comfortable for the lady partner in Child's bank (Child's petition in support of the Temple-bar nuisance), so that the friends of the firm may be better accommodated whenever a feast or a funeral procession draws West-end sight-seers so far into the East. In this decision of the Court of Aldermen we have two points brought under our consideration—one of fact, and one of taste. It is only necessary to take one's stand at Temple-bar for half an hour, at the busiest time of day, to be convinced that the Committee of Aldermen made their investigation at a very early or a very late hour.

The upper and wider portion of the Strand is always open and free from dead-locks and smashed panels. As the wayfarer approaches the space between St. Clement Danes and the "Bar," his pace slackens; at the Temple-bar the four lines of vehicles, which can so easily traverse the Strand either way, are obliged to arrange, according to the vigorous skill of the drivers, the speed of the horses, or the stoutness of the carriages, which shall be the favoured two to take the lead either way through the gate. Fleet-street is too narrow for modern traffic—so is Ludgate-hill. The houses round St. Paul's stand inconveniently in the way; droves of beasts and sheep from Smithfield to Blackfriars'-bridge assist "wheel-locks," and add to the confusion: but it is as plain as possible to every one but an Alderman, that the Temple-bar gateway—which reduces four lines of vehicles to two—is the great obstruction. The Duke of Wellington said there were not half a dozen Generals who could get an army of a hundred thousand men out of Hyde-park in good order. We may venture to say that in no other country could we find charioteers able to make their way through such a "Pass" as Temple-bar without a crash. We can only account for the obtusity of aldermanic intellect on this point by imagining that, as dreams are said to go by contraries, the report was drawn when the worthy gentlemen were in a dreamy state, under the soporific influence of a City banquet.

But although the nuisance of Temple-bar is obvious to every one not provided with City spectacles, the proposition for utterly destroying the last symbol of the west-end boundaries of London city is quite a different thing. We are no advocates for gratuitous destruction, although we are no friends to sentimental obstruction. Between pulling down and dispersing men's work, and leaving Fleet-street in its present besieged state, there are several alternatives.

Mr. Peter Cunningham has stepped forward in defence of one of the monuments of the City he has so well described; and proposed to clear away the musty and squalid buildings on either side, and, leaving the arch standing, to open two additional roadways. This suggestion would preserve a monument which, although neither very ancient nor very ornamental, is still an interesting relic of bygone times; and would, by destroying what is certainly not worth preserving, commence improvements which it is high time should be carried further. Another alternative would be to treat Temple-bar like the Marble Arch, and re-erect it in the grounds of the New Crystal Palace, or in some other less inconvenient situation than that which it at present occupies.

After all, the question about the greater or less obstructiveness of Temple-bar is only one of a series of practical questions involved in the present condition of the communications through London.

We do not envy France the despotic powers which are rapidly rendering Paris the finest, the cleanest, and one of the most healthy cities of Europe; but we do wish to see an intelligent public opinion directed against the apathy and "want of system" which either obstruct all improvements, or convert intended improvements into new nuisances. London-bridge is almost impassable morning and evening; Fleet-street is little better; Holborn, with its Alpine ascent and descent, consumes thousands of pounds of horseflesh every year; the banks of the river are a disgrace to any civilised community, and City disgraces are more than kept in countenance by the abominations of radical and unmunicipal Lambeth.

The Corporation of London certainly requires repair, reconstruction, and ventilation, new avenues and renewed foundations even more than Temple-bar.

VERNON GALLERY, MARLBOROUGH-HOUSE.—This Exhibition is to be re-opened to the public on Monday next, the 24th inst.

THE NATIONAL GALLERY.—On Wednesday, the authorities of the National Gallery, Trafalgar-square, issued a notice to the public, stating that, in consequence of the extensive alterations and repairs which are now proceeding, the Gallery would not be opened to the public on Monday next, the 24th inst., as heretofore; but that the Exhibition would positively be re-opened on Monday, the 7th of November next. It is expected that there will be several valuable additions made to the Gallery before its re-opening.

ABOLITION OF THE MERCHANTS' ROOM AT LLOYD'S.—At a meeting of the committee of management at Lloyd's, on Wednesday, it was agreed to abolish the merchants' room, the same being required for the business of the underwriters in connection with the "Rising" underwriters' room." The change is fixed for the 31st of next March.

RAILWAY TRAFFIC.—The railway traffic returns on the principal lines, as far as received for the past week, all show a progressive increase over the same periods last year. The principal increased returns are the following: Great Northern, £4073; York, Berwick, and combined lines, £4111; London and North Western, £1939; Oxford and Worcester, £1425; Midland, 1448; Great Western, £1209; Caledonian and combined lines, £1232; London and Brighton, £897; South-Western, £891; South Eastern, £481.

THE COURT.

The return of the Court to Windsor-Castle was announced last week. Her Majesty, early on Saturday morning, accompanied by the Princes and Princesses of the Royal family, walked for some time in the grounds adjoining the Castle. In the course of the day the Earl of Aberdeen arrived from London, and had an audience of her Majesty.

On Sunday the Queen and the Prince Consort, with the Prince of Wales, the Princess Royal, and Princess Alice, and the ladies and gentlemen of the Royal household, attended Divine service in the private chapel of the Castle. The Hon. and Rev. Gerald Wellesley officiated.

On Monday the Queen, with the Princess Royal and the Princess Alice, took equestrian exercise in the Royal riding-house. At an early hour in the morning, Prince Albert, attended by Colonel the Hon. Charles Grey, Lieut.-Colonel Francis Seymour, and Lieut.-Colonel Baddalph, left Windsor, and proceeded to London by a special train on the Great Western Railway. His Royal Highness drove to Buckingham Palace, subsequently visited her Royal Highness the Duchess of Gloucester, and returned to Windsor Castle at a quarter past two.

On Tuesday morning the Queen and the Prince walked in the Home Park. The Prince afterwards took equestrian exercise, and in the afternoon his Royal Highness accompanied her Majesty in a carriage airing. The Earl of Aberdeen arrived from London at six o'clock, and had the honour of dining with her Majesty.

On Wednesday the Queen, with the Princess Royal and the Princess Helena, took equestrian exercise in the Riding-house.

On Thursday the Queen walked on the Slopes at an early hour. The Prince Consort went out shooting, attended by Colonel the Hon. Charles Grey. The Duchess of Cambridge and the Princess Mary, and the Hereditary Grand Duke and Grand Duchess of Mecklenburg-Strelitz visited the Queen in the course of the afternoon.

Lord De Tabley has arrived as Lord in Waiting, and Colonel the Hon. Charles Grey as Equerry to the Queen. Lieut.-Colonel Francis Seymour has succeeded Lieut.-Colonel Hon. A. Gordon in waiting to his Royal Highness Prince Albert. The Hon. Eleanor Stanley and the Hon. Beatrice Byng have succeeded the Hon. Mary Bulteel as Maids of Honour in Waiting to her Majesty.

The Queen will hold a Privy Council on Monday next, the 24th inst., at Windsor Castle.

Her Imperial Highness the Grand Duchess Marie of Russia came to town from Torquay last week, accompanied by two of her children, the Prince Eugène and the Princess Eugénie, for the purpose of visiting the various national establishments, and objects of interest now open for inspection in the metropolis. The Grand Duchess was to leave Dover yesterday (Friday), on her return to St. Petersburg.

Her Royal Highness the Duchess of Kent arrived in town on Tuesday afternoon, from York, attended by Lady Augusta Bruce, and Sir George Couper; and proceeded to her residence, Frogmore, near Windsor.

Her Royal Highness the Duchess of Gloucester has been slightly indisposed, at Gloucester House, since her return from Richmond Park. The Duchess of Cambridge, and the Princess Mary arrived in town on Tuesday, from Kew, and paid a visit to their illustrious relative.

The Ex-Queen of the French is at Geneva, suffering from an attack of pleurisy, from which, however, she was recovering by the last accounts.

The Duke and Duchess of Beaufort are surrounded by a select circle at Badminton-park.

The Earl of Cardigan, who has been cruising off the Irish coast, has arrived in Portman-square, *en route* to Dean-park, Northamptonshire.

The Count and Countess Woronzow, accompanied by the Russian Count Stophny, have arrived at Piercy's Hotel, from visiting the Earl and Countess Bruce, at Savernake Lodge, near Marlborough; where a distinguished party, including the Secretary at War and the Hon. Mrs Sidney Herbert, were invited to meet the distinguished foreigners.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rectories:* The Rev. E. M. D. Fyne, B.A., to Bawdsey, otherwise Bawsey, Norfolk; the Rev. F. Swire, B.A., to Elston, Notts; the Rev. F. Trench, to Worlingworth, with Southolt annexed, near Woodbridge, Suffolk; the Rev. B. H. Packle, to Graffham, Hants; the Rev. C. C. Barnard, to Ruckland, with Farforth, and the vicarage of Maiden-well annexed near Louth, the Rev. C. New march, to Leverton, near Boston; the Rev. H. West, to Pett, near Hastings, Sussex; the Rev. T. Cowdell, to Norton Disne, Northampton. *Vicarages.* The Rev. S. I. Butler, to Penrith, Cumberland, the Rev. W. H. Milner, to Thornthwaite, Lincolnshire; the Rev. S. Baker, to Clifton-upon-Teme. *Incumbencies:* The Rev. R. B. Kidd, to Butley, near Woodbridge, Suffolk; the Rev. D. T. Barry, to St. Barnabas, Liverpool; the Rev. G. Dwyer, to St. Mary's, Kirkdale. The Rev. G. Fosbrooke, to the curacy of Whippenham, Isle of Wight, and to the chaplaincy of the Royal establishment at Osborne House.

CHURCH-RATES have been carried at Ruthin, Carnarvonshire, by a majority of 39; at Wrexham, after two days' poll, by a majority of 234. At Rotherham, however, the rate was rejected by 1003 to 802. And, last week, a rate of a penny in the pound, was refused at Sheppy Minster, by a majority of 152 to 26.

TESTIMONIAL.—On Wednesday week an elegant silver inkstand was presented to the Rev. Mortimer Manley, M.A., by the parishioners of Bodham and Baconsthorpe, Norfolk, in testimony of their esteem and respect, and upon the occasion of his resigning the above curacies, after eight years' ministry in the same.

MISS CUNNINGHAME'S RELEASE.—A letter from Florence states that—"The President of the Tuscan Council, M. Baldasseroni, informed Mr. Scarlett, her Britannic Majesty's Chargé, on Sunday last, the 10th inst., that the Grand Duke had been pleased to pardon Miss Cunninghame—that he was willing to regard the past as cancelled, and in consideration of the sex of Miss Cunninghame, and the imprisonment she had already undergone, to accord to her her liberty. He, however, took that opportunity of expressing his extreme disapprobation of the conduct of the English in Tuscany; that he hoped that what had lately occurred would be taken as a lesson; and that he was determined to exercise the utmost rigour of the law against all English offenders for the future, especially against those offending against or infringing in the slightest degree the laws respecting religion."

THE WILTSHIRE ARCHÆOLOGICAL SOCIETY.—The Archæological and Natural History Society, which has been formed in Wiltshire, was inaugurated in Devizes, last week, under auspices which promise to it a long career. Few counties in England present to the antiquary more interesting objects than Wiltshire; and, although much has been done to Aubrey, Stukeley, Hore, and in later days by Britton, to elucidate the primeval relics by-gone ages, there is still ample scope for all the talent which was then collected together, in the various uninvestigated portions of Wiltshire, whose historic renown has hitherto escaped the attention of individual research. The general objects of the society were well and ably set forth by Mr. Poulett Scrope, in his inaugural address. The large assembly-room of the Town-hall was almost entirely filled. The Marquis of Lansdowne took the chair. The report of the provisional committee was read by the Rev. Mr. Lukis. At half-past four o'clock about fifty members of the society sat down to dinner at the Bear Hotel, under the presidency of Mr Sotheron. Among the toasts drunk after the removal of the cloth was the health of the venerable antiquary, John Britton, Esq. A *conversazione* was afterwards held at the hall, at which the Rev. J. E. Jackson further explained the design and objects of the society.

GREAT SALE OF LIVE STOCK ON PRINCE ALBERT'S FARMS, AT WINDSOR.—On Monday, the annual selection of live stock, the property of his Royal Highness the Prince Consort, was sold by auction, at Norfolk Farm, and attracted a large attendance of butchers, graziers, and others. First in order of sale were the pigs, which realised very high prices, comparatively small hogs ranging from £5 to £6 each. The pigs made altogether nearly £200. The sheep consisted of 420 fat South-downs, 300 home-bred ewes and lambs, with several rams; the whole of which were disposed of at good but not exorbitant prices. Of the cattle, the dairy-cows ranged from £14 15s. to £16 10s.; the fat cows and heifers, from £15 15s. to £22 10s. The Hereford ox (fed on cake and meal) was really a splendid animal, and realised the large sum of £46. The fat short-horned oxen varied from £18 10s. to £28 each, the five-year old steers, from £13 to £17; the four-year-olds, from £10 to £12 10s. The fat Devons ranged from £17 to £24 10s. A two year-old short-horned bull was knocked down to John Hervey, Esq., for £35; an Alderney bull of the same age fetched about half the money. The total proceeds of the sale were about £4000.

THE APPLE CROP IN THE WEST.—A vast increase has of late years taken place in the quantity of cider made in the west of England. The crop of apples this year has been more than an average, in fact, in some parts they have been exceedingly abundant. Near Exeter, and in the South of Devon, the trees are almost broken down with them. Cider, therefore, is expected to be very cheap. A brisk trade has sprung up of late with the London market.

THE ILLUSTRATED LONDON NEWS

No. 651.—VOL. XXIII.] SATURDAY, OCTOBER 29, 1853. [PRICE, WITH A SUPPLEMENT, SIXPENCE.

THE WOES OF SCOTLAND.

For a whole century Scotland has been without a grievance. Ever since the Battle of Culloden put an end to rebellion—and introduced the law into districts where writs, and parchments, and the officers of justice, were matters of vague rumour, sometimes witnessed south of the Grampians, but never permitted to penetrate into the sacred retreats of the Celtic aborigines in the far North and the savage West—Scotland has been a prosperous and a contented country. Her national pride was satisfied by the accession of her Royal house to the throne of England; and when revolution set aside and exiled the male representative of that illustrious line, it was in virtue of their descent from a female branch of the house of Stuart that the family of Hanover were elected by the Supreme Council of the Nation to occupy the vacant throne. Under a settled form of Government the energies of the Scottish people soon began to develop themselves. Edinburgh, it is true, descended to the rank of a provincial city, and became of scarcely more political importance than York or Chester; but, instead of Edinburgh, there arose the city of Glasgow, which, next to London itself, is the finest, the richest, the most thriving, and the most populous city in the British Isles. Even Edinburgh did not suffer like other mediæval cities in the southern parts of the island. Situated near the noble estuary of the Forth, she had a port in Leith, which enabled her to maintain a commercial position, and to assume and hold a high rank in the encouragement of art and literature. In all those fertile counties north of the Tweed, where that rich 'Doric" dialect of the English language commonly known as broad Scotch is spoken, and which are inhabited by a people descended from the same Saxons and Scandinavians that occupied Cumberland, Yorkshire, and the other English counties, agriculture improved, manufactures were introduced, and trade and commerce flourished to an extent which, though equalled, was not surpassed, in England. In all the great fields of human thought and enterprise Scotchmen were competitors. The records of art, of science, of literature, of philosophy, of divinity, of the army, of the navy, of the diplomatic service, and of the most extensive commerce in the world, show the names of illustrious Scotchmen who have become eminent in each. No disability, civil or religious, afflicted the Scotchman. No impediment to his success ever stood in his way that did not stand equally in the way of an Englishman. To all intents and purposes the English and Scotch became one people. If there be a dark side to the glowing picture, that might be drawn of the progress of Scotland, subsequent to the "'45," the darkness is no result of government or of politics, but is solely attributable to blood and race. It could scarcely be expected that the Celt could prosper in the same degree as the Southron: his temperament is different; he speaks a barbarous language, and is ignorant of the noble speech that prevails in every other part of the island except amidst the rude and remote fastnesses of the mountains. By these unfortunate circumstances he is shut out from much of the civilisation of his time and nation. Like his unhappy brother in Ireland—suffering from the same causes—he lacked energy, and lived contentedly upon potatoes, while a man of the south would have meditated rebellion, unless he had had beer. He increased, and multiplied, and replenished the earth; and at last found, to his sorrow, that his means of subsistence had not increased in anything like the same ratio. Hence arose the only real misery of Scotland. But the operation of these causes stopped at Glenfalloch and the Grampians. It was never felt at Perth or at Dumbarton, and no more afflicted Edinburgh or Glasgow than it did Liverpool or Southampton. With this exception, the history of Saxon Scotland is but a history of peaceful progress. In fact, Scotland—like the king in the Eastern fable, or like a rich hypochondriac—has been too happy. There was not a single screw loose in her whole machinery—there was not a button off her garments to torment her. She was sound in wind and limb; had her own say and her own way in religion and in politics; had a comfortable balance at her bankers, and had nobody in the world to coerce or overawe her. But, alas, for the vanity of human wishes! Neither men nor nations will be happy when they may. Scotland, in the plethora of her well-being, has discovered in the year 1853, that there is something wrong with her. She has found out a grievance, and determined to make herself duly miserable about it. Taking an example from the late Daniel O'Connell, she has resolved to agitate, to get up petitions, to hold monster meetings, and even to talk of a repeal of the Union, unless she be properly humoured in her demands Before next Saturday the people of Scotland, or a few zealous individuals claiming to be representatives of the national wish, will have assembled in solemn conclave in the ancient city of Edinburgh, under the presidency of one of the most illustrious of Scotchmen, the representative of the ancient house of Montgomerie—the Earl of Eglinton and Winton, the mediæval champion, the redoubtable lord of the tournament. The machinery of the press has been employed for some months past in Scotland in preparing the national mind for this great manifestation, and speeches will be made, resolutions will be passed, and petitions will be adopted to show that the burs of the old Scottish thistle are by no means flaccid, but can prick and sting as venomously as of yore. But the English reader will naturally enquire whence comes all the outcry? And are the Scottish people, or any portion of them, really in earnest? We believe that there can be no doubt of the earnestness of those persons who have taken up the question of what they are pleased to call the grievances and the wrongs of Scotland. We shall endeavour to show as briefly as we can of what those wrongs and grievances in reality consist, even upon the showing of those who have taken upon themselves to agitate in this matter.

We have not before us all the documents that have been issued upon the subject; but we think we shall be enabled to state

"THE DALHOUSIE," WRECKED OFF BEACHY HEAD.—(SEE PAGE 362.)

without much danger of having our accuracy impugned, that the "grievances" of Scotland amount to five. If there be any more we shall be glad to rectify the omission on the behest of any ultra-Scot who may consider himself or his country aggrieved or insulted by our neglect or misinterpretation.

The first grievance is a heraldic one. It appears that the old lion of Scotland—for Scotland has a lion as well as a unicorn—has not that place on the national flag which these jealous Scotchmen consider to be his indisputable and imprescriptible right. He plays a subordinate part, his nose is put out of joint, and the dignity of the noble brute is sorely wounded—of course to the great discomfort of all true Scotchmen.

The second grievance is of a similar kind, and must have taken a very keen eye to have discovered it. It appears that on the new coin, the florin, the shield of Scotland is placed in a position inferior to the shield of England. For this also the doughty champions are in arms; and, to obtain redress, the lance of Eglinton and the sword of Lion "King-at-Arms" are to be aimed against all who gainsay or deny. Whether the outraged honour of Scotland will be satisfied with anything else than the withdrawal of the obnoxious coin remains to be seen.

The third grievance appears to be that the ancient Palace of Holyrood has been suffered to fall into decay, and that niggardly and tyrannical England begrudges the money to repair it. It is true that a palace more splendid than Holyrood is rising at Balmoral, but this fact has been overlooked by the Scottish agitators. But we must confess that in this item our sympathy with the Scottish cause, infinitesimal though it be, begins to be excited. It seems to us that it would be a judicious expenditure of the public money to restore Holyrood to as high a pitch of splendour as it ever attained in the palmiest days of the Stuarts. We hope that the thing will be done, and that Lord Eglinton may hold another tournament within its precincts, and that we may be there to see and to illustrate it.

The fourth grievance is, that Scotland is "denied the honour of a guard-ship at any of her ports; and that thus the capital of Scotland—which might have sent her own fleets to sweep the waters—is degraded to a mere seaport town or fishing village." But it is not only on the point of honour—although that is something—that the Scotch are dissatisfied in this respect. "A guard-ship," says one of the newspaper organs of the disaffected, "is something more than a mere point of honour, for the constant victualling, the pay, &c., of a crew of five or six hundred officers and seamen, are a permanent benefit to the town where such a ship is stationed." Here the triumphant spirit of shop betrays itself and the "douce and cannie" character of the nation is vindicated as it ought to be. We, therefore, hope that Leith will have a guard-ship, and Greenock and Cromarty to boot!

But the fifth grievance appears to be the most serious one. Though Scotland, as we learn from the authority already quoted, "was the birthplace of James Watt and Henry Bell, yet England retains all the dockyards and great naval arsenals, as if she were jealous of entrusting the Scotch with a share in building their own wooden walls, or as if they were ignorant and unable to achieve their construction." This, however, strikes us as being a grievance that Yorkshire, or any county on the coast, might as well put forward as Scotland. It is a great question whether the Government would not do wisely to relinquish the trade of ship-building, and have its ships built by private contract, as the mercantile community of England and Scotland is glad to do. We believe that by such a course the Government would be provided both with better and with cheaper ships than by the present system. If Scotland could, under such circumstances, build cheaper and better men-of-war than can be built in England, she would, no doubt, have her fair share of all the work that was going. But in such a cause must the sword of Eglinton and Winton be necessarily unsheathed? An shall we repeal the Union on so vile and unsatisfactory a pretext? Scotchmen are too "cannie" and sensible to desire such an absurdity. "But," say the agitators, "there is a good time coming. Scotland is awaking from her lethargy. She is about to throw off the incubus that so long has weighed her down, and the voice of the association for the vindication of Scottish rights has gone throughout the length and breadth of the land, like the summons that went with the fiery cross of old." On the 2nd of November—eventful day! Scotland will require the redress of these grievances in a manner which we are told "shall startle the dullest echoes in Downing-street." Seriously, we did not think that there were twenty men in wise and thrifty Scotland who could make such fools of themselves.

FOREIGN AND COLONIAL NEWS.

FRANCE

(From our own Correspondent.)

PARIS, Thursday.

Public attention has been much and painfully excited by the number and importance of the arrests made within the last fortnight. No pains have been spared, no means left untried, to discover the plans of real or suspected conspirators, even to the minutest searches in articles of furniture, mattresses, &c. A *perquisition* took place at the house of M. Bastide, the Minister of Foreign Affairs under the Republic, without, it appears, leading to any disclosures. M. Goudchaux, another of the Republican Ministers, was arrested at his domicile, under an accusation of concealing arms, and being connected with a secret society; and M. Charles de la Varenne has written a letter to the *Union*, stating the fact, that, after a fruitless search of three hours among his papers, he was conducted to the *dépôt de la Préfecture*, where he remained four days in secret, without being subjected to any interrogatory whatever; at the end of which period he was released, no motive for either his arrest or liberation being given in explanation. The *Presse* reprints this letter, with a short comment signed Emile de Girardin, which, to the astonishment of the public, has been allowed to pass without notice by the Government. It is asserted, and we believe on good authority, that on the return from Compiègne, the Empress seriously desires that all the penalties incurred by the writers and editors of the public papers during the course of the year shall be remitted. Such a measure was already spoken of on the occasion of the fête at Eugénie in September; but as the celebration of the Empress's fête is referred till the St. Eugène in November, it is expected that, if the report of such an intention be true, it will be carried into effect on that anniversary. It is observed that the Empress is once more dressed by Louis Napoleon on his right, when they drive out in public; and this fact, with the circumstance of her Majesty following the *chasse* in a carriage, instead of on horseback, as it was stated she was to do, is significative of the renewed hopes of *leurs Majestés*.

It is reported that, in addition to the adoption of the *maximum de cote*, and the creation of various new titles, the establishment of the Imperial Pages is to be restored, and a variety of other institutions of a similar nature to be announced; facts which excite much bile in certain *salons* of the Faubourg St. Germain, where such acts are regarded as far more important light than events of a national or political nature, however grave may be their tendency.

It appears that the question of emigration, one hitherto so little attended to, and regarded with so little favour in France among the population—is likely to receive an impetus which certainly cannot fail to prove highly beneficial in its results. Not only are the advantages and capabilities of Algeria being, with this view, seriously studied, but the attention of practical men is being turned to Corsica, as a spot, which, from its climate and produce, and its hitherto almost uncultivated and, consequently, unimpoverished soil, affords prospects of the most encouraging nature to emigrants. Three commissioners have been charged by the Minister of the Interior to examine into the state and resources of the island, and Dr. Conneau, the physician of Louis Napoleon, has, it is said, received the commission to report on the degrees of salubrity of its least known and least inhabited portions. The riches of Corsica, consisting in forests, a fine soil, a climate that ripens the rarest fruits, game and fish in profusion, are precisely those calculated to repay the labours of the emigrant; and it is to be hoped that these facts once sufficiently manifested, some of the inhabitants of France will be induced to quit the misery in which they have been born and bred, and in which they will otherwise die, to seek a country where their labour will bring an honest and adequate means of existence.

There is being erected at this moment, on a prominent point of the Butte Montmartre, a lighthouse of fifty mètres in height, on the summit of which is to be placed an electric apparatus, which is to light the whole of the south of Montmartre and Paris as far as the Boulevard des Italiens.

The famous "Memoires d'un Bourgeois de Paris," of M. Véron, has not altogether the success it was anticipated it would meet. Many of the anecdotes are so trivial, that the heads of the chapters contain all their point; those that would really command the most interest, it would, with the restraints imposed on the press, be difficult or impossible to publish; and altogether it is found by many readers that the book falls short of the amusement and instruction expected from it. M. Véron had, it appears, the intention of illustrating his work by an engraving, representing himself (*beau portrait!*) in the act of drawing a curtain, and revealing to the public all the personages passed in review in the said "Memoires;" but this indulgence has been denied the author, and the curtain remains undrawn. Already is the spirit of ridicule at work on this production, the *Librairie Nouvelle* being about shortly to publish, in five volumes, "Les Mémoires de Bilboquet," a parody on those of M. Véron.

The Opéra has produced, with considerable success, the long-talked-of work of Limnander, "Le Maître Chanteur;" the poem by M. H. Trianon. The scene, passing in Germany in 1493, affords occasion for all that is most romantic in place, language, and decoration; and the music admirably sustains this character. The *chant de Charlemagne*, "O lune, à toi je bois," and the romance of "Marguerite at the Window," are, with one or two others, airs of a genuine beauty and merit. Rossi is shortly to appear at the Opéra in a Mexican ballet, entitled "Jovita." The Français is giving "Murillo," a comedy by M. Aglie Langlé. Although betraying in certain portions the inexperience of a young hand, and not built on a very powerful plot, the piece has so much of poetic feeling, eloquence of language, and sentiment, and a certain freshness and originality of composition, that it merits and obtains considerable popularity. The Opéra Comique has a work entitled "Colette," which is weak and commonplace; the Palais Royal, an amusing piece, "To be, or not to be," and the Ambigu, a melodrame, "La Prière des Naufragés"—very *larmoyant*, sufficiently effective, and with a certain degree of originality, which, in general, is the point particularly excluded in this style of production.

As we last week commenced by informing our readers of the promise of M. Alexandre Dumas to furnish the Théâtre Français with a *remplaçant* for the "Jeunesse de Louis XIV.," by a second piece, of five acts, changing not only the cipher, but the plan, the character—every detail, in short, *in toto*—written in five days; we now beg leave to announce to them—not that he has kept his word (that, apart from some singular circumstance, everybody expected)—but that he has curtailed two days of the period named, thus completing a play of five acts in the space of three days! The work, read at the theatre on Saturday, was received *à l'unanimité*, and will shortly make its appearance.

Madame George Sand has been occupying herself in dramatising her admirable novel of "La Roche Mauprat," at the request of the new manager of the Odéon, M. A. Roger, but it appears probable that her labour will, for the present, at least, be lost, the Censor being far too strict to permit the appearance of a work of decidedly republican tendencies.

The residence of the Emperor and Empress at Compiegne—where they have been enjoying the pleasures of the chase and the sports of the woods—has been an uninterrupted series of fêtes. The Emperor and Empress enjoy excellent health. On Friday there was a stag hunt, at which a serious accident occurred to a lady of the Imperial party, Madame Tnayer. The horse on which she was riding reared and fell back, by which she had a leg fractured. A letter from Compiegne says:—

"It appears that the stag-hunt at Compiègne, in which Madame Amédée Thayer, wife of the Senator, had her leg broken, was very nearly occasioning more numerous and grave accidents. The stag rushed into a stable, and there kept the dogs at bay. In so doing he almost touched the horses of the Emperor and the Empress; as it was, the horses were greatly frightened and were with difficulty reined. M. Edgar Ney, in his quality of Grand Huntsman, rushed on the stag, his hunting knife in his hand, and killed him." Besides the fractured leg, Madame Thayer's other leg was a good deal hurt.

It has been remarked that Marshal St. Arnaud and General Canrobert, especially the latter, have had frequent private interviews with the Emperor. Amongst the visitors at Compiègne are Lord Cowley, Marshal Narvaez, Lord Hertford, Count de Morney, and Baron Rothschild.

It is rumoured that M. Delacour, the French Ambassador at Constantinople, is about to be recalled.

The French Finance Minister has found it necessary to imitate the step just adopted by Mr. Gladstone, and to raise the interest on Treasury bonds to the extent of an additional 1 per cent.

Notwithstanding the measures adopted by the French Government to keep down the price of bread, it is still on the increase. Some of the bakers of the *banlieue* of Paris complain that they have not yet been paid the indemnity promised to them by the Government when the price of bread was limited, and threaten to close their shops. In several localities it has been so twenty sous. Some disturbances have taken place in a few of the provincial corn markets.

A deplorable event is said to have occurred at Châlons-sur-Marne. The General commanding the division is said to have been killed in a quarrel with one of his officers. It appears that an altercation took place, when the General struck the officer (who was his aide-de-camp) with a stick on the face in a most violent manner. The aide-de-camp, under the excitement of pain and anger, ran to his pistols, fired at the General, and shot him dead. The quarrel is stated to have been on account of a lady very nearly related to the General.

SPAIN

Upwards of 10,000 persons are said to have recovered their liberty throughout Spain since the promulgation of the new law on expatriation.

WAR BETWEEN TURKEY AND RUSSIA.

The interval allowed by Turkey for the evacuation of the Principalities by Russia having now expired, and no preparations having been made by Prince Gortschakoff for withdrawing his forces, a collision between the two belligerent powers will probably have taken place before this meets the eyes of our readers. The rumour that Omer Pasha has intends to cross the Danube with the whole of his army, no doubt obtains credence, but every day may be expected to bring the news of skirmishes and irregular forays on the part of the Turks—unless restrained by secret instructions from Constantinople, which we owe it to the outraged dignity of the Sultan and his solemn declaration of war to attack the Russian forces and bring on a collision. The weather and the roads being, however, like unfavourable to hostilities upon the terrible ones of the Lower Danube, it is not in this quarter that we are taught to look for the commencement of warlike operations upon a large scale. A winter campaign upon the Asiatic shores of the Black Sea is said to be determined upon by the Porte; and, though the better discipline of the Russian army in Asia may give great advantage to Prince Woronzoff, this superiority may be more than counterbalanced by the greater number and vigour of the Moslem host under Abdi Pacha, and the alliance of the hardy mountaineers of the Caucasus. One half of the Turkish fleet has been despatched to Trebizond to sweep away the stations by means of which Russia cuts off the communication between the warlike tribes of the Caucasus, and to kindle a flame of insurrection in that region. The French and English fleets, too, have positively passed the Dardanelles. But while it is felt that hostilities between Turkey and Russia are inevitable, a feeling of buoyancy in the Exchanges of London and Paris testifies to the existence of a general belief that there will be no European war, and that the western powers will be able, before long, to effect a peaceful solution of the Eastern difficulty. Renewed pacific assurances have been received from St. Petersburg; and the announcement on the part of both the Czar and the Sultan, that war will not be allowed to cripple commercial operations with other states, may, in part, account for the diminished disquietude which has been felt during the week, as to the issue of the dispute.

The combined fleets of England and France entered the Dardanelles on the morning of the 14th. The fleets will not at present appear before Constantinople, but will first anchor near the island of Marmora, about half way between the Strait and the Golden Horn. This spot affords the fleets a convenient shelter, the anchorage in Besika Bay being such that it was no longer possible for the ships to remain there. A letter from Constantinople, of the 10th says:—

"This entrance was determined on on the 6th, after despatches had been received by the French steamer the *Solon*, and the steam frigate of the two nations which were at Constantinople proceeded to Besika Bay to bring up the sailing vessels. The *Solon* left to-day, to carry to the Admirals the decision which had been come to the day before by the Porte, relative to the spot where the squadrons were to come to anchor. The most perfect accord prevailed between the representatives of the four great Powers. The Turkish Government has officially recognised Selim Bey, and the other chiefs of the Circassian insurrection. It has given them titles corresponding to their grades, and is sending them arms and ammunition.

Since the war manifesto was publicly read at Constantinople, the war fever has been continually increasing, and every one is so intent on procuring arms, that even the most useful articles of household furniture are sold if the necessary funds for the purchase cannot be raised in any other way. In the midst of a population aroused to war, no lawless act whatever is heard of. European travellers, with their wives and daughters, walk fearlessly about the bazaars of the capital; nor have we to record a single instance of insult to a Christian, either native or foreigner. The behaviour of the Asiatic hordes in the capital and its environs is described as exemplary. A stranger cannot walk through the streets of Constantinople without seeing the most evident sign of war. Troops of the line are marching and countermarching; steamers are daily embarking men, horses, and baggage. The narrow streets and rickety wooden houses tremble to the roll of heavy ordnance dragged over rugged pavement. But these are the preparations of the Government, the mustering of the organised forces of regular warfare. Besides all this, we see the numerous volunteer corps of citizens arming themselves to resist their northern foe. The firemen of Stamboul—as stout, active, and rough a set of men as any city could furnish—march past, armed with battle axes and pistols, much like the ancient janissaries. Troops of Lazy Spahis, mounted with grey-bearded and respectable proprietors, who have buckled on their fathers' or grandfathers' rusty and furnished up some ancient firelock, are repairing to the Seraskier to tender their services, while rude Turcoman shepherds, from the mountains of Anatolia, armed to the teeth, are seen gazing with stupid wonder on the strange city life into which they are precipitated for the first time. Bodies of irregular horsemen—Kurdish, Turcoman, and Arab freebooters, whose costumes and arms are those of the middle ages—form a fine and picturesque contrast to some barrack warrior, the barbaric grandeur of whose arms and dress mark him as the child of a slain. Those who have travelled the length and breadth of the Turkish empire, and who fancied they could recognise its various tribes and peoples, even at first sight, since the dawn of war has called from unknown solitudes tribes of whose existence they were ignorant. The other day a troop of strange people from a far country appeared, whose arms were sumitars and bows and arrows; they were clothed in loose white garments and peaked caps—probably from some remote valley of Daghestan or Northern Kurdistan. How far such savages will be of service or otherwise, it is for military men to determine. It would appear that Turkey will have ample means to meet the irregular force of Russia, though the regular cavalry of the latter is vastly superior.

The official preparations for war are carried on with equal zeal, and four hundred men of war have left in part for the head-quarters of the two armies. Mehemed Ali, the gallant Seraskier, has promised an addition of 100,000 disciplined recruits in Asia, and 60,000 in Roumelia. 1,27 troops have arrived at Constantinople from Beyrout, part of the *corps d'armée* of Syria. About 8000 more were expected from the same place. The steamer *South South* has brought from Tripoli 1851 troops of the line.

About 1700 troops are just embarking for Trebizond. A steamer is now at Varna, waiting for the answer of General Gortschakoff to the ultimatum he has received to quit the Ottoman territory. In the event of the refusal to evacuate, the captain has instructions to proceed at once to Batoum, to order the commencement of hostilities. Six frigates are sent to defend the latter port. Ten thousand men a short time since passed up the Bosphorus on their way to Batoum, and both Omer Bey, a Circassian chief, seized the opportunity of returning to the frontiers of his native country. The corps at Batoum is perhaps the best organised body of men in the Turkish army. Its commanders are Oubsid Pacha (late General Guyon), the Seraskier Pacha (absent), Kmil Bey (late Colonel Osman Bey (Zabitzky), and other refugees with equally Ottoman names. The corps in question will form the vanguard of the army in Asia Minor. Fifty thousand Albanian men will be passed as an army of observation on the Austro-Greek frontier, and Mehemed Redschid Pacha, the Seraskier of Bagdad, has received instructions to adopt a similar measure on the Turco-Persian frontier. The cause of this precaution is, that it is supposed Russia has promised to allow more time for the payment of the debt owing by Persia if the Schah will make common cause with the Russians against Turkey.

It is confidently affirmed that at least 250,000 Turks, troops and rabble, are to cross the Danube; and if we add to this each man, as it is epidemic, the daily expense of the army will amount to 1,500,000 piastres, an outlay which Turkey cannot possibly long support. Namik Pacha, one immediately to Paris and London, as Extraordinary Commissioner, to contract a loan of £4,000,000 sterling.

The old Turkish Admiral, Achmed Pacha, has gone into the Black Sea with a squadron, composed of four frigates, a corvette, a brig, and a steamer, with a double allowance of captains and lieutenants, in order to prepare for eventualities.

The Turkish official organs speak with great satisfaction of the defeat of the Russian torrent of Soprak-Kale by the Circassians, "who having advanced to the Black Sea, attacked five fortified posts, and one of the forts of 900 organised Russians." In consequence of these disasters, Russia has been necessitated to send reinforcements, which are already off the coast. Three Russ an brigades have been drawn from the frontiers at Tortum and Ani, the Pacha of Erzeroum, Omer Pacha of Batoum, and those preparing to take a diversion which would assist the inhabitants of Lasistam, the Kurds, Circassians and people of Daghestan, to relieve their brave brethren in the Crimea from a foreign yoke."

On the 8th Baron de Brunow and M. de Wimbersdorf communicated to Reschid Pacha the result of the Olmütz Conference, but it failed to produce any change in the opinions of the Turkish Minister. The Czar again rejected the modifications there, but expressed his willingness to accept the original Note of the Vienna Conference.

The navigation of the Danube is now quite impossible. The last steamer was not allowed to touch at any point on the right bank, and

at Rustchuk she was even prevented from delivering her letters for that town

An ancient custom requires the Sultan to march to battle against the infidel at the head of his sacred troops. This custom has degenerated into a fiction In accordance with it, however, the Padishah is preparing to quit his palace, and during the war he will inhabit the kiosk at Therapia, which his father Mahmoud occupied during the late Russian war [illegible] being prepared for his reception, and is, we may add, vastly more comfortable than the tent of his great ancestor, Suleiman the Magnificent

The new Patriarch of Constantinople, Anthimos, who was elected and installed on the 6th, is even less favourable to the pretensions of Russia than was his predecessor.

RUSSIA.

According to advices from St Petersburg of the 15th inst., the Minister of Finance, by command of the Emperor (who has returned to his capital), had assured the leading British firms that British property, as well as their persons, would be protected, notwithstanding the untoward aspect of the Eastern question. The interview of the merchants with the Minister of Finance lasted half an hour, and terminated with an assurance that there was no risk for goods or ships during the remainder of the present season

On the 17th instant the Minister of Finance again requested the attendance of the same firms, and informed them that he had submitted the question as to the safet of vessels to his Majesty, who had desired the Minister to say that he repeated his assurances of protection to the persons and property of British subjects, and that it was not his intention, in the event of hostilities, to detain British vessels in his ports, provided, of course, that the British Government did the same by Russian vessels

The news of the Turkish declaration of war made an "alarming impression" in St Petersburg, where the Czar is believed to be too stubborn to yield now that the gauntlet has been thrown down by his adversary. War seems inevitable, and a manifesto declaring thus much is shortly expected. In that manifesto the sacred war for the Holy Eastern Cross is to be proclaimed against the Crescent, which refuses to conjustice to the orthodox. In St Petersburg the army and the civil service are for war, but the news from the south shows that public feeling in those parts is far less enthusiastic in the cause of Russia against Turkey. The movements of large bodies of troops have exhausted the resources of the agriculturists, and the merchants in the towns suffer from the stagnation of trade. There is no enthusiasm for war, in spite of all official poetry and other means taken to rouse the slumbering feelings of the masses From Moscow southwards none but soldiers and contractors are in favour of war. Military preparations are, meanwhile, executing on a most extensive scale. The corps set apart for the Caucasus has not, indeed, been reinforced by regular troops, but it has received strong reinforcements of new levies of Cossacks. It is said that numerous detachments from the Caucasus have been directed upon the Turkish frontier in Asia. The Caucasian army consists of three divisions of infantry, with the reserve brigade of Caucasian Grenadiers, a complem nt of engineer and rifle battalions, and a division of artillery, besides colonised Cossacks, militia, &c., making a total of fifty-five battalions, ten squadrons, and 180 pieces of artillery, or 60,000 troops of the line, and 10 000 irregulars

Letters from Bucharest of the 11th inst., state that the Russian engineers, while sounding the dep h of the Danube, approached very close to the Turkish bank They were warned off, and as they paid no attention to the summons, a gun was fired. The ball struck one of them, a major, and killed him on the spot. This story requires confirmation

Certain disagreeable circumstances are said to have taken place at Wallachia. It was notorious in 1848, when the Russian army was advancing upon Hungary, that several officers had been sent back to Russia, and others shot. It is stated that the very same things occurred at Wallachia Eight officers of Polish origin, who were said to have exhibited symptoms of disaffection, were shot. The public voice speaks highly of the talent and acquirements of the Russian Generals, but few of them are first-rate officers "Gortschakoff," says one informant, "is a nobody, and Paskewitsch is worn out Lieutenant-General Luders is an excellent officer, and perhaps the best man the Russians have, but he is only the commander of a corps." The person in question, who gives no favourable account of Omer Pasha's qualifications as a tactician, describes him as "the very man to lead half-disciplined troops into battle"

Accounts from Bucharest speak of the frightful mortality of the Russian troops from typhus fever the houses used as hospitals are being constantly avenged, in order to put a stop to the infection, from which about 10 per cent fall victims. This has always been the scourge of an invading Russian army in Turkey, and may be traced to the bad feeding and food of these wretched troops, joined to the fatigue they are so ill able to support, with, perhaps, the change of climate.

The Russians are settling into their winter quarters in the vicinity of Bucharest

GERMANY.

According to the last resolution adopted by the Germanic Diet, the strength of the Federal army is fixed at 466,000 men, exclusive of the reserve

The States of the Zollverein have come to the resolution to prolong the period of the free importation of corn and all farinaceous products from the 1st of next year, the term originally fixed, till the end of September, 1854.

A terrible storm is marching with rapid strides towards a national bankruptcy The fact that the Austrian Government were during the last month necessitated to increase the paper circulation to the amount of 8 012,456 florins has produced a most unpleasant impression. It had long been the boast of the Finance Department that the State paper currency was steadily, even if slowly, diminishing, and therefore the emission of a new batch of Treasury Bills would never have taken place, had not the necessities of the State imperatively required it.

The Viennese papers continue to hold a pacific tone, and the Ministerial journals argue strongly from the recently-decreed reductions in the army, that it is intentions of Austria are peaceful. In the meantime no arrangements are on foot for carrying into execution the Imperial decree; but, on the contrary, the Generals commanding in Lombardy, Hungary, and Croatia, have all demanded reinforcements, on account of the popular feeling of discontent and disaffection in those countries

ITALY.

The liberation of Miss Cunninghame is said to have been caused by the arrival of despatches from Lord Clarendon instructing Mr. Scarlett to take down the British arms from the Embassy, and to leave Florence The Grand Duke—in announcing that he had been pleased, in consideration of the sex of Miss Cunninghame, and the imprisonment she had undergone, to accord to her her liberty expressed his deep disapprobation of the conduct of the English in Tuscany. He hoped that what had lately occurred would be taken as a lesson; and added that he was determined to exercise the utmost rigour of the law against all English offenders for the future, especially against those offending against or infringing in the slightest degree the laws respecting religion Miss Cunninghame in a private letter says, "My liberation is considered here the greatest triumph, since the Grand Duke has freed me because England has desended it; and it is universally known also that I am declared innocent *legally*"

The distress prevalent throughout the Roman States in consequence of the failure of the corn and wine crops, and the bad appearance of the olive, as well as the determined resistance everywhere experienced by the Government to tax-gatherers to the obnoxious tax on industry, have induced the Government to suspend that tax until the middle of next year.

The Russian Ambassador has left Rome. The Pope sent to some Polish monks for information about the Polish martyr just canonised. The monks communicated the particulars directly, instead of through the Emperor, and have been sent in consequence to Siberia. To this severity the Pope alluded in a recent harangue, and wept as he deplored that Catholics in Russia had no other course left but to suffer and die

The King of Naples has embroiled himself in a quarrel with Louis Napoleon The Duke de Serpente, aide-de-camp of Marshal St Arnaud, was sent to Turin to be present at the manœuvring of the Sardinian army, and met with the kindest reception from the King and his Ministers. From thence with two of his officers he proceeded to Naples on the same mission; but on arriving at the port he was surprised to find that he was not allowed to land, on the pretext that he must undergo quarantine. Finding that the manœuvring would be over before quarantine was concluded, and taking it for granted that the quarantine was merely a pretext to Duke determined to return at once to France, in order to show his sense of so unceremonious a procedure. The seeming discourtesy was promptly resented by the Emperor, and the French Ambassador received an immediate summons to leave Naples, unless a satisfactory apology were offered by the King.

CAPE OF GOOD HOPE.

Advices from the Cape to the 23rd September state that the aspect of affairs beyond the colonial border was unsatisfactory. The withdrawal of troops, and the abandonment of the Orange River Sovereignty had excited dissatisfaction Macomo wanted possession of the Amatola Mountains, but had been refused by General Cathcart.

A communication had been opened between the Great Lake and the vicinity of Walfisch Bay. A party of Bauntus and others performed the journey in fifteen days through the desert into the fine tract of country on the river Nosono, which lies east-north-east of Walfisch Bay.

AFRICA.

The *Hope*, from the west coast of Africa, brings dates from Fernando Po, September 11, Cape Coast Castle, September 17; Sierra Leone, September 27. By this arrival we have intelligence of another war having broken out at Lagos, on the 5th of August, between King Akatoi and the pretender Kossoko, which, after some skirmishing, was put an end to by Admiral Bruce, who landed a force of marines and seamen from his squadron, and aided in the rout of the Pretender's force. The boat operations were under the superintendence of Commander Phillips, of the *Polyphemus*. Some slaughter of the natives took place, but the only casualties on the part of the British consisted in a marine being wounded in the shoulder, and a Krooman being shot. Lieutenant Strickland, of the *Polyphemus*, still remained on shore, superintending some field operations. On the 3rd September King Akatoi died suddenly, and his son Docemo was placed on the throne in his stead. The Liberian Government had received a present of arms and military accoutrements from the French Emperor. Matters at Cape Coast Castle were more peaceable, the alarm of an Ashantee invasion being at an end

AMERICA.

By the steamer *America*, we have dates from New York to the 11th instant. Two vessels had reached America from California with 3,000,000 dollars of gold dust. Mining was never more successful, and business had rather improved. The state elections had resulted in a democratic majority.

Mr. John Y. Mason has been appointed the United States Envoy Extraordinary and Minister Plenipotentiary to France

Advices from the City of Mexico, to the 3rd inst., state that a Mexican war steamer had left Vera Cruz, with 300 troops, for Yucatan, where a revolution had been reported.

An extensive conspiracy had been discovered in Puebla. Several prominent citizens had been arrested, and had been ordered to leave the country.

The New York Stock Market was very heavy, and several important failures had occurred.

CALIFORNIA.

(*From our own Correspondent*)

SAN FRANCISCO, Sept. 16, 1853

During the last fortnight we have passed through a flutter of great excitement, consequent upon our election of state, county, and city officers. All the servants of the people are elected in one day—from the Governor of the State down to the smallest constable of a magistrate's court. The returns have not yet come in from the different counties; but it is, nevertheless, well known that the Democratic party are strongly in the majority. That party have re-elected their Governor, John Bigler, who is acknowledged an unfit and unpopular personage, but party in the United States is indifferent as to men—they rally to the cry of measures.

Intelligence from the mining districts continues favourable, although this is the dullest time of the year for the yield of gold, owing to so many of the miners making preparations to work the beds of the rivers when the waters shall have a little more subsided.

We have news this week from Australia, and our papers contain many letters from old Californians in those diggings, loudly complaining that the change they have made is much for the worse—that they cannot earn more than from two to three dollars a day; which amount is the average obtained by all the diggers; and that workingmen and mechanics in Melbourne and Sydney can only obtain from ten to twenty shillings a day by working at their trades.

In San Francisco and the other towns the country workmen of all kinds are obtaining enormous wages. Strike upon strike has occurred, and the result is that at this time some kinds of masons—viz., those employed in laying stone foundations are getting fifteen dollars, or nearly seventy-five shillings a day; while bricklayers and carpenters are working for eight and ten dollars, and ordinary labourers for six dollars a day. The rate of these wages is a fair criterion of what men are earning in the mines, for the facilities of travel over the whole country are now so great stages running to every little mining town—that, if they were getting less at the diggings than by following their accustomed occupations in the cities, would soon have a surplus of labour; the contrary of which is manifestly the case

We find from carefully-prepared reports of the amount of gold shipped from Australia to England for the first half of this year, that it reaches to £3,403 6 6, or about 42,000,000 dols.; while from California the amounts exported during the same time is 30,991,552 dollars. From this it appears that Australia has yielded a larger amount of gold than California; but it must be borne in mind that the number of miners in Australia is fully double the number actually engaged in mining in California, so that the individual average is very much in favour of this country.

Amongst the English quartz people here, not much has yet been accomplished, as far as remunerative returns are concerned. Most of the companies have now good positions on promising mines; and, as far as can be predicted from our knowledge of extracting and amalgamating the gold in the quartz, when they get fairly to work, large amounts of gold must be obtained. The quartz certainly contains gold largely and visibly; and all that is necessary, is funds to set the machinery in motion, and knowledge to separate the gold from the crushed ore.

The companies that are in active preparatory operations, are the Agua Fria, the Anglo Californian, the Nouveau Monde, and the West Mariposa; all other English companies are *actually without a location*, and are scarcely known in this country by name, even by English residents.

The Agua Fria are busily employed in erecting heavy machinery at Grass Valley, on a mine that has already made some returns with very imperfect machinery. Their prospects are good; and, in the meantime pending the erection of their works, they are sending home a small amount of gold, the proceeds of surface "sluice washing," the ordinary mode of surface washing by the miner, and not the result of legitimate quartz operations.

The Anglo Californians are getting on well with the erection of their works at Brown's Valley. They also have mines at Dickeburg, but less rich than those at the former locality, which prospect and promise as well as any in the country. Dickeburg will, however, doubtless come into remunerative play when Brown's Valley mines are in active operation.

The Nouveau Monde have not yet commenced extracting any gold, though their operations are more extensive and their work farther advanced than that of any other company. They have expended vast sums of money; and will, before long, be in a fair way of realising good dividends.

The West Mariposa are not as yet doing much. There has been a great want of unanimity in the direction out here; and as yet no fixed plan of operation has been determined on. These matters, however, are now undergoing a change; and then there will be no reason why the West Mariposa should not stand on a par with other companies.

By an arrival a few days since from the Sandwich Islands we hear that events that may prove of grave importance are being enacted at Honolulu. It appears that the people, especially the foreign inhabitants, are greatly exasperated against Messrs Judd and Armstrong, missionaries and Cabinet Ministers of the King The charges against them seem to be that for a long time they have been misruling the Islands with despotic power; that King Kamehameha has been but a puppet in their hands; that their general rule of action and conduct has been based upon antiquated dogmas of government; that they have placed the most irksome restrictions upon business; and that even social life has not been free from their domineering influence; that recently, while the small-pox was raging over the kingdom, and hundreds were falling victims to it, while all industry was suspended, and business paralysed by it, these Ministers refused the small sum of 7000 dollars as an appropriation to vaccinate the natives. The pent-up indignation of the people first found vent in loud murmurings, and then in "indignation meetings," which gave birth to a petition to the King to dismiss these ministers from office This the King refused to do. The people, however, persist, and continue to agitate the question: they have declared they say, 13 000 signatures to their petition, and have appointed a "vigilant committee" to press their demands on his Majesty, and have pledged themselves to support this committee in any measures they may see fit to adopt. At this point despatches from the islands close; it is certainly "a very pretty quarrel as it stands;" but it appears to us that matters there are not so purely virtuous as they would wish to appear. True the American missionaries on those islands have taken too much thought for mundane affairs, and have secured to themselves high political power and much worldly goods, and the inhabitants have certainly much reason to raise their voice against them. However, in the present instance we have good reason to believe that the "casus belli" is only a pretext for the introduction of a *filibustering* movement on the part of *some* American residents for the annexation of those Islands to the United States.

M.

INDIA AND CHINA.

A telegraphic despatch from Trieste announces the arrival of the Indian mail, with dates from Calcutta, Sept. 20; Bombay, Sept. 28; Singapore, Sept 9.

Our Burmese acquisitions were in a state of war, being overrun by large bodies of armed men, said to exceed 14,000 in number, who occupied fortified positions, whence they attacked our posts with occasional success. They were said to be instigated by the King of Ava. The resumption of hostilities was considered inevitable

Colonel Mackeson had been assassinated by an Affgan, at Peshawur

Captain Parker and Ensign Bosworth had been killed in an affair with Arabs in the Nizam's country

The revolution in China still continued. At Amoy the Imperialists had had some success, but the Patriot army had invested Khai-lung foo the capital of Honan, on the Yellow River. The whole country was in a state of anarchy, and trade at a stand.

Abbas Pacha has limited the exportation of grain from Egypt to 250,000 quarters.

AUSTRALIA

By the arrival of the Overland Mail we have dates from Sydney down to July 28; from Adelaide, to August 2. The following is the only item of intelligence telegraphed:—The Constitutional Committee of the Legislative Council of New South Wales had recommended the establishment of the Upper Chamber on the nominee system, and negatived the proposal to make it executive. Large quantities of gold continued to be found

The Auditor General of the colony of Victoria has furnished a table, in which he compares the revenue of the year terminating on the 30th of June, 1853, with that of the year terminating on the 30 h of June, 1852. The total revenue of the year end ng on the 30th of June 1852, was £714,679 15s 6d.; and of the second year, ending the 30 h of June, 1853, was £2,451,236 6s. 9d., or, in other words, more than three times the amount of what was justly considered the enormous increase of the former year. Prosperity was thus inflated to an almost incredible amount. It seems strange that, with this enormous revenue, so little should be effected toward carrying out the ends of good government. We hear of the robbery of an escort, effected by twenty armed men, with much bloodshed, and a loss variously reported at from £12,000 to £30,000. The roads are almost impassable, no effort having been made to improve them. The wharves have fallen into dilapidation, and the storage for goods is so defective that any sacrifice is submitted to rather than pay the high rent which must be paid in order to keep them till the spring, when the roads will probably again become passable from the beneficent interference of natural causes. This difficulty of keeping goods, or of sending them up the country, not only aggravates the effect of the glut, which has at last arrived, and causes the goods to be thrown into the market with a wasteful and reckless rapidity, which may possibly, at a later period, be felt as much by another time of high prices and scarcity. It does seem strange that, with a revenue of two millions and a half, with a population many of whom are cast on their shores utterly destitute, and a country in every respect peculiarly favourable for the making and pre-serving of roads, the Government should have allowed the first and most crying want of a new country to remain so long unsatisfied. Till shippers can know what chance there is of their commodities finding their way to the market for which they are designed, they can never feel confidence in remunerative returns for their investments, and the bulkier articles will be exposed to continual depreciation from the exorbitant price of warehouse room and the impossibility of transit.

In the meanwhile, the yield of gold continues unabated. The gold licenses issued in the colony of Victoria were 59,261 in May, and 42,269 in June. The gold brought down by escort during those two months was 301,288 ounces, worth £1,205,152; and the amount exported was 352,849 ounces, worth £1,411,000. The arrival of immigrants during the same period was 13,045, and the departures 5891; leaving a balance in favour of the colony of 7158. The number of ships in harbour at Port Phillip on the 1st of July was 222, with an aggregate capacity of 81,066 tons

Great excitement was caused at Melbourne in consequence of the Mount Prvior Escort Company's gold escort having been attacked and robbed on its way to Melbourne of a considerable amount of gold dust and gold coin The escort was attacked by twenty men when about fifteen miles from the Mount Mivor diggings, and the amount of gold dust stolen was 8000 ounces, and £4000 in gold coin.

Accounts from Geelong state that a decided improvement was observable in the yield of gold from Ballarat. The last escort that arrived at Melbourne brought 6000 ounces, besides leaving a large quantity behind.

The box, containing £10,000 in gold, which had been lost overboard from the steamer *Osmanli*, in Melbourne harbour, had not been recovered, although a diving-bell had been constructed, and every attempt had been made to find it.

Stocks of all descriptions of goods and merchandise were rapidly accumulating in Melbourne, there being from twelve to fourteen arrivals every day from foreign ports. A crisis was inevitable at no distant period. There were many houses of no means that were expected soon to disappear, particularly the American houses. Gold was still rising, and was quoted at £3 17s. 6d per ounce. Private letters from Port Phillip are extremely unfavourable with regard to the state of the markets. Goods continued to pour in from all parts of the world, and as many were endeavouring to hold on rather than submit to immediate sacrifices, ships were being purchased in numbers, to be used for storage. Other arms had come to the conclusion that the anticipations of a great improvement when the roads to the mines should again be open would prove deceptive. "If consignments come forward," it is remarked, "as they have done of late, the market will be pretty glutted."

CAPTAIN LAKEMAN, OF THE WATERKLOOF RANGERS.

THE able services of Captain Lakeman, in the late Kaffir war, have already received acknowledgement in the Cape Colony, but have scarcely been honoured at home with that signal distinction to which they are entitled

Captain Lakeman had already witnessed with the French troops in Africa, the great disadvantage under which regular troops labour in combating the Arabs, who like the Kaffirs, never ventured on any but bush and rock fighting Accordingly the Captain proposed to the late Duke of Wellington in the year 1852, a different arming and clothing of the troops engaged in the Kaffir war; adding that in attacks with an enemy so subtle as the Kaffirs, would be found more efficacious, than the system of warfare now adopted. To prove the truth of his observations, Captain Lakeman offered to proceed to the Cape, and there equip, at his own private expense, a corps of men, which was to be clothed entirely [illegible] they would be found most destructive to the enemy in [illegible] Captain Lakeman was allowed to put in practice his system [illegible] with the sanction of his Excellency, Lieut.-Gen.

Cathcart, Governor of the colony, he thus armed and equipped the Waterkloof Rangers" (150 men), with whom the brave Captain took the field in 1852; and, by a series of night attacks, this small corps destroyed more of the enemy than a very much larger force could have done by the old system of warfare. Throughout the war the Captain did not lose more than eleven men killed; although he was almost nightly engaged with the enemy, and took and destroyed a very large number of Kaffirs and Hottentots. In fact, so destructive had his corps become to the enemy, that they were called the Invisibly-moving Column of Death. Of this very efficient service, the following is the picturesque episode, represented in the accompanying Illustration:—"On the 13th July, 1852, Captain Lakeman, with eighty men, assaulted and carried in a night attack, the

CAPTAIN LAKEMAN, WATERKLOOF RANGERS.

position of the Kaffirs at Mundell's Peak, considered the strongest in the Waterkloof. Having killed a large number of the enemy, he burnt their huts and captured all their cattle, with the loss to him of only one man killed, and two wounded. The taking of this formidable position had required, in a previous attack by her Majesty's troops, above 1000 men and three pieces of artillery; whereas the loss to the enemy by Captain Lakeman's night attack was much greater than in the attack by her Majesty's regular troops."

The services rendered by the Captain and his patriotic and gallant corps were acknowledged in a very marked manner from head-quarters, at Fort Beaufort and Graham's Town. On disbanding the Rangers, they were placed as military settlers on the frontier; Captain Lakeman allowing the men to retain their arms, equipments, &c., for their protection. The principal inhabitants of the colony, whom he has so devotedly aided, have testified their sense of the services he has rendered on many occasions, amongst others, in two addresses, very numerously and influentially signed by the inhabitants of Graham's Town and Port Elizabeth; whilst the press of the colony have been unanimous in their praises of this gallant officer's conduct and patriotism.

HEAD OF SPRING-BOKS.

The whole of the officers commanding at the Cape during Captain Lakeman's services, are unanimous as to the good results he obtained by those night attacks and the peculiar arming and clothing of his men; and so sensible were the Kaffirs of the advantage, that on the conclusion of peace, several leading Kaffirs offered five and ten bullocks for the simple dress of one of the Rangers. In conclusion, Captain Lakeman declared that in case of another Kaffir war he would undertake to clear the whole country of Kaffirs with 2000 men, armed and equipped as were his gallant Rangers. The Captain is in the full vigour of life—in his thirtieth year, and has served so gallant and effective an apprenticeship to the art of war as to be desirous of devoting the remainder of his life to the military service of his country. But here a difficulty has arisen. Everything must be done by rule and system at the Horse Guards. No merit, however distinguished, justifies in the eyes of those in authority a departure from the customary practice. It appears that an ensigncy in the British army has been offered to this gallant Englishman, and that he has declined accepting it on account of his age; but that a captaincy, which is the rank he would have attained had he entered the army at the usual period of life, would meet his wishes, and secure the services of a very efficient officer to the British service. Had Mr Lakeman been a Frenchman, and rendered similar service to his country, it is likely that he would have been made a Colonel, if he had wished it; but, being an Englishman, he must, it appears, become an ensign, or renounce the profession which he is so well qualified to adorn. We hear that, in this dilemma, civil rank has been offered to him as an acknowledgment of his services; but Captain Lakeman aspires to be a soldier and has declined the proffered honour.

THE SPRINGBOK.

Among the various interesting objects brought by Captain Lakeman from South Africa is a beautiful specimen of the Spring-bok, which he has presented to the Zoological Society. The Spring-bok is by far the most elegant, as well as the most active, of that divinus of antelopes which are familiar to us as gazelles. The immense herds of this species which descend from the interior into the southern wilderness, and thence to the confines of the colony, are numerous beyond belief. It is not, we believe, very unusual for a hunting party to see 50,000 individuals in a single day. The vernacular name of Springbok was given by the Dutch settlers to this animal from the singularly conspicuous display of the white mark on the back which it makes at every bound. There formerly existed at Knowsley, in the collection of the late Earl of Derby, a herd of these beautiful creatures, which were at that time one of its most brilliant ornaments. It is greatly to be regretted that the confined limits of the land rented by the Society does not admit of the large inclosures which are so essential to the effective display of the many groups of ruminants which they possess.

NIGHT ATTACK ON KAFFIRS, AT MUNDELL'S PEAK, IN THE WATERKLOOF.

H.M.S. "INVESTIGATOR," IN THE ARCTIC REGIONS.

THE Admiralty have, during the past week, published the Despatches of Captain M'Clure, which give a succinct narrative of the voyage of the *Investigator*, in the Arctic regions, during a period of three years. Captain M'Clure's narrative has been read with extreme interest, not only by the members of his gallant profession, but also by thousands of his fellow-countrymen, who know how to appreciate the skill, fortitude, and heroism which have just been crowned by so large a measure of success, in the completion of the North-West Passage. We have been favoured by Lieut. Cresswell, who has rendered such efficient assistance to Captain M'Clure, during the prolonged voyage of the *Investigator*, with three Illustrations of events described in Capt M'Clure's despatches. These Sketches present such graphic and truthful pictures of adventure in the dreary, ice bound regions of the Polar seas, that our readers will participate in the gratification with which we state that we trust to be enabled hereafter to borrow a few more leaves from Lieutenant Cresswell's interesting Sketch book.

The Admiralty are entitled to the acknowledgments of the public for having promptly issued a chart showing the North-West Passage discovered by the *Investigator*, and the coast explored since 1848, in search of Sir J. Franklin, by Sir J. Ross, Sir E. Belcher, and other gallant Arctic commanders. This Admiralty chart, published by Mr. Potter at a shilling, has already had an enormous sale, and is in such request that it is impossible to keep pace with the demand of the public for copies. By the aid of this chart Captain M'Clure's track, and that of the travelling party despatched to his relief by Captain Kellett, can be clearly made out.

The Princess Royal Islands are two rocky islets in Prince of Wales's Strait, which were discovered by Captain M'Clure on the 19th of September, 1850. It was near the Princess Royal Islands that the *Investigator* was beset by the ice. Captain M'Clure's account of the choice of difficulties which presented themselves to him will enable us to estimate the anxieties which press, in these dreaded and unknown regions, upon the commander to whom is entrusted the lives of so many gallant companions:—

As the navigable season was now drawing to a close, which the fall in the temperature, as well as the formation of pancake ice upon the surface of the water, whenever the wind became light, unmistakeably pointed out, it became a subject of anxious consideration what course to adopt in regard to the safety of the vessel; whether, by running to the southward, in which direction the water was still open, endeavour to obtain a harbour in one of the bays indenting the south-eastern side of Barrug's Land—the nearest, probably, being sixty miles distant—and then only the chance of finding a safe anchorage, which, if our search proved a failure, would place the vessel in a worse situation than at present, exposing her to a wide

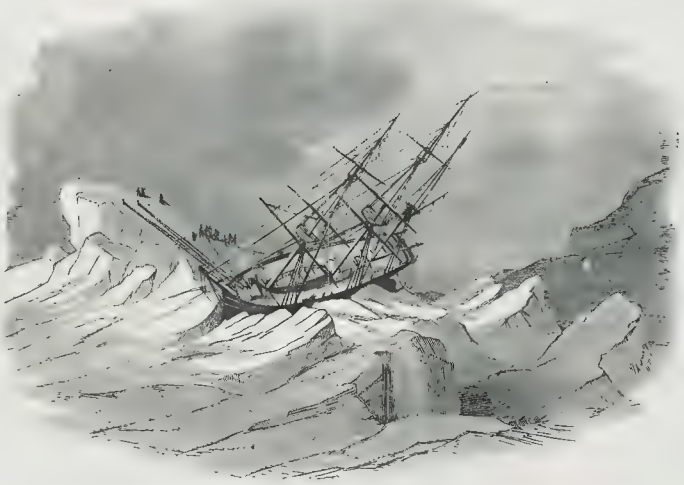
"THE INVESTIGATOR" NEARING MERCY BAY, BARING ISLAND

sea range, subject to heavy pressure from the enormous massive floes with which the Polar Sea is encumbered, but from which we are here protected by the Princess Royal Islands; or continue our advance to the north-east as long as the season permitted, and then submit to the only alternative, that of hazarding a winter in the pack. I decided upon the latter, for these reasons—that to relinquish the ground obtained through so much difficulty, labour, and anxiety, for only the remote chance of finding safe winter quarters, would be injudicious, thoroughly impressed as I am with the absolute importance of retaining every mile to ensure any favourable results while navigating these seas, the loss of which might frustrate the operations of a whole season. Above all, being in the vicinity of Banke's Land, and in the direction which Sir J. Franklin would, in all probability, have endeavoured to penetrate, could he have reached Cape Walker, I therefore considered that our position was most eligible for carrying into full effect the instructions of my Lords Commissioners of the Admiralty, when the season becomes favourable for despatching parties upon this important and interesting search.

The experiment was a hazardous one, but it was perfectly successful. The *Investigator* was frozen in near the Princess Royal Islands, in lat. 72° 30 N., long. 117° 58 W., on the 19th Sept.; and here they passed the winter of 1850-51. On the 3rd of March, 1851, Captain M'Clure commenced operations, with the view of again prosecuting his search. He says:—

The month of March found us in a most healthy and efficient condition. Accordingly, upon the 3rd we commenced our preliminary duties by taking a 30-foot whale-boat to the larger of the Princess Royal Islands,



CRITICAL POSITION OF "THE INVESTIGATOR," AT BALLAST BEACH, BARING ISLAND.

where it is my intention to leave three months' provisions for all hands, that, at the breaking up of the ice, should the vessel unfortunately get crushed, we may have a certainty to fall back upon, which will enable us to reach the *Plover* without hazard of starvation. All arrangements being now made for the start of the searching parties, and the weather becoming very favourable for travelling, upon the 15th of April three were despatched—under Lieutenant Haswell, S.E. shore; Lieutenant Cresswell, N.W. shore; and Mr. Wynniatt (mate), N.E. shore, with six weeks' provisions each.

The season's travelling operations terminated fortunately, for all returned on board in excellent health, with the exception of three of the travellers suffering from frost-nips. Captain M'Clure was now able to hazard a conjecture relative to Sir John Franklin and his expedition:—

From the close examination which has been made over a vast extent of coast, the direct distance of which, by observation, embraces 800 miles, to which a third may be added for the devious windings of the coast-line, without observing the slightest vestiges of any spar or other indication of civilised man having reached these shores, I am fully confident that the missing expedition under Sir John Franklin has never penetrated towards the Polar Sea in this direction, as some portion of the immense mass of stores, spars, or fitments with which those ships were provided must have been picked up, when driftwood of very inconsiderable dimensions did not escape observation.

The gallant little band now awaited with no little anxiety the disruption of the mighty masses of ice by which they were surrounded, for their lives hung upon the event. On the 14th July the ice opened

round the vessel, and she drifted with the whole of the pack towards the Princess Royal Islands. The Captain made an attempt to round the pack and to get in Browse's Strait, from which he was only distant twenty-five miles. The ice, however, stretched across the strait in one unbroken line, and compelled him to abandon his intention, and return down the Prince of Wales's strait.

Our first Illustration represents the *Investigator* running past the Princess Royal Islands on this return.

The second Sketch represents the *Investigator* in a snow-storm on the 6th September, the day before she reached Mercy Bay, Baring Island, where she passed the winters 1851-2, and 1852-3. The *Investigator* during the snow-storm, had nearly all her sail set, and was going at four or five miles an hour. She was running between the heavy pack and heavy pack which was closing in upon her. The manœuvres were hazardous, only just wide enough indeed, for them to pass. Captain M'Clure says of this exciting passage of seamanship—

"We found our course was nearly obstructed from the ice resting upon a shoal about two miles distant. He stood as sails were taken in, immediately rested, as it gradually opened, allowing just sufficient space for our absence by keeping up the lower booms. The storm of fine driving more to the southward increased our water, but snow and thick weather, with night coming on, rendered it no land, not one point distant, barely discernible. Most anxious, however, at the close of the season, to embrace every opportunity of getting to some place of security, our course was continued with every caution, when, under other circumstances, we should have most assuredly secured for the night, and at 7.30 p.m., with the lead going, went from 15 fathoms upon mud bank, having only six feet under the bow, and as the distance of 10 feet from the stern only 18 inches; while the stern was in 5 fathoms. The stream anchor and cable were laid out, which service was well performed by Messrs Wynniatt, Sainsbury, and Court; the parting four boats in consequence of the freshening N.W. gale and pieces of loose ice with snow, which, caking as it rested the water formed so hit a coating over its surface, and offered much resistance, that it was scarcely possible to pull through. However, with cheering the forehold and warrant officers' storerooms, and by hauling all the weight abaft the mizzenmast, at 10 p.m. we were enabled to heave off, and brought up with 7 fathoms in four and a half fathoms, and that night were finally frozen in in what has since proved a most safe and excellent harbour, which, in grateful remembrance of the many perils that we had escaped during the passage of that terrible Polar Sea, we have named the "Bay of Mercy," thus finally terminating this short season's operations, having been actual y only five entire days under way."

The third Engraving depictures the critical position of the *Investigator* at Ballast Beach, Baring Island, where she was frozen up from the 20th August to the 11th September, 1851. The good ship was, during this period, exposed to a heavy pressure, and was only partially protected by a large piece of grounded ice, within sixty yards of it's lead. The current was then created by Captain M'Clure—

On the morning of the 20th August our further progress was impeded by finding the ice resting upon a point. To prevent being carried away by the pack, we secured to a heavy floe on the side of a deep bay, a piece of ice, grounded in twelve fathoms, 74 yards from the beach, the connecting point between the two floes measuring about 7 knot per hour to the ebb; before a fresh breeze directly ends, which at length placed us in a very critical position, by a large floe striking the piece we were fast to, and causing it to oscillate so considerably that a tongue, which happened under our bottom, after the vessel had been, by every precaution to the anchors and warps, successful in holding on during the conflict, which continued several minutes, [illegible] and our berth was now [illegible] perfectly secure; but [illegible] of the day, the ice [illegible] suddenly to move, when a large floe, [illegible] the piece to which we were at length fast, and under the [illegible] ran several perpendicularly thirty feet, pinning to it on board a most frightful aspect. As it ascended above [illegible] forward, and appeared as was feared, it might be thrown completely on board the ship [illegible] have been crushed beneath it. This suspense was but for a few minutes, as the floe rent, carrying away with it a large piece from the foundation of our main, when it rose to every tide, and resumed its former position; but, no longer capable of resisting the pressure, it was hurried onward with the drifting mass. Our proximity to the shore compelled us, for the purpose of safety, to abandon her, and, heading to [illegible] consequently secur d with a chain stream and hemp cable three inches and a half in diameters, three of which were passed on board, the latter we were forced to cut, sank by large pieces beneath the bottom, and subtaining a heavy strain against the stern and rudder: the latter was much damaged, but to unship it was impossible. At one time the pressure raised from the ice becoming stationary.

The summer of 1852 was short and cheerless and the sun could not make its influence felt upon the icy masses which blocked Barrow's Strait entirely across. Captain M'Clure found himself, accordingly, again frozen in for another winter, and the temperature was pre-eminently severe in these icy solitudes. The weather in January and February, 1853, was [illegible] very rigorous and severe. On one day the temperature fell to sixty-five degrees below freezing point, and for twenty four hours actually averaged sixty two degrees below freezing point. It was Captain M'Clure's intention to start a party via the Mackenzie and Bathurst Bay, in the hope they would reach England by that route, when the discovery of the *Investigator* by Lieutenan Pim and the searching party from the *Resolute*, brought the welcome news. Captain M'Clure and his gallant crew greatly rejoiced after the long and trying ordeal through which they had so bravely and so cheerfully passed.

The *Phœnix* screw steam-sloop, Captain Edward A. Inglefield, was paid off on Tuesday at Woolwich. Previous to the crew being paid off the officers, petty officers, and men assembled in front of the pay-office when Captain Inglefield read a letter—of which the following is a copy—which was forwarded to him by command of the Lords of the Admiralty:—

Admiralty, Oct. 7.

Sir,—Having laid before my Lords Commissioners of the Admiralty your letter of the 6th inst., received this day, I have their directions to convey to you the expression of their Lordships' great satisfaction at your proceedings.

My Lords highly approve of the firmness, energy, and good judgment, with which you have carried out their instructions, and of all the steps you have taken in the execution of their orders; and their Lordships desire that you will convey to the officers, seamen, and marines employed under your command, including the masts' second master, and crew of the *Herculaneum*, the like expression of their Lordships' high approva. of the manner in which you speak of their having done their duty.

I am commanded not to conclude this despatch without signifying to them their deep regret with which my Lords have heard of the untimely death of an officer so much esteemed by them as Lieutenant Belloc, of the French Navy.

I am, &c.,
W. A. B. HAMILTON.

Commander Inglefield, R.N., H.M. Steam vessel *Phœnix*.

The officers and men were much gratified when they heard the letter read. Prev ous to separating they gave three times three hearty cheers for Captain Inglefield; and many of them audibly expressed their wishes that they might soon serve under him again. A finer or more healthy-looking body of men were never paid off at Woolwich dockyard.

We hope to present to our readers a continuation of these interesting Illustrations, with further particulars of the contributions of Capt M'Clure and Lieut Cresswell to geographical discovery.

SUBMARINE TELEGRAPH ACROSS THE FORTH.—The Edinburgh, Perth, and Dundee Railway Company have just entered into an agreement with the Electric Telegraph Company, by which the telegraph now and down on part of the line from Edinburgh to Dundee will be continued immediately.

THE WELLINGTON MONUMENT FOR THE CITY.—The Committee appointed to select a design and approve an Artist to execute a monument to the memory of the late Duke of Wellington, in the Guildhall of London, have advertised for models, and thirty models were sent in on Tuesday last, from which they have to choose from the thirty the one which is to be awarded the sum of £1000. The successful [illegible] Mr. Behnes, Mr. Bell, Mr. Foley, Mr. Adams, Mr. [illegible] &c. Should the committee not find [illegible] models precisely meets their views, then each of the six [illegible] to supply fresh models, but it is distinctly [illegible] that these six artists shall have the execution of the work

SHIPWRECK OF "THE DALHOUSIE."—SIXTY LIVES LOST.

Much regret pervaded the City, on Friday week, at the announcement of the foundering of the ship *Dalhousie*, Captain Butterworth commander, in the Channel, off Beachy Head, and the loss of almost every soul on board, except one. The circumstances of the wreck are of deeply painful interest. The *Dalhousie* was a fine Indian-teak-built ship, of 800 tons. She was launched at Moulmein in 1848, and was a first-class vessel. She was the property of Mr. Allan, of Leadenhall-street, and was chartered as one of the "White Horse Line of Australian Passenger Ships." She went into the East India Docks to load for Sydney, and, happily, she was more devoted to the conveyance of freight than passengers. Her outward cargo consisted of about sixty-nine, and her cargo, comprising every description of merchandise, was estimated at upwards of £100,000. Captain Butterworth was one of the most experienced navigators, and had passed many years in the owner's service.

The *Dalhousie* cleared from the docks at Blackwall on the 13th and proceeded to Gravesend. Her passengers were confined to chief cabin class; and not more than twenty berths in all had been secured. Of these there went on board at Gravesend Mr. and Mrs. Underwood and three children; Mrs. Slingsby and three children; and Mrs. Radford; and the following had expressed their intention of joining the ship at Plymouth, where she was to touch:—Major Hawke, Capt. R. Daniel, Mr. J. Baldwin, Miss Macintosh and her maid, Mrs. Hill, and Miss A. M. Castles. Mrs. Butterworth, being unable to accompany her husband, Capt Butterworth, to Plymouth, where she would leave, went on board, with two of her sons, for the trip down Channel. The eldest, however, on the ship reaching the Downs, went ashore at Deal, to return to school, in the neighbourhood.

On the 18th the ship's departure from the Downs was telegraphed to Lloyd's, and the next that was heard of her was about five o'clock on the following afternoon, when a boat reached Dover from the brig *Mitchel Grove*, which was lying off in the roadstead, reporting having fallen in with one of the ship, and landing the only survivor, Joseph Reed, a seaman; every soul on board having perished with the vessel.

The following is a painful detail, as given in Reed's own words:—

On the 19th of October last set sail in the capacity of an able seaman. The ship was laden with a general cargo; her crew consisted of forty-eight men and officers, and she had also twelve passengers on board; it being intended that she should call at Plymouth to embark the remainder. She was towed down the Thames by a steam tug, and on the 18th, at 7 a.m., she arrived and was anchored in the Downs, the wind being contrary. The pilot who had taken her down from London quitted her in the Downs, and the vessel lay there detained by adverse winds, until the 18th. During that interval she rode out a heavy gale of wind from the S.W., which lasted for the space of 36 hours till the evening of the 17th, accompanied by a very heavy sea; but the ship rode it out easily with a single anchor and chain, being veered away to upwards of 90 fathoms of it. At seven a.m. on the 18th the captain got the ship under way, and proceeded down the English Channel, with a fresh breeze from the N.W. She arrived off Dungeness at about ten a.m., when the wind fell light. Captain Butterworth made the best of his way down Channel, under all sail; and nothing took place until between seven and eight p.m. At that time the vessel was ten miles to the westward of Dungeness: the wind shifted to the S.S.E., and gradually freshened. At ten p.m. Captain Butterworth took in the topgallant-sails, and at midnight all hands were called to reef topsails as the wind increasing rapidly from the southward and eastward, and a strong sea getting up. The light on Beachy Head was then in sight, six or eight miles on the starboard beam. At two a.m. I took the helm from which position I had the means of observing everything which took place subsequently; and at four a.m. the fore and mainstop-sails were double reefed, and the mizentop sail stowed. The wind was then blowing a gale, accompanied by a heavy sea, in which the vessel laboured greatly. Up to that time she had shown herself, to the best of my judgment, a lively, manageable ship, and during the gale in the Downs she had behaved remarkably well. The pumps had been sounded night and morning, and she was quite tight; and, after carrying them, as usual, at eight p.m (previous night), no water (excepting that always in the bottom) could be found.

Town do four a.m. being up began to lurch deeply in the sea, going a long way over on her broadside, and she seemed unable to recover herself when she rolled. Shortly afterwards the starboard-quarter boat was carried away by a sea, and the after davits were also carried overboard. The overboard water casks, sheep-pens, and other lumber. While so occupied the ship gave a violent lurch to starboard, and a heavy sea at the same breaking over her, stove in the bulwarks on the main-deck. The weather was then getting worse, and the ship was kept hauled to the wind on the port tack. She continued to lurch violently, and at half past five a.m. she rolled right over on her beam ends. I was at the fore and mainstop-sails were double reefed, and the mizentop sail stowed. The position with her mast-head in the water, as the men of the sea, which then made a clear reach over her, and carried away the larboard quarter boat. A great many of the crew took refuge in the main-top, and I got outside the ship on the weather-quarter gallery, it being impossible to stand on deck.

Captain Butterworth, the chief and second mate, the carpenter, cook, and some of the crew, joined me on the weather quarter, and they dragged through the gallery window four passengers, consisting of a gentleman, his wife, and two children. A gentleman and his wife and another seaman also succeeded in getting out of the water a young lady who had come out on one of the poop cabins, and I handed her a large spar, and she held her with the rest of the crew on the gallery. Immediately afterwards a large sea broke over the ship, which washed off the gentlemen above mentioned, with his wife and children (four in all), and I never perished together. At about the time a schooner was observed about half a mile to the eastward, bearing down up on the wreck. Our ship was at that time settling fast in the water, and it was evident she could not remain afloat for many minutes longer. I cut the lashings of the spar to which the young lady had been made fast, in order to give her a chance for her life. Of the four quarter-deck guards, Captain Butterworth, the second mate, and one or two of the seamen quitted the sinking ship, and headed on to the spar in the hope of saving themselves. I being left on the quarter with the cook and carpenter. Many of the people had by this been drowned, but others remained holding on as they best could on the weather side of the wreck. She lay thus for about [illegible] minutes after Captain Butterworth had left her, when sank, going down head first. I scrambled from the quarter to the mizen-mast, which I secluded as the ship sank. I found the surgeon in the mizentop, and we went up together in the mizen crosstrees.

When we were submerged I lost sight of the surgeon, and I swam to some spars which were floating about. I got hold of one of them, but shortly afterwards I saw near me one of the hooks of the long-boat, capable of affording me better support than the deal, which I therefore left, and placed myself on the hook. The schooner was then within shouting distance, being about 100 yards to leeward of me, and I hailed her, begging her crew to go about to windward, and afterwards drift down among the *Dalhousie's* people, of whom several were still alive, and might thus have been picked up and saved, with a little exertion on the schooner's part. The only response which I could hear from her was given by some person on board, who told me "Swim to her," but as I was drifting to leeward more quickly than any man could swim, and she shortly afterwards stood away to the S.W., and left me and my companions struggling in the water. I watched her for nearly two hours afterwards, but she at length disappeared, with a breeze (so far as I could see) made the east shore to save any of us, although the schooner was close to the *Dalhousie* when she foundered, and her crew must have seen her go down.

In the course of the morning several other vessels passed near me, both going up and down Channel, without seeing us. My companions gradually perished one after the other, and I was reduced to my own frail support. At about one p.m. the wind veered to the S.W., and towards four o'clock a brig hove in sight to windward, standing down towards where I was floating. I made signals to her with my handkerchief, in the best way I could, which were fortunately seen. The brig soon came alongside me, and, having lowered a rope with a bowline in it, I made it fast round by body, and sprang from the hook into the sea. Although the crew of the brig observed every precaution in their power, I was unavoidably dragged under water for a minute or two before I could get on board, and when I at length reached her deck I was nearly senseless. She proved to be the *Mitchel Grove*, Mr. Rawson master, bound from Littlehampton to Sunderland, with timber. Captain Rawson and his crew all treated me with the greatest kindness and humanity, and at four p.m. on the following day the brig anchored in Dover Roads. The weather was then moderate, and Captain Rawson, having lowered a boat, landed me at Dover.

I made application to the owners' agent, who furnished me with the means of coming to London; and on the same evening I arrived in London, and lost no time in reporting myself at the office of the company. I further declare that when the ship went down, the light on Beachy Head bore from N.E. by E., distant about sixteen miles, and, to the best of my judgment, in about twenty fathoms of water. I believe that every person on board of her, with the exception of myself, perished. I cannot account for the circumstance of the ship foundering in the manner she did, otherwise than upon the supposition that a bag-end must have started, either from her having struck upon a wreck, or from some other cause unknown to me. And I, the said Joseph Reed, do conscientiously believe the above statement to be true &c.

(Signed) JOSEPH REED.

From the ship's papers deposited at the Shipping-office, we learn the names of her officers and a portion of the crew:—

Mr. John Butterworth, aged forty-five, captain, of London; Mr. William Walter Edge, aged thirty-three, chief mate; Mr. Charles Finch, aged twenty-three, second mate, of Little Hedingham; Mr. Charles Bowditch, aged twenty, third mate, of London; Mr. William Simpson, aged twenty, fourth mate, of Suffolk; John Alexander, aged twenty three, carpenter, of Stromness; James G. Brotherstone, aged forty-five, steward of Deptford; James Brotherstone (son of above), aged seventeen, cabin servant, of Deptford; Alfred Scarcliffe, aged twenty-three, [illegible] Walton-on-Naze, George Lopers, aged thirty-one, sailmaker, [illegible] Helena, James Barney, aged twenty-one, seaman, of Kent; James Harris, William Star shorn, Edward Saxon Rendle, and John Stutman, apprentices. The remainder—thirty-two—were Lascars had been brought from Calcutta on the ship's last voyage, and whose names are not mentioned in the ship's papers.

The conduct of the crew of the schooner, against whom Reed makes a serious accusation, in bearing away from the drowning sufferers, excited much feeling. The vessel is reported to be the coasting schooner *Exeter*. The name of the port to which she belonged, or where she was bound from or to, or her master's name, has not been elicited. She came up to the wreck in the manner described by Reed, but was, the evidence of the gale at the time that the master was unable (see states) to render assistance. And perhaps it is but justice to him and that as soon as he reached Portsmouth, [illegible] had seen to the pilots, and requested them at once to report [illegible] Lloyd's agents; and, on reference to Lloyd's List, [illegible] will be found.

Reed, the only survivor, is a young man, twenty-two years [illegible] sa. has been but a short time in Mr. Allan's service, and bears [illegible] excellent character. The poor fellow is suffering from the [illegible] the exposure which he endured. He was upwards of ten [illegible] and a half on the piece of wreck (the chock, a piece of timber which supported the long-boat on deck), and was then washed off to [illegible] a dozen times. When dragged on board the *Mitchel Grove*, he was nearly senseless. He has given some further details, from which we extract the following harrowing passages:—

When the ship was on her beam ends, Captain Butterworth told them to do the best they could to save themselves, not forgetting the passengers. He pointed to the schooner, apparently bearing down to the wreck, which might save them. The passengers who were dragged through the gallery window were Mr. and Mrs. Underwood and two children; and the young lady who was taken out of the water was Mr. Underwood's eldest daughter, a fine young lady, about nineteen years of age. Just before a fearful sea had swept off Mr. and Mrs. Underwood and the two children he observed them embrace each other and in earnest prayer, evidently quite conscious and resigned to their fate. Captain Butterworth was holding on near him when Miss Underwood, in her night dress, was washed out of the poop, and he exclaimed pointing to the unfortunate girl, "For God's sake, look here!" She was floating away when he (Reed) caught her up under the arms, and, with the aid of Burley, he got her out. He would never forget the look she gave him. He had cut a piece of rope to secure himself to a spar (the spare mainyard), but, seeing there was no chance for the girl he said, "You can better let me lash you to this; it is your only chance: and you may be picked up; if you perish, there is some hope for your body being found." She looked up resignedly at him, and said, "Yes, do." He immediately lashed her to the spar; and when it was sent adrift from him, she ejaculated to Reed, "My good brother, I am quite proud of being on board such a vessel, to wish had she rode out the gale in the Downs. The chock just enabled him to kneel upon it, and with a piece of deal planking, which he unshipped from the main-top, he held up to sail. He adheres to the former statement regarding the conduct of the schooner, which bore away from the drowning people. The weather was then moderate, and covering a body, and the sea did not [illegible] easily come up to the windward of them, and as for only seeing three men in the water, as she had reported to the Cowes pilot, more than that number must have been plainly seen.

Reed's escape altogether is most marvellous, besides his [illegible] clothing, he had on a heavy oilskin coat, with a thick Guernsey beath. Fortunately, he is a very expert swimmer, to which many owes his life. He has expressed him-elf in the most thankful terms to the captain and crew of the *Mitchel Grove*, Rawson, who picked him up, and for the great kindness he received on board.

We are happy to find that a subscription fund is about to be formed for the benefit of the unhappy widows and orphans who have been left destitute by this melancholy catastrophe.

Upon the front page of the present Number we have engraved a portrait of the *Dalhousie* from a drawing of the ship, formerly in the possession of her lamented commander, Captain Butterworth.

A CRY FROM THE DEEP WATERS.

[The following lines appeared in "Fisher's Drawing room Scrapbook for 1850." They seem to depict so closely the awful position of Joseph Reed, the sole survivor of the ill-fated *Dalhousie*, whose affecting narrative we this week present to our readers, as to render it, [illegible] their republication in the ILLUSTRATED LONDON NEWS.

From the deep and troubled water
Comes the cry
Wild are the waves around me
Dark the sky;
There is no hand to grasp me
From the sad death I die.

To one small plank that fails me,
Clinging low,
I am dashed by angry billows
To and fro;
I hear death-adders rising,
In all the winds that blow.

A cry of sad despair
From my lips
As I behold the distant
White-sail vanish
O'er the [illegible] grave,
Where the horizon dips.

They pass; they are forgotten,
And remote,
They cannot see the spaces
Where I float
The last hope dies within me,
With the [illegible] in my throat.

Through dim cloud-rifts looking
I can see
The new moon's crescent [illegible]
Faintly
And one star coldly shining
Upon my misery.

There are no sounds in nature
That [illegible]
The [illegible] of the wild [illegible]
All alone
And roar of waves exulting
To make my flesh their own.

Billow with billow racing,
Tempest trod;
Strength fails me; coldness gathers
On this clod:
From the deep and troubled waters
I cry to *Thee*, my God!

PATENT LAWS.

The principle of patents for new inventions has recently been the subject of warm discussion, in which several men of considerable eminence have taken part—some with an acerbity not quite befitting the treatment of a purely economical question. The cry for, what by an abuse of terms is called, "Free-trade" in inventions, or, as stated in the United States, where a taste for annexation, growing by what it fed on, created a desire to add inventions to the copyrights, which the printers and paper-makers of that country find it so profitable to reproduce without regard to the rights of authors. The idea has been taken up here by persons of a very different class; for instance, by Colonel Sir William Reid, the late Chairman of the Executive Committee of the Great Exhibition, author of a valuable book on Storms; by Mr. Scott Russell, who combines in his own person the unusual qualifications of a manufacturing capitalist and of an inventive scientific mechanic; and by Mr. Dent, a wealthy amateur watch and lock-maker, who was chairman of one of the rank of one of the Exhibition Juries. These, and those who agree with them, found their objection to the limited monopoly of a patentee on the inconvenience which a right of property in an invention causes to those who wish to make use of it. They take the state of invented property as it is—and it has grown up under, and in spite of, an imperfect patent-law—and they assume that they should have had all we now possess, and more, if the benefit from inventions had been open to be used by every one who had the means of manufacturing the article invented. They desire, that in future the faculty of invention shall meet no other reward than that which can be derived from carrying on a manufacture, or from the eleemosynary generosity of the public.

We differ from these claimants of "free warren" over the results of the inventive faculty, but not on the ground of the abstract injustice of their propositions. Every claim to exclusive rights must be maintained on its own merits. In a state of savagery man has no rights, but the rights of the strongest; at every step of civilisation in creating rights of property, we create limited monopolies.

The question to be considered is whether Patent Laws give us valuable inventions more rapidly than if the inventor lost all property the moment he made the results of his abilities public. But as the limited monopoly conferred by Patent Laws cannot be maintained on the plea of pity for the hard case of the inventor, so it cannot be condemned on the ground of inconvenience it may cause in special cases to certain manufacturers; because on such grounds all rights of property might be proved to be inconvenient and impolitic. If I cannot drain my estate because the outfall is through my neighbour's lands, who is such a blockhead that he prefers a sterile morass to fertile farms, that is a reason for a law enabling me to pass a drain in spite of him, but not a reason for confiscating his estate that I may cultivate it up to my ideas of model farming.

The principle of our Patent Law is, that, in consideration of the advantage conferred on the State by an invention, the inventor shall have a monopoly of using it for a certain time; so that he may obtain a pecuniary benefit in return for the time, the labour, and the intellect that he may have bestowed in bringing his invention to the state when he made it public. It is a condition of every patent, that, to be maintained, the specification must state clearly all the particulars respecting the invention. From time to time it is considered worth while to offer rewards for the attainment of certain objects. The patent-law offers perpetual premiums for the invention of the things most needed at each particular epoch, without putting the State either to the difficulty of deciding on the merit of an invention, or of drawing on the national exchequer or the purchase of a contrivance which the next inventor might supersede.

In ages when Patent-law did not exist, every skilled calling was a mystery: trades were secretly handed down from father to son, and inventions of great importance were repeatedly made and lost. It was at that period not worth while to invent anything that could not be kept secret. That our present system answers well is proved by the fact that no sooner does a demand for any improvement arise—as for instance in screw-propellers, in the manufacture of caoutchouc, in electric telegraphs—than it is supplied by the exertions of the whole inventive intellect of the kingdom, stimulated by the seldom realised idea of a fortune to be made from a patent. Certain manufacturers complain that they are hampered by excessive fertility of invention, that is possible—but they must not take it for granted that they would have had the advantage of the same number of inventions if the reward of a limited monopoly did not exist to stimulate invention. By far the greater number of valuable inventions can only be turned to profit in the hands of a great manufacturer. It is not the interest of a manufacturer to promote inventions which will supersede his machinery and interfere with his established line of business. And it is certainly not the interest of the public that every inventor should be tempted to become a manufacturer. If land were re-distributed every year, no person would build; every one would encamp; no one would drain, manure, and go through a course of agriculture; we should have nothing but potato-farms. So, if the patent privileges of inventors were abolished, it would have the effect of decreeing that intellect without capital, should remain unrewarded, at the mercy of such terms as capital, with or without intellect, should impose. For instance, a manufacturer of steam-ships, of established reputation, would have an opportunity of first experimenting on, and then making public, any improvement he might make in propelling steam-vessels, and might reap from it profitable reputation if not actual profit. But, if one of his workmen fancied he had made a valuable invention, the master would be in a position to say, when it was offered for his purchase—"No; I am satisfied with my present machinery, and, if your invention is really good, why, when my neighbours have tried it, I can adopt it." The obvious effect of the abolition of Patent rights would be to drive us back to the "*mystery*" system of the middle ages, and remove from all not possessed of capital any interest in effecting improvements in the machinery or the materials they may be in the habit of employing. Of what use would it be to educate our mechanics by schools, and lectures, and books, if at the same time we were to decree that mechanical and chemical skill was only to be useful to those provided with a money qualification? It is our interest that a close union should be formed, and yet a division of labour exist, between the manufacturing and the inventive, the intellectual and the operative, sections of our community. This a reasonable Patent Law effects. It enables the inventor to toil on day and night for years in hopes of reward; it enables him, when successful, to deal with the capitalist on equal terms.

There can be no doubt that just as mines remain unworked or ill-worked, and farms undrained or ill-drained, in the hands of torpid proprietors, so certain patents, especially in mechanical inventions, become after a time embarrassing to the progress of invention; but this embarrassment is rather a reason for enactments similar to those which compel the drainage of lands in Lincolnshire, and force railroads and canals through the estates of unwilling proprietors, than for opening up the whole proceeds of inventive intellect to the free use of manufacturers by a decree, which would, in effect, hand over the profits of invention as a monopoly to capital.

We can conceive circumstances under which a compulsory arbitration for selling the money worth of mechanical inventions, and permitting one patentee to make use of the inventions of another, might be advantageous to the State, or even to buy up inventions in order to throw them open. But as the double reward of reputation and money has always been found the greatest incentive to exertions of every kind, we can conceive no better mode of keeping the inventive intellect of the world on the stretch, than by granting to each inventor a limited monopoly in the shape of a Patent for his improvements.

PROVINCIAL INTELLIGENCE.

Testimonial to Mr. Bright.—The subscription commenced in Rochdale for a testimonial to Mr. Bright, for his exertions in behalf of Free-trade, has been brought to a close. The amount was upwards of £5000. After consulting with the hon. member, the committee decided that a library would be an appropriate testimonial. The case is an elegant and elaborate work of art. A silver plate is affixed to this handsome piece of furniture, with an appropriate inscription. The library consists of more than 1200 volumes. It was selected by Mr. Bright at an additional cost of £1300; and the balance, after deducting the expenses, has been paid to that gentleman.

Totness, Devon.—The corporate property of the borough of Totness, which for a great number of years has been in Chancery, has been conveyed by the Lords Commissioners of Her Majesty's Treasury to charity trustees, in order that the income accruing therefrom might be applied towards the establishment and support of a free school, and to certain other charitable purposes. There are about 100 candidates for the vacant office of the head-mastership of the grammar School in this town.

Winchester Gaol.—At the late Hants Assizes, Lord H. Cholmondeley took occasion to deny the truth of the statements made at a recent coroner's inquest in London, respecting cruelties practised in Winchester Gaol. Lord Palmerston had sent down one of the inspectors of prisons to make inquiry; he went over the prison with himself (Lord Cholmondeley), and Mr. Taylor had expressed himself perfectly satisfied, and, as it was expected that some house of the proceedings would come before the court, Mr. Williams told him that he might state that the whole was an unfounded charge.

Fraud on the Liverpool Corporation.—A fraud on a large scale has been discovered between a clerk of works and a contractor. At Mr. Rawson's, a committee of supervision, consisting of Mr. Rawson, Mr. Clark, and Mr. Hall, acted as clerk of the works, and his duty was to examine the bricks furnished by Mr. Rawson, and to pass none as to the correctness of the deliveries. It has been discovered that Clark passed receipts for 900,000 bricks, which were either not delivered or spoiled, and for which Mr. Rawson has received £1326 15s. 9d. Mr. Rawson has been arrested, and brought before the police-court, Liverpool, but the case was remanded till the 29th (yesterday), when Clark is expected to be also in custody.

The Chancery for the Duchy of Lancaster.—This court having recently been revived, and brought more prominently before the notice of the legal profession and of the public, Mr. James, the Vice-Chancellor, held a sitting for the first time at Manchester, last week, at the Law Society's rooms. Formerly the sittings were held at Preston only, but under the new *régime* they were held at Liverpool, and now they will be held in Manchester; so that there will be three courts open on the palace in place of one as before. The profession in Manchester have promised to take all the cases they can into it, and a large number were brought before Mr. James for adjudication.

The Half-Holiday Movement.—A public meeting of the trades of Edinburgh and Leith has been held to promote the success of the movement for a Saturday half holiday and Friday payments. The meeting, which was largely and respectably attended, was presided over by John Hope, Esq., W.S. Statements were made showing the progress which had been made in obtaining the half-holiday. Already the building trades enjoyed the privilege, and a hope was expressed that, by the unanimous and earnest support of the influential inhabitants of the city, it would become universal. Resolutions affirming the expediency of restricted hours of labour, and pledging those present to use their best endeavours to effect the desired change, were cordially agreed to, and the meeting adjourned.

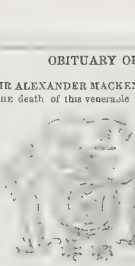
Popular Libraries, Museums, and Institutions.—*Liverpool.* Mr. Brown's offer to the people of Liverpool, promises to become the germ of a magnificent institution. Between Liverpool and Manchester there has been a rivalry of pride, purpose, and opinion, not always productive of the best results. Thus, Manchester having won a laurel by its Free Library, Liverpool now seeks to win a better. Manchester has expended some five or six thousand pounds on its literary treasures, and on the building which contains them—Liverpool proposes to lay out some twenty thousand in the same service. Mr. Brown's offer of £50,000, having been accepted, a committee of the corporation has recommended the court to set aside £15,000 out of their surplus revenues, as an addition to the gift of the benefactor for South Lancashire. With such a sum, added by gifts of every kind, a noble institution may be created an honour to the town, and an example to the country.—*Salford.*—The Museum of Art and Nature is understood and appreciated by the people. In the three years from the day of opening, more than one million of visitors have gone through the rooms—945,200 have visited, and 108,222 volumes have been read in, the reading-room. This is sufficient, perhaps, to show that the want of a lead ng library has not hitherto prevented the books from being read.—*Bolton.*—The sum raised as a library fund by voluntary subscription amounted to £2185 5s. 9d. Of this amount, the committee have expended not less than £2475 in books—therein acting more wisely than laying out the chief part of their resources in building. Bolton has followed Manchester in dividing its library into two parts—a consulting section and a lending section. The first of these contains above 9000 volumes, and the second somewhat above 3000.—The opening of the *Rotherham* and *Scarborough* Literary and Mechanics' Institution was celebrated last week with great *éclat*. Monday, Tuesday, and Wednesday were devoted to the bazaar; Thursday morning to Mechanics'n's oratorio of "Elijah," and the evening to a grand and miscellaneous concert. Friday morning to a public breakfast, and the evening to a *soirée*. Thus, the five days opened sources of attraction remarkably varied in their character and calculated to gratify the tastes of all sections of the community, and to present, as a whole, a festival, which was no auspicious to the success of the institution as its warmest friends could reasonably have anticipated.

Russian Corruption.—It is well known that in Russia, government functionaries are easily corrupted. The following instance of their corruption is related in a recently published work:—"A young man inherited a large estate in the government of Moscow. A neighbour unjustly claimed a part of it. The young man asked a uncle, the chief judge of the district, if he ought to go to law, or consent to an arrangement. The uncle recommended him to go to law, assuring him he would gain his suit. Some months after he learned that he had lost the action, because his uncle had allowed his self to be corrupted for the sum of 10,000 roubles. He hastened to his uncle and reproached him bitterly. 'It is true,' said the uncle calmly, 'that you have lost your action—true also that I accepted 10,000 roubles from your adversary, but that was all he had. If you had gained your suit here, as was your right, he would have appealed, and by sending his 10,000 roubles to St. Petersburg would have gained his cause. But now do you take the money, appeal, and you will succeed.' The nephew, delighted, gratefully embraced his uncle."

OBITUARY OF EMINENT PERSONS.

SIR ALEXANDER MACKENZIE, BART., G.C.H., OF FAIRBURN

The death of this venerable Baronet, the senior General in her Majesty's service, occurred at Bath on the 17th inst., in the eighty-third year of his age.



Sir Alexander was eldest son of the late Roderick Mackenzie, Esq., of Fairburn, by Catherine, his wife, daughter of William Baillie, Esq., of Rose Hall Rosshire, and succeeded to the baronetcy August 21, 1820, at the decease of his maternal uncle, General Sir Evan Baillie, some time Provisional Commander-in-Chief of the forces in Bengal, who obtained a special patent, extending the limitation to his sister's son. At the period of his death Sir Alexander was the senior general in the Army List. He entered the army the same year as the Duke of Wellington, with whom he previously studied at Angers, in France. Succeeding, at a very early age, to extensive hereditary possessions in Rossshire, N.B. (the Royal forests of Fairburn, Monar, and Strathconnan having been granted to his lineal ancestor by James IV. of Scotland), the young soldier rose very rapidly, passing from the Royal Regiment to the 42nd Highlanders, and then obtaining a battalion of the Ross-shire Highlanders (the 78th), which he commanded at the first capture of the Cape of Good Hope. In the last long war, which terminated in 1814, General Mackenzie was continuously employed abroad and at home. For his services in the Mediterranean, the King of the Two Sicilies conferred on him the Order of the Grand Cross of St. Januarius, and, in recognition of his general duties, he was honoured with the Grand Cross of the Guelphic Order by King George IV., by whom, and the Duke of York, he was much esteemed. We understand that Sir Alexander has left considerable sums to hospitals and other philanthropic establishments.

REAR-ADMIRAL BELL, C.B.

Rear-Admiral Christopher Bell, C.B., died on the 16th instant. This gallant officer, who entered the Royal Navy in June, 1796, took an active part in many a daring capture and "cutting out" expedition of the war. While employed ashore on the south side of St. Domingo, in 1806, he received a severe wound in an attack made by the natives on his party. In 1810 he was honoured with approbation of the Admiralty for his gallant engagement with *Le Barbier de Seville*, which he took and destroyed.

He obtained the Companionship of the Bath in 1840, and was made Rear-Admiral October 1, 1846.

The Wordsworth Memorial Window, intended for the new church at Cockermouth, has been painted by Messrs. Hardman, and is ready for fixing

OFFICERS COMMANDING IN THE FRENCH SQUADRON OF THE LEVANT.

REAR-ADMIRAL FACQUINOT.

Charles Hector Facquinot, Second in Command of the French fleet in the Levant, is one of the most intrepid navigators of the French navy. He was born on the 4th of March, 1786. In 1820, being then still *enseigne*, he made, under the orders of the celebrated Dumont d'Urville, the circumnavigatory expedition in the *Coquille*, and afterwards, almost without an interval, the two voyages of exploration in the *Astrolabe*, under the orders of the same sailor. He was promoted to a lieutenancy in 1825, and was made captain of a frigate in 1836. During the expedition above-mentioned, M. Facquinot collected, among other important contributions to science, a series of observations on the coast of New Zealand. In 1840 he was made post-captain; and obtained the rank of Rear-Admiral on the 3rd of February, 1852. He was charged by Louis Philippe with the superintendence of the artistic execution of the beautiful work of Dumont d'Urville, on the voyage of the *Astrolabe*, and acquitted himself with great care and success. Upon the formation of the Mediterranean squadron of Evolution, last year, he was appointed Second in Command, by the Emperor. Admiral Facquinot is one of the most accomplished officers of the French navy. His address is frank and sailorlike, and there is in his expression a sweetness and affability which at once conciliate the sympathies of every one. M. Facquinot is a Commander of the Legion of Honour.

VICE-ADMIRAL HAMELIN.

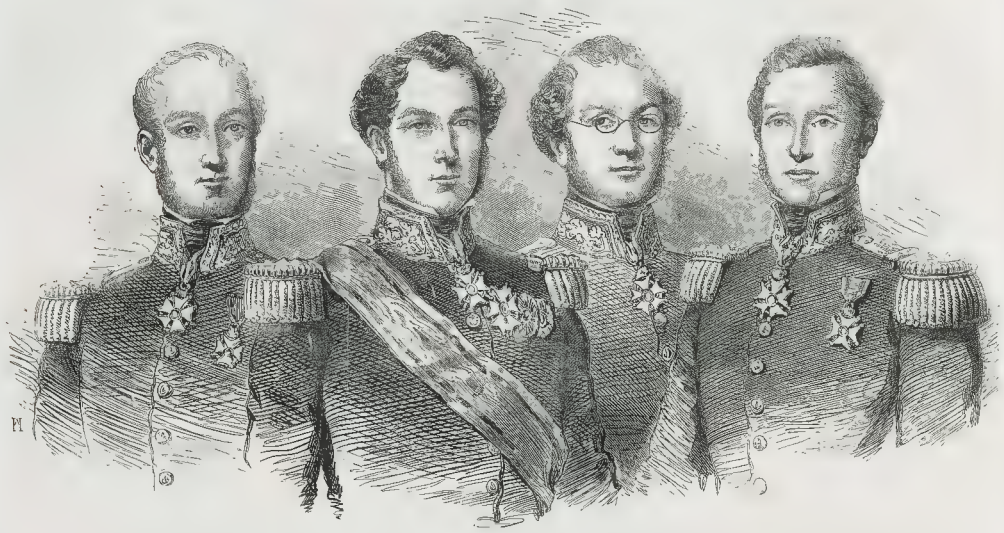
Ferdinand Alphonse Hamelin, Vice-Admiral, Commander-in-Chief of the Naval Forces of France in the Levant, was born Sept. 2, 1796. At the early age of nine he entered the navy: in 1812 he was made *enseigne* (a grade equivalent to that of midshipman of the English navy); and, in 1821, attained the rank of Lieutenant. In 1824 he took part in the squadron of evolution before Cadiz, under the orders of Admiral Duperre, charged with protecting by sea the operations of the French army in the Peninsula. His distinguished conduct on this occasion procured for him the order of St. Ferdinand from the Spanish Government. He was appointed *capitaine de frégate* in 1828. *capitaine de vaisseau* in 1836; and Rear-Admiral in 1842. In the following year he was appointed *Major-General de la Marine* at Toulon. In 1844, Admiral Hamelin succeeded Admiral Dupotit Thouars in the command of the naval station *de l'Océanie* and the west coast of America. He repaired to the Sandwich Islands in the month of March, 1846, to assure himself of the execution of the treaty concluded in 1837, between France and the Government of Oyahyhe. Satisfied with the conduct of the king, Hamamia, the Admiral delivered to him the presents with which he was entrusted by Louis Philippe. In 1848 M. Hamelin was made Vice-Admiral, and was charged with the inspection of the ships of the line in the ports of Rochfort and Toulon. At different intervals he was named Member of the Board of Admiralty—a post which he resigned in 1849, to take that of Port Admiral of Toulon. Admiral Hamelin is Grand Officer of the Legion of Honour. Of an agreeable physiognomy, the gallant Admiral possesses in the highest degree the manners of the perfect gentleman, allied to the energy characteristic of his profession. In regard to naval science, also, he is an officer of great distinction; and his appointment to the command which he at present holds is but the just reward of his high personal qualifications.

COUNT BOUET WILLIAUMEZ.

Le Comte Bouet Williaumez, *capitaine de vaisseau* at the head of the *état major* of the French fleet in the Levant, was born on the 24th April, 1806. He was adopted, in the year 1845, by Count Williaumez, Vice-Admiral in the French service; and in the same year he married the daughter of Rear-Admiral Lemarant. Count Bouet entered the service in 1823. He was then in the French Navy in terms as *aspirant* in 1824, *enseigne* in 1829, and lieutenant in 1835. In 1842 he commanded as *capitaine de corvette* on the French station on the coast of Africa, and was specially charged to watch the execution of the convention relative to the slave trade. He exercised provisionally the functions of Governor of Senegal. *Capitaine de vaisseau* in 1844, he took a part in the naval expedition against Morocco, under the command of the Prince de Joinville. It was this officer who furnished the plans according to which the operations in the bombardment of Mogador were directed. The Prince de Joinville selected him to convey to France the flags taken in this campaign. In 1848 he was charged with a mission to the coast of Africa, and in the performance of this duty he visited the Republic of Liberia. Captain Bouet is a sailor gifted with rare energy and great intrepidity. During his government of Senegal he signalised himself by several feats of arms against the aborigines; one of which, in particular, in which he defended Bonaze Medine on the subject of a picture which now belongs to Admiral Lemarant, father-in-law of M. Bouet. Appointed commander of the Legion of Honour in 1849, on the return of his expedition from the coast of Africa, he was promoted in the following year to the first class of his grade.

ADMIRAL LE BARBIER DE TINAN.

Le Barbier de Tinan (Marie Charles Adelbert), Rear-Admiral in command of the French steam squadron destined to Constantinople, was born on the 30th of August, 1803. He was fifteen years old when he entered the service. In 1832 he was appointed *enseigne*, and in 1839, lieutenant. Since that period he has served in different commands, especially in 1850. In 1851 he became *capitaine de frégate*; and in four years, *capitaine de vaisseau*. He filled different offices from 1845 to 1850, at which period he was raised to the first class of his grade. On the



REAR-ADMIRAL FACQUINOT. ADMIRAL HAMELIN. CAPTAIN ROBERT WILLIAMEZ. REAR-ADMIRAL LE BARBIER DE EINAN.

OFFICERS COMMANDING IN THE FRENCH SQUADRON OF THE LEVANT.

3rd February, 1852, M. le Barbier de Einan was appointed Rear-Admiral, titular member of the Board of Admiralty, and one of the Commissioners of Lighthouses, attached to the Ministry of Marine.

KAMENIETZ, CAPITAL OF PODOLIA, IN RUSSIAN POLAND.

KAMENIETZ is the principal town, and seat of the Government, of the province of Podolia, in Russian Poland. It is situated on the Smotritsch, and not far from the Dnieper, 235 miles north-west of Odessa. This province has belonged successively to the Poles, the Turks, afterwards to the Poles again, and lastly, at present, to the Russians. Its area is 16,443 square miles, and the population was in 1846 1,702,000, mostly Poles. The soil is fertile, and cattle-rearing is carried on to a great extent. The mineral products include lime, nitre, and alabaster. There are here manufactures of woollen cloth, leather, potash, and some distilleries—the trade being chiefly in the hands of the Jews.

Kamenietz is the capital of the Greek eparchy of Podolia and of Roman Catholic bishops, and has a Russian Theological Seminary and other schools. The chief edifice is the Cathedral of St. Peter and St. Paul. The fortifications were razed in 1812, but have since been reconstructed, and are said to be of great strength.

WIDDIN, ON THE DANUBE.

WIDDIN, IN BULGARIA, ON THE DANUBE.

WIDDIN is a very important post, commanding as it does the approach to one of the defiles of the Balkan from the Danube. It is consequently very strongly fortified, mounting ordinarily 280 guns; but the fortifications have been very considerably increased, and the number of guns also, since the late threat of invasion on the part of Russia. The town is the largest on the Turkish shore of the Danube, containing more than 20,000 inhabitants. It has an imposing appearance when approached by water, on account of the number of its white minarets and mosques rising above the houses. Within the walls it shows signs of industry and wealth. The country around Widdin presents a pleasing landscape, consisting of verdant swells, cultivated fields, and plains, upon which vast troops of horses and herds of buffaloes are seen grazing. The Austrians bombarded the town from the island in front of it, and took it, in 1689. Part of the Russian troops are now posted near Kalafat, on the opposite bank of the river.

KAMENIETZ, THE CAPITAL OF PODOLIA, IN RUSSIAN POLAND.

TURKISH RECRUITS.

RECRUITS IN TURKEY.

ALTHOUGH the practice of recruiting in Turkey has undergone some modifications since the organisation of the new military code of 1843—modifications removing much of that arbitrary character which formerly led to so much abuse and cruelty—recruits are still required and obtained under a regular conscription, under officers very formidable in aspect and unrelenting in purpose, appointed to the duty. The subject of our present Engraving is one of the recruiting parties, as they were seen some years ago in the more distant provinces of the empire. The recruiting officers are armed to the teeth carrying pistols, dagger, and a formidable yatagan swung across his breast, in the folds of his shawl. Sometimes—more especially in case of resistance, or attempted escape—the new recruits are tied together with a cord. There can be no doubt that conscription is looked upon with great dislike in most of the rural districts—where parents see with regret and terror their sons taken from the plough to risk their lives in the battle-field. But the admirable regulations of the new system, which ensure the soldier abundant food, good clothing, and regular pay, for a limited service of five years' active duty—to be followed afterwards by a service of five years in the militia of his native village or district—will, in time, go far to remove the opposition which is evinced upon this subject.

THE FAIR OF ST. PETER, AT GIURGEVO.

THE Fair of St. Peter, as celebrated at Giurgevo, presents a wild scene, strangely illustrative of the costumes and habits of the various inhabitants of the Danubian Provinces. It is held upon a vast barren plain, without verdure or shade, at a little distance from the town; and here whole villages and families pour in their thousands to mix with gipsies and professional mountebanks in the rude hilarity appropriate to such occasions. Every party as they arrive unharness the horses or oxen from their carriage, and then organise themselves into small several encampments The merchants and farmers put up a sort of rude canvas covering, supported at the sides by their waggons; the gipsies defying the sun's rays from beneath their broad-brimmed hats On every side the smoke from improvised kitchens curls upward high into the air whilst beneath the tents, and on the open ground all around, the preparations for the dance are set about without delay. The belles of Wallachia are very proud of their velvet caps, in which are suspended long chaplets, upon which are contained the jewels and coins which are to form their dower. The young *tsigane* girls have a peculiar beauty of face, and gracefulness of figure, which support their claim to an extraction, in olden time, from a parent stock on the borders of the Ganges.

In the midst of this scene of confused gaiety, the merchants furnish forth their stalls the principal productions dealt in being coarse cloths, furs, and various articles of attire; to which may be added, all descriptions of food in abundance.

FAIR OF ST. PETER, AT GIURGEVO, IN WALLACHIA.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

The life of Haydon, by Mr. Taylor, is about to appear in a second and revised edition. Very few lives of modern artists have got beyond an average sale of the first edition, and the success of Haydon's life must be attributed as much to curiosity about his person as interest in the art to which, in his own eyes, he was a real martyr. The lives of artists seldom abound in incidents, but Haydon's life is full of striking situations. It is the history of a man of inflamed temperament warring with the world in behalf of high art. Mr. Taylor, it is said, is about to omit some of the prayers that have given unnecessary offence to a few over-scrupulous minds. We are sorry for this. The prayers, it is urged, are essentially necessary to the due understanding of the man. Mr. Taylor should act on the advice which we remember to have heard Haydon himself give when Wilkie's life was first announced. There had been an idle rumour afloat that Wilkie was to appear in full dress, that omissions of moment were to be made in his journals and letters. "Pray," said Haydon, "do not suffer Wilkie's vigour to be castrated to suit *temporary apprehensions* of the truth."

Another work of still greater moment connected with art, and of some importance, also, in connexion with literature, is the announcement of a volume of letters to and from Mr. Haydon. The volume will, it is said, include letters of interest from the poet Keats; and some of great artistic value from Wilkie, who always wrote clearly on what he understood so well his own art. "The real man," we remember to have heard Haydon remark, speaking of Wilkie, "is only shown in his correspondence with me."

The friends of Wilkie complain that Haydon is made to appear too advantageously, and Wilkie too disadvantageously in Mr. Taylor's "Life;" and that the cause of their final quarrel is not stated. No two men could be possibly more unlike than Haydon and Wilkie; their friendship, consequently, assumed the form at all times of a sort of armed neutrality. Haydon was loose in money matters; Wilkie correct, like an accountant on oath before a magistrate. Haydon often borrowed, seldom repaid in time, and too frequently omitted to pay at all. Such things could not last. When Mr. Cunningham wrote the life of Wilkie, Mr. Haydon was still alive; and, out of delicacy towards him, the cause of their final quarrel was omitted altogether. Now that Haydon has gone, and Haydon has been allowed to tell his story, the friends of Wilkie are of opinion that the version of the quarrel, as related by Wilkie himself, merits publication. Wilkie, it is well known, kept a journal; and from this journal the following extract now appears in print for the first time:—

12th November, 1821.—Had a call this morning from Mr. Haydon, to say that he had just been *arrested*, at the suit of Rennel, the printer, for a debt of £66, and the Sheriff's-officer had brought him out in his gig to see if I would bail him. I expressed much dislike to this; but, rather than see him go to prison, said, that if he would get another as good I would be one to bail him, but would not bail him a one. He therefore *promised* that he would get Mr. Perkins, of Great Marlborough street, to join me, or some other friend equally good. In consequence of this, and the assurance that he would use every exertion to raise the money to discharge the debt, and his repeated promise that he would not leave town till it was discharged and the bond destroyed, I acquiesced, and put my name with his to the bond. In the afternoon I called at Perkins's, to ask if Haydon had called on him. He said he had; but that he, being out, did not see him. Go he could not be bail to him. I was led to call on Perkins to ascertain this in consequence of having received a very unbecoming letter from Haydon, filled with upbraidings, promises, and threats, and at the same time submitting to ask for secrecy, but neglecting entirely what was most his duty to have informed me of—namely, whether he had found any one else to join me in bailing him. Haydon's conduct on this occasion appears strikingly offensive, and brings me to the determination of giving up his acquaintance.

The unbecoming letter we have not seen; but it is easy to imagine from Haydon' journals what a threatening letter from Haydon would be like. Such then is Wilkie's account of his quarrel with his old friend, and we recommend it to Mr. Taylor for insertion in the next edition of "Haydon's Life."

It is usual for artists to appear during the last week in October in a state of excitement not common to them during any other part of the year. The private view day at the Royal Academy—the first Monday in May—is a tranquil hours to artists without the pale of the Academy, compared to the last week in October. The reason is obvious: the first of November in each year is the day on which, should any vacancy have arisen in the ranks of the associates of the Royal Academy during the preceding twelve months, that the election takes place of an artist to succeed to the vacancy. The first of November is what is called a field day with the forty Royal Academicians. It is on that day they assemble to consider the claims—not of British artists who are not Royal Academicians, but of British artists who have expressed in writing a desire to belong to their body. Every kind of influence is at work to secure or prevent his election. Artists desirous of admission call in their best clothes on the most popular Academicians, and look smiling and well to do. At the election, portrait-painters prick against portrait painters, and landscape painters prick against landscape-painters. The sculptor exerts his interest to bring in an architect, and an architect works to bring in a sculptor. This is human nature, and is easily accounted for. To become a Royal Academician is to attain a position in art very generally sought for by candidates for distinction and reward. The situation implies merit, and in many instances commands commissions. Who would not fill such an office? The first of November is, therefore, a great day. Unhappily, this year there is no vacancy. Were a Raphael to arise to-morrow and twenty vacancies to occur in the Academy in the next twenty weeks, the modern Raphael, whose claims all men admit, must wait for another first of November, and must go through another last week in October. Mr. Millais, for instance, as some one remarked the other day very pertinently, cannot by any chance become an Associate of the Academy before the 1st of November in next year. The Academicians surely should revise their rules.

The great and increasing demand for the works of British artists (having its source chiefly in our great manufacturing cities) has originated a scheme for a monthly sale by public auction of pictures and drawings. On the first Thursday of every month a Mr. Robinson, of Old Bond-street, purposes selling by public auction whatever is entrusted to him for sale in this way. He will, so we are assured, receive Cimes from artists, from collectors weeding their collections, and from connoisseurs "returning abroad." The scheme has much to recommend it. But it has our heartiest support from the assistance it will lend to the young and too often the needy artist. This is a medium between the patron and the pawnbroker. Collectors and connoisseurs had ample friends in Christie and Manson, and Sotheby and Wilkinson. "Of how much advantage," it was remarked to us the other day, "would a monthly auction of this kind have been to Patrick Nasmyth." Our London Hobbema, for such Nasmyth certainly was, sold his pictures to pawnbrokers. His principal dealings in this way lay with a pawnbroker in the Westminster-bridge road. We remember his works there. When a young painter, fresh from Scotland, with all his country's pride freshly about him, expressed his regret at seeing his pictures so ill hung—"Were they inside or outside the window?" was Nasmyth's question. "Oh, they were in," was the reply. "Then," said Nasmyth, "I do not care; they might have been worse hung." Meaning outside the window, with riddles, warming-pans, and Hessian boots.

The fever-height to which the best works of living British artists has of late been carried, may be illustrated by an offer made last season—not in earnest half in jest by the great auctioneer of pictures in this country. Mr. Christie is said to have offered to secure to the proprietor of Sir Edwin Landseer's exquisite little picture, called "Jack in Office," no less a sum than two thousand guineas, on his sending that picture to his rooms for sale. Our readers will remember the size of the picture, but they will also remember its admirable story, and the vigour and finish of its execution. It was no romantic offer. The money for it would have been found in the manufacturing districts.

MUSIC.

A series of our performances of Italian Opera is to take place at Brighton during the second week in November, in which Grisi and Mario are to appear. There will, in all probability, be the last appearances of these illustrious artists in England. We are enabled to mention (on authority worthy of reliance) that Mario goes, during the winter season, to the Italian Opera at Paris; while Grisi will remain in repose, demanded by the state of her health. In the spring and summer they have in contemplation a professional tour through Germany and France, previous to their departure in the autumn for the United States; and they will then withdraw from public life to the retirement of their Florentine villa.

The operas to be given at Brighton, in which they are to appear for the last time, are to be got up on as large a scale as the size of the theatre will permit. Madame Doris, Madame Bellini, Signor Ciabatta, Signor Galli, Signor F. Lablache, and other singers well known to the metropolitan public, have been engaged; and the band and chorus are to consist entirely of performers from the Royal Italian Opera.

Two young English vocalists, of great promise, have appeared at the HAYMARKET, in the "Beggars' Opera:" Miss Featherstone, in the character of *Macheath*, and Miss Ormonde in *Polly*. In general we dislike the appearance of females in male parts; but Miss Featherstone did much to reconcile us to a thing which neither judgment nor taste can entirely sanction. She gave, certainly, a very fair feminine version of this part; but still she looked so admirably, and acted with so much gaiety and spirit, that it was impossible to be otherwise than pleased. And then she sang the airs deliciously, with one of the finest and richest contralto voices we have ever heard, and with great simplicity and expression. Still, however, we shall be better pleased to see her in a character belonging to her own sex. Miss Ormonde, too, will be an acquisition to our musical stage—if ever we have one. Her voice is a soprano, of limited power, but much sweetness, and it has the great advantage of being always in tune. She sings, too, with taste and feeling.

An entertainment of a miscellaneous nature—literary, pictorial, and musical—called "The Irish Tourists' Ticket," was given by Mr. H. P. Hatch on Monday evening at the Hanover-square Rooms. It is a descriptive sketch of Irish character, manners, scenery, &c., illustrated by dioramic views and songs, written by Mr. Samuel Lover. Without possessing any striking features, the entertainment is lively and agreeable; and an evening spent in seeing and hearing it will not be thrown away.

THE THEATRES, &c.

HAYMARKET.

The most important theatrical event of the present week is the re-opening of this house, under Mr. Buckstone's excellent management, with embellishments, improvements, and repairs, on an extended scale; showing at once determined enterprise and a well-grounded hope of permanent success. The architect, in effecting these satisfactory results is Mr. G. Somers Clarke. The area in front of the curtain has been entirely re-furnished—the pit and stalls being covered with patent American leather, and separated by a metal gilt cresting. The flooring of the orchestra has been much lowered, for the purpose of promoting an uninterrupted view of the stage—the stage itself being newly constructed. The green curtain, also, has been removed; and, in order to harmonize in tone with the rest of the embellishments of the house, has been replaced by a blue one. A new drop-scene also has been painted by Mr. Callcott. Mr. Garland has modeled some beautiful medallions for the ceiling, proscenium, and dress-circle. Among these, are fifteen medallion portraits of English dramatists, from Shakspeare to Knowles and Bulwer. The decorative paintings were executed by Messrs. Pantanini and Bendixen. In a scroll, over the proscenium, is a group of boys and animals, immediately under one of Thalia, Melpomene, and Erato. The whole has, indeed, a dazzling effect and presents the most beautiful, as well as the most brilliant, of our theatrical interiors.

The re-opening took place on Monday, and the inaugurating performances were—"A Cure for Love," the "Beggars' Opera," and "Founded on Facts." The part of *Sadgrove* is one perfectly Buckstonian; and his fits of inability, to which he resorts as the means of drowning an erotic passion, needing the consolation of the glass, were overwhelmingly ludicrous. On Tuesday "Hamlet" was performed, for the purpose of testing the claims of Mr. George Vandenhoff to the tragic lead of the company, and the trial was perfectly satisfactory. During the Vestris management of Covent Garden, Mr. Vandenhoff gave promise of perhaps more power than he now evinces, but was crude in style; when he left us altogether for America, where, by practice, he has become evidently a finished artist. His *Hamlet* is certainly an elegant, and in some situations a highly-wrought, piece of acting. We have great hope that, in the new pieces about to be produced at this theatre, he will prove an efficient performer. His success was incontrovertible, and an honourable future awaits his exertions in the profession to which he was born.

DRURY-LANE.

The manager has collected the leading members of the different equestrian and gymnastic troupes, and thus combined the attractions of many entertainments in one. On Monday, an excessive multitude assembled within the walls of the theatre to witness these exciting exercises. The stage has been converted into a circle, a gallery for the orchestra being formed at the back, and the pit being boarded over and raised to a level with it; thus constituting a *salle* convenient for witnessing the performances. The feats of horsemanship, equitation, and vaulting were surprising. A few particulars may be given in illustration, such as the brothers Elliott in "the Sports of Atlas, or Dance of the Silver Globes." M. Russell's equilibrium feat on the neck of the top of a pyramid of decanters; the young Hernandez and Mr. Dale, as the Olympic Brothers; Mr. Eaton Stone's the wild horse of the prairies; and the little Ella's daring exploits in riding and leaping. We may commend the Zameson family and Pauline's management of her steed. Tom Barry and his fellow clowns were also decidedly clever, spinning their long ethical yarns with a mock wisdom and a humour irresistibly provocative of mirth. The manager certainly seems to be a fortunate man, and the public to have determined on patronising his efforts for making this once patent theatre a profitable place of amusement.

MONUMENT TO THE LATE LIEUTENANT BELLOT.—Lord John Russell and the Earl of Ellesmere have requested Sir Roderick Murchison to place their names on the list of the committee, for the purpose of promoting the erection of a monument to the memory of the late gallant French officer, Lieut. Bellot, and have authorised him to announce that they are ready to contribute liberally to the laudable object.

Literature.

THE LIVES OF THE POETS-LAUREATE &c. By WILTSHIRE STANTON AUSTIN, Jun., B.A., Exeter College, Oxon, and J. RALPH, M.A., Barrister-at-Law. Bentley.

The personal and literary history of the Poets-Laureate of this empire is a very fine subject, and it on it to have inspired a very fine work. We cannot, however, in conscience, say that the work which Messrs. Austin and Ralph have here given to the public is very fine. But it is at least a book and a book on a theme which cried out for record. Far be it from us to discourage anybody who may still wish to treat the subject. It is not yet our duty to wave a gag-rule, as we are not yet able to proclaim the ground sacred from discussion. Still, less would we discourage the present authors themselves from the exercise of their own production. There is nothing in what they have here published, which would justify us in describing them as incapable of the task; and there is nothing in the book which would permit us to pronounce them *parfumeurs officio, munere abolutos*. There may—it is possible—be some persons in one rank who would feel an interest in the lives and characters of poets, and even poets laureate, who will learn something new from this volume; there may be also some who will agree with the authors of it in their critical remarks where those remarks are not repetitions of common sentences, or of now prevalent opinions: there may, again, be others, who will not notice, or even perceive, the errors of date and the errors of fact. We are not of the number. But the book contains several pages forcibly and felicitously written; and therefore the writers could doubtless have produced the rest in a shape different from that which it wears at present. We are certain that they have not used all the pains of which they are capable, either in collecting their materials, or in collating their authorities, we are equally sure that they have not exercised all the judgment and discrimination which they possess in estimating the moral or the literary merits of the poets recorded. We are not less convinced that they could have infused a lofty spirit of impartiality into the whole of this series of critical biographies. But, altogether, there are hundreds of less interesting volumes, and there are thousands on less interesting matters.

TEN POEMS, VII,M., VII,C. Lines. By HENRY RIDLEY. London: M. VIII.C., V.X.,I.

Such is the title-page of an odd book, splendidly printed and bound, and utterly worthless in substance. Each of these ten poems (?) consists of 770 lines, and rejoices in a lofty argument, though by no means a lofty treatment. The first, the "Messiah," is written in pentameter verse—in which certain doctrinal points are plodding maintained, without any attempt at grace, or any sustainment of dignity. On a theme so sacred, surely an author should reverently make some preparation of powers before entering the lists; but it is precisely on such themes that "fools rush in where angels fear to tread." The second poem, entitled "Divine Control" is written in what the author denominates "irregular verse:" which, on reference to the poem, we found to consist of nine lyrical measures *rugged* enough of all conscience. From this we cannot extract any passage that would exhibit the author as a poet, even as a dolorous moralist, we have no wish to deal with him. As such, he might have written essays rather than poems; and those he may have formed, perhaps a few creditable devotional tracts. But even this are not prepared to affirm with any degree of certainty. But the book, at it stands—with its affectations of matter and method—is too suggestive of presumption to justify us in commending it in any way. By doing so, we should much mislead the reader, and, we fear, ultimately the author.

THREE ORIGINAL PLAYS OF JOHN WYNNE, VIZ., TRICKS OF THE TIME: a Comedy, in five Acts. NAPOLEON THE FIRST'S FIRST LOVE: an Historical Comic Drama, in two Acts. THE ADVOCATES OF BUDA: a Romantic Mexican Drama, in four Acts. Bosworth.

These plays are dedicated to Mr. James William Wallack, the actor, who has just now become the lessee of the Marylebone Theatre and who it seems is a friend of the author. In the course of the dedication Mr. Wynne reviews the theatrical productions of the last twenty years, and finds, to his astonishment, in the pieces that have been accepted by managers, the reason why his own have been rejected. Nothing daunted however, Mr. Wynne adopts Dundas's famous expression, when he was decried in his first speech in the House of Commons—"the time will come when you shall listen to me!" The sooner that time arrives," he adds, "the better for the managers, for I intend to write as it does."

Such indomitable perseverance is not often found—nor is it, perhaps, very desirable. Nevertheless, we may state further with truth, that the compositions before us are not without merit. They are very novel and original in their subjects and their treatment. If they lack the highest kind and truest spirit of dramatic interest, they have much of the liberal in their texture for the first of the pieces has, for instance, its origin in the A B C and X Y Z advertisements in the morning journals for the sale of Government office situations for sons being a youth of foreign count, and quite to a merchant's daughter, and he falls off in the careless, farce-like style which, at once feels to blend the quaintly of comedy, and wanting in elaboration as a work of art. There is an amount of cleverness and an aptitude for humorous effect in these, which, under better conduct might have made a good drama. The second piece treats on the historical incident of Napoleon, in a straight forward, off hand manner; but, while it testifies to great facility in the execution of the dialogue, shows a want of thought in the conception and general structure. The third drama is a three act shop-boy play, which, perhaps, was undertaken in emulation of "The Corsican Brothers;" and there are passages in it indicative of considerable power, and some, though not sufficient skill in the arrangement of a series of terrible accidents, which only want identity intens fying to be exceedingly effective. The qualities actually shown by the author, are those which befit the playwright, as contrasted from the dramatist; and as such, with his perseverance, he has a better chance than many a better writer for his acceptance by a manager. We wish his claims had been of a higher mark; because then the publication of his book might have been serviceable, in establishing for him a closet reputation. To such a destiny these plays have no pretension; and as they are deficient in stage eligibility, we cannot exactly see the service which Mr. Wynne proposes to himself by their publication. If, however, it should teach him his defects and induce him to a resolution of amendment, it may have a positive operation, on his own mind, highly beneficial.

COUNT ARENSBERG; OR, THE DAYS OF MARTIN LUTHER. By JOSEPH CORTAIN, A.B., of Trinity College, Dublin. Longman. 1853.

This is an historical novel, designed to illustrate the early progress of the Reformation. In all its main incidents this narrative is based on authentic facts, and the fiction is merely a vehicle which is strictly kept subservient to truth. The story involves the loves of a German Count and an Italian Marchioness which are crossed by many chequered circumstances, but terminate, after the best approved fashion, in a prosperous marriage. A Cardinal of the Lotharic school is the villainous instrument of all the unhappiness of the hero and heroine; and he causes her father to be imprisoned in the Castle of St. Angelo, and ultimately murdered, because she will not surrender her virtue to his impure desires. This Cardinal represents the depravity of the holy precincts of the Church during the pontificate of Leo X; and charity induces us to think that this character is over coloured. The events in the tale succeed each other rapidly, and the adventures never flag. The scene is laid partly in Rome, partly in Saxony. Leo, Luther, Melancthon, Frederick and Ruffaelle, Frederick the Wise Elector, Charles V. of Spain and Emperor of Germany, are the prominent actors; and the main object is to describe the state of religion and feeling that prevailed at Rome and in Germany when the sale of indulgences was adopted to defray the expense of building St. Peter's in the Eternal City.

The writer is perfectly familiar with the spirit of the epoch on which his tale is founded, and he does justice to the good and bad qualities both of Leo and Luther. It is this calm and careful discrimination which gives the principal charm to his volumes. The Pontiff was certainly more inclined to the revival of ancient literature than to the study of Gospel truths, and if the great Reformer was not in possession convictions, he was frequently coarse and vituperative in his conduct and preachings. The merits and defects of both are fairly stated; and they who have not leisure to consult original documents, will gain a fair insight into the inner life of both these celebrated men by a perusal of this story. The style is elegant and nervous; and some notes are appended to vindicate the historical veracity which the author's pen. There are no bitter polemics; no attempt to drag in any modern controversy; and we can commend the work as one that will not fail to afford both amusement and instruction.

AMERICAN NEWS AND GOSSIP.

NEW YORK, Oct. 8, 1853.

THE United States continue to be heedless, passing like a great giant in excitement from one interest to another. Important event succeeds event, of course, with the usual train of discussion and Turkish difficulties. War is talked of in every branch of society, and a vein of speculation is heavy in its bile from all sides, inundating the county with startling prophecies and conjectural absurdities, the effect of which is only to confuse the public mind. The myriad journals with matter for comment and discussion. The arrival of each steamer from Europe excites more interest than usual y arises, and the progress of negotiations between the contesting countries is noted with extreme care and point. What gives piquancy to the affair here is the little episode of the Koszta case, and Mercy's letter, both of which have an indirect bearing on the event—the influence of which, however, may be more or less loss. The Government is solemnly silent, while individual warmth is manifested in the avowal of a large number of citizens in various states of the Union, to proceed to Turkey, and invest fortune and life in the service. Whether this be rooted, lasting sympathy for the Turks, or merely a hasty-formed outburst of momentary zeal, the future will more fully demonstrate.

A company, we hear, has been organised in New York, for constructing a submarine telegraph between Liverpool and New York, via Galway, Newfoundland, and Nova Scotia—the route marked out extending about 2600 miles. The cost of construction, per mile, for the submarine wire, on an improved plan, adopted by a gentleman of New England, is estimated at less than 800 dollars, which is considerably under the present cost. It is contemplated that the route will be finished, and in working condition, by the 1st of August next; and, if all these schemes be, practically brought about, news by the Cunard and Collins lines will be no longer the great point of the press.

Jullien's concerts are not as attractive at "Metropolitan Hall," as they were at Castle Garden. The Americans like his waltzes, polkas, and elaborate dressings of "Yankee Doodle," and the national melodies: but the Beethoven and Mozart episodes are received with melancholy apathy. The critics of the metropolis own that we eat a very sorry feast in our national appreciation of instrumental music, and a "flowing negro melody" will allure an audience into an encore sooner than the most classical overture ever composed. The matter stands thus:—"Chetham, in the interests of musical taste, is a bore, and Mendelssohn may be all very well, but Balfe and Wallace suit us much better." Time alone will correct this indifference to the works of the great master.

A case of Chinese smuggling has lately been exposed, which shows that the Celestials are by no means behind in superiorness in this respect. A vessel had arrived from China at San Francisco with a large number of natives on board. A revenue officer was placed on duty to see that no cargo was landed without authority. Among the passengers one round jolly-looking old fellow attracted a good deal of attention by his extreme portliness, and it was observed that his dimensions were inharmonious, and his movements constrained. These facts did not escape the eye of the officer, who approached, and gave him a playful poke in the stomach, which gave back a hollow sound. This made the official open his eyes with the prospect of a discovery; and the old Chin se being compelled to put aside his tunic and appurtenances, a round wash-tub-like stomach was discovered, stuffed with opium. Of course stomach and contents were confiscated as contraband.

The enormous amount of international traffic would seem to have brought about a certain meteorological influence as well as commercial, for recently we have had the most positive Liverpool weather in the American metropolis—even to mist and fogs! We can afford to dispense with this importation, as blue skies and bright stars are far more conducive to happiness and health than evening damps and a London fog. The weather-seers foretell avalanches of snow the coming season, with sleighing and buffalo robes in abundance. Broadway, with its ten thousand carriages, displays a winter appearance, exhibits furs and skins in profusion. In the north snow is not a stranger in the years; and even in Philadelphia, where the feathery element rarely whitens the *trottoir* until November, there have been a score of respectable storms, with just enough snow to indicate what may be expected when the season is more advanced. The news from Canada and the Lake Counties tells of frost and hail storms; and this weather is connected with appearances in the section, endorse the impression that the coming winter will be one of severity.

Mostly being the first day of the Levantic year, New York was honoured with a large body of Jews, who assembled from all parts of the Republic in order to partake, in certain forms and ceremonies in the various synagogues of the city. Among other matters, the consecration of a new "sepher Torah," or Holy Scroll, was performed. This scroll, which contains, in Hebrew, on plates of gold. Over the scroll is thrown a small bush, of muslin. This wrapper is composed of white satin, bordered with heavy silver fringe. Hanging from the scroll is a "yad" or pointer, with which the reader points to every word as he reads. This instrument is about eight inches in length, composed of silver, at its extremity is a hand of solid gold, on the index finger of which is a signet ring set with a large diamond. The handle is bodily chased, and the sacred points are gilt and burnished. Hanging over the "manboard" by a heavy gold chain, is a large shield-like plate of silver, on the border of which is elaborately-chased scrolls and foliage; on the front of this plate are two plain pillars of burnished gold, with capitals and bases of frosted silver, raised in the Egyptian style, from the fronts of each cap and pedestal project large rubies and emeralds, and on the top of each pillar is a silver dove. Between the pillars, on the centre of the shield, are two lions rampant, with golden heads and silver bodies, supporting two large gold plates, on which are inscribed, in Hebrew characters, the Ten Commandments of the Law as it was delivered to Moses. The whole shield is a small, gold door, on which are engraved the Ten Commandments, which are supposed to be concealed when the scroll is not in use, but which are substituted therefore. The pillars, lions, laws, &c., are surrounded by the "Kesher Israel," or crown of the Law, the crown is of gold, and a vast amount of exquisitely elaborate chasing and engraving have been lavished upon it. Its front is studded with large rubies, emeralds, and other precious stones. On the "Gates that rise," or "Tree of Life," is engraved the name of the donor. The "Tree of Life" is the roll around which the scroll is wound. The whole affair is certainly a magnificent work of art, and cost an immense amount of skill, labour, and money.

Among late news items from Havannah there is a report that there has been a fresh cargo of 600 negroes landed on the Cuban coast.

SUBWAY FOR SEWAGE, GAS AND WATER SUPPLY.

THE concentration of the Sewage Gas and Water Supply of the Metropolis, by means of Subways, so as to avoid the many inconveniences and disadvantages of the present system, has long exercised the ingenuity of inventive persons, but the subject has lately been taken up with better prospects of realisation than hitherto, in consequence of the increased importance attached to the three main provisions which this invention promises to complete.

The last projected plan is illustrated in the accompanying Original View of a proposed Subway, to contain, first, a large common Sewer for the reception of drains from streets or houses, and from minor sewers in lanes and smaller streets; the main, or large sewer, being provided with outflow, or discharge pipes, running into reservoirs or discharge main-pipes; which latter it is intended to sink on the shores of the River Thames, below level of the low water. Thus, the sewage waters, instead of polluting the river waters, will run through the main pipes, after leaving the street sewers, and be finally removed (undergoing process of deodorisation for manuring purposes) from large tanks or basins, by means of barges or trucks on night railway trains, to various parts of the country, and thus become of good commercial value.

The Street-Sewer, or Subway, is also to be provided with air-shafts, or flues, carried up at convenient distances for ventilation, and will be lighted with gas. A strong oak floor and joists over the whole of the sewer-waters on which two lines of rail or tramway are run for conveyance of materials, pipes, &c.; rubbish from sewer-levers, or bottoms, being removed on waggons underground, instead of in the streets. No stench can possibly ascend to the streets, through the gratings, as every grating will have a water-trap.

Immediately over the sewer proper section, and tramways, will be placed iron girders, or cross bearers (at three yards intervals), bearing on side walls of the subway, and preventing collapse or thrust of house walls towards sewers (now frequently occurring); the iron girders at the same time form shelves or supports for gas and water pipes; which pipes are preserved from corrosion, and all escapes from bad joints of pipes detected and prevented. It is a proved fact, that one third of all the gas manufactured is wasted and lost in the ground, from bad pipes and joints; to repair which the companies incur an enormous expense, and tradesmen and the public are subject to great loss and a continual nuisance, by stopping up the streets and thoroughfares. In the subway service pipes for supply of gas or water to houses, are led through galvanised iron or slate-lay chambers, to the wall faces of houses so that no more to dig up traffic to ever be engaged to lay on supply or repair pipes, &c. A strong arch of brickwork, built in cement, is to form the crown of the subway, on which a thin bed of concrete will be laid to receive a substantial and permanent pavement; and the under face (or soffit) of the arch will be available for fixing telegraph wires, avoiding the present expense of tubes and difficulty of ascertaining and repairing damaged or defective wires. It is intended that inspectors should be constantly on duty in the subway, and that by a proper system of the subway may be increased, so as to allow of conveyance of coals and heavy merchandise, inclined or descent approaches being constructed from the streets.

It is confidently asserted that the losses, waste, and expense incurred in fourteen or fifteen years of the present system, are equal to the first cost of the proposed subway.

The designs and arrangements of this Subway are by Mr. W. Austin, Holywell-street, Westminster; and have been approved by the Metropolitan and City Sewer Commissioners, and their engineers.

PROPOSED METROPOLITAN SUBWAY FOR SEWAGE, AND GAS AND WATER SUPPLY.

STRANGE STORY.

A son of George Linley, the composer, has had a narrow escape. He had fixed on the *Dreadnought* to take his passage to Sydney, but his mother entertaining a prejudice against that ship, she urged him so fervently to give up his desire of going in her that, at the last moment, he consented. She visited the *Dalhousie* three times with her son, hoping to overcome her superstitious fears. On the occasion of her last visit, a gentleman signing papers in the cabin, seeing her hesitation, said, "Madam, this is a brass ship. I have £40,000 on board, and rest assured I must think well of the *Dalhousie* before I would trust so much in her." Much more he argued to persuade her, but Mrs. Linley still demurred, and immediately went to the *Sauarang*, and there secured a berth for her son.

The Emperor of the French has given a sum of 1000 fr. toward's the monument to be erected in Hamburg to the memory of the celebrated composer Weber.

Mr. Henry Chatfield, assistant to the master-shipwright at Woolwich Dockyard, has been appointed master shipwright of Deptford Dockyard, vice Mr. Winnett, who has retired, on account of ill-health on a superannuation allowance of £400 per annum.

PERILOUS SITUATION OF THE STEAM-PACKET "DISPATCH," AT GUERNSEY.

THE Mail steam-packet *Dispatch*, Captain Baudt, left the harbour of St Helier at her usual hour on Saturday, the 17th inst., for Guernsey and Southampton, in a heavy gale and high sea. Soon after nine o'clock she was signalled at Fort Regent as in distress; and the following are the particulars of the accident which had befallen her:—

When she arrived off the Corbière her main shaft broke in two places, and two of her eccentric rods also snapped, at once rendering her steam-machinery unavailable for further navigation. In this extremity Captain Baudt attempted to make sail to return, but in setting the mainsail the peak halyard-block broke, and when it was replaced the halyard broke. He then let go another between the three rocks called the Oaks. H.M. Steam-ship *Dasher*, Com. Le Febvre, on perceiving the distress-signal, had immediately left the harbour to go to her assistance, and when the *Dispatch* saw her approaching within about a mile and a half, she cut her cable, leaving the anchor and about thirty fathom of line, and got under way.

The *Dasher* met her near the Corbière, and, going round her stern, observed that her sails were drifting to leeward; she then took her in tow with two hawsers. These broke short one after the other, and were again replaced in the same manner. The wind being fair, the *Dasher* relied mainly upon her canvass, working her engines now and then to keep the vessels near of each other. The *Dasher* encountered some tremendous seas, one of these sent high over the bridge, and carried away the stern-boat from the davits, leaving the deck so encumbered of water, as to render it necessary to knock out the ports for its escape. Shortly after five, we o'clock she arrived safely, with her rescued charge in the outer roads of St. Helier, and at twenty minutes past six o'clock, the pier was crowded assembled on the Pier-heads has the delight of seeing the war-steamer passing safely into Victoria Harbour, hoisting after her the distressed *Dispatch*. As the *Dasher* passed between the Pier-heads, several hearty cheers greeted her gallant commander and crew, from the assembled throngs on the pier and quay

We need scarcely state that the alarm among the packet's passengers (among whom was a lady with her nine children—one only six weeks old) when they found her disabled, and at the mercy of wind and tide, on such a terrible coast, was extreme. Many of them knelt and prayed, some were landed in the boats of the two steamers, as they lay in the roads; the remainder, on their arrival in the harbour. One of the passengers, a deaf gentleman, was ignorant, at the time of the catastrophe, of what had happened, and must feel they have reached Guernsey.

One of the passengers in the *Dispatch* has since addressed a letter to the papers, complaining of the want of attention of the authorities. He says:—

I was one of the passengers on board the *Dispatch* steam-packet on Monday, the 17th inst., when she so narrowly escaped shipwreck on the Jersey coast, and I think it my duty to suggest such a mode of extrication in the disaster should be made by the Post-office, or some other competent authority, and a report of it published. Why should there not be an inquiry when upwards of 100 lives were placed in such terrible peril? The first cause of the accident was the breaking of the main intermediate shaft, which forced away the eccentrics. This shaft, which, as I have been told on one side, at the fracture, to be extremely fine grained, and must have sustained great injury long before. Orders were given to haul the mainsail; but the iron halyards soon broke, and the steamer became perfectly powerless. In this perilous position it was of the utmost importance that immediate intelligence of our danger should be conveyed to St. Helier's about eight o'clock a distress signal was made on the steamer, and after rather a long delay, a gun was fired and a rocket flown. It must have been half an hour before the signal was answered at the signal-station; and I have since learned that it did not reach St. Helier's till half past nine, and in the form of "four steamers," which was unintelligible, instead of "steamer in distress," to which it was afterwards changed. I think I have shown ample reason for an inquiry into the state of the machinery and sailing-tackle of the ship, and into the signal service at Jersey. No one can more admire than I do the gallantry of Captain Lefebvre and the crew of her Majesty's steam-ship *Dasher*, and those who so nobly accompanied him; and I feel deeply grateful to the Almighty, and, under Him, to those brave men, for the timely succour afforded in such hazard; also, to the brave crew of a Jersey pilot-boat, who courageously came off to render assistance, but met us in tow of the *Dasher*.—P.

The accompanying illustration—the *Dasher* towing the mail-steamer off La Frette Point—is from a sketch by R. J. Quinee, of Jersey.

FRIGHTFUL ACCIDENT ON THE MEDWAY.

ON Thursday week a most awful catastrophe occurred at Hadlow, which has hurried to an untimely grave no less than thirty two human beings—men, women, and children. The circumstances of this terrible casualty are briefly as follow:—For some little time past, Mr. Cox, an extensive farmer and hop-grower of Hadlow, has had a number of persons, principally from the counties of Surrey and Berks in his employ picking hops, in addition to the resident labourers. It is customary when the evening work, between six and seven o'clock, a waggon filled with the home dwellers, left the Hadlow hop grounds, and proceeded towards Tuxley, crossing the Upper great Hartlake-bridge, over the River Medway, in safety. This bridge is very old, and is built principally of wood; it has a descent on either side of about eight feet in depth, with a close boarded fence between two and three feet in height; and on the Tuxley side the road curves a little to the left—took sides, in a certain state, supporting it for some little distance. At this spot there is a depth from the road of about eight feet, which is generally dry; but, owing to the recent rains, it was covered with water, and thus the width as well as the depth of the river was considerably increased. The bridge is forty-two feet across, and nine feet three inches wide.

The first waggon-load of hoppers having been safely conveyed to its destination, the second waggon, containing forty, if not more, persons, follower, (the unfortunate creatures singing merrily, as usual,) at the rate of two to three miles an hour. At the ascent to the bridge, the waggoner desired the hoppers to discontinue singing, as it might frighten the horses, which was immediately complied with. The fore horse mastered the crown of the bridge, and was descending on the Tuxley side, when its foot slipped from the pieces of iron placed on the roadway to give a sure footing; the horse gave a sudden plunge, which disconnected it from the waggon, and the shaft horse at the same time became unruly. A little to the right, had the effect of forcing the hind part of the waggon against the fence on the off side, which immediately gave way, and the waggon, with its contents, was precipitated into the river beneath. The scene that presented itself at this moment is beyond description—men, women, and children all huddled together, in frantic terror, were striving to escape destruction; but their efforts only tended to increase the hopelessness of their position. Assistance was promptly obtained, and by the kind assistance of the crew of the two boats, a few were saved; but it was too late; the mass of human beings, with the exception of eight, had sunk to its bottom. For upwards of half an hour after the occurrence cries for help were heard, but the unhappy creatures could not be discovered. One little Irish lad was found about twenty rods down the stream with a piece of fence, which he had clung to in his agony, still fixed in his hand. He was up to his middle in water, and was speedily rescued from his agonising situation. The poor fellow's garments

H.M.S.S. "DASHER" TOWING THE JERSEY MAIL STEAM-PACKET "DISPATCH" OFF LA FRETTE POINT.—(SEE PRECEDING PAGE.)

were torn to shreds by the unfortunate creatures clinging to them for support; and there is no doubt, that, had his clothes consisted of a less fragile material, his life would also have been sacrificed. The waggoner's mate was sitting on the side of the waggon, talking to his little boy, just as the accident happened; and, although he attempted to snatch his child from the waggon, he was unable to do so, owing to the close manner in which it was packed; and he only escaped by throwing himself in the opposite direction. The bailiff's life was saved in a similar manner. During Thursday night and Friday the river was searched in all directions, and six bodies were recovered—five women and one man. A jury has been assembled; and, after hearing the evidence, agreed to return a verdict of "Accidental death," with a recommendation to the River Medway Company to erect a new bridge.

It is estimated that the weight of the waggon, with its contents, was about ten tons. The waggoner says he has passed over the bridge with four tons.

On Sunday, the neighbourhood was visited by thousands of the curious, some of them from remote distances. The dragging for the bodies continued without intermission, and eleven more were recovered; and on Monday another body was discovered. At ten o'clock eight of the bodies, in decent elm coffins, attended by a crowd of mourners, were conveyed in a waggon to Hadlow Church, for interment. The melancholy ceremony attracted a great number of spectators. And in the afternoon the remainder were interred in the same place.

CONSECRATION OF THE CHURCH OF ST. PAUL, AT GRANGE, LANCASHIRE.

This church has been erected through the devoted and untiring labours of a lady (Miss Clarke), who has, after years of perseverance, succeeded in endowing and completing the building. Taking into consideration that in the whole district of Grange (about three miles from the parish church of Cartmael, 14 miles from Lancaster), there are not more than thirty to forty houses, and those mostly of the poorest class, the result is surprising. However help came by degrees: one friend subscribed £100, another £50, and the chief of the remainder came in small contributions; the sale of a scriptural enigma at 1s each, realized £60; and a friend gave a series of lectures, which brought about the same amount.

The foundation-stone of the Church was laid about twelve months since, by the Earl of Burlington; and the edifice being completed, it was consecrated on Thursday week, the 20th inst., by the Lord Bishop of the Diocese, with the usual ceremonies. His Lordship then preached an eloquent sermon, which was responded to by a collection of £32.

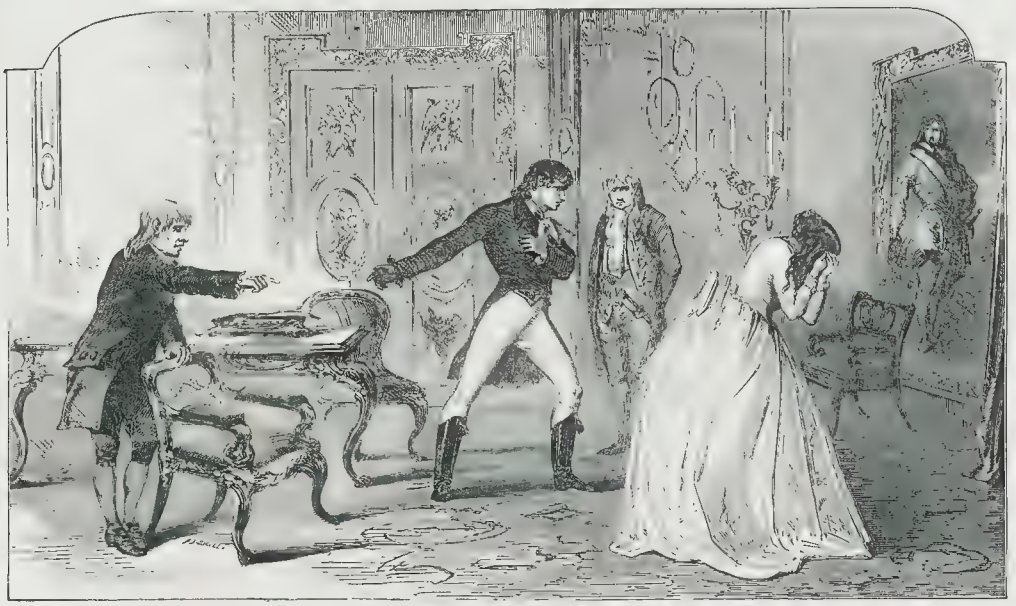
The Church was densely crowded in every part. The Earl of Burlington was unfortunately unable to attend. The Bishop expressed his warm approbation of the Church, which was built after the design of Mr. T. D. Barry, architect, Liverpool, whose valuable services were gratuitous.

Among the liberal donations to the Church are the handsome Font, the gift of G. Webster, Esq., Eller How; the Communion-plate, the gift of Miss Taylor and Miss Anna Taylor, of Grange. The covering of the communion-table, fine crimson cloth, with the carpet and other necessary furniture within the rails, together with the furniture of the pulpit, reading-desk, and vestry, are the gift of Mrs. Richard Wright, of Grange. The linen for the communion-table is the gift of Miss Whewell, sister to the Rev. the Master of Trinity College, Cambridge. The west window was presented by Mrs. Johnson, wife of T. Johnson, Esq., Spalding, Lincolnshire, and daughter of Gray Rigge, Esq., Wood Broughton. The east window, supplied by Wailes, of Newcastle, and consisting of three lights, with a figure of Christ in the centre, is the gift of Oswald P. Sergeant, E. W. Sergeant, and Alice Emma Sergeant, children of the Rev. Canon Sergeant. The bell and the vane were given by W. Wareing, Esq., and his brother, of Haworth Hall, near Rotherham. The books were kindly presented by the Society for Promoting Christian Knowledge; and the limestone, of which the Church is mainly built, is the liberal contribution of Edward Turner, Esq., Grange.

NEW CHURCH, AT GRANGE.

The Church is of the Geometric Decorated character, and consists of a nave, chancel, and vestry. At the south-west angle is an organ chamber, with porch adjoining, and a turret and spire, of simple yet unique design (corbelled from the south-west angle) form an effective feature in the general grouping of the building. The walls are built of the stone of the neighbourhood, lined with brick, and having a cavity to prevent the penetration of wet, to which such exposed situations are frequently liable. The dressings, window-tracery, &c., are of Bath stone, and contrast well with the grey wall stone. The east window is of three, and the west of four lights, of original design (as are all the other windows) and filled in with geometric tracery. The pulpit, desk, and font are of simple but suitable character. The seats are open, with plain chamfered elbows, and afford accommodation for 206 worshippers. The roof consists of coupled timbers, two feet apart, boarded on the outside, and being open to the apex gives a good interlacing effect to the cross timbers and foot pieces. The whole of the woodwork is stained dark oak and varnished.

THE UPPER GREAT MARTLAKE BRIDGE OVER THE MEDWAY, HADLOW, THE SCENE OF THE LATE ACCIDENT.



SCENE FROM THE NEW DRAMA OF "PLOT AND PASSION," AT THE OLYMPIC THEATRE.

"PLOT AND PASSION."

THIS fine drama continues its successful career at the OLYMPIC Theatre. The composition is highly creditable to the talents of both Mr. Tom Taylor and Mr. Lang, its joint authors. Its production at the opening of the new management is a fortunate occurrence for Mr. Wigan. It has given, from the commencement, his theatre a character for a class of piece too elegant for the Adelphi repudiated at the Princess', and not suitable for the Haymarket. The prose-drama, sincerely and earnestly written, unincumbered with a low-comedy underplot, and dealing with an intellectual class of subjects—this is the species of production which the circumstances now distinguishing this establishment indicate as appropriate to the stage and to the actors. To this triumphant result the undeniable genius of Mr. Robson has, no doubt, largely contributed. His acting is *sui generis*, and must command the admiration of the judicious.

Our Artist has selected in the accompanying Illustration, the last scene, where *Maximilian Desmourets* (such is the name of *Fouché's* scoundrel secretary) reveals, in the malice of his miserable and passion-tormented heart, the fatal secret to the Creole, *Henri de Neuville*, that *Madame de Fontanges* is one of the *Duke of Otranto's* syrens, whose fatal charms had seduced him into the toils of the Minister of Police. This revelation the Minister himself confirms, and enjoys the triumph, until the officer from the Emperor enters and pronounces his own dismissal. The Illustration, therefore, includes the portraits of the principal actors—Mr. Robson, Mr Wigan, Mr. Emery, and Mrs. Stirling. The mention of these names in combination is sufficient to show how well the characters of the piece are supported; and, apart from its intrinsic merits, goes far to account for the remarkable success of the drama. It will, unquestionably, have a long run.

PARIS FASHIONS FOR NOVEMBER.

WINTER fashions now reign paramount; not that the season is very much advanced; but the weather would lead one almost to suppose it mid-winter. Again, everything must be ready by the return of persons of fashion from the country; so that there be nothing to do but make a choice. We, therefore, take advantage of the preparations in progress, but without being able to decide what will eventually become most fashionable: the arbiters being still in the country, and not likely to return before the end of December.

CAPS AND CAZENOU, SLEEVES AND BRACELETS.

Great attention is bestowed upon mantles, or cloaks. First, they will be of velvet, as well as of satin and watered silk, of ancient style; but velvet will be preferred. With regard to shape, small pelerines are mounted on a pointed somewhat pointedly, which exists in reality only in the back. The front remains plain, like the paletots, from the arm down to the bottom. Only three large plaits, or folds, are placed on the back. The sleeve is arranged so as not to interfere with the shape of the cloak. It is trimmed with a ruche of satin ribbon all round. A second row is placed at such a distance from the first as to turn round the edge of the sleeve; and two large knots of the same ribbon, put one upon each side of the chest or bosom, complete a garment simple but tasteful, and suitable for morning visits for town. Mantles and pelisses have hitherto been lined with silk ("*piqué*" or stitched), and of the same colour as the outer material of the mantle: for which it is proposed to substitute linings of plush, of varied and lively colours—as cherry-colour, red-currant, or blue, for an outside of black. Mantles of watered silk of the ancient style (*moire antique*) are also spoken of; but we doubt the success of this novelty. This new mantle is of the same shape as the velvet ones: the trimmings alone vary, being generally of wide velvet ribbons placed flat, and of velvet galoons, forming either quadrilles or a design of running leaves. The mantles are also trimmed with rich lace round the bottom, and with bows of ribbon placed on each side—the sleeves being hidden in the folds of the trimming of lace.

For the drawing-room the scarf-mantle is much in request, and is embroidered or trimmed as hitherto. Black predominates for dresses, and black taffetas is most generally worn, with three or five volants edged with velvet; or with a wide, black, watered silk ribbon. We have seen a dress of black taffetas, with a plain petticoat, trimmed from the knee downwards with a black velvet ribbon, and placed, from top to bottom, in a manner exactly the reverse of what has lately been customary. The sleeves are worn very much *à l'reine*; and bodies of silk and velvet; with petticoats of various colours and stuffs, are much worn

PROMENADE DRESS.

SCOTCH POPLIN DRESS AND VELVET PARDESSUS.

There is no change in the form of bonnets: they are still very small, and of taffetas, velvet, and lace—mixed, plain, or intertwined; a little tuft of feathers, and a bit of the poke has a feather trimming, but on the whole the bonnets are much smaller than they were some months ago. The colours most worn are chestnut-brown, velvet and lace, deep blue and black, violet and brown, green and black always accompanied by lace, and small feathers placed in tufts on the sides.

THE ILLUSTRATIONS.

Fine Muslin Cap, with the back mounted on small slips, trimmed with two bands festooned, and with rounded teeth, the "brides," or strings, to close under the chin, are formed of a large piece of the stuff which trims the front of the cap, plus underneath the first festooned band, with a piece of the same, and another piece to match.

Another Cap of Fine Muslin, with the back embroidered (by hand) and ornamented with two rows of festoons of pointed teeth. The brides or strings are similar, and also embroidered.

Caneaou of Embroidered Muslin.—The bottom is ornamented with a double row of Mechlin lace; and above that, a light pattern embroidered on the ground. The sleeves are ornamented to correspond: and the neck is a single row; the lace near the neck becomes gradually smaller until it reaches the waist, where it is lost in a bow of ribbon

Muslin Sleeve, embroidered, holding back a double volant of muslin. Another sleeve, trimmed with a double volant of Valenciennes lace.

Velvet Bracelet, with an oval plain gold buckle, and put on above the wrist over the glove. *Bracelet*.—Often made of ribbon to correspond with that of the dress; a knot or bow in the middle, and a small trimming above and below.

Dress Cap, of lace, with taffetas or velvet ribbons.

Dress of Scotch Poplin, green and black; the skirt black velvet pardessus, trimmed with figured galoon, and ornamented with jet; the sleeves turned back, and trimmed to correspond, as well as all the way round the lower part of the pardessus.

MRS. H. BEECHER STOWE.—A letter has been received in Leeds from this distinguished lady, dated "My Cabin, Andover, Sept 20," on mentioning, "I am glad to here the safe and speedy manner that she has reached her own home in safety, after a very stormy passage, and has found all "comparatively well." Her daughter's health is much improved, though there is still so much need of a mother's watch and care, that she does not see how she took the best course in returning." Mrs Stowe says: "We are all warm and bland and kind in the circle of my friends I cannot but feel that I have returned to the atmosphere of conflict. But one opinion, however, has been expressed to me by the friends of the cause, and that is, that the recent movements in England have been a needful help to us here. To be sure, "the heathen rage, and the people imagine a great many vain things;" but yet on this subject I find such a testimony has been given in our favour and strong a tone, that it cannot help being felt, and will be felt increasingly." Mrs. Stowe expresses warm and lively gratitude to "the friends who so loaded her with kindness" in England.—*Leeds Mercury*.

A SPENDID MEMORIAL WINDOW TO MR. HUSKISSON has just been placed in the north aisle of Chichester Cathedral, opposite Gibson's statue of the distinguished statesman. The window has been designed by Mr Digby Wyatt, and is a very rich one.

THE LATE SIR CHARLES NAPIER.—A paragraph, stating that the property of the late General amounted to £20,000, having been seen in most papers, we are requested to state that "the property in question, for Stamp duty purposes, has been sworn under £20,000."

PROROGATION OF PARLIAMENT.—At the court held at Windsor, the 24th day of October, 1853, it was ordered by her Majesty in Council, that the Parliament, which stands prorogued to Thursday, the 27th day of October instant, be further prorogued to Tuesday, the 29th day of November next.

PUBLIC-HOUSES.—The report from the Select Committee of the House of Commons on Public-houses was published on Monday last, with the evidence, in a Parliamentary blue book. The committee merely report that they had made progress in the inquiry which related to the licensing of public-houses, theatres, and the regulations of other places, and they suggest the re-appointment of a committee to pursue the subject in the next session. The evidence fills nearly five hundred pages. Sir Richard Mayne, Alderman Wire, Colonel Hogg, Mr Serjeant Adams, Admiral Hope, the Hon. Frederick Byng, and Mr. Daniel Whittle Harvey were among the witnesses examined.

SOCIETY IN MELBOURNE.—Everything is the reverse of England: the lower classes are here in the ascendant; insolence and rudeness are mistaken for independence. But all this must change shortly. What I set great store by was the profusion of religion in every family. Houses in Melbourne are not to be had but on the most exorbitant terms. I live at a village called Collingwood, and for a miserable weather-boarded hut of two rooms, have to pay £2 10s. per week; and I am truly thankful I can get that. Every thing is very dear and comfort there is none. The colonists have grown rich to an extreme degree. The hotels are splendid, accompanied with a dust like a London November fog, are very dirty. Nothing gold completes sin general, do not believe a word about Sydney; they were never worse off for gold, and in the end prices in fact it is utterly impossible that any one of them can be worsted to a profit; and in Melbourne they are not known, although so many exist on paper in London.—*Private Letter*.

NEW STEAM-VESSELS.—M. Lefevre, director-general of the Transatlantic Steam Company at Dieppe and Paris, has contracted for twelve vessels of 1200 tons, and 240 horse power, for the passage across to La Plata River in West India French colonies, and the United States. The firm of Messrs. Mare and Co., of Blackwall, are entrusted with the building of the ships, and Messrs. Maudslay, Field, and Co. are to have the contract to put the engines in. Messrs. Mare and Co. Messrs Mare have no less than 40,000 tons of shipping in hand, building, or ordered to be built representing in value upwards of one million sterling.—*Standard*.

MONUMENT TO ARAGO.—A committee, consisting of eminent scientific and other persons, has been formed for raising a subscription for the purpose of erecting a monument to the memory of the late François Arago. M. Dupont (de l'Eure) has been chosen honorary president, and M. Combes, President of the Academy of Sciences, president. Among its members are Professor Airy, Mr Bache Franklin, Mr Hall, Vice Admiral Smith, Berenger (de peu), Sir David Brewster, M. Biot, Colonel Sabine, David (d'Angers), Dr Faraday, M. Flourens, Baron Humboldt, M. Matin, Professor Melloni (of Naples), Mr Owen, M. Michelet, M. Quetelet, M. Struve, Horace Vernet, and M. Villemain.

THE DOCTOR MATCHED. A lady, the wife of a very distinguished musician, conceited Abernethy, and finding him uncourteous, said, "I had hear, of your rudeness before I came, sir, but I did not expect such. When should I come for your prescription, and what would you do with this?" "Anyth ng you like. Put it in the fire, if you please." The lady took him at his word—laid his fee on the table, threw the prescription into the fire, and hastily left the room. Abernethy followed her into the hall, pressing her to take back her fee, or to let him give her another prescription; but she lady was inexorable, and left the house.—*Abernethy's Memoirs*.

ADMISSION OF ATTORNEYS.—There are no fewer than 131 applications to be made in Michaelmas term, by persons who have served their articles and passed their examination, to be admitted attorneys of the superior courts. It is expected that in consequence of the reduction in the duty on articles of clerkship by the new Stamp Act from £120 to £80, the number of articled clerks will increase. Instead of £12 certificate duty, attorneys in London will be required for the future three years, will only have to pay £9 a year, and if admitted under five years only £10. In the country the certificate duty will in future be £6, if admitted for three years, and £4 if not admitted so long. The new duties will become payable next month.

CALIFORNIAN GOLD.—From an elaborate table, compiled by Adams and Co., it appears that the whole amount of gold dust manifested and sold at the port of San Francisco, California, during the last 6 months, ending 30th June, 1853, was as follows:—Total shipments to Europe, 24,570,736 dollars 68 c.; New Orleans 734,000 dollars; London, 1,000 dollars; Panama, 734,000 dollars; Valparaiso, 51,062 dollars; Central America, 1,000 dollars; Hawaii, 5,000 dollars; Manila, 1,000 dollars; Mexico, 1,000 dollars; New South Wales, 1,000 dollars; total exported 26,853,798 dollars.

ISLE OF WIGHT.—A monument of Carrara marble, with carved figures of Peace and Plenty, has been erected in Carisbrooke Castle, over the grave of Princess Elizabeth, daughter of Charles I., who died there. The inscription, which is in Latin, states that the monument was erected by Queen Victoria, in the year of our Lord 1853, and of her reign the 16th.

ARRIVAL OF CALIFORNIAN GOLD.—The Royal Mail Steam-ship Tamar, Captain Hosken, arrived at Southampton on the 20th inst., from Chagres, with the mails from the West Indies, and 1,000 passengers, of whom 400 are from California. She has on board 1,000 ounces of gold, the property of Messrs. Wells, Fargo, and Co., of San Francisco, and 1,000 ounces of gold, the property of Messrs. Adams and Co., of the same city. The gold is in the charge of Messrs. Adams and Co.'s agent, Mr. Hall, who has also charge of the mails. The gold was shipped at Panama, and was brought across the Isthmus by the Panama Railway. The Tamar has also on board the officers and crew of the American ship Winchester, which was wrecked on the coast of California, on the 5th of April, 1853.

PRESENTATION.—The officers of the Royal Mail Steam-ship Company have presented to Captain Hosken, of the Tamar, a handsome silver tea-service, as a testimonial of their esteem and respect in which they hold their associate, and how deeply they deplore their untimely end."

THE ROYAL YACHT.—Several improvements to high offices in the department will take place in consequence of the gentlemen's re-

CHESS.

TO CORRESPONDENTS.

R. G. T., AMATEUR, SPECTATOR.—The limited space we can devote to Chess, enables us to give a select example of the games in the match between Messrs. Löwenthal and Horwitz. From the numerous kind strains of encouragement we have received in favour of *Chess players' Chronicle*, we are glad to learn that the whole of it appears to meet with general approbation.

ALBERT S., Birkenhead.—We have no room to spare that there are games in course in this school and Devon to form a numerous Chess club; and a very cheerful and amusing social circle, if they will only combine and not let the talented and gentlemanly spirit, (*God bless us!*) good nature between us wolf carry the day. Is he should remember.

J. B., Bridport.—Many thanks. The two last of yours are really beautiful.

H. LESTER.—Both are very neat and correct.

H. E. K., Sheffield.—They are good, and quite excellent.

A. K., Limavady, Derry.—Better by far than the two previously contributed.

F. M. I shall be examined.

PHILO-CHESS, Ipswich.—Your draft has reached us in due time.

SOLUTION OF PROBLEM No. 506, by Messrs. Lowenthal, Ernest, Phil. C., P., M. P., Minister, G. P., W. X. Y., L. S. D., Lynx, Philo-Chess, Unosfensis, Peter, Walter, and a correct.

SOLUTION OF ENIGMAS, by Deveron, M. P. G., Walrus, M. B., J. T., Y. A., Ernest, Phil. C., and Peter. All others are wrong.

Solution of Problem No. 502.

WHITE.	BLACK.	WHITE.	BLACK.
1. Kt to Q K 4th (d & ch)	K to Q 3rd	5. P to K 4th	R to Q R 3rd
2. B to K Kt 2nd	R to Q R 3rd (best)	6. B takes R	R to Q Kt 3rd

11 Castles (K side)	P to K R 3rd	39 R to K 7th	R to B sq
12. B to Kt 3r	K Kt to K 4th	40. R to Q B 7th	R to K 4th
13. B to K 2nd (b)	P to K F 4th	41. K to R sq	R to K Kt 5th
14. P takes P	Kt takes h (ch)	42. P to K B 4th (o)	R takes K R P
15. K takes Kt	P takes P	43 B takes P (ch)	K to Kt sq
16. Kt to Q 5th	B to K. Kt 4th (c)	44. R to Q 4th	P to K R 4th
17. Q to her B 3rd	Q to her 2nd	4	R to K Kt 7th(ch) K to B sq
18. P to K R 4th (d)	B to K 3rd	46. P to K B 6th	R to K Kt 8 h(ch)
19 Q R to Q sq	K to R sq (e)	47. K to Q 2nd	B to Q 4th
20. K R to Q sq (f)	Q K to Q sq (g)	48. B to Q R 5th (ch)	K to h sq
21. P to Q Kt 4 h	P to K R 2nd	49. R to K 7th (h)	K to Q sq
22. Kt the Q B P (h)	Q takes Kt	50. B to Q Kt 6th(ch)	K to Q B sq
23. R takes Q P	Q to her B sq	5 . P to K B 7th (p)	It takes P
24 K takes B	Kt to Q 5th	52. R takes B	R to K Kt 8th
25. R to Q 6th (i)	Kt takes B (ch)	54. R to Q B7.h (ch)	K to Q Kt sq
26 P takes Kt	Q R to K 3rd	54. R to Q 7th	R to K Kt sq
27. Q takes Q	B takes Q	55. R to Q h (ch)	R takes R
28. P to Q B3rd	B to Q B 7th (k)	56. B takes R	

And Black resigns.

(a) The object of this was, probably, if White neglected to thwart it, to advance the Q Kt P and Q B Pawn to or to drive back the Queen, the Bishops and the Knight.

(b) It is perhaps more effective than it looks. We confess we should not have withdrawn the Bishop, thus we lose some re-tinctures.

(c) Giving the adverse queen to take up a still stronger position.

(d) A good move. Black has no genuine att ne reserve for him box. If he returns to Q sq, he shuts in the Q, the K, the R 2nd, Will he leave it, and risk a give check to the Queen at her Kt 3rd with a view to advantage; and, finally, to K 2. White will not have a have.

(e) Black plays the Kt hoping to get more of his own solution What is surprising

(f) Mr. Löwenthal might here, we believe, have made the move which he makes later, of Kt takes Q B Pawn, with at least equa. If not better effect. For suppose—

20. Kt takes Q B P	Q takes Kt
21. R takes Q P	Q R to Q B sq

Has he any stronger line of play?

22 R takes P	Q to K B 2nd
23 Kt t K R 5th	Q to K Kt sq
24 Q R to Q B sq	Kt to K 2nd
25 Q to K 2th, and wins.	

(g) We see no better move.

(h) This is a fine piece of play; but, as we have just shown, it would have been perhaps less effective than the move played.

(i) Leaves an opening, as will the previous moves, this forms a beautiful combination.

(k) Every one should, as we shall see, go on pawn.

(l) Had we taken the K B Pawn with the Rook, White would have replied with R to K 7th, having a completely safe game to be had.

(m) Capitally managed. White now possesses the doubled Pawn, and has a winning advantage.

(n) Much better than interposing the Rook; because in that case the Bishops being on different coloured squares, Black might probably draw the game.

(o) The whole of these, and following moves are finely played by Löwenthal.

(p) The game is lost, but we very much like the following, which is more sensible—

51. R to Q B 7th (ch)	K to Q Kt sq
52. R Q th	B to K 3rd
53. R to K 8th (ch)	B to Q B5
54. P to K B 7th, and wins.	

CHESS IN BRUSSELS.

Dashing little skirmish, played between M. Von Heydebrand, the celebrated Prussian Minister, and Mr. Staunton.

Allgaier Gambit.

BLACK (M. H.)	WHITE (Mr. S.)	BLACK (M. H.)	WHITE (Mr. S.)
1. P to K 4th	P to K 4th	8. Kt takes Kt P	Kt to Kt 6th
2. P to K B 4th	P takes P	10. K to K sq	Q takes K P
3. Kt to K B 3rd	P to K Kt 4th	11 Kt to K B 2nd	Q to K 3rd (ch)
4. P to K R 4th	P to K Kt 5th		
5. P to Q 4th	P to Q 4th		
6. B to Q B 4th	B to K B 4th		
7. Kt to K B 3rd	P to K 6th		

(a) This is a novelty, and far owed by Kt to K B 3rd, presently, appears to be a better for one that of Q to K 2nd, recommended by the books.

(b) In the course we miss a remark of the two amateurs to Allgaier's novel 8th move. After the K is play this to the 6th attack seems over and an advantage of the position to be altogether on the side of the adversary.

(c) The best move upon earth; for if he had played his Q to K R 5th, black might have answered by taking K Kt P to Q B 5th.

[This title is interesting only on account of the novelty of the situation. It affords no re- [illegible]

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The Great Northern Company have, it is said, offered Lord Fitzwilliam £60,000 a year for his coal mines, on a lease for fifty years. A considerable portion of the coals supplied to the Great Northern Company are obtained from the above pits.

Her Majesty's Commissioners have given notice of their intention of holding a public meeting at the Guildhall, Exeter, for inquiring into local charges upon shipping.

The *Nornen*, a new iron screw steamer belonging to the Peninsular and Oriental Company, arrived at Southampton on Friday. She came the passage from the Bay of Biscay to Southampton water in 11 hours, the quickest time in which it has been ever accomplished.

The Secretary of State for the Home Department is receiving reports in the North Riding, particularly at Underbank. Several fatal cases have recently occurred, and large numbers are at present under medical treatment.

The editor of the *Vore Della Liberta*, in Italy, has been condemned to prison and fine for an insult to the French Government in an article published in his paper, entitled "The Two Napoleons and France.

Captain J. H. Todd, of Westbrooke, Donegal, has been appointed by the Lord Chancellor a magistrate for that county

On Saturday week Alderman John Holmes died at his residence, Everton crescent, Liverpool. He was the oldest member of the Town council, being eighty years of age.

Since the new Stamp Act came into operation on the 10th inst., there have been issued from the Manchester Stamp-office the large number of 456,000 penny receipt stamps, of the value of £1900.

The following comparative view of the salubrity of different countries in Europe is given in the annual report of the Registrar-General:—England, 22 deaths annually to 1000 living; France, 28; Prussia, 27; Austria, 30; and Russia—

It is decided, by Lord Lucden, her Majesty's Envoy Extraordinary and Minister Plenipotentiary at the Court of Spain, has left town for Paris.

A private telegraphic despatch from New York, via Halifax, has been received in Liverpool, by the steamer *America*, announcing the failure of two houses in Wall-street, with liabilities amounting to £1,000,000.

The following appointments have been made in the Department of Science and Art:—Mr Norman M'Leod, late assistant-secretary to the Directors of Convict Prisons to be registrar, Capt. Owen, R.E., inspector, and Mr. J. J. Mayo, assistant-accountant.

Major A'Court has been appointed to the lucrative agency of the Dublin estates of the Right Hon Sidney Herbert.

Letter-receiving boxes have been furnished to all the stations situated in towns on the South Western railway. They are to be fixed in the most conspicuous parts, against the walls of the platforms of the various stations. This will be a very great accommodation to the public.

The Hon. Mrs. Norton has been staying at Lismore Castle for the past three weeks accompanied by her husband.

The expense of the establishment of the Lord-Lieutenant in Ireland was, last year, £20,662, including £20,000 as salary to his Excellency

Robert Dougan, Esq., is appointed Queen's Advocate at Sierra Leone, in room of the late Joseph O'Neill, Esq., of Limerick.

At a recent meeting of the brewers of Burton-upon-Trent it was unanimously resolved, in consequence of the very great advance in the price of malt and hops, to raise the price of pale ales 6s. per barrel from the 15th of October

The *Echo des Pyrénées* says.—"Such is the abundance of corn at present in Spain, that it is contemplated to adopt measures calculated to facilitate the exportation of the surplus into France. A decline in prices has taken place in all the Spanish markets."

Hubert de Burgh, Esq., Lieutenant-Colonel of the Uxbridge Yeomanry Cavalry, and nearly allied to the Earls of Carnarvon, has been created by the Emperor of the French honorary chamberlain to his Majesty.

At recent meetings of the Lancashire magistrates, it was unanimously resolved, that any person proved to have given or received a bribe at any election for the borough was an unfit person to be a parish constable. Seven names were, in consequence, struck off the list.

On Monday morning the whole of the carriage-way of Ludgate hill from Farringdon street to St. Paul's, which had been closed during the last fortnight, was re-opened for general traffic.

The last news from the Basque state that this year the harvest will be more than sufficient for the consumption of the country, and there will be a great quantity of corn can be exported. In Hungary prices are fall

It is rumoured that the Emperor and Empress of France will visit London next month, but preparations are stated to be making in official circles for the reception of their Majesties on no doubt a splendid as far as the City is concerned, scale.

According to the *Vienna Gazette*, the total amount raised by subscriptions for the erection of a church, to commemorate the Emperor's escape from assassination, is 2,800 florins.

A Somersetshire labourer has met a horrible death. He got drunk, and went to sleep in a corn field; but, having put a lighted to accommodate his pipe, he fell asleep. The corn caught fire, and [illegible] and are roasted to death.

VICTORIA BANK, MELBOURNE.—EXHIBITION OF MAMMOTH NUGGETS OF GOLD.

MAMMOTH NUGGETS OF AUSTRALIAN GOLD.

We have been favoured by a Correspondent with a Sketch of the Interior of the Bank of Victoria, representing a scene which caused great excitement in Melbourne—the exhibition of Two Monster Nuggets of Gold; and the following extract from our Correspondent's letter explains their history:—

These Mammoth Nuggets were found in the Canadian gully at the Ballarat diggings, lying together in the same matrix; when a question arising among the finders of this costly treasure, the law was appealed to to settle the dispute; during which period these magnificent specimens were in the custody of the Supreme Court. The proprietors—two in number—had been, along with another, many weeks at work without any fortunate result attending their labours; and the third, disgusted with their ill fortune, had left the party, and gone down to the town of Geelong to resume work at his trade of a cabinet-maker. hence arose the dispute—the absentee wishing to share, as was originally agreed, in their good fortune. They are by far the most beautiful specimens that have yet been found, being almost solid masses of ore, beautifully intersected with veins of white quartz. They have been on view in the Bank of Victoria, in Melbourne, and have created a great sensation

The Nuggets were consigned to Messrs. G. and A. Herring and Co., were brought to England by the *Eagle*, which arrived at Liverpool, on Saturday last, and they are now deposited in the Bank of England.

One of the Nuggets measures 1 ft. 8 in. in length, by 8½ in. broad in its widest part, and 5 in. in thickness; the other is 1 ft 1 in length by 6 in. in width, and is 6½ in. thick. Their respective weights are 1117 ounces 11 pennyweights, and 1011 ounces 15 pennyweights; and their estimated value is above £8500.

In appearance these Nuggets are very beautiful, especially the smaller one: the gold being extremely pure, and fine in quality, veining the quartz in most elegant forms; and though there appears a great amount of quartz, we believe there is not so much as is usually found, and not nearly so much as in the large nugget lately exhibited at the Great Globe in Leicester-square. At Melbourne they were considered the most gorgeous specimens of the kind ever seen, and well deserved their reputation.

MELBOURNE.

Every record of the progress of Melbourne, the capital of the great gold-producing country of Victoria, is of especial interest. The accompanying illustration represents a row of newly-erected buildings in one of the principal streets of the rising city. The most prominent building has been erected—a new Colonial Bank, the shares in which will probably, at no distant day, figure conspicuously in our Stock Exchange reports. Nearly the whole of the buildings represented are the property of Dr. Black, lately arrived in England from Australia; and who, after a long and industrious colonial career, finds himself in the possession of a very handsome income from a property which he had the spirit to erect before the gold discovery; and which, since that time, has increased in value so greatly as to enable him to hold a high position among our Australian millionaires. He is of the medical profession, and one of the oldest Colonists of the fortunate dependency of Victoria, long known as Port Phillip.

Amongst the buildings represented, and next adjoining the above property, are the new offices of the *Argus* newspaper—the daily circulation of which, in January last, was 10,500. The *Argus* has only been in existence as a daily paper for about three years; its politics are ultra-Liberal, and it freely advocates the immediate independence of the Australian Colonies, under the conviction that the neglect of the Mother Country, and the ruinous transportation system, are productive of far greater evils than could possibly arise from any other cause likely to affect the colonial interests.

The Lawson Observatory.—The Committee appointed to carry out this desirable object have, during the past week, been making renewed exertions by applying to the nobility, gentry, and various scientific societies for assistance. The Central Committee have generally doubled their former subscriptions; but all their exertions leave them £1750 short of the sum stipulated by Mr. Lawson and the Government to be raised.

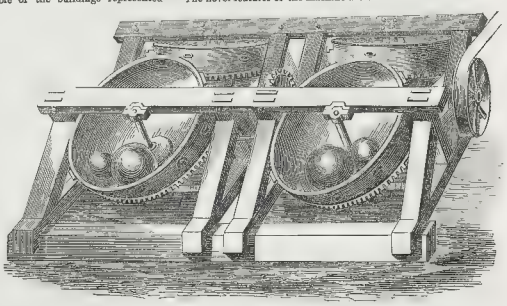
Promotion by Merit in the Police.—The following order has been issued by the Police Commissioners, with the approbation of the Secretary of State:—"Whereas it has happened in several instances that officers in the Metropolitan Police service have attempted to obtain promotion by means of application from private friends; and whereas such practices are injurious to the good order and discipline of the service, notice is hereby given that all officers and constables in the Metropolitan Police service are to understand that their prospects of promotion must depend on the report which their superiors may make as to their qualifications, and as to their conduct in the performance of their duties. Merit, and not favour, will thus be the ground of advancement; and any one in the Metropolitan Police force who may attempt to bring interest to bear for the purpose of influencing the Commissioners to recommend them to the Secretary of State for promotion, or who shall apply to the Secretary of State for promotion, will be considered as having disqualified himself for the promotion which he may thus have sought to obtain.—Richard Mayne.—September 16, 1853."

BERDAN'S GOLD QUARTZ CRUSHING MACHINE.

A large number of gentlemen were present, on Tuesday, at the Windsor Iron Works, City road, to witness the operation of Berdan's newly-invented machine for pulverising, washing, and amalgamating gold and other ores. It cannot be denied that the construction of the machine is peculiarly simple, as will be seen by the following official explanation:—It consists of a cast-iron basin, 7 feet in diameter, revolving upon an inclined axis or shaft. In this basin are placed two cast-iron balls, the larger one 24 inches in diameter, and weighing two and a half tons; the smaller one 24 inches in diameter, and weighing one ton. Under the basin, and attached to and revolving with it, is a furnace, of conical form. The whole, being hung in a strong framework of timber, receives motion from hand, horse, or steam power, by means of simple cog-gearing

The operation is as follows: Fire is made in the furnace beneath the basin, quicksilver is placed in the basin, and the auriferous ore thrown in, in lumps of considerable size. The apparatus is then set in motion; the balls, by their gravity, revolving in a direction opposite to that of the basin. The two balls, moving in contact with each other, and with the inclined bottom of the basin, receive a spiral as well as a rotary motion—a combination which is found to possess the greatest efficiency in the pulverisation of the ore. The ore is brought under the balls, and instantly crushed to an impalpable powder. The crushing is effected, of course, at the point of contact between the large ball and basin, and below the surface of the mercury. Thus, the moment the gold is disengaged, it comes in contact with pure and heated mercury, which seizes upon it, and secures every particle. The refuse powder rises to the surface of the quicksilver, whence it is carried off, in the form of a thin paste, by a small stream of water, which runs in at the upper side of the basin, and escapes through suitable openings, just below its rim, into a trough placed for the purpose. The tailings may thus be preserved for analysis if desired.

The novel features of the machine are both mechanical and chemical.



BERDAN'S GOLD QUARTZ CRUSHING MACHINE.

The arrangement of an inclined revolving basin in connection with balls of corresponding size and weight, produces a rolling and grinding motion never heretofore attained, and as efficient as it is new. The chemical novelty consists in the heating of the mercury, which greatly increases its affinity for the gold. The result of the combination of these operations is, that every particle of gold is secured. The machine, one portion of which was employed in reducing ores from the Cwmheisian mines in Mericnethehire, and the other ores from the Poltimore mines

NEWLY-BUILT STREET IN MELBOURNE.

ppeared to do its work most effectually, and, apparently, to the satisfaction of all who witnessed the operation.

The trial took place in the presence of some 130 invited guests, among hem were the American Minister, Colonel Lawrence, the Secretary, nd other members of the Legation; Mr. Cotton, Mr. Matthew Marshall, the assayer, and the engineer of the Bank of England; Mr. George Peabody, Mr. Sturges, Professor Ansted, Professor forris, Dr. Price, Mr. George Windsor Earl, Dr. Latham, Judge Upham, eneral Haug, General Somers, General Welsh, Mr. John Calvert, ieutenant Johnson and Mathey, Mr. John Mitchell, F.C.S., Sir harles Kirkpatrick, Bart.; Mr. Dilke, Mr. Wentworth Dilke, Ir. Forrest, and Mr. Davenport, from the Society of Arts; Mr. Jdermaster Harter, Mr. Barwise, and Mr. Earl. The ores tried were two kinds—one, the red gossan, from the mines of the Polismore ompany, Devonshire; and the other the ore of the Cwmheisian Mines, rusted in the county of Merioneth, North Wales. There were 444 lbs. f the Polismore ore, and 320 lbs. of the Welsh ore. The time occupied n crushing the ore was eighteen minutes. Two machines were used—ne for the Devonshire, and the other for the Welsh ore.

About half an hour was consumed in washing out the basins after the ompletion of the experiment, when the amalgam was drawn out, and cleaned, and the result ascertained. The result as regards the Polismore is given as follows:—On the previous Saturday, 400 lbs. f gossan yielded by amalgamation 4 dwts. 5 grs. The experiment on Tuesday gave 440 lbs., which yielded 5 dwts. 11 grs. With he Welsh ore the result of Tuesday's experience was as follows:—uantity of ore run through the machine, 320 lbs.; quantity of old cloth, 5 dwts. 18 grs. This experiment was conducted entirely nder the direction of the assayist of the Welsh company. The result f last Thursday's experiment was as follows:—1. That 362 lb. of ore, aken from various parts of the East Mine (Cwmheisian), yielded by malgamation 154 grains of pure gold, or after the rate of 2 ozs. 12 rains to the ton of ore. 2. That 98 lb. of ore from the West Mine Cwmheisian) yielded by amalgamation 46 grains of fine gold, or after he rate of 3 ozs. 16 dwts. to the ton of ore. 3. That the gold on assay was found perfectly pure. 4. That the residuum or "tailings," on careful assay, contained no trace of gold.

It was stated, during the morning, that a machine consisting of four mains in each frame, will pulverize, wash, and amalgamate about 10 tons of ore, of average hardness, in ten hours, with 12-horse power—being nearly one-third more work, in crushing alone, than has ever been done by any other machine.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, OCT. ::.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer: Highest Reading.	Thermometer: Lowest Reading.	Mean Temperature of the Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.
Oct. 21	Inches. 29.840	58·3	39·8	50·1	+ 1·3	99	S.W.	Inches. 0.10
„ 22	29.894	64·5	42·9	57·6	+ 8·9	94	S.S.W.	0.01
„ 23	29.976	64·9	48·3	57·1	+ 10·1	88	S.W.	0.00
„ 24	30.022	64·6	46·9	55·2	+ 7·0	88	S.S.E.	0.00

„ 27	29.628	63·6	51·9	57·1	+ 9·0	93	S.	0.05

Note.—The sign + denotes above the average.

The reading of the Barometer has varied but little during the week, the highest being 30.10 inches during the afternoon of the 22nd, and the lowest 29.65 inches during the afternoon of the 27th. The mean for the week, was 29 810 inches.

The mean daily Temperatures during the week have been much above their averages: that of the 22nd is the highest mean temperature recorded on that day since the year 1829, when it was 60·2°; that of the 23rd, the same date of 1826, when it was 58·7°, and those of the 26th and 27th are the highest mean daily temperatures recorded on those days for the last 9 years.

The mean Temperature of the week was 55·8°, being 7·7° above the average of 38 years.

The range of Temperature during the week was 29°; being the difference between the lowest reading, on the 21st; and the highest, on the 24th.

The mean daily range of Temperature during the week was 15·8°. The greatest was 23·5°, on the 26th; and the smallest, 11°, on the 22nd.

Rain fell to the depth of three-tenths of an inch during the week.

Lightning was seen and *thunder* heard frequently during the evening of the 27th.

JAMES GLAISHER,

The Weather during the week has been dull and close, with remarkably high temperature; and the sky has been mostly overcast.

Lisson Grove, 28th October, 1853.

HEALTH OF LONDON.—During the week ending October 22, there were registered within the metropolitan districts the births of 1462 children. Of these 743 were boys, and 720 were girls; exceeding the average of the same week in the preceding eight years, by 23 boys, and 46 girls. The births and fifty-four deaths were registered within the same period.

In the ten corresponding weeks of the previous ten years the average number was 958, which increased in proportion to the increase of population, becomes 1054, being identical with the actual number of deaths, and showing that the mortality in London is still only in a healthy state. Of the deaths, 586 were males, and 518 were females; the average in the same weeks of the preceding ten years was 483 males, and 475 females. At ages less than 16, there were 531 deaths; between 15 and 60, there were 332; and at 60 and upwards, 187 deaths, distributed over London as follows:—In the west districts, out of a population, in the year 1851, of 376,437, there were 142 deaths, and in the east of 2 of these was cholera; in the south districts, out of a population of 496,896, there were 197 deaths, and 5 of these were cholera; in the centre district, out of a population of 393,256, there were 151 deaths, and 3 were attributed to cholera; in the east districts, in a population of 483,922, there were 263 deaths, and the cause of 24 was cholera; and in those on the south side of the river, out of a population of 616,833, there were 301 deaths, and 49 of these were caused by cholera. To zymotic diseases 306 deaths are attributed (their average is 256): of these small-pox carried off 3; measles, 14; (their average is 46); hooping-cough, 34; diarrhœa, 45 (whose average is 30); cholera, no less than 83. In the corresponding week of the previous ten years the deaths caused by this disease were as follows:—In 1849, there were 1854; in 1848, none; in 1847, none; in 1846, 2; in 1845, none; in 1844, 3; in 1843, none; in 1842, 2. Typhus carried off 20. To dropsy, &c., 44 (their average is 45). To tubercular diseases 153 (their average is 163). To diseases of the brain, nerves, and senses, 110 (their average is 107). To those of the lungs, &c., 165 (their average is 178). Those of the stomach, &c., 29 (their average is 34). To premature birth, 28; to atrophy, 39; to age, 26; to sudden death, 6; to colic, 1; to poison, 2; to burns, 2; to hanging, 3; to drowning, 8; and to fractures, 8. We feel the seen with regret that the deaths recorded in the Register Book, had declined in the two previous weeks from 66 to 45, rose again last week to 53. Forty males and 43 females perished by this disease. The districts on the south side of the river still assert their fatal pre-eminence, 49 out of the whole number of cases having occurred there: Rotherhithe, Battersea, St. Saviour, St. George, are the parts of that division which suffered most. The public have been frequently cautioned against the evil consequence in spirituous liquors at periods of epidemic cholera. The readers of the Registrar's notes, published from week to week, will find too many instances in which this advice has been disregarded. Persons in drinks to excess, in a few hours he is suffering from an attack of diarrhœa, and the disease runs through its several stages to a fatal termination. Many others lie at the door temptation in the use of intoxicating liquors, and an almost total abstinence from gin and other spirits, becomes extremely necessary for the preservation of life. It is admitted that diarrhœa generally precedes cholera; that there are few, if any, exceptions to the rule. But it is of importance both to establish the rule, and to have it cast by a mass of observations accurately recorded. It is therefore desirable that medical informants should inquire specially in all cases whether the attack of cholera commences by diarrhœa, and state the interval of time in hours and days between the appearance of diarrhœa and the supervention of spasms, or of the other characteristic symptoms of cholera

NEW WELLINGTON DOCKS.—A company has been announced for the construction of capacious docks on the Surrey side of the Thames, close to the Spa-road station of the Greenwich Railway. The capital is to be £1,660,000, in £25 shares, and the area contemplated consists of one hundred and forty acres, of which sixty will be water. They are to be called the Wellington Docks, and are to be capable of admitting the largest steamers.

ADDITIONS TO SOMERSET HOUSE.—The front of the new wing of the west end of Somerset House is now completed exteriorly. The front which faces the river, and the side which is in Lancaster-place, are in keeping with the river front of the main building. The Lancaster-place front is surmounted by six urns, and the national shield supported by two youthful Neptunes holding tridents. On each side of the windows of the second floor female figures are cut, and a balcony is supported by four round and two half-square pilars. The wing lies back several feet from the river front of the main building, and, viewed from the river or Waterloo bridge, gives an appearance of completeness to the whole building.

THE CITY CORPORATION COMMISSION.—It was generally supposed that the commission would sit at Guildhall; but at eleven o'clock, on Thursday morning, the Commissioners—the Right Hon. Henry Labouchere, Sir John Pattison, and G. C. Lewis, Esq., attended at Lord Aberdeen's office in Downing-street. None of the City magistrates, however, were in attendance, and the representatives of the public press were not admitted. We are, therefore, unable to give a report of the proceedings. The Commissioners are engaged in consultation up to two o'clock, and they are to sit again on Tuesday next, at twelve; and, it is said, that they will sit every Tuesday, Wednesday, Thursday, and Friday for two weeks to come. At these meetings reporters will be admitted, except when the Commissioners are engaged in private consultation.

THE EASTERN QUESTION.—*Pimlico:* A meeting of the inhabitants of Pimlico and Westminster was held on Tuesday evening last in the Lecture-hall of the Athenæum Literary Institution; Mr. Shimpton in the chair. Mr. Town moved the first resolution, namely, "That this meeting is of opinion that the conduct of the Czar Nicholas, his ambassadors, and armies, is opposed to common justice, international law, and universal right." Mr. Round, the secretary of the Westminster Athenæum, seconded the resolution. He said, admitting in these "piping times" of peace war should be avoided, if possible, yet a course so timid as that adopted by the British Government in reference to the Eastern question was not calculated to promote the interests and maintain the reputation of this country (Hear, hear). Russia should have been stopped in its audacious course, and then it would have appeared that a few days' war would have been better than months of semi-hostility and effeminate indecision (Cheers). Other resolutions in a similar strain followed, amid some interruptions from dissentient parties.—*Tower Hamlets:* A meeting of the inhabitants of the Tower Hamlets was held on Wednesday, "to give expression to opinion on the Eastern question." Captain Mayne Reed took the chair, and made a speech attacking Lord Palmerston and Lord Aberdeen for censuring Kossuth from Kutayah; censuring Mr. Cobden for his peace theories; and referring hotly to "Hungarian independence." A letter from Mr. Charles Salisbury Butler, M.P., respectfully intimated his inability to attend. Mr. Duncombe was caused himself by pleading a previous engagement; and Lord Dudley Stuart wrote to the same effect, also advising that the enthusiasm of meeting on the Eastern question should not be directed to other objects. Mr. W. Newton spoke, condemning secret diplomacy. Mr. Urquhart followed. He attacked the Government for not assisting Turkey, and then said that Turkey of late need assistance. A resolution censuring the Ministry for want of energy in supporting the Porte was then passed; but one gentleman in the meeting having attributed all the proceedings of Russia to the conduct of the English Government, that opinion was put into another resolution, and formally carried. There seemed no division of opinion among the parties present, and at an early hour the assembly separated.

MICHAELMAS TERM.—The Lord Chancellor has appointed eleven o'clock on Wednesday next, at his Lordship's residence, for the reception of the Lord Mayor and the other authorities of the city of London, on which occasion the Lord Chancellor will signify her Majesty's approval of the Lord Mayor elect. The Lord Chancellor will also, on the same day, at twelve o'clock, receive the Judges, Queen's Counsel, &c.; it being the first day of Michaelmas Term.

FINSBURY SCHOOL OF ART.—A numerous meeting of the patrons and scholars of this institution was held last Saturday to witness the distribution of prizes. The chairman (Mr. Warren De la Rue), in opening the proceedings, congratulated the pupils and their friends upon the manifest improvement and rapid advancement observable in the various departments of science and art to which the competitors had applied themselves. Other addresses were made, and the chairman then awarded the prizes. The first consisted of an elegantly-fitted-up box of colours; the second prizes (the merits of the two competitors being equal) were an electro-plated pen-box, of beautiful design and workmanship, by Mr. Elkington, of the City-road—and an inkstand of same style and material, from the same establishment. The fourth prize was Barnard's "Treatise on Trees and Foregrounds." These were received amidst loud applause. Twelve certificates were also awarded as marks of approbation.

BUILDERS' BENEVOLENT INSTITUTION.—The sixth anniversary of this society was held on Tuesday evening at the London Tavern; Mr. Peter Roth, M.P., in the chair. The cloth having been removed, the chairman rose to propose the toast of the evening, "Prosperity to the Builders' Benevolent Institution." He would not trouble the meeting with details further than to state that there are at the present time only 22 recipients of their bounty. That was a small number, considering their institution had been established six years, and he therefore called upon them to support the directors in their endeavours to increase that number. The secretary then read the list of subscriptions, amounting in the aggregate to £500, including a donation of £50 from the chairman, £10 10s. from Mr. Cubitt, M.P., £10 10s. from Mr. Gurney, &c.

THE EVANGELICAL ALLIANCE.—This institution had a soirée on Tuesday evening, at the Freemasons' Tavern, attended by two or three hundred persons. The Rev. Dr. Morison presided, and delivered the annual address. "Their proceedings," he said, "had been conducted in freedom and harmony." The Rev. Wm. Chalmers also spoke:—"Though had not accomplished much thing, he had great faith in unseen influence; and there was an under-current set in motion which might effect results they did not at present anticipate." Prayers and hymns were also offered at intervals. A second assembly was held in the same place on Wednesday, and was very numerously attended.

THREE SHOCKING ACCIDENTS.—On Monday information was received from St. George's Hospital of the deaths of three persons, which took place under the subjoined circumstances:—On Saturday evening last a man named James Martin, went into a stable at Brook green, Hammersmith, and he was found shortly after, lying on the ground of the stable, near a horse, shockingly bruised and quite insensible. He was taken to the hospital, he was found to be quite dead.——A few days before, a groom, named Alfred Sargent, was exercising a spirited horse in Hyde-park, when the animal threw him, and he sustained injuries by which he received such injuries that he expired in the hospital at ten o'clock the same night.——The third case was that of a child named John Clarkson, aged seventeen months. The parents resided at 3, Green street, Chelsea; and on Saturday the poor child, in trying to walk round the table, upset a large can of boiling water, containing a quantity of which drew the child's body. He was taken to the hospital, where he gradually sank, and expired at six on Monday morning from the injuries received.

THE FOUNDERING OF THE "DALHOUSIE."—In another portion of this day's ILLUSTRATED LONDON NEWS we have given an illustration of the *Dalhousie*, and also the narrative of the only survivor, Ronald Cameron; but, from some recent observations on the wreck, we are led to believe that the melancholy occurrence is mostly attributable to the vessel being top heavy, and also crank, from the stowage or shifting of the cargo. The ship, it is now confirmed, lurched over, and lay on her beam ends for about twenty minutes before she sank. When in this state, Captain Butterworth was busy in getting the deck-load, and other spare cargo, thrown overboard; and it is much to be wished that he had cut away the masts. Had this been done, it would, in all probability, have saved the vessel, while the masts themselves would have made a raft on which some lives might have been saved. We are glad to have it in our power to give a letter from Mr. Hamlyn, the master of the *Exeter* schooner, upon whom the imputation of inhumanity rests, for not exerting himself, as it is alleged, in saving the crew of the unfortunate vessel. We think he sufficiently shows why he could do nothing fr them more than he attempted. The following is the statement enclosed in the letter of Captain Hamlyn, and signed by himself, his mate, and his four seamen: "At seven a.m. of the 19th inst., wind S.E. by E., I saw a ship a point on the starboard bow, with her head to the eastward, and her starboard side in the water, the water level with her main and mizen tops, and her foretopsail partly under water. We bore away, and came under her lee, and then altered her course, and about a cable's length from her sank. We hove our vessel's head to the south-west for about a quarter of an hour, put our helm down, and tried to stay her; came head to wind, and then went astern, at the rate of five or six miles per hour. She would not have put off had not a sea struck her on her starboard bow. We then hauled our wind, but the vessel would not come to windward, or near the unfortunate men who were struggling in the water. All hands were in attendance with head-lines, cork fenders, in fact, everything we had available for the purpose of saving life; but it was of no avail, by reason of the distance we were from them; and we could render them no assistance whatever, theses at this time making clean breaches over our little vessel, being only 115 tons, and heavily laden with coals. Indeed, during the whole time we were in the N. and E. for half an hour, and finding we could be of no service whatever, drifting as we were on a lee shore, we consulted together, when it was determined (after having done everything in our power to save life), for our own preservation, and that of the ship, to steer our course down Channel; and you may rest assured it was with anything but desirable feelings, having witnessed such a calamity, and unable to render our fellow creatures the least assistance. The undersigned would not consider themselves human beings had they acted in the manner

CALENDAR FOR THE WEEK.

SUNDAY, Oct. 30.—23rd Sunday after Trinity. Fire at the Tower, 1841.
MONDAY, 31.—John Evelyn born, 1620
TUESDAY, Nov. 1.—Sir Matthew Hale born, 1609.
WEDNESDAY, 2.—Michaelmas Term begins.
THURSDAY, 3.—Sir Samuel Romilly died, 1818.
FRIDAY, 4.—William III. landed at Torbay, 1688.
SATURDAY, 5.—Gunpowder Plot discovered, 1605.

HIGH WATER AT LONDON-BRIDGE,

FOR THE WEEK ENDING NOVEMBER 5.

Sunday	Monday.	Tuesday	Wednesday.	Thursday	Friday.	Saturday.

TO CORRESPONDENTS.

A KENTISH SUBSCRIBER.—The sale of Mr. Knight's ponies at Exmoor takes place annually, in the middle of September.

V. R. C., Essex.—The address of Mr. Robert Smith, author of a Prize Essay on Sheep, and agent of the Exmoor Estate, is Emmett's Grange, Exmoor.

J. L.—Ruding's "Annals of the Coinage of Great Britain," 3rd edition. Henne, 81 Strand. Shilling of Queen Anne—common.

YEOVIL.—A SUBSCRIBER.—Twenty-shilling piece of Charles I.; worth from 20s. to 30s., according to its preservation.

A. M.—Your coins are of no value. No. 1 is a coin of Magnentius, A.D. 353

A. N. (Sound).—The great guns at the Chobham Encampment are stated to have been heard at Aylesbury—a distance, in a straight line, of about thirty miles; but on July 4, and on several previous days, the firing of guns at Devonport was distinctly heard at Crediton—a distance of forty miles in a straight line.

F. W. E.—Apply at the Government Annuity Office, 10, Old Jewry

R. F.—See "Acting Charades," pub lished by D. Bogue, 86, Fleet street.

W. D., Basingstoke.—Apply at the Mechanics' Institute, Southampton-buildings Chancery-lane.

QUIDAM, Gillingham.—We cannot inform you.

A PLAY GOER.—Mrs. Chatterley, now of the Olympic Theatre, late of the Haymarket and Covent Garden Theatres

CERES will, perhaps, favour us by sending the Photograph.

VERITAS.—The Earl of Eldon (grandson of the Chancellor) is still living. He was declared a lunatic some short time since.

B. C.—An account of Milton and his family appeared in the *Patrician*.

C. J. W.—The Duc de Montpensier, youngest son of the late King Louis Philippe, married, Oct. 10, 1846, the Infanta Louisa of Spain, sister of the present Queen.

STRETFORD.—The Crest sent is that of Hamilton; viz., "Out of a ducal coronet or, an oak-tree fructed, and penetrated transversely in the main stem by a frame-saw ppr., the frame gold;" with the Motto "Through."

WENVAE.—The widow of a Peer's son, when married to a second husband, is not entitled to continue the use of the prefix "Honourable."

CHINA.—Next week we shall engrave a series of Characteristic Sketches made upon the Yang-tze-Kiang, during the recent exploration of that river by H.M.S. *Hermes*.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, OCTOBER 29, 1853.

THE West of Europe is still kept in suspense on the question of peace or war in the East. Every day brings its own rumours, some tending to confirm, and some to contradict, the rumour of the day preceding. The electric telegraph brings as many untruths, or half-truths, as messages; and the sensitive frequenters of the Exchanges of London and Paris know not what to believe. Although the one great fact, which people are most desirous of knowing, whether the Czar be determined upon war *à tout prix*, remains unknown, a few minor facts appear to be tolerably well authenticated. The neutrality of Austria and Prussia, which we announced last week, is confirmed; and it is now stated that the efforts of those Powers will be vigorously exerted towards confining the war, should war arise, to the two parties primarily interested—in short, they will do their best to prevent the war from being a European one. The task will be difficult. There is a popular instinct which sometimes transcends reason—and could not give a reason, if asked—which often impels mankind in the right direction, under circumstances which might lead a careless observer to disapprove of its action. Some such feeling filled the mind of the first Napoleon when he arrayed himself against Russia; and when in exile and captivity, he justified his antipathy to that Power by his famous prediction, that, in less than fifty years, there would come a time when Europe would have to decide whether it would be Cossack or Republican. His successor appears to have inherited the same policy and ideas; and it is quite evident that, in giving effect to them, Napoleon III. will be supported by the instinct as well as by the reason of the French nation. That the popular feeling of England runs strongly in the same channel is patent to all who know anything of what is passing in the world. It is not only the independence of Turkey that is at stake; it is the rank, position, and interests of Great Britain and France, and of Great Britain especially, that are imperilled, if the will of the Czar is to be superior to justice, and to the public law of Europe. For these, and countless other reasons, Prussia and Austria will find it extremely difficult to confine the struggle to the assailant and the assailed.

The combined fleets, which were prematurely announced to have passed the Dardanelles a fortnight ago, have been at length ordered to proceed to the Bosphorus. But of far more importance than any aid which the Allies can give, either by land or by sea, is the unanimous spirit of resistance that has been awakened in every part of the Turkish Empire. At the great meeting of the Divan, when it was finally resolved to declare war against Russia, the sum of 600,000,000 of piastres, or £6,000,000 sterling, was subscribed within a few hours; and it has since been ascertained that the amount will be doubled or trebled, if occasion require; that all the rich plate and golden ornaments of the temples and mosques; all the jewels and personal adornments of the wealthy Turks and the inmates of their harems, will be cheerfully poured into the national treasury; and that the man who has nothing else to give in defence of his country will give his life. No one suspected that such enthusiasm could be aroused. The Czar himself, if pride and cupidity have left him amenable to reason, will doubtless give these facts their due weight, and take council from them in forming his ultimate decision.

Those writers in this country who, while they condemn in the faintest possible terms, the conduct of Russia, are loud in their disparagement of the Turks, affect to see, in this unexpected and unwelcome display of vigour, a new cause of alarm for Europe, and a new reason why the Czar should not be disturbed in his possession of the two Principalities. When it suited their purpose to declare Turkey to be weak, miserable, and unworthy of assistance, there were no terms of contempt which they did not employ to depreciate her resources and to sneer at her effeminancy. Now that they have discovered that the Turks are not effeminate, but bold and daring, that they have resources in men and money which will make them formidable antagonists, their efforts are directed to represent Turkish patriotism as utter bigotry and intolerance; and Turkish courage as ferocity, that, if once sufficiently excited, may prompt aggressive as well as defensive warfare, and deluge Eastern Europe with a new flood of Asiatic barbarism. But such writers lose their trouble in attempting to convert the people of England. The popular instinct sees through the sophistry, detects the falsehood, and is quite aware of its motives. The question is too clear to be obfuscated by the dirty smoke of such arguments. Never since the world began was peace or war staked upon a more simple and intelligible issue. The public has understood it from the first, and the general sentiment of the country was as strong against the pretensions of Russia five or six months ago, when Prince Menschikoff originally attempted to intimidate the Sultan, as it is now, when there is no room for the slowest intellect to doubt that Russia means the spoliation and dismemberment of her neighbour. Prince Gortschakoff appealed, in his famous proclamation, to the aid of the "God of the Russians;" but the God of Justice and of Nations is the Arbiter of Battles, and can scarcely be appealed to by a Sovereign who makes unjust war against another for the sake of his own aggrandisement

ALL the arguments that had been directed against our Corn-law system, from the year 1815 downward to 1846, fell with comparatively little weight upon the minds of statesmen, until a famine stared the nation in the face. The slow process that had been going on in the conversion of public men to sound views of economic science, received an impetus from the fearful responsibilities that such an event would have entailed upon them. The consequence was that the Corn-laws were suddenly and totally abolished. Sir Robert Peel could brave the reproaches and the taunts of the party with whom he had all his life acted, but he could not brave the responsibility of a year of famine. Something of the same kind is happening in France at the present moment. That country possesses a tariff of Customs' duties so stringent and ultra-Protectionist, that the unreformed tariff of England was liberal and sensible in comparison with it. the whole people, with the exception of the wine-growers and wine-dealers, are more hopelessly Protectionist than the most obstinate squire in Lincolnshire or Essex. But the French Emperor must have studied the great principles of Free-trade as expounded and developed in this country. He is far more shrewd and sagacious in this respect than the people about him, or than the statesmanship of France generally; and he has often allowed it to be seen that the light of Free-trade has broken in upon him. If not quite a Free-trader, he is certainly not a bigoted Protectionist. A scarcity in the food of the people will perhaps work upon his mind, as it did upon that of Sir Robert Peel. At the first sign of stormy weather, the principle of Protection is found insufficient to guide the ship. It is a fair weather principle, and cannot stand the test of stormy winds and raging seas. It is of little use for statesmen to bar the door against plenty. Famine, who is greater than statesmanship, draws the bolt with her skeleton fingers, and invites the world to come and feed her. France is at this moment a Free-trading country. Her ports have been opened, by Imperial decree, to all who will bring corn or provisions; and the custom-houses on her Rhenish and Swiss frontiers are no longer permitted to levy a tax upon cattle or agricultural produce of any kind. France will, no doubt, reap some advantage from this tardy and, perhaps, temporary change of policy; and, if food after all be scarce and dear, the people will have no right to reproach the Government with having neglected the necessary measures to secure a more bountiful supply. But when the danger of famine has passed away, will the Emperor return to that antiquated system of commercial policy which, in the presence of danger, he was compelled to suspend? This is a great question for France, and one in which her future commercial prosperity is largely involved. England can be no indifferent spectator of the result. Free-trade between the two nations would be the last and strongest link in the bonds of peace which now unite them; and when we see to how large an extent the order and stability of all Europe depends on the joint action of these Powers, the more urgently is it to be desired that our good example should not be thrown away upon the French; and that a friendship, based upon the interests of commerce, should cement and complete the good understanding already existing.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rectories*: The Rev. R. L. Cotton, D.D., Provost of Worcester College, to be Vice-Chancellor of Oxford, 1853-54.—The Rev. F. E. Tower, B.A., to Kirby Mallory, with the rectory of Elmsthorpe, and the incumbency of Earl Shilton annexed, Leicestershire. *Vicarages*: The Rev. G. Williams, B.A., to Llowes, with the chapelry of Llandewifach, Radnorshire; the Rev. J. Jones, to the united vicarages of Llanarth and Llanina, near Lampeter; the Rev. C. Pratt, jun., to Ashby-de-la-Zouch. *Incumbencies*: The Rev. F. T. Gregory, to St. Mary's Church, Lambeth-butts; the Rev. M. Spincke, to St. Ives, Cornwall; the Rev. E. B. Leonard, to Llandevaud, Monmouthshire. *Perpetual Curacies*: The Rev. L. G. F. Broome to Whitleibury with Silvester; the Rev. K. Gale, B.A., to North Horton, Cardiganshire; the Rev. S. Robins, M.A., to Holy Trinity, Dover.—The Rev. A. Pott, M.A., Vicar of Cuddesden, near Wheatley, is to be the first Principal of the New Diocesan Theological College for Oxford.

ILLNESS OF THE BISHOP OF NORWICH.—The right rev. prelate has been suffering from so severe an attack of illness that he has been compelled to postpone a course of confirmations for which he had made arrangements

THE NEW AFRICAN BISHOPS.—The Rev. Dr. Colenso, the newly-appointed Bishop of Natal, intends leaving England early in December, for the purpose of making an extensive visitation of his diocese, and will return to England in the course of next summer, to inform the Church at home of the requirements of the see of which he is to have the episcopal supervision.—Dr. Armstrong, the new Bishop of Graham's Town, intends, after making due provision for the church already planted in the colony, to direct his attention to the religious instruction of the Kaffirs, who have long been a most lawless and rebellious race, and who were recently subjugated by the force of British arms.

It is stated that a new church—St. Luke's—is to be forthwith erected in Milford-place, and another will soon be erected in Orchard-street, Portman-square.

HOLYHEAD NEW CHURCH.—At page 300 of the ILLUSTRATED LONDON NEWS for October 8, the population of Holyhead is stated to be 1900, instead of 8000, and the accommodation in the old church was for 500 or 600 only.

THE COURT.

The arrival of the King of the Belgians, and the young Archduchess of Brabant, on a visit to the Queen and the Prince Consort, has led to an early commencement of the usual autumnal hospitalities of the Court. The Duke and Duchess of Wellington, and the Earl of Aberdeen, were present to meet the illustrious party on their arrival at the Castle, on Friday se'nnight.

On Saturday morning the Queen and Prince, with the King of the Belgians, and other Royal visitors, walked in the grounds adjoining the Castle, and visited the gardens at Frogmore. The Queen and Prince, with the Duke and Duchess of Brabant, and the Count of Flanders, drove out in the afternoon.

On Sunday her Majesty and his Royal Highness Prince Albert, the Prince of Wales, and the Princess Royal, and Princess Alice, the King of the Belgians and the ladies and gentlemen of the Court, attended divine service in the private chapel of the Castle. The Duchess of Kent was present. The Hon. and Rev. G. Wellesley officiated. The Duke and Duchess of Brabant, the Count of Flanders, and the Princess Charlotte of Belgium, with their suite, went to the Catholic Chapel at Clewer.

On Monday the Queen held a Court and Privy Council. In the morning her Majesty and the Duchess de Brabant took equestrian exercise in the Riding-house. The Prince Consort, with the King of the Belgians, the Duke of Brabant, and the Count of Flanders, went out shooting in the afternoon. In the evening, the Royal dinner party included his Majesty the King of the Belgians, her Imperial Highness the Duchess of Brabant, her Royal Highness the Duchess of Kent, his Royal Highness the Duke of Brabant, his Royal Highness the Count of Flanders, the Lady in Waiting to her Imperial Highness the Duchess of Brabant, the Lady in Waiting to her Royal Highness the Duchess of Kent, the Baroness de Speth, the Belgian Minister, the Earl of Aberdeen, the Earl and Countess of Carendon, and the Right Hon. W. F. Cowper.

On Tuesday the Duke and Duchess of Brabant, and the Count of Flanders, attended by the Count and Countess Gustave de Launoy and Baron Prisse, went to London, and visited various exhibitions and public establishments.

On Wednesday the Queen and the Duchess of Brabant drove out in a pony phaeton. His Royal Highness Prince Albert, with the King of the Belgians, the Duke of Brabant, and the Count of Flanders, went out shooting.

On Thursday his Royal Highness the Duke of Cambridge, and his Serene Highness Prince William of Hesse-Philipsthal, arrived on a visit to the Queen.

The theatrical performances commence on the 10th of November, with "The Tempest." Mr. Grieve has been busily engaged for some time on the scenery.

The Countess of Desart has succeeded Viscountess Canning as Lady in Waiting to her Majesty. Lord Camoys and Lieutenant-General Sir F. Stovin have relieved Lord de Tabley and Lieut.-Colonel the Hon R. Bligh as Lord and Groom in Waiting

THE QUEEN'S COURT, &c.

The Queen held a Court and Privy Council at three o'clock on Monday afternoon, at the Castle.

At the Council, Parliament was ordered to be further prorogued from Thursday next, the 27th instant, until the 29th November.

John Parker, Esq., by command of the Queen, was sworn of her Majesty's Most Honourable Privy Council

A proclamation was issued for the election of a Scotch representative Peer, in the room of the late Lord Saltoun.

At the Court, Shah Khan, the Persian Minister, had an audience of her Majesty. His Excellency was introduced by the Earl of Clarendon, the Queen's Principal Secretary of State for Foreign Affairs, and was attended by the Secretary Interpreter of the Legation

Sir Edmund Lyons had an audience of the Queen.

General Lopez was presented to her Majesty, at an audience by the Earl of Clarendon.

Sir William Hotham had an audience of the Queen.

THE BELGIAN ROYAL FAMILY.

His Majesty the King of the Belgians, accompanied by their Imperial and Royal Highnesses the Duke and Duchess de Brabant, the Count de Flandres, and the Princess Charlotte of Belgium, left Ostend at half past six on Friday se'nnight, in the Belgian mail-packet *Ruby*, Captain Lahaye, and, after a stormy passage of about five hours, landed at Dover at twenty minutes after twelve p.m. The King and the Royal party landed under a salute from the castle heights, and, having entered the carriages in waiting, drove to Shorncliffe, at Ship Hotel, where apartments had been engaged for their reception. At three o'clock his Majesty, accompanied by the younger members of his family, and attended by his Equerries, Colonel Van de Weyer and the members of the Royal suite, left the Ship Hotel for the railway station, where the illustrious party were received by Captain Harlow and conducted to the saloon carriage. At a few minutes after three o'clock the train left Dover for the Brocklayers' Arms station of the South-Eastern Railway, where the Royal party arrived at six o'clock. The Queen's carriages were in attendance to convey the illustrious travellers to the Paddington terminus of the Great Western Railway, by which route they travelled to Windsor.

His Royal Highness Prince Albert met his illustrious relatives at the Windsor railway station; and the Queen, with the Princes and Princesses of the Royal family, was in attendance at the foot of the grand staircase, to welcome their arrival at the Castle. Colonel de Moerkerke and Sir Robert Carswell are in attendance on the King. The Count and Countess Gustave de Launoi are in the suite of the Duke and Duchess de Brabant. Lord de Tabley and Colonel Francis Seymour have been appointed by her Majesty to be in attendance during the sojourn of the Royal party in England.

KNIGHTS OF THE THISTLE. A Chapter of the Most Ancient and Most Noble Order of the Thistle was held at Windsor Castle on Friday, at which the three Green Ribands—vacant by the deaths of the Marquis of Hastly, Lord Saltoun, and the Earl of Warwick were bestowed by the Sovereign upon the Earl of Haddington, the Duke of Atholl, and Lord Panmure. The Knights Brethren and Officers connected with the Order attended the ceremony of investiture in due form.

PROROGATION OF PARLIAMENT.—On Thursday, at two o'clock, the Lords Commissioners for her Majesty met in the House of Lords, and a deputation from the Commons being summoned, prorogued the meeting of Parliament from that day, to Tuesday the 29th of November next.

NEW SCOTCH LAW LORD.—We believe we are correct in stating that the vacancy on the Scotch Bench, caused by the death of Lord Anderson, will be filled by Mr. Inglis, the Dean of Faculty.

MR. COBDEN ON EDUCATION.—In concluding his address at the Barnsley Mechanics' Institution, on Wednesday last, Mr. Cobden said, "I have not a party, I hope, in this country now opposed to education. I believe there is not a party that does not consider there is more danger, upon the whole, in our artificial state from ignorance than from education. I believe there are none here, whatever his political predilections may be, that would not henceforth say—Whatever we may be doomed to undergo from strained or an forces, owing to decline in commerce, from difficulties of different kinds, and political changes, whatever may be in store for us in the way of troubles or of disasters, there is nobody will say it is not better to have an educated people to meet them than to have to encounter them in the masses of ignorance and with unrestrained passions (Cheers). For all of us must admit that the mass of the country do govern. In the last resort they are called in to arbitrate on all questions that touch our interests and our welfare; and we must all admit that it is better to have an arbitrator who has been trained to think—who has been accustomed to weigh and [illegible] to deduce consequences from facts and evidence [illegible] than to have parties of this kind to settle great national questions affecting our highest interests to the arbitration of ignorance, prejudice, and passions." (Cheers)

HIBERNIAN ASYLUM.—The half-yearly examination of the children in this most excellent school, took place on Saturday, at the Asylum, in the Caledonian-road, in the presence of the Scotch Presbytery of London. The boys were first examined in the upper [illegible] near, English, Scottish, and Scripture history, geography, and arithmetic, in the whole of which they displayed a [illegible] degree amount of knowledge for children of their [illegible] ages; and rewards were awarded to those who showed that they had [illegible] to by their teachers. The Cumming Lassie prize [illegible] was [illegible] of him elf and the other members of the committee, with the progress made by the children in their education, and their healthy appearance. The proceedings appropriately concluded as they had been begun, by the singing of hymns. The numerous visitors to the school were [illegible] gratified by the admirable manner in which the [illegible] by the juvenile band of musical performers. It is to be regretted that the small [illegible] funds are [illegible] to meet the expenses of the [illegible] and [illegible] from the continual calls upon it to [illegible] on the receipts during the last [illegible] were [illegible] 40 boys and 38 girls were [illegible] and [illegible] and [illegible] and

POSTSCRIPT.

TURKEY AND RUSSIA.

A telegraphic despatch from Vienna, dated the 22nd, of questionable authenticity, says:—

The army of Omer Pacha, which could be kept back no longer, has passed the Danube, and beaten the Russians near Oltenitza. The Russian vessels on th Danube have fallen into the hands of the Turks.

If this news should be confirmed, no doubt the French and English fleets will speedily appear before Constantinople. In the treaty with Russia, which excludes the ships of war of foreign nations from passing the Dardanelles there occurs the clause, "as long as the Porte is at peace." As soon, therefore, as hostilities commence, the squadrons can enter the Bosphorus without any violation of treaty; and it is the intention of the Ambassadors to refrain from calling them up to the capital until the occurrence of war, which may be daily expected to break out.

The correspondent of a French journal, who has just descended the Danube from Pesth, gives us information relative to the position of the two hostile armies:—

As he was passing on the 11th, before Roustchouk, a Turkish fortress on the Danube, the Aide-de-Camp of Omer Pacha, who had been to Giurgevo, on the Wallachian bank, to notify the declaration of war, had just returned to the fortress, after having passed eight days in the headquarters of Prince Gortschakoff. After the delay of fifteen days fixed by the summons of Omer Pacha, hostilities could commence on the 11th of October of the Greek and Russian calendar, which is twelve days behind ours—the 1st October of the Russian corresponding to the 13th of our calendar. The Russian troops were occupying in force the little town of Giurgevo, and were entrenching themselves there (a Sketch of the fair of St. Peter, at Giurgevo, will be found at p. 365 of our present Number). Letters differ greatly as to the force of this *corps d'armée*. Some estimate it at 15,000 men, and others at 30,000. In Wallachia great terror was felt at the expected passage of the Turks. The Turkish camp is opposite Giurgevo. There were there a good many irregular troops, who inspire great terror. The weather continued to be magnificent. The serenity of the sky and the dryness of the ground would permit the armies to make a campaign before the winter. There was a large Russian camp near Galatz, on the Lower Danube. The strong places of the Turks along the Danube appeared to be in a good state, and well armed. That of Roustchouk was specially remarked on account of its imposing aspect. It is the centre of a numerous *corps d'armée*. The town is seated on a steep bank by the side of the river, and the ramparts crown the summit. At the brink of the river is a series of low batteries. Round the town are seen the tents of the Turks, which are of a green colour in honour of the Prophet. The *corps d'armée* is picturesque. It is commanded by the Hungarian General Klapka commands this *corps d'armée*, or one of its divisions. It appears that the Turks protect themselves on the Bulgarian bank, and keep watch with great vigilance. All along the bank there are posts and sentinels, or videttes, with a pole near them, from fifteen to eighteen feet high, surrounded with straw or rushes steeped in tar, and destined to be set on fire in case of alarm. The fire would be lighted in the event of a movement of the Russians, and the signal would spread rapidly on all the line. Besides the posts and the videttes of the bank, there are others on the road having also signals prepared. This system of vigilance is very well regulated, and things appear to be on a very good footing at Roustchouk.

Increasing attention is being directed to the Asiatic frontier of Turkey. Both Russia and Turkey are concentrating large armies in this direction, and, in the course of two or three weeks, unless peace should be restored, we may expect to hear of serious encounters between the belligerent forces. The Russians have very recently formed an army of reserve at Redout kaleh, on the eastern coast of the Black Sea. On Tebedcen, an island lately ceded by the Persians, close to Astrabad, on the Caspian, they have landed 20,000 men, and at Tiflis they have a large *corps d'armée* under General Arakoudine Dolgorouki. From Tiflis there is a military road leading through the country of the Chetchi, and intersecting Circassia and Daghestan. This military road is a most important strategic point, and is the only way through the mountains of Caucasia.

We hear from Persia that the army at Sultanieh is already disbanded, the Persians having declared that it was assembled merely to be exercised in military evolutions, and that nothing hostile against Turkey is intended. The reliance on, however, is placed on the professions of Persia, since the disputes between these two Powers concerning the frontier question are always of sufficient gravity to keep up a constant state of warfare. A letter from Tabreez, after corroborating the news as to the break up of the camp, states that it was said the Russian Minister was about quitting Teheran, and had already sent away his wife and family. The letter concludes by announcing "most glorious accounts of the victories of the renowned Daghistan chief, Schamyl, who has placed himself at the head of 20,000 mountaineers, and besieged the town of Zakhstahl, distant two hours from Cahetty. The place was occupied by 5,000 Russians, and a bloody battle ensued, in which the Daghestanis kept the field. The loss of the Emperor's troops is estimated at 3000 infantry and artillery. The news was brought to Tiflis by an express, and the Commander-in-Chief instantly despatched new forces, but Schamyl was nowhere to be found; he had withdrawn into his fastnesses, after having burnt and pillaged the villages along the return route."

An active propagandism has begun in Greece and Thessaly, with the view of establishing a Greek State on the ruins of the Ottoman Empire. Emissaries are working in all parts to obtain subscriptions for this view, and £30,000 have already been raised by the Philhellenists within the Ottoman Empire.

Constantinople perfect tranquillity is preserved, although all kinds of military preparations are being pushed on with vigour, and the greatest enthusiasm is shown by all classes of the Musulman population.

FRANCE.

The Emperor and Empress returned to Paris from Compiègne on Thursday. In a few days their Majesties will set out for Fontainebleau. The recal of M. de la Cour, the French Ambassador at Constantinople, is said to have been caused by his equivocal behaviour, by means of which the French have lost much of their popularity and influence in the Turkish capital. It has been throughout of the greatest importance to that the most perfect understanding has prevailed between the two Western Powers. The avowed policy of the Emperor of the French, and the conduct of his political agent at Constantinople, have not, however, seemed to correspond; and it has been remarked, that while M. de la Cour is indecent, M. de Lavalette, as Ambassador, is prudent desire for the maintenance of peace, must have exceeded his instructions. The rumour is revived that France and England are making some new proposals, with a prospect of success.

The French garrison in Rome is to be increased. Louis Napoleon and the French army have become more popular of late in Rome, in consequence of the alliance with England against Russian pretensions in the East.

The French Department Gendarmery are to resume the title of *gendarmerie Impériale*, which they bore under Napoleon I.

The Bourse was animated on Wednesday, and there was a considerable amount of business transacted. The Three per Cents opened at 72f. 50c., fell to 72f. 20c., rose subsequently to 72f. 75c., and closed at 72f. 65c. for the end of the month, being a rise of 25c. as compared with the closing price of the previous day. The rise is attributed to the influence of many of the speculators to deliver the stock sold by them, and to the announcement that Consols had improved in London.

The Emperor has conferred a pension of 2000f. on the parents of Lieutenant Bellot, to be continued to his brothers and sisters.

AUSTRIA.

The increase in the price of provisions in Vienna has awakened the solicitude of the Government, and it is about to diminish the cost of the consumption of corn. It will begin by lowering the tariff on the State railways. The bakers of Vienna are so much embarrassed by the want of money, that they wish to borrow 400,000 florins from the Municipal Council without interest.

AMERICA.

By the *Baltic* we have advices from New York to the 13th inst. She is brought 1 000,000 dollars in specie on freight.

Something like a panic pervaded the Money Market. The public was alarmed about the effects of a war in Europe, and the consequences of a short crop of grain in England and France. The evil has been aggravated by the speculative mania, fostered by a state of prosperity, and of great commercial credit. The issue of bonds of all descriptions, from under the guarantee of States down to the smallest city in the northwest, has been of the most enormous magnitude, mounting up to millions of millions, and resembling the condition of things in England, [illegible] country a few years ago.

[illegible] is employing a portion of his surplus of [illegible] ing up the bonds of the Government not due; and the remission of specie to Europe for this purpose increases the [illegible] at the New York Money Market, and exposes the Secretary of the Treasury to a good deal of abuse from the speculators and their organs. It is, however, well remarked by the *New York Courier and Inquirer*, that—

A people who raise a surplus of food sufficient to feed half Europe, and with the addition of such crops as cotton and tobacco, together with millions of gold, produced annually from the soil within its own borders, cannot be doomed to ruin, as some would have us believe. The United States has every element of wealth within her control, and the stringency in the Money Market, as keenly felt for a few days past, cannot be of long duration. The crops must soon cause a turn in the exchanges, and enable the gold from California to remain in the country. Panics are short-lived, and this one is destined to be consigned to oblivion sooner than those that have preceded it.

The United States will in time become the granary of the whole world. The wheat crop for the present year is estimated at 120,000,000 bushels, and the Indian corn crop at 800,000,000 bushels. America will, it is said, be able to export, by the end of July next, provisions and bread-stuffs to the value of 100,000,000 dols

It is stated that Mr. M'Kay, the builder of the *Great Republic*, recently launched at Boston, has been offered 300,000 dollars for his ship.

The elections in Ohio and Pennsylvania were going in favour of the Democrats

The Administration has come to the determination not to demand from any foreign Government, nor to surrender to any foreign Government upon their demand, any person who may be charged with crime, without an express treaty stipulation to that effect.

General Almonte, Mexican Minister at Washington, denies the fact that Santa Anna ascertains the notion of the substitution of Empire for the present Republic.

ATTACK UPON THE AUSTRALIAN GOLD ESCORT.

The following account of the daring attack upon the M'Ivor gold escort is from a Melbourne journal, dated July 2:—

On Wednesday morning last, Mr. Warner, one of the escort superintendents, started with his troop, consisting of a sergeant and three mounted men, from the M'Ivor diggings. They had in their charge a cart containing 2223 ounces of gold and about £700 in money, packed up in two boxes. The troopers were armed with a sword, carbine, and pistol each. The superintendent and sergeant having six-barrelled revolvers in addition, the cart driver only being unarmed. They proceeded on their way until they came within three miles of the Mi-Mi Inn, and seven miles from the M'Ivor, and they immediately noticed a log thrown across the road near one of its turnings, and the sparsely detached mi-mi at one side. Conceiving those appearances to be nothing more than ordinary, they continued their march, little expecting what was in preparation. The superintendent and sergeant were riding about 100 yards in advance, and the other three close by the car. When within five or six yards of the mi-mi, they were suddenly assailed by a volley of seven or eight shots from it, and the horses of the two foremost riders being wounded, they plunged violently forward for several yards; and Mr. Warner, whose mount was soon to be pulled up his horse, the first objects that met his view were some eight or nine men standing round the cart, and all the others stretched wounded on the ground. Seeing the odds against him, he was for a moment undecided what to do, and discharged three shots from his revolver, but without taking any effect. He was then compelled for a time to be a simple observer of what passed, and about half a dozen of the robbers proceeded in a very cool and business-like manner to unload the cart of its treasure, the boxes containing which were removed to an adjoining dense stony scrub. The sergeant's horse received three balls in his back, but still bravely bore his rider, and Mr Warner at once despatched him to a government station three miles off for assistance. He followed the others himself into the scrub, where two or three shots were fired at him, but he escaped uninjured, and discharged the three remaining shots of his revolver, wounding, it is thought, one robber. Fearing that the sergeant's horse would sink exhausted before he arrived at the Government encampment, and, his own horse being injured, he started off on the same route, arriving at his destination nearly exhausted, and quickly returning with a reinforcement of troopers and a number of diggers whom he met on the road. The latter were armed, furnished with horses, and started in pursuit of the bushrangers on returning to the scene of the atrocity, they found all the wounded men lifted into a cart, and a stranger standing by them. On being questioned, the latter declared that he had been out looking for cattle, and, on coming up and seeing what had happened, assisted the wounded men. He further offered to lead the pursuers on the track of the bushrangers, and, on his offer being accepted, attempted to decoy them off on quite a different direction from that which the former party supposed to have taken. A suspicion being created that he might be in league with the fugitives, he was submitted to a cross-questioning, and from some vagueness and contradiction in his account of himself, he was arrested, and still remains in custody. The wounded men were then sent off to the M'Ivor, and the country all around explored to a considerable distance. The mi-mi was searched, and in it were found a double-barrelled gun, several pannikins, one of which was indented with the letters "W. R.," also two pea-jackets and a comforter. A short distance off in the scrub were picked up four pack-horses, supposed to belong to the robbers. While operations were being carried on, Mr. Langwith a party of troopers, arrived at the spot, and lent their assistance in the pursuit. The bushrangers are supposed to have numbered seven or fourteen individuals, and to have been in the mi-mi during the preceding night for their work of blood and rapine. We believe Mr. Warner can identify three of them; and, should the wounded men recover, there can be but little doubt that they would be able to recognise more. The party were dressed, some in Guernsey shirts, others in pilot cloth pea-jackets, and all had woollen comforters wrapped round their heads in turban-like fashion. They were all armed with double-barrelled guns; the number of shots fired is not known, and they are supposed to have had a relay of horses close by. All the escort party, with the exception of the superintendent and sergeant, were wounded, as was every horse belonging to them—one of the animals that drew the cart being killed. The three guards and the driver were seriously hurt, it is to be hoped, not dangerously wounded. One was shot in the thigh, a second received a ball in the shoulder, above the region of the lungs, and the top of his nose was taken off; another was wounded in the cheek and nose, and the driver was shot in the knee. The man who was shot in the thigh, in falling from his horse, dislocated his shoulder; and during the plunder the miscreants offered no further violence than one of them kicking out of his way the driver, who had tumbled back into the car. All the wounds, with one exception, were inflicted with balls, the exception being that one of the men was shot with a slug. As soon as the news of the "sticking-up" became known about the country, parties of police were out in all directions, as well as a large number of diggers, among whom the affair has caused the utmost excitement. The diggers were at their own request sworn in as special constables, and apprehensions are entertained that if they overtake the robbers, under circumstances to lead to a certainty of their guilt, the perpetrators will judge Lynch will be vindicated without waiting for the interposition of either judge or jury. We are also informed that about fifty troopers of the 40th have joined in the chase, and that four men were arrested on suspicion, but subsequently discharged. When Mr. Warner left, two of the wounded men were in a very dangerous state, but hopes were entertained of their recovery. Such a premeditated and sanguinary outrage has been hitherto without record in the criminal annals of the colony, and it is to be sincerely hoped that the blood-stained wretches who could plot and perpetrate an act of such daring and magnitude will soon be in the hands of justice.

Miss Cunningame.—On Thursday a deputation of the Evangelical Alliance, headed by Sir Culling Eardley, waited on Lord Aberdeen, to express their gratitude for the liberation of Miss Cunningame. His Lordship received the deputation most courteously, and during the interview stated his opinion that Mr. Scarlett should have been so unjustly censured by a portion of the press; that gentleman having, throughout the affair, acted in the most firm and dignified manner.

Arrival of Gold.—A richly-laden galleon arrived at Liverpool on Saturday last—the clipper-ship *Eagle*. In addition to the packages of gold-dust on freight—weighing 69,593 ounces, and valued at £278,000—there was a very large amount in the hands of passengers, one of whom possessed a nugget weighing 40 lbs. There were also in the freight list the two splendid nuggets described at page 373. The ship likewise brings home the delinquent Quin, who absconded from a Liverpool house some months ago, with £10,000, and was captured in Melbourne.

Asylum for Idiots.—On Thursday the autumnal election of this charity was held at the London Tavern—Alderman Sir Carrol, Bart., in the chair—in which occasion twenty idiot children, from a list of 168 candidates, were placed on the books of the institution, making the total number at present cared for in the asylum 240. A special appeal was made in behalf of the building fund, for the erection of a suitable asylum.

The *Golden Age* steamer, engraved in the ILLUSTRATED LONDON NEWS of last week, is announced by the Post-office authorities to take out the letter bags for Melbourne and Sydney, on the 10th of next month.

The "Great Britain."—The steam-ship *Great Britain*, for Australia, was spoken on the 7th ult., in lat. 4 S., long. 27 W., by the *Ianthe*, which arrived at Cork, from Buenos Ayres, on Monday. She had no steam up, but was making her way under canvas.

Government Income from Railways.—By the return of Mr. W. Williams, on the public income and expenditure, recently issued, it is shown that in the year ended the 5th of January, the payments to the revenue by railways amounted to £280,144.

LATEST INTELLIGENCE.

"THE FIRST CANNON SHOT."

The *Moniteur* of Thursday says the Government has received the following Telegraphic despatch from the French Consul-General, at Bucharest, dated Oct. 25:—"Two Russian steamers and eight gun boats forced a passage on the Danube on Sunday, the 23rd, and encountered a smart fire from the Fort of Isactcha, situated on the right border of the river between Reni and Ismail. The Russians had a Lieutenant-Colonel, commanding the flotilla, 3 officers, and 12 sailors killed, and about 50 wounded. They allege that they set fire to the Fort of Isactcha."

Everything is prepared in Paris for a land expedition to Constantinople, but no orders will be given for it to leave unless new circumstances should render it necessary. The military cadres have been reformed, and such admirable arrangements have been made that in less than six weeks the standing army of France could be raised to 750,000 men.

The Funds fell forty centimes upon the Paris Bourse on Thursday. This is chiefly ascribed to the article in the *Moniteur*, noticed elsewhere, which is regarded as decidedly warlike. It is generally understood that the two Governments of France and England are fully agreed on a strong demonstration against Russia; and, it is believed that this manifestation will produce the desired effect. The letters from St. Petersburg, received in Paris, speak of a strong desire for negotiation on the part of the Count de Nesselrode, and even the *St. Petersburg Journal* has an article which is decidedly in this sense.

General Baraguay d'Hilliers is spoken of as the successor of M. de la Cour as the French Ambassador at Constantinople. The General was summoned by telegraph from Paris to Compiègne on Wednesday to wait on the Emperor.

Letters from the Danubian provinces state that the Russian army is in a most deplorable condition, being, in fact, decimated by disease.

General Dembinski is reported to have left Paris, and embarked in the last steamer which left Marseilles for Constantinople. It is thought that he will remain at Malta till November.

Fresh news from Australia has been brought by the *Argo*. The dates are Melbourne, 14th of July; Sydney, 11th of August; and Port Phillip, the 6th of August. The intelligence is on the whole very satisfactory. New gold fields have been discovered; the social condition of Victoria is improving; and the disposal of goods at Melbourne proceeds more freely. In New South Wales agriculture and general trade proceed steadily. The new gold-field is on the Goulburn River in New South Wales. Its richness has caused some sensation, and the sailors of the *Argo* immediately demanded and obtained £45 and £50 for the run home. Some new "diggings" at Jones's Flat were accidentally discovered by the wheel of a bullock-waggon having turned up large nuggets in a rut! Both these new "diggings" are yielding profitably. The social condition of Victoria is improving, though occasional outbreaks of crime occurred, which are attributed by the Melbourne papers to the leaven of transportation still existing in the colony.

Papers and letters from India and China have been received by express, in anticipation of the Overland Mail.

Our accounts from Burmah are still unfavourable. The bodies of armed Burmese, who are now carrying on a guerilla warfare against us in our new territories, are increasing in number and confidence. The present position in our affairs in Burmah, is unquestionably very critical. Notwithstanding the check the Dacoits had received, they were expected every hour to attack Kaingain, and Major Minchin sent to Sir J. Cheape, by the Indus, an urgent requisition for reinforcements. The steamer reached Prome on the 20th, and the following detachments were immediately despatched to Major Minchin's assistance—three officers and 100 men of her Majesty's 80th Foot, two officers and 100 men of the 67th Bengal Native infantry, and a lieutenant and 20 men Sappers and Miners. It is generally thought that another campaign in Burmah is inevitable.

In China the insurgents are extending themselves in all directions, but principally to the north and west.

The rumour that the Emperor has left Pekin, and is some distance from it, ready to make his escape.

The leader of the insurgents still continues at Nankin, which will, probably, be henceforth the capital of China; but large bodies of his followers are constantly marching towards the country to the north of the Yellow River, on their way to Pekin. Some time since it was reported that they had established themselves in the capital of Ching-Tong, within 250 miles of Pekin; and, even if the capital should be lost, it must certainly see this have been invested.

Trade is almost at a stand-still at all the ports.

Proposed Statue to Prince Albert.—This design, originated in "the City," has been readily taken up. A meeting is to be held at the Mansion House, on Monday, the 7th of November, the object of which is to raise a subscription for the erection of a statue to Prince Albert, to serve as a national tribute of respect to his Royal Highness, for having suggested and organised the Great Exhibition of 1851. The Lord Mayor has warmly interested himself in this project; and the proposal having met with the sanction of many distinguished persons, there is no doubt that it will be successfully carried into effect.

Dinner to the Lord Mayor.—On Thursday evening, the United Wards of Cripplegate Within and Without gave a handsome and complimentary dinner to the Lord Mayor, at the Albion, in Aldersgate-street. Mr. Dillon was the chairman, and there were about 150 gentlemen, inhabitants of the wards, present at the entertainment.

Post-office.—The General Post-office is being enlarged for the purpose of giving increased accommodation in the inland and letter carriers' offices, in consequence of the additional business that has to be transacted in those departments. To effect the enlargement it has been considered necessary to enclose and throw into those offices the portion of the magnificent vestibule between the pillars on the north side and the present north receiving-house, which will give an increase of space to those offices of nearly 1800 superficial feet.

Buckingham House.—The late residence of the Duke of Buckingham, in Pall-mall, has been let to the Carlton Club for £1800, till Midsummer, 1855. The tenancy of Buckingham House by the Club will be during the alterations which are to be made in their own building.—*Times*.

The Irish Railway Accident.—We understand that the total loss the Great Southern and Western Railway Company will sustain by the late fearful accident at Straffan will not be less than £80,000.

The "Queen of the Thugs."—The grand jury at the Central Criminal Court, on Thursday, threw out the bill of indictment against the captain of this ship; and found a true bill against the two Lascars for murder and mutiny on the high seas.

Contemplated Purchase of Southwark Bridge.—A new free bridge for City traffic is in prospect. Extreme inconvenience is sustained daily on account of the over-crowded state of London bridge and its approaches, and it is quite evident that there is great want of another free [illegible]-bridge, if free, would take off more than one third of the traffic, and would be one of the greatest possible public improvements. The bridge cost between £700,000 and £800,000, and the company are now offer to sell it for £200,000. The Court of Common Council have resolved to ascertain by professional inquiry as to the strength and durability of the bridge, with a view to [illegible].

Telegraph to America and Europe to the Pacific.—The subject of an Atlantic submarine telegraph is occupying a greater share of public attention just now, and at least, half a dozen projectors are in the field, with separate plans and claims to public support. The sum of 37,000,000 dollars has been subscribed to the stock of the New York Atlantic and Pacific Railroad Company, recently chartered by the New York Legislature, with a capital of 100,000,000 dollars. Mr. Robert J. Walker is a candidate for the presidency of the company.

The Religious Bankrupt.—Michael T. S. Welsh—the bankrupt who ran away from his creditors, and was taken on his return from Australia (as announced in our paper of October 15), was tried at the Old Bailey yesterday, found guilty, and sentenced to *four years' penal servitude*.

Thunder-storm.—A storm of thunder and lightning broke over London on Thursday, about half past five o'clock, and lasted nearly an hour. In the south the storm was very violent in the early part of the day. A correspondent from Hastings states that a carter, of Cogshurst, Guestling, was engaged in feeding the horses in the stable, and while so occupied the sleeve he held in his hand was struck by lightning, and driven through the weather boarding attached to the stable, but neither he nor any of the horses sustained the slightest injury

LITERARY ANNIVERSARY AT TAMWORTH.

A most interesting demonstration took place at Tamworth on Tuesday, when the anniversary meeting of the library of the town (rendered remarkable by the presidency and addresses of the late Sir Robert Peel) was held, and derived additional importance on this occasion from its being connected with a conference of delegates from the mechanics' institutions of the Midland Counties. The delegates discussed measures necessary for the efficient establishment and management of mechanics' and other establishments of a similar nature.

Sir Robert Peel was the first president for the ensuing year, in the room of the Earl of Yarborough. The progress of education amongst the working classes was said to be most satisfactory, and great advantages were anticipated from a friendly union between the various institutions of the Midland Counties. The principal attraction of the proceedings was the conversazione held at the Town-hall in the evening. Sir Robert Peel, and a distinguished party of visitors at Drayton, called respectively together for the occasion, were early in attendance.

Sir R. Peel spoke at some length, and in an appropriate spirit. "Their wish," he said, "was to give to the working-classes of England as much of the literature of the country, carefully selected, as the literature of the country could supply." He expressed a hope that Parliament was about to inaugurate a measure of primary education applicable to the whole kingdom. Lord John Russell, beyond all other statesmen, was capable of digesting such a measure; but the task would be beyond the powers of any Government to accomplish unless it received the co-operation of the people (Cheers). Sir Robert next denounced the "strikes" which have recently occurred in the north, and said that which cheated labour of its hire robbed the wife, family, and friend of the honest labourer. It was only the other day that he had observed there was a strike in Stockport. Not fewer than 20,000 workpeople were said to have "struck;" and in wages a operatives and profits to masters not less than £160,000 was in a given period lost as much—just as much—as a loan to Russia (Cheers and laughter).

Mr. Monckton Milnes, M.P., followed, and in the course of his address, denounced strikes.

Mr. Adderley, M.P., in a short speech urged the Government to supply funds for primary schools.

Dr. Lyon Playfair, in an earnest address, advised the necessity of adopting a systematic course of lectures in mechanics' institutions, instead of the desultory system now generally practised throughout the country. There was, in his opinion, a great want of systematic instruction. He did not charge that fault upon the delivery, but it was notorious that any lectures—it mattered not upon what subjects—were introduced, when supposed competent lecturers could be obtained. The Doctor proceeded to argue the necessity of promoting amongst all classes a taste for scientific knowledge All the nations of the world were now competing intellectually against brute force; and it was their duty to spare the sweat of the brow by the scrupulous application of the head (Cheers). He advised mechanical trades might be carried on without a knowledge of the principle upon which they were conducted; but he contended that it would be far better if workmen were to possess a knowledge of the principle on which they worked, and able to explain the work upon which they were engaged (Cheers).

The Earl of Yarborough advised union among mechanics' and literary institutions; Mr. Hall, Q.C., the Birmingham, spoke warmly on the progress made in the reformation of juvenile offenders, Mr. P. L. Nr. Foster, Secretary to the Society of Arts, explained the arrangements of that body for facilitating the union of provincial literary societies; and Mr. C. N. Bracebridge entertained the meeting with a spirited account of his foreign travels. The proceedings, which were happily managed throughout, ended with the usual complimentary resolutions.

NATIONAL SPORTS.

NEWMARKET HOUGHTON MEETING MONDAY.

Sweepstakes of 10 sovs.—Guy Mannering, 1. Jack the Giant Killer, 2. Swee, jack of 10 sovs. each.—Coleraine, 1. Songster, 2.
Match. 200.—Speed the Plough, 1. Coalition, 2.
The Criterion Stakes.—Phaiton, 1. Rosaline, 2.
Handicap Plate of £50, and upwards.—Hadlida, 1. Nicotine, 2.
Match. 300.—Filbert received forfeit from Pelion.

TUESDAY.

Sweepstakes of 10 sovs. each.—Guy Mannering, 1. Farmer's Bo,, 2.
Handicap Plate, £100.—Cleveland, 1. Poodle, 2.
Handicap Sweepstakes of 15 sovs. each.—Protest, 1. Stonehenge, 2.
Sweepstakes of 200 sovs each.—Pantaloon colt, 1. Ortolano, 2.
Sweepstakes of 10 sovs. each.—Puritan, 1. Tonic, 2.
Sweepstakes of 10 sovs. each.—Strutaway, 1. Mysterious Lady, 2.
Cambridgeshire Stakes. Little David, 1. The Naboth, 2.
Fifty Pounds.—Bracken, 1. Eldorado, 2.

WEDNESDAY.

Selling Handicap Sweepstakes.—Snarry, 1. C. by Cotherstone, 2.
Handicap Sweepstakes of 10 sovs. each.—Loretta, 1. Grub, 2.
Sweepstakes of 10 sovs. each.—R. f. by Verulam, 1. The Master, 2.
Match: 100.—Senorita, 1. Old Rowley, 2.
Subscription Plate of £50.—Syrin, 1. Vantage, 2.
Sweepstakes of 10 sovs each.—Ruptiure, 1. Sabra, 2.
Sweepstakes of 50 sovs. each.—Weathercock, 1. Rosaline, 2.
Match: 100.—Nathan, 1. Miss Sarah, 2.
Sweepstakes of 10 sovs. each.—Foxhunter, 1. Surprise, 2.
Handicap Plate of 50 sovs.—Master Slender, 1. Nicotine, 2.

THURSDAY.

Sweepstakes of 10 sovs.—Jack the Giant Killer, 1. Braxey, 2.
Handicap Sweepstakes.—Blanchie filly, 1. Sister to Aphrodite, 2.

CHESTER CUP.—1000 to 20 agst Muscovite and Defiance coupled.
No betting at Tattersall's on Thursday.

RECOVERY OF TEN THOUSAND SOVEREIGNS.—The *Valetta* steamer has arrived at Marseilles with a fine cargo on board eight cases of the Australian mail. The pleasing intelligence reaches us by this opportunity that the 10,000 sovereigns dropped while being conveyed from the steamer *Geelong* to the shore at Geelong had been recovered. The *Lady Eveline*, from California to Hong-Kong, had been lost. There were twenty-four Chinese and six Europeans saved.

A GRAND SHIP.—The great Boston builder, Donald M'Kay, has launched another gigantic ship. It is called the *Great Republic*, is of 4000 tons burthen, and will spread 16,000 yards of canvas to the winds. She is expected to surpass in sailing qualities the *Flying Cloud*, which ran 374 geographical miles in a day, and the *Sovereign of the Seas*, which once ran 450 geographical miles in the same time.

THE WIDOW AND FAMILY OF THE ETTRICK SHEPHERD.—The Rev. J. Marshall, of Burnside-house, Forfarshire, has addressed the newspapers on the fact, that while the classic literary persons and widows of literary persons receive pensions, none has been given to the widow and family of the Ettrick Shepherd. "While such is the case (says the rev. gentleman), how does it come to pass that the widow and family of one of the most eminent of Scottish poets has been passed over in the distribution of Royal patronage? Surely, the widow and family of James Hogg—of the sweet bard of Ettrick—of the author of the 'Queen's Wake,' of the 'Witch of Fife,' of 'Fiora Macdonald's Lament,' and of a host of lyrics, which rank him at a song-writer next only to the immortal and unfortunate Burns, is as worthy to receive attention at the hands of our gracious Sovereign, as either Sir Francis Head or the widow and daughter of Joseph Train. Poor Hogg sleeps in Yarrow churchyard; but Mrs. Hogg yet survives, and, along with her, three "bonnie lasses," the offspring of him who, sprung from peasant-soil, touched a chord of Nature's harp which made it thrill even to distant lands. All these are unprovided for. Why is it so?" We understand that Mr. Marshall has addressed the Earl of Aberdeen and Viscount Palmerston upon the subject, in which the Premier has expressed his sympathy.

PENSIONS FOR SERVICES.—The pensions for judicial services, for last year, amounted to £42,264. There are several retired Lord Chancellors on the list. Counting the same period, the annuities and pensions for naval and military services were £31,625: thus the Law beats the United Services by £10,639.

THE VINE.—A letter from Pesth (16th inst.) states that near Erlau the crop of grapes is abundant, that it has been found necessary to leave one-half on the vines for want of casks to put the wine in. Twenty pails of wine are offered for a cask capable of containing twelve pails. In the neighbourhood of Olen the vintage has been more abundant than for many years past.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The continued scarcity of stock, and the steady absorption of it by the public, added to the large imports of the precious metals from Australia and the United States, have had a favourable influence upon the quotations of the national securities. This week the advance in them has been about one per cent, and we may intimate that jobbers have, in many instances, found it a very profitable speculation to meet the wants of the buyers. As might be expected, much uneasiness has been felt by the operators for a fall, who have made large purchases to cover speculative sales; whilst we learn that a few of the "bears" have also assisted, by way of loan, several millions of stock to meet the public demand.

The Money Market has been comparatively easy; and first-class bills have been readily taken in Lombard-street at 4½ per cent. We may observe, however, that both wool and corn bills are not readily taken, and that some of the provincial bankers have intimated to their customers that future advances must of necessity be limited.

On Monday, Consols were very steady, and prices had an upward tendency. The Three per Cents were done at 91¾; but declined, towards the close of the week, to 91⅝. Both for Account and Time. The Three per Cents Reduced were 90¾; and New Three-and-a-Quarter per Cents, 97⅞. Long Annuits were 16 5-16; Ditto, Thirty Years, 1850, 5 5-16. India Stock, 248; Ditto Bonds, 1½ pm. South Sea Annuities were 106. Both on Tuesday and Wednesday prices improved, the Three per Cents having been done at 92⅛ Exchequer Bills were par. to 2s. prem., India to 70 prem., and India Bonds par to 2s. prem. On Thursday, Consols were steady, and the leading quotation for the Three per Cents for transfer and time was 92⅛. The New Three-and-a-Quarter per Cents were 97⅝; and the Three per Cent Reduced, 91⅝. Exchequer Bills were par to 2s. premium. South Sea Old Annuities, 9¾, and Long Annuities (1880), 5 5-16.

The average circulation of the Irish and Scotch banks for the four weeks ending the 1st inst. was £9,384,211. The total amount of gold and silver held by those banks was £2,696,774. The circulation of the private and joint stock banks in England and Wales, was £6,861,778, being an increase on the month of £201,114.

Miscellaneous securities have been in very moderate request. Australia Bank Shares have been 68⅝ to 69; Chartered Bank of India, China, and Australia, 1½ to ⅝; London Chartered of Australia, 15⅝; London and Westminster, 39¾; New South Wales, 4½; Oriental, 43 ex div.; South Australia, 40; Union of Australia, 68; Australian Agricultural have marked 83⅜; British American Land, 58 ex div.; Canada, 71; Crystal Palace, 5⅜; London Docks, 108; Peel River Land and Mineral, ¼ to ⅜; Scottish Australian Investment, 2¼ to ⅝; South Australian Land, 35⅝ to ⅜. Submarine Telegraph, ⅛; Van Dieman's Land, 15; Hungerford Bridge, 1½. Waterloo, ¼; Vauxhall, 10¾; Lisbon Issuance, 95; Alliance Marine, 53½; Atlas, 21½; Argus, 23; County, 127; Globe, 146 to 146; Guardian 60 ex. div.; Imperial Fire, 275; Ditto, Life, 29; Law Life, 56; Pelican, 46; Phœnix, 188; Royal Exchange, 262; Sun Life, 65; Universal, 45½; Berlin Waterworks, 2; East London, 130; Southwark and Vauxhall, 89½; West Middlesex, 113; Canada Six per Cent Bonds, 110; Ditto, 111½; General Steam Navigation, 28; Peninsular and Oriental Steam, 69.

A few parcels of gold have been forwarded to Paris; but the shipments to other quarters have been very limited. Amongst the exports of the week of £30,000 in gold from the West of Africa, £340,000 from Australia; and 1,150,000 dollars from New York.

A transaction has taken place in the New Two-and-a-Half per Cents "Assorted" Stock, at 85.

There has been rather a firm market for foreign bonds, the prices of which have been rather in advance. Buenos Ayres Six per Cents have been 78: Chilian Six per Cents, 99¾; Danish Five per Cents, 103; Mexican Three per Cents, 25 to 24½; Peruvian Three per Cents, 54½; Portuguese Four per Cents, 40 to 41; Russian Five per Cents (1822) 112½ to 112¾; Ditto, Four-and-a-Half per Cents, 96½; Ditto, Small, 97; Spanish Three per Cents, 44¼ to 45; Ditto, Three per Cent New Deferred, 21¼; Spanish Committee's Certificates, 9 per cent; Venezuela Three-and-a-Half per Cents, 30½; Dutch Two-and-a-Half per Cents, 62¼; and Dutch Four per Cents, 93⅝.

Railway shares have been very firm, and dearer. Stock has been scarce, and in demand. The following are the official money closing prices on Thursday:—

ORDINARY SHARES AND STOCKS. Caledonian, 50¾; Eastern Counties, 12½; Lancashire and Yorkshire, 62¼; London and Brighton, 95½; London and North-Western, 103¾; South-Eastern, 74; South-Western, 74; Midland, 59¼; Newry and Enniskillen, 2⅜; North Staffordshire, 11⅜; South-Eastern, 1⅝; South Wales, 34; York, Newcastle, and Berwick, 62.

LINES LEASED AT 4 PER CENT.—Wilts and Somerset, 97.

PREFERENCE SHARES.—Caledonian, 96; East Anglian, 3⅞; Ditto, Six per Cent Stock, 13⅞; Great Northern Five per Cent, 117½; Ditto, redeemable at 10 per cent, 26½; Great Western, irredeemable, 6 per cent, 86⅞; York, Newcastle, and Berwick, 94⅝.

FOREIGN.—Antwerp and Rotterdam, 2½; Paris and Lyons, 20¾; Paris and Strasbourg, 26½; Sambre, 13.

Mining Shares have been in moderate request. On Thursday, Agua Fria were 1¾; Cobre Copper, 4½; English and Australian Copper Smelting Company, 2¼; Great Nugget Twin Scrip, 2½; Mexican and South American, 6¼; Quartz Rock, ⅞ to 1.

Friday Evening.

Since the morning the Consol Market has ruled heavy, and prices have given way. The Three per Cents, both for money and time, have been 91⅝; the Three per Cents Reduced, 91¼; and the New Three-and-a-Quarter per Cents, 97⅜. Exchequer Bills have declined 5s. prem. to 4s. discount. Foreign Bonds and Railway Shares have become flat.

THE MARKETS.

CORN EXCHANGE, (Friday).—The supply of English wheat on sale in to-day's market was but moderate. For most kinds the demand ruled steady, and full prices were realised. Foreign was in good request, and the quotations were quite as high as last advised. The few floating cargoes on sale were held for higher rates; but the business done was limited. Barley—the show of which was but moderate—moved off steadily, and the currencies were well supported. We had a steady sale for malt, at former quotations. Oats were in request, and, in some instances, good round corn was the turn higher. Beans, peas, and flour were quite as dear as last advised.

ARRIVALS.—English wheat, 2420; barley, 3550; malt, 3010; oats, 370; flour, 1450. Irish: barley, 300; oats, 2600. Foreign: wheat, 12,710; barley, 3100; oats, 11,750; flour, 6600 sacks.

English Wheat.—Red, fresh, 40s. to 44s.; ditto, old, 40s. to 42s.; white, fresh, 42s. to 46s.; ditto, old, 42s. to 44s. Rye, 30s. to 32s. Grinding barley, 22s. to 24s.; distilling, 25s. to 27s. Malting ditto, 30s. to 34s. Lincoln and Yorkshire malt, 50s. to 56s. Kingston and Ware, 54s. to 56s.; Devonport, 51s. to 54s. Yorkshire and Lincolnshire oats, 20s. to 22s.; Scotch and Irish, 19s. to 20s. Tough and Cork, black, 18s. to 19s.; ditto, white, 21s. to 23s. Pick beans, new, 30s. to 32s.; ditto, old, 34s. to 36s.; grey peas, 33s. to 35s.; maple, 34s. to 36s.; white, 34s. to 36s.; boilers, 36s. to 38s. per quarter. Town-made flour, 37s. to 39s.; Suffolk, 35s. to 37s.; Stockton and Yorkshire, 33s. to 35s. per 280 lbs. *Foreign.*—French flour, —s. to —s. per sack; American, —s. to —s. per barrel

Seeds.—Linseed is in request, at very full prices Tares are lower to purchase. In other seeds there are no changes to quote Cakes are on the advance

Linseed, English, new, 50s. to 52s.; old, 47s. to 52s.; Mediterranean and Odessa, 50s. to 52s.; hempseed, 32s. to 33s. per quarter; Coriander, 10s. to 15s. per cwt. Brown mustard-seed, 9s. to 10s.; white ditto, 7s. to 8s.; tares, 7s. 6d. to 8s. per bushel. English rapeseed, 42l. to 43l. per last of ten quarters. Linseed cakes, English, £10 0s. to £10 10s.; ditto, foreign, £9 2s. to £11 10s. per ton Rapeseed cakes, 7l. 5s. to 7l. 10s. per ton. Canary, 62s. to 70s. per quarter.

Bread.—The prices of wholesale bread in the metropolis are from 10½d. to 11d.; of household ditto, 9d. to 10d. per 4lb. loaf.

Imperial Weekly Average.—Wheat, 68s. 11d.; barley, 35s. 7d.; oats, 24s. 2d.; rye, 38s. 4d.; beans, 35s. 7d.; peas, 35s. 7d.

The Six Weeks' Average.—Wheat, 62s. 4d.; barley, 37s. 10d.; oats, 22s. 4d.; rye, 37s. 9d.; beans, 38s. 10d.; peas, 44s. 1d.

Duties.—Wheat, 1s.; barley, 1s.; oats, 1s.; rye, 1s.; beans, 1s.; peas, 1s.

Tea.—There is more business doing in this article, and the prices of black have an upward tendency. Common sound congous has realised 11½d. to 1s. 0d. per lb. Up to Saturday last, duty was paid on 35,556,037 lbs., against 35,683,037 lbs. in 1852.

Sugar.—The general demand has continued very inactive; and, in some instances prices have gotten worse. Fine and good refining Barbadoes, 38s. to 39s.; grocery ditto, 39s. to 40s.; fine and good refining Mauritius, 38s. to 39s.; low to mid. yellow ditto, 37s. to 38s.; mid. to good mid. ditto, 36s. to 37s.; fine grocery ditto, 39s. to 40s.; fine and good refining Bengal, 37s. to 38s.; fine white Benares, 39s. to 40s.; good grainy yellow, 36s. to 37s.; mid. to good brown, 35s. to 36s.; refined goods are dull, at 44s. to 46s. 6d. for standard goods, and 46s. 6d. to 47s. per cwt. The total importations in the 43rd inst., were 5,385,795 cwt., against 5,147,863 cwt. in 1852.

Coffee.—Good and fine qualities are in demand at from 42s. to 46s. 6d. per cwt. Most other kinds are dull, at former terms

Rice.—This article has been in steady request from the lowest point, with a good demand

Provisions.—Most kinds of Irish butter have met a slow sale, on former terms. Fine foreign has sold steadily, at full prices. Bacon, Irish, rather dearer. Hams, Irish, quiet, at 60s. to 62s. Other kinds of provisions support previous currencies.

Spirits.—The sale for rum is dull, at barely stationary prices.—Proof Leewards, 2s. 7d. to 2s. 8d.; East India, 2s. 8d. to 2s. 9d., and Havannah, 2s. 7d. per gallon. Brandy commands very little attention. Geneva and corn spirits are firm.

Hay and Straw.—Meadow hay, 75s. 0s. to 85s. 0s.; clover ditto, 4l. 0s. to 4l. 6s.; and straw, 1l. 1s. to 1l. 7s. per load.

Wool.—The public sales are progressing heavily, at a decline of 2d. per lb

Potatoes.—For most kinds the demand is inactive, as follows.—Shaws, 120s. to 140s.; Regents, 150s. to 160s.; Forfars, 140s. to 160s. per ton

Coals (Friday).—Wylam, —s. to —s.; Northumberland, Kent, 21s.; Hall's Primrose, 18s. 6d.; Ripley Original, —s.; Lambton, 25s. per ton.

Hops (Friday).—Our market is very scantily supplied with fine hops, for which the demand is brisk, on higher terms. All other kinds move off briskly at enhanced currencies. The duty is called £140,000. New Mid and East Kent pockets, £15 0s. to £20 0s.; Weald of Kent, £11 0s. to £13 10s.; Sussex, £8 10s. to £10 0s. This week's imports are—1 bale from Amsterdam, 323 bales from Ostend, 179 ditto from Hamburg, 141 ditto from Antwerp, and 4 ditto from Dunkirk.

Smithfield (Friday).—To-day's market was seasonably well supplied with beasts, as to number, but their general quality was inferior. All breeds met a very dull sale, at a decline in the quotations of fully 2d. per 8 lbs, and a clearance was not effected. Sheep, the supply of which was but moderate, moved off slowly, at barely stationary prices. We had an unusually dull sale for calves, at a decline in value of from 2d. to 4d. per 8 lbs. Pigs came freely to hand, and only a limited business was transacted in them, at our quotations. Milch cows were very dull, at from £14 to £19 each, including their small calf.

Per 8lbs. to sink the offals.—Coarse and inferior beasts, 3s. 4d. to 3s. 8d.; second quality ditto, 3s. 10d. to 4s. 2d.; prime large oxen, 3s. 4d. to 3s. 8d.; prime Scots, 4s. 0d. to 4s. 2d.; coarse and inferior sheep, 3s. 8d. to 4s. 0d.; second quality ditto, 3s. 8d. to 3s. 10d.; prime coarse-woolled ditto, 4s. 0d. to 4s. 4d.; prime South Down ditto, 4s. 6d. to 4s. 8d.; large coarse calves, 3s. 4d. to 4s. 0d.; prime small ditto, 4s. 2d. to 4s. 4d.; large hogs, 3s. 4d. to 4s. 0d.; neat small porkers, 4s. 2d. to 4s. 4d.; suckling calves, 21s. to 27s.; and quarter old store pigs, 20s. to 35s. each. Total supplies: Beasts, 1091; cows, 105; sheep, 5600, calves, 341; pigs, 560. Foreign: Beasts, 440; sheep, 1000.

Newgate and Leadenhall (Friday).—The demand was heavy, and prices had a downward tendency.

Per 8lbs by the carcase.—Inferior beef, 2s. 2d. to 2s. 8d.; middling ditto, 2s. 10d. to 3s. 0d.; prime large ditto, 3s. 2d. to 3s. 4d.; prime small ditto, 3s. 4d. to 3s. 8d.; large pork, 3s. 4d. to 3s. 10d. inferior mutton, 2s. 6d. to 3s. 0d.; middling ditto, 3s. 2d. to 3s. 10d.; prime ditto, 4s. 0d. to 4s. 6d.; veal, 3s. 2d. to 4s. 4d.; small pork, 4s. 0d. to 4s. 10d.

THE LONDON GAZETTE.

TUESDAY, OCT. 25.

OFFICE OF ORDNANCE, OCT. 24.

MEDICAL DEPARTMENT.—Surgeon J. A. Davis to be Senior Surgeon, vice Quigley; Assistant-Surgeon J. Ireland to be Surgeon; Temporary Assistant-Surgeon J. A. M'Munn to be Assistant-Surgeon, vice Hassard.

ADMIRALTY, OCT. 21.

Royal Marines: Second Lieutenant F. W. A. Boyd to be First Lieutenant, vice T. A. M. D. V. Pennington.

W. BROOK, stuff-merchant, Manchester.

BIRTHS.

BLACK.—On the 19th inst., at 3, Loudoun-road, St. John's-wood, Mrs. Black, of a son.
BUXTON.—On the 25th inst., at 7, Grosvenor-crescent, Belgrave-square, the wife of Charles Buxton, Esq., of a son.
CLARKE.—On the 21st inst., at Wootton Rectory, Norfolk, the wife of the Rev. W. W. Clarke, of a daughter.
COOPER.—In the 21st inst., at Pembridge Villas, Bayswater, the wife of Mr Richard Cooper, of a son.
DUNCOMBE.—On the 20th inst., at 7, Lowndes-square, the Hon. Mrs. Duncombe, of a son
ECROYD.—On the 20th inst., the wife of the Rev. C. P. Eden, Vicar of Aberford, Yorkshire, of a son.
FARQUHAR.—On the 21st inst., at Polesden, the Lady Mary Farquhar, of a daughter.
MARSHALL.—On the 22nd inst., in the Minster Precincts, Peterborough, the wife of the Rev. F. A. S. Marshall, of a daughter.
RATHBONE.—On the 24th inst., at 28, Bedford-place, Russell-square, the wife of Mr. William Rathbone, of a son.
SALTOUN.—On the 22nd inst., at Philorth, Aberdeenshire, the Lady Saltoun, of a son.
WYNNE.—On the 14th inst., at Brighton, the wife of John Wynne, Esq. (late of the 23rd Royal Welsh Fusiliers), of a son.

MARRIAGES.

BEHENNA—SINCLAIR.—On the 25th inst., at Christ Church, Highbury, by the Rev. Robert Bilborne, Curate and Lecturer of St. Luke, Oldstreet, Mr. Richard Moreland, son of Mr. Richard Behenna, Westmoreland-place, to Miss Sarah Bodle, daughter of Mr. Thomas Sinclair, No. 19, Old-street.
BLOMEFIELD PRESTON.—At Askam Bryan, Yorkshire, the Rev. T. Eardley Wilmot, son of Sir T. W. Blomefield, Bart., of Brighton, to Fanny, daughter of the Rev. J. D'Arcy J. Preston, of Askham Bryan Hall.
BRODRICK—FREMANTLE.—On the 25th inst., at St. Peter's Church, Pimlico, by the Rev. W. R. Fremantle, Rector of Claydon, Bucks, W. Brodrick, Esq., eldest son of the Hon. and Rev. W. J. Brodrick, Rector of Bath, and nephew of Viscount Midleton, to Augusta Mary, third daughter of the Right Hon. and Rev. Sir Thomas Fremantle, Bart., of Swanbourne, Bucks
DAVIS—JONES. Oct. 25th, at Llandegley parish church, by the Rev. James J. Evans, Nantmel, the Rev. John Davis, B D, Vicar of Llandeloy and Llanhowell, Pembrokeshire, to Gwen, daughter of the Rev. J. Jones, of Baileybedw, near Carmarthen, and Vicar of Llandegley, Radnorshire.
FOSTER—FOSTER.—On the 14th April, at St. David's Cathedral, Hobart Town, by the Venerable the Archdeacon Davies, F. A. Chambre, youngest son of W. Foster Foster, Esq., Cadleycroft, Yorkshire, to Henrietta, only daughter of H. Foster, Esq., of Cape Portland, and niece of J. Foster, Esq., Wyresdale, Lancashire, all of Hobart Town.
GREGSON—GRANT.—On the 21st of October, John Gregson, Esq., of Staindrop Hall, co. Durham, to Mary Jane F. Grant, only daughter of R. Grant, Esq., of Monymusk, co. of Aberdeen, and niece of Sir J. Grant, Bart.
LAWSON—MAULE.—On the 20th inst., at All Saints', Prince's-gate, by the Rev. W. Raule, the Rev. J. Lawson, son of W. Lawson, Esq., of Longhirst, in the county of Northumberland, Esq., to Mary, daughter of the late G. Maule, Solicitor for the affairs of her Majesty's Treasury.
RUSSELL—STEPHENS On the 20th inst., at St. Barnabas Church, South Lambeth, by the Rev. Mathew Anderson, A.M., Incumbent of St. Paul's Church, Herne-hill, William Knight Russell, only son of Wm. Russell, Esq., of 30, Strand, London, to Elizabeth Ann Sarah, to Sarah Katherine Stephens, youngest daughter of William Stephens, Esq., of Clapham Rise, Surrey.
TOOKE—COSHAM.—On the 25th inst., at St. James's Church, Piccadilly, John Joseph Tookie, Esq., of the Inner Temple, to Fanny, third daughter of Thomas Shadwell Cosham, Esq., of Harstmonceux, Sussex.

DEATHS.

BARNETT.—On the 17th Sept., in Jamaica, of yellow fever, Charles, youngest son of the late Henry Barnett, Esq., of Colbrey, near Ross, Herefordshire.
HODGSON.—On the 19th inst., at Eton, in his 10th year, F. C. D. Hodgson, eldest son of the late Rev. F. Hodgson, B.D., Provost of Eton, and the Hon. Mrs. Hodgson.
INGLIS.—At the house of her brother, Sir R. H. Inglis, Bart., M.P., in Bedford-square, in her 68th year, Miss Inglis, of Milton Bryant, Bedfordshire, daughter of the late Sir H. Inglis, Bart.
RENWICK.—On Monday, the 24th inst., universally beloved and lamented, John James Renwick, Esq., surgeon, aged 31, son of the late William Harris Renwick, Esq., of Canterbury.
ROBERTS.—On the 15thinst., at Bath, the Rev. J A. Roberts, M.A., Rector of St. Alban's, Wood street, London
STROUD.—On the 21st inst., at the residence of her brother-in law, the Rev. W.C. Thompson, Rector of Blackborough, Devon, Mary Charlotte, wife of the Rev. J. Stroud, Perpetual Curate of Williton, Somerset.
TILT.—On the 20th inst., at Clapham, after a severe illness, Lieut.-Col. A. Tilt, late of H.M.'s 97th Regiment, in his 74th year.

THE ILLUSTRATED LONDON NEWS.

No. 652.—VOL. XXIII.] SATURDAY, NOVEMBER 5, 1853. [PRICE, WITH A SUPPLEMENT, SIXPENCE.

COMMENCEMENT OF HOSTILITIES IN THE EAST.

"Too late! too late!" is the melancholy exclamation with which the friends of peace throughout Europe will greet the intelligence that, at the eleventh hour, France and England, through the intermediation of their representatives at Constantinople, had drawn up the terms of a new compromise of the Eastern Question. The world was not informed whether the Divan received any exact notification of the terms of this proposal; but as soon as the Ambassadors of the Four Powers at Constantinople communicated the intelligence that the friendly offices of the Western Powers had devised a project to be submitted in the first instance to the Porte, and if the Porte approved, to be forthwith communicated to the Czar, than the Sultan and his advisers, true to that spirit of wisdom and moderation which has invariably guided their policy, despatched orders to Omer Pacha to suspend for ten days longer the commencement of hostilities. Yet on what slender threads hang the destinies of nations! If hostilities had actually commenced before Omer Pacha received these new orders, he was to treat them as *non avenus*, and prosecute the war on his own responsibility. Unluckily for Turkey—unluckily, let us hope, for Russia—and unluckily for the peace of the world, the orders arrived several hours, if not days, too late. The Russians, in attempting to force a passage up the Danube, had been fired upon, and blood had been shed. The war had commenced, and Omer Pacha had made ready to cross the Danube, if he had not already effected a passage. On the 27th of October, 3000 Turkish infantry and 2400 cavalry crossed the Danube and occupied Kallaphat, and large reinforcements were preparing to cross the river in barges, when the last news was despatched. The Russians were concentrating on the points menaced, upon the northern bank, and a collision between the two armies on the 28th was deemed inevitable.

It is idle for public writers to criticise the conduct of the Turkish General in making this daring movement in face of an enemy so much his superior in point of numbers. No one can know the reasons which have impelled him to act as he has done, or can measure the stern necessities which may have influenced his conduct. No one can say, until the issue be known, whether he has acted wisely or unwisely, or whether the highest strategical skill may not have counselled him to act upon the offensive at a time, and under circumstances, when people at a distance deemed a defensive position the safer and the better for him to maintain. But, whatever be the result, the grounds of quarrel remain as they were. Turkey is as much in the right as ever she was, and Russia is as much in the wrong. The duty of all the other powers of Europe remains precisely what it was—to endeavour to stop the effusion of blood as speedily as possible, ere other nations are drawn into the conflict; to continue to mediate between the angry belligerents; and to secure, without the cost of incalculably greater evils than have already occurred, the same result of a peaceful settlement that must, after all, be sooner or later arrived at, unless Turkey and Russia are to fight till the "crack of doom."

Under no circumstances can Turkey be justly blamed for the actual outburst of hostilities. By her ready acquiescence in every suggestion of her allies that promised to secure peace without the forfeiture of her honour, Turkey has entitled herself to the respect and admiration of Europe. Insulted and invaded as she has been, upon pretexts that did not even affect to conceal the cupidity and lust of dominion of the aggressor, Turkey has in every stage of this exciting history exhibited a forbearance and a moderation which raise her to a moral eminence never surpassed by any nation in similar difficulties. When outraged honour would have justified an immediate resort to arms, she contented herself with the dignified assertion of her rights, and placed no impediment in the way of a satisfactory solution. Out of her calmness grew her strength. Knowing that her antagonist was wrong in principle and wrong in fact, she relied upon justice no less than upon the conscience and the instinct of Europe. Even the Turkish populace—whom the friends of Russia have made it a custom to decry as barbarians and as fanatics—displayed an amount of moderation not always witnessed in countries that claim to be more civilised. The last act of the Turkish Government added a crowning grace to all that has preceded it. Whatever may be the result of the war now raging, her willingness to negotiate, even at the last moment, and when the enthusiasm of the Turks, in Europe, Asia, and Africa, was roused to fever heat, and men and money were placed at her disposal in numbers and amount far more than she could need, have won for her, not only the applauses of the brave, but the support of the wise; and will deprive a war, undertaken in her behalf, of the last shreds and patches of unpopularity that might otherwise have clung to it in Great Britain and France.

If, as the world had many reasons for believing, the Czar has been anxious to avoid a collision, and would not unwillingly have accepted any reasonable proposition which would have enabled him to withdraw from the false position into which his ungovernable ambition had thrust him, he must now be more than ever aware of the fatal mistake he has committed. Upon his head lies the guilt of all the blood that has been, and that will be shed in this quarrel.

Great and mighty as he is, he is not great and mighty enough to bestride the whole earth. He cannot afford to place himself continually in the wrong. A bad cause paralyses a strong arm, and amongst the eventualities with which he has to contend is defeat. He may be defeated by Turkey unaided, or he may be defeated by Turkey and her allies. No defeat of Turkey could be so serious to that power as defeat would be to him. It is not only that character for wisdom and moderation which he once acquired and deserved; not only the *prestige* of power and glory and success, that has for a century surrounded his name and deeds; not only the stability of his dynasty and dominion in Europe; but his very crown and life which

SCENE OF THE RIOT AT WIGAN.—THE ROYAL HOTEL.—(SEE NEXT PAGE.)

he stakes upon the hazard of the die. Were he not, even now, to give their full weight to all these considerations, were he to continue to act as if he had no other incentives than cupidity and revenge, he would act the part, not of a great king but of a great soldier, but of an ungovernable maniac. There is nothing to show that the Emperor Nicholas is unamenable to reason. He may be unscrupulous, but he has shown himself far-sighted; he may be ambitious, but he knows as well as any man in Europe that the end is one thing, and the means to accomplish it another. He must have been long since aware that his occupation of Moldavia and Wallachia was a mistake. He imagined that Turkey was weak, tottering, and unable to help herself. He has discovered, in common with all Europe, that Turkey is strong and self-reliant. He imagined that Great Britain and France would never be brought to act together; and that the revival of the Bonapartean dynasty had widened the moral breach that previously existed between the two nations; and that the Imperial despotism of the Tuileries was more likely to invade England than to act in concert with her on any cause or pretext whatever. Experience has proved that here also the Czar grossly miscalculated, and that he has received all the odium due to an unjust aggression, without one single advantage that he expected to gain from it. Strongly as all these facts must have operated upon his mind, up to the day when Austria and Prussia refused to become parties to his quarrel, they must have operated still more strongly after that event. If anything could give additional force to the arguments fairly deducible from them, it is the actual outbreak of war. Yet, such is the force of passion—such is the influence of national pride, that we tremble to reflect how many new and unforeseen difficulties may be excited by the passage of the Danube, and the inevitable collision between the Russian and Turkish Generals. But war is not an expedient to be fought upon the Danube will reckon but for little while the mighty Balkans lie outstretched between Russia and her final leap upon her prey. The task of intermediation, so far from being ended, can scarcely be said to have begun. We still cling to the hope that, with so many reasons against war operating in the councils of every nation in Europe, means will yet be found to keep the struggle within its present limits; and that the world will yet be spared all the unutterable horrors of a war worse than all the wars of the last three or four centuries, because embittered by religion, or, more properly speaking, by that fierce fanaticism which desecrates the name—

And hopes to merit Heaven by making earth a Hell.

FEARFUL RIOT AT WIGAN.

We regret to have to record the continuance of riots in the North, consequent upon striking for increase of wages. It is the great mistake of those who engage in "strikes" to imagine that they are the only means by which the workman may ensure to himself the reward to which he is fairly entitled. This mistake originates in the supposition that a master can, for any length of time, continue to give wages below their fair market value. The fact of his so doing, and in consequence of so doing, his reaping excessive profits upon his outlay would soon become known, and would call into competition with him other capitalists, who would not only take away part of his business, but some of his best workmen also; thus undermining his position from two directions; or, on the other hand, the master to discourage opposition, or take the fullest advantage of the nominal profits he commands upon the labour he employs, will be tempted to extend his business beyond due limits; thus, as it were, becoming a rival to himself. In a word, labour is like other exchangeables: it is sure to find its right price, without any need for violence on the part of those who deal in it.

A riot of an alarming character took place in Wigan on Friday night week, and during its continuance a great amount of damage was done to property in various parts of the town. For more than four hours a mob held complete possession of the place, and the inhabitants had to submit to see their windows broken, and furniture injured or destroyed by the rioters (who were not checked in their career of destruction until the hotel after this destructive attack. Again the mob went through the Market-place and down Wallgate, breaking lamps and windows.

In Queen-street they did great damage to the windows and frames of six or eight houses. The house of Mr. Johnson, cotton-spinner, and Chapel-lane, was then visited; but Mr. Johnson and his family took refuge in the factory premises. The rioters quickly made a wreck of doors and windows, and then entered the two parlours. A finger organ and piano, mirrors, chairs, picture-frames, and other moveable articles, were broken to pieces.

From this house they went to that of Mr. Tipping, cotton-spinner, and destroyed the lower windows of his house, counting-house, and warehouse. The Bridge Inn, Chapel-lane, was similarly served. Returning, they attacked a provision shop at the corner of Chapel-lane and Darlington-street. Its windows were smashed, and its contents stolen or damaged. The mob next went up King-street, and did much mischief.

The next point of attack was the shop of Mr. Collison, pawnbroker, Standishgate, where windows, frames, and shutters were broken. The rioters continued their way up Standishgate and along Wigan-lane, as far as the shop of Mr. Liptrot, provision dealer and grocer, which they entered and sacked. They then returned towards the centre of the town. This was about half-past eleven o'clock.

During this time the Mayor, and a number of other gentlemen, were at the station, anxiously awaiting the arrival of the military; and just before twelve o'clock two companies (150 rank and file) of the 34th Regiment (under the command of Capt. Wilt, Lieut. Weathead, and Ensigns Lawrence and Byron) arrived at Wigan. The police then marched up Wallgate, through the Market-place, and up Standishgate, followed by the Mayor and military.

When the rioters (who were returning from Mr. Liptrot's) were met in the last-mentioned street, they were a very small body, and quickly fled. Five were caught—two young men and three lads, and taken to the police station. In their possession was found a quantity of tea, sugar, biscuits, stones, &c. After marching through the principal streets, the military went to the Moot-hall and Town-hall, the town being then in a very pacseable state, and the streets deserted.

Wigan was perfectly quiet on Monday; groups of colliers and factory operatives were in the streets; and the Mayor had thought it right to direct that all the stalls should be removed out of the Market-place that night, and the fair discontinued.

ATTACK BY TURNOUTS AT WIGAN.

In consequence of the recent disturbances, Mr. Pence, the agent for the Earl of Balcarres, at Haigh, near Wigan, procured the services of a large number of men from Wales, to enter the coal-pits of his Lordship, in the place of those who are now on strike. These men were not taken direct to Wigan; but were conveyed to some very extensive works at New Springs, known as the Saw-mills, where railway carriages and colliery stocks are prepared. In the saw-mills, through the exertions of Mr. Pence, a regular commissariat had been established, and everything required for feeding them. Silently, however, as the men were conveyed to their lodgings, their arrival got known, and the colliers instantly concerted means to get rid of them.

On Monday there were meetings of colliers at Aspull and at Wigan, and they determined not to go into the pits upon the terms the masters offered; and there seems to have been an understanding come to that the attack should be made on the Saw-mills at night, and that a simultaneous attack should be made upon Wigan. The latter was not carried into effect owing to the presence of the military. Inspector Gillett, of the Bolton division of rural constabulary, who has been stationed at Aspull during the last six weeks, on account of the turn-out, was sent for, and arrived at the Saw-mills about half-past four o'clock, with ten men. About six o'clock a mob was heard coming from the direction of Wigan, and before they stopped they walked up to a kind of stockade, strongly formed of timber, guarding an outer yard leading to the works They cried out that they were not come to fight the battalies of the "Lord's (Balcarras) colliers," and during them to come out and fight.

They then proceeded towards Aspull, but soon returned, about 350 of them, armed with sticks and stones. They tried to force the outer gate, but it was too strong, and they then sought to climb it; but Inspector Gillett had planted his men behind the stockade, and as the rioters put their hands up they beat them down. The mob then threw the paving stones with which the road is paved, taking the men in front, and hurling some of them into the dam. Gillett then fell off to the warehouse, which is situate a considerable distance beyond the stockade, and across the passage to the works. The mob outside soon scaled the woodwork, and rushing at a beacon fire in the centre of the yard proceeded to put it out. One of Mr. Peace's men then fired a gun through a window in the warehouse, and the contents of the piece, small shot, is supposed to have taken effect upon a man who was putting out the fire. This was unexpected by the assailants, and they hastily retreated. It appears, however, that they were not pursued, they encouraged one another by epithets more varied than select. They advanced a second time much further into the yard, and when they were within range, they were fired at again by four more men, with pieces loaded with larger shot. This drove them back.

They left the place, and when Mr. Gillett and his men followed them up they found all gone in the direction of Wigan. If any were wounded they were taken away. During the short fight, which lasted for half an hour, the military were sent for from Wigan, and Captain Wilt, with about 150 men, attended. The magistrates, fearing that outbreaks would occur elsewhere, telegraphed to Manchester for dragoons, and a troop of the 1st Royals reached Wigan at two a.m., under the command of Captain Ainslie.

The Blackwall Railway Improvements.—Several labourers and a great number of mechanics are now employed between the Blackwall Railway Terminus, Fenchurch-street, City, and Goodman's-fields, in constructing massive brick-work on the north side of the line, which is intended to widen the railway, so as to admit of another line of carriages, as the traffic has so much increased, and the amount of luggage conveyed to and from the east and western parts of the metropolis for transmission on the various other lines of railway.

Dangerous State of the Houses in the Strand.—On Saturday, at the Court Leet of the Duchy of Lancaster, held before the high steward, and a jury of the principal inhabitants of the duchy, the jury viewed two houses on the estate of the Duke of Norfolk, which had been reported to be in a dangerous condition. These houses are situate in Norfolk-street, near the spot where the late fatal accident occurred. The jury reported, after inspecting the premises, that they were in a most dilapidated state. A fine of £20 was then imposed upon the Duke of Norfolk.

The New Street in the City.—Considerable progress has been made with New Cannon-street, which now extends westward to Old Change, and is only divided from St. Paul's Churchyard by a few stacks of old houses. The new street, which runs at the back of the handsome row of warehouses lately erected on the south-east side of St. Paul's Churchyard, and form a junction with the latter at St. Paul's-chain. The only unsightly objects which at present detract from the magnificent ensemble of this new street are the unfinished buildings and debris of old houses on the south side of New Cannon-street, between Queen-street and Old Change. In the midst of them appears the old church (St. Augustine), standing in an almost isolated position, almost in the way of the traffic, and exhibiting an extremely shabby appearance. This church is expected to come down.

Parisian Thieves.—Numerous robberies of cigars having lately been committed in cigar-shops, and the species of robbery called *rendez moi* (demanding change for a larger piece of money than that actually given), having also been extensively practised in the same other ways, the police made an investigation, and having discovered that the thieves formed a band acting under the orders of a chief, took measures for arresting them all. This they effected. They are twenty-six in number, and amongst them are some females. All the band bear nicknames. The chief, who was always dressed with extreme elegance, is called the great Conquerer; another is Sans Douceur (without hair), another Roi-de-la-Basoche, another Mort à la Police (death to the police); a fourth, Lovelace, miss Moncot, miss Drink without Thirst; the fifth is the Cantonnier (the countryman); a sixth, the Ravisseur (different of pocket-handkerchiefs); another, Je m'esbigne (I run away), and another, Boule en Dos (humpback). Some of the women bear nicknames which have been given to them at the establishments in which they called the Chouette. When any of the band went into a shop to attempt a robbery, the Great Conqueror used to make a rule of being present, and if by chance the thief happened to be detected, he read him a severe lecture, and, giving him a piece of 5f., said, "Go and get yourself hanged elsewhere!" This generally softened the wrath of the shopkeeper and the thief, who always pretended to weep bitterly, was allowed to depart The Great Conqueror, in addition to superintending his band, and directing them where to operate, was a very skilful pilferer of cigars. While examining a box to select one or two, which he paid for, he could slip unobserved a dozen into his sleeve. In addition to all this, the band used to pick up partially-smoked cigars in the streets, and make them into cigarettes. The total revenue of the association, from one source or another, were rather considerable, and they were divided according to certain fixed regulations.—*Galignani.*

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

Paris, Thursday.

Fresh rumours, so often spread, and so often contradicted by the facts, of the approach of the *sacre*—are once more afloat. It appears certain that the carriage used on the occasion of the consecration of Charles X., that prepared for the christening of the Count de Chambord, and three other of the State carriages, are being altered and embellished with the utmost magnificence.

Certain journals have been spreading a report of an intention on the part of Louis Napoleon to visit London; this project, of which nothing is known in the diplomatic circles, seems to exist only in the imagination of the papers in question, there being no apparent reason whatsoever to justify such an idea

On Sunday the last steeple-chase of the season took place at La Marche. The fineness of the weather attracted a large attendance, headed by Louis Napoleon and the Empress.

The Prince Napoleon is gone to Stuttgardt, at the invitation of the King of Wurtemberg, the brother of his mother, ex-Queen of Westphalia. It was at Stuttgardt that the Prince for some time pursued his military studies. His Imperial Highness travelled under the name of Comte de Meudon, to avoid all official receptions on his journey; but, having arrived at his destination, he resumes his title, and receives the honours due to his rank.

The nomination of General Baraguay d'Hilliers as Ambassador at Constantinople, in the place of M. Delacour, was known for some days before the official announcement of the fact in the *Moniteur*; and was even stated in the *Journal des Débats* on Monday, and thence copied into other papers previous to its notification in the organ of the Government.

The great event in the sporting world here, has been the sale at Chantilly, of the racing stud of M. Aumont, the first, decidedly, in France Some of the best horses fetched extremely high prices: Aguila was purchased by the Comte de Prado for 45,000 francs (£1800); Royal-quandmême, was bought in by M. Aumont at 31,100 francs.

An accident, which most providentially proved harmless, occurred on Saturday last. The gigantic stone cross, which crowned the façade of the Madeleine, gave way, and falling on the steps, was shattered to atoms. Fortunately no one was on the spot. It is to be hoped that no attempt will be made to replace the cross, for which the architecture of the building is wholly unsuited, both as to appearance and security.

The frequency and gravity of railroad accidents is becoming a subject of serious attention and alarm. That of last week, on the Versailles Railway, right bank, is the third of a similar nature—the giving way of a rail which has occurred on that line. It is certain that a great want of attention—independent of any defect of material or construction—exists on this railway; the arrival and departure of some of the trains—especially the Sunday evening ones—being extremely irregular; and the hurry and confusion attendant on this irregularity having, on more than one occasion, failing under our personal observation, led to much inconvenience, and even danger

The sixth sale of the guillotine, that of Tarves, has taken place on the public square The interesting relic fell into the hands of a cabinet-maker for the sum of thirty francs; and the cord, the *couperet*, and the *panier*, were sold separately by the purchaser, at a considerable profit.

One of the best illustrations of the French school of dancing the rival of Vestris—has just died in Paris, at the age of seventy-one. Louis Duport composed, wrote, and danced ballets for the great theatres of Paris, St. Petersburg, and Naples, and finally became manager of the Theatre of the Porte de Carinthie, at Vienna. Duport, at the period of his death, was residing at Beaujon (one of the suburbs of Paris) with his nephew, M. Paul Duport, a dramatic writer, of much talent and popularity. Verdi has arrived in Paris, where he proposes to pass the winter and to complete his opera, "King Lear." The Théâtre Français, desirous to prove to the public that the presence of Mdlle. Rachel is not indispensable to its success, is preparing a number of entertainments to succeed each other with a rapidity that must give an extraordinary variety to its representations. To "Murillo" succeeds "Une Journée d'Agrippa;" the *reprise* of "Clotilde," the *chef d'œuvre* of Frédéric Soulie, performed by Mdlle. Judith; "La Sœur de Sigismond," by E. Augier and Jules Sandeau, with Mr me. Madeline Brohan; "Aline," by M Paul Foucher; a piece by Scribe, for the *début* of Ressaut, who quits the Gymnase for this theatre; and a grand drama in verse by Jules Lacroix. The Théâtre Lyrique is giving an opera ballet—the music by M. A. Adams—entitled, "Le Danseur du Roi;" a sufficiently mediocre production, saved by St Léon and Mdlle. Zella, a *débutante* from Vienna, of remarkable talent, style, and originality; and who, to such merits, adds those of youth and beauty; with such elements, success is certain. Mdlle. Cruvelli is said to be engaged at the Grand Opera, with a salary of £4000, and four months' *congé*. Alboni is to have £80 a night at the "Italiens." The Gymnase is giving one of those *saynoune* pieces, in which it and the *Vaudeville* stand unrivalled one of those *spirituel* dialogues, which go by the conventional name of *proverbes*, entitled "Le Pour et le Contre," played by Mdme Rose Chéri and Dupuis, with a grace, a *naturel*, and a tone of good society that render the illusion perfect. At the Variétés, "Pepito," an Opéra comique in one act—the music by Jacques Offenbach, the celebrated violoncellist—has great and merited success.

Marshal Narvaez and Queen Christina will leave Paris for Madrid immediately

The report of the coronation of the Emperor and Empress is again revived. It is confirmed in some measure by the preparation of the state carriages for a grand ceremony. The coach used by Charles X. at his coronation has been newly gilt. The linings have been renewed, and it has been ornamented with eagles The carriage used at the baptism of the Count de Chambord has been prepared for King Jerome. Three other carriages have been fitted up for the members of the Imperial family. These carriages are called the Turquoise, the Topaze, and the Victoire. All those changes have been made with the utmost despatch.

The Government have adopted a plan, which, it is expected, will enable housekeepers to supply themselves with butchers' meat at a more reasonable rate than that required by the butchers. During the administration of M. Carlier, as Prefect of Police, about two years since, a market was established where carcasses of beef and mutton are sold by auction. But this arrangement only served the butchers and proprietors of large establishments, such as hotels and taverns. By the late arrangement a second marked is opened where meat is retailed by auction, and a purchaser may procure a single joint. This is an advantage to the consumer, and must eventually put an end to the monopoly which the butchers of Paris have so long enjoyed. There has been a further rise in the Paris corn-market within the last week.

General Baraguay d'Hilliers is, by an Imperial decree, appointed Ambassador Extraordinary and Minister Plenipotentiary at the Sublime Porte, in the stead of M. de la Cour, called to other duties. He takes with him rather a numerous *personnel*, and what is not unworthy of notice, his secretaries and *attachés* will be all, or very nearly all, military men, belonging to different arms of the service, and of various grades; in fact, a regular staff. Thus, if anything should occur at Constantinople to require the services of military men, or should the Porte renew the application it made some time since of having some general officers of the French army, they will be found on the spot instead of having to be sent from Paris. The appointment of the General may be taken as a proof that French diplomacy in the East has entered into a new phase, in conformity with the change which the question itself has undergone. General Baraguay d'Hilliers is more a military man than a diplomatist, and it is possible that he has been selected to carry into execution plans that have already been adopted rather than to perform the duties involved in the drawing up of notes and protocols The Turks, at all events, will so understand the mission. The new Ambassador is allied

to the family of Foy—being, in fact, brother-in-law to the late General of that name. General Foy was attached for some time to the Embassy of General Sebastiani in 1808, at Constantinople; and, as Colonel of Artillery, co-operated in preparing the defence of that city against the English, who now unite with their former enemies for the protection of the Ottoman Empire

The *Journal de St Quentin* gives the following details of a visit which the Emperor and Empress paid a few days ago to the fortress of Ham:—

On Wednesday afternoon, about four o'clock, the Emperor, accompanied by the Empress, the Princess Mathilde, and some persons of the Court, arrived here incognito. Without having given any intimation of his intention, he proceeded at once to the fortress, his former prison during a period of six years and when he crossed the drawbridge his features appeared much changed—his emotion was great. His Majesty then went to the gate through which he had effected his escape, and the porter having opened it, the Emperor immediately related to the Empress, with the greatest detail, all the circumstances of his flight. He afterward descended to his apartment, and when the Empress threw herself into his arms and embraced him with a tender emotion. After this scene, which affected the persons present, the Emperor went out on the terrace, and examined the remaining flowers of those which he had formerly cultivated. The Empress plucked some branches and distributed them around with a mournful smile. A simple and frugal repast was then served to their Majesties, under the trees in the court of the fort, and their Majesties were still occupied in partaking of it when M. Allart, the mayor, arrived, accompanied by the civil and ecclesiastical authorities, and by the Bishop of Arras, formerly there in the place when the Emperor was confined in the fortress. The rumour being spread about that the Emperor was among us, a crowd soon assembled, and saluted their Majesties with loud cries of "Vive l'Empereur!" "Vive l'Impératrice!" and accompanied them to the gates of the town. The whole visit lasted somewhat more than an hour.

HOSTILITIES AND AN ARMISTICE BETWEEN RUSSIA AND TURKEY.

Almost as soon as the news of a collision between the contending armies arrived in Western Europe, there followed the intelligence that an armistice had been concluded between the Turkish and Russian forces. The first hostilities appear to have been unpremeditated, and the scene of the affray was not exactly the scene of the expected war. The hostile armies of the Russians and the Turks are stationed in the provinces of Wallachia and Bulgaria respectively, with the waters of the Danube between them. Further down the stream—that is to say, from the point of confluence of the Pruth, the left bank of the Danube becomes Russian territory, the opposite bank being formed by the northernmost angle of Bulgaria. It was at this part of the river that the engagement occurred. A Russian flotilla, consisting of two steamers with gunboats in tow, was proceeding to ascend the stream, when it was fired upon from the fort of Iskitchi, on the Turkish bank. The object of the Russians was, doubtless, to establish a communication between the Black Sea and their own army of occupation in Wallachia; but either they approached too closely to the Ottoman guns, or the Turks had resolved to oppose the expedition. It will be seen, however, that though the Russians were "forcing a passage" up the river, and were attacked in the attempt, the operation in no degree resembles a movement of the Russian troops across the river against the Turkish forces.

The affair of Iskitchi appears to have been immediately followed up by active operations on the part of the Turks, who resumed the offensive. A telegraphic despatch from Vienna says:—

A private despatch from Temesvar states, that 26,000 Turks have crossed the Danube and occupied Kalafat.

From Orsova another despatch says that 52,000 men have crossed, and hostilities have commenced.

This news is believed in, although not authenticated.

A subsequent despatch from Vienna professing to be authentic says:—

A force of 30,000 infantry and 400 cavalry, under the orders of Omer Pacha, passed the Danube at Kalafat on the 27th inst. A great number more were in the act of passing.

An encounter with the Russians was expected on the 28th.

Another telegraphic message, received on Wednesday, corroborates the passage of the Danube by the Turks. It comes via Semlin, and announces that "20,000 Turks crossed the Danube on the 27th October, near Widdin, and occupied Kalafat, which had ceased to be occupied by the Russians. There was no fight."

A large number of troops were still passing over in barges when this news was despatched. The Russians were gathering on the point attacked, and it is doubtful whether the news of the armistice agreed upon at Constantinople can arrive at the Turkish camp in time to avert a collision between the two armies

The armistice, indeed, is said to have been agreed to by the Sultan upon the condition that hostilities had not already commenced; and it is not impossible that these untoward events may exercise an unfavourable influence on the negotiations. With this qualification, the armistice is not simply a suspension of hostilities, but an extension of time advisedly granted by the Ottoman Government for the purpose of more effectual negotiation, at the instance of European representatives. The interval assigned by Omer Pacha for the evacuation of the Danubian Principalities was to expire on the 24th ult.; but, although the reply of Prince Gortschakoff to the Ottoman summons had been received at Constantinople as equivalent to a refusal, the Porte consented, at the request of the Ambassadors of the Four Powers, to prolong the term of preliminary peace until the 1st of November. This movement of the European representatives was not made without well-grounded expectations of a beneficial result; and, as the assent of the Porte to the proposition bespeaks in itself a desire to avoid extremities, there was good ground for confidence, until the intelligence of the breaking out of hostilities, that this last effort in the cause of peace would prove successful.

It would be idle to waste strategical criticism on the movements of Omer Pacha, which are, probably, as involuntary as those of a rider whose misfortune has mounted him on the back of a runaway horse. Borne away by the fanaticism of Islam, he is probably forced to lead in order to preserve the semblance of command. With an inferior force, with uncertain communications in his rear, in the face of an enemy for a long time possessed of and established in the country and therefore unburthening him in cavalry, it appears the extremity of rashness to have deserted the protection of a line of strong fortresses and a mighty river, to throw himself into the midst of a hostile country at an inclement season of the year, when everything is against aggressive and in favour of defensive operations. By crossing the Danube, the Turks forfeit the resources of entrenched camps and well-provisioned stations, and must advance, with a very deficient cavalry and scarcely any military equipage, to encounter on level plains a powerful army of cavalry extremely well furnished with both. For the moment, therefore, nothing seems possible but to leave the fierce hordes of Asia and the wild chivalry of the Ukraine to satiate their mutual thirst for slaughter in undisturbed fury.

A letter from Belgrade, dated the 13th October, states that Omer Pacha, being informed that the Russians had evacuated Kalafat, sent a patrol to that place, which encountered a detachment of Don Cossacks. The two parties were equally scared with a panic, and each retreated from the place in great disorder. The Turks, however, came back with fresh forces, and fortified an island in the vicinity of Widdin.

The communication with the Lower Danube is entirely interrupted in consequence of recent events.

The much talked of and dreaded manifesto of the Emperor of Russia, on the receipt of the Turkish declaration of war, now turns out to have been a very pacific note from Prince Nesselrode, in which he informed the Four Powers that the Emperor, his master, regretted extremely that the Turks should have so misunderstood his intentions as to have pushed matters to a declaration of war; that he deplored the present state of suspense, and was most anxious for its speedy termination. As the readiest way of effecting this, and with a view to the immediate evacuation of the Principalities, he proposed that a Turkish Plenipotentiary should proceed to Prince Gortschakoff's head-quarters, and arrange the matter on the spot. This proposition was declined by France and England, on the ground that matters had gone too far to allow the difference between Russia and Turkey to be arranged in this summary manner, but those powers were ready to draw up a new note, based on the evacuation of the Principalities, in which the points of the Vienna note, which had offended Turkish dignity, should be omitted, or explained in such a way as to leave no ground for Russian interference with the sovereign rights and prerogatives of the Sultan. Such a note has been drawn up, has received the assent and approbation of Austria and Prussia, as well as of the representative of the Emperor Nicholas at Vienna, and is now on its way to Constantinople. It is also said that Lord Stratford has procured the assent of the Porte to a note, embodied in terms almost identical with those of the document now on its way to Constantinople. With this apparent agreement among the Representatives of the various Powers, the intelligence from Wallachia, although deeply to be deplored, leaves hope that the war thus inaugurated will not become protracted, or involve the western nations of Europe.

The Russians are still concentrating their troops at Bucharest. The Russian fleet is continually occupied in conveying troops to the Asiatic coast of the Black Sea. Up to the commencement of hostilities the opinion prevailed that the Russians would act only on the defensive until the spring. On the 13th ult., however, Prince Gortschakoff forwarded despatches to General Osten-Sacken, urgently requesting him to advance by forced marches to the Pruth, in order that he might be able to move his reserve troops from Moldavia into Wallachia.

From the latest accounts received by way of Trebizond, it seems quite certain that the Circassians and Daghestanlis have begun the war in right earnest. Several thousands of these savage warriors have come down upon the fortresses on the eastern coast of the Black Sea from Soujouk Kalé to Naroghinskoi, and in Daghestan the tribes under Schamyl have attacked the Russian troops occupying the banks of the Terek. Prince Woronzoff has himself repaired to the eastern seat of war, and several reinforcements have been sent from Sevastopol to the eastern shore of the Black Sea. The Circassians are said to have approached within 45 English miles of Tiflis. They were 20,000 men, with 60 guns; and for some time Prince Woronzoff could only oppose 15,000 men to them. Fortunately for him, General Nostetcow and Majatsky came up with a reinforcement of 15,000 men; the battle was renewed, and Schamyl Bey obliged to retire into his mountains. The Circassians are said to lost 2000 men, but the Russians confess that they left 5000 men on the field of battle; from which Prince Woronzoff sent Count Nicolai to St. Petersburg with an urgent demand for reinforcements, without which he should be obliged to evacuate not only Tiflis, but Georgia.

We hear from Constantinople that the same excitement and the same zeal against the Russians continue to be manifested.

The great drawbacks for the Turks are, a want of general officers, and a lack of money. The greater part of the Turkish fleet is gone to Batoum; and it is affirmed that a communication with Schamyl has been established.

Mustapha Pacha has gone from Constantinople to the Greek frontier, to take the command of the corps of observation which is forming there. The greater part of the subjects of the King of Greece are leaving the Turkish capital, it being notorious that the relations between the two Governments are becoming less amicable from day to day. The exports of corn from Constantinople are prohibited.

GREECE.

As soon as the declaration of war between Turkey and Russia was known at Athens, several hundred Greeks, led on by two officers, crossed the frontiers, and advanced towards Arta and Prevesa, with the intention of expelling the Turkish garrisons, and then proceeding to Janina. The probable consequences of the invasion will be a general rising in Albania, which may extend to Thessaly—a province that has long been in a disturbed state.

ITALY.

The Austrian authorities are said to have discovered a new conspiracy on the part of the revolutionary party, who had organised a simultaneous outbreak in Austrian Italy and Sardinia. Numerous arrests have taken place at Milan and elsewhere, and the watchfulness of the police and military authorities in Italy is redoubled

We hear from the Papal dominions, that the price of corn at Ravenna, Forli, and other places, has risen very considerably, and that all the corn that comes from without, disappears at once. Disturbances had occurred at Forli and Faenza, but had been speedily put down. The Gonfaloniers of those towns had given in their resignation.

SPAIN.

The influence of Marshal Narvaez at Court appears to be reviving. M José de Zaragoza is to assume the government of the province of Madrid. M. Zaragoza occupied that post during the administration of Marshal Narvaez, and resigned with him in 1851. The Opposition Senators have resolved to oppose the present Ministry, as its political system was the same as that of the last Cabinet.

AMERICA.

By the *Arabia* we have advices from New York to the 19th ult. She brought 1,216,000 dollars in specie on freight.

The yellow fever was raging fearfully at various points on the Mississippi river and in the interior.

A private meeting of some exiles of different countries is reported to have taken place at New York, by whose unanimous decision Major L. Tarnacanowski, formerly aide-de-camp of General Murakowski, and afterwards Commander-in Chief of the French Legion in Sicily, had been appointed to form a volunteer legion in the United States, intended to aid for Ennobling purposes.

United States and State loans are firm, the purchases of the Government absorbing all of the former that appear. Several of the States are also, from time to time, purchasers of considerable amounts of their own debts, as investments of the sinking funds provided for their redemption. The scarcity of money is felt principally in the large commercial cities. In the interior the supply is ample, and the payments to the seaboard are made with great promptness and regularity. The agricultural interest is very prosperous, and, while this is the case, there is no reason to apprehend any serious crisis in the business of the country generally. The rate of discount for first-class paper is twelve per cent. Messrs. Dimond and Co., of Bristol, Rhode Island, sugar-merchants, &c., had suspended payment. Their liabilities were said to be very large. The rumours of failures among the dry goods jobbers were confirmed. The failure of Messrs. Winston and Seaman, jobbers, Pine-street, had also been announced.

CENTRAL CRIMINAL COURT.—Saturday, Oct. 29.

The Rev. *Wade Mears* pleaded guilty to publishing a false and malicious libel, concerning the Hon Craven Berkeley, and also on other noble families with which the defendant was connected. With the permission of the counsel for the prosecution, the prisoner then entered into recognizances of £1000 to appear when called on, and also to keep the peace for five years.

Mr. *Abrahams*, the highly respectable surveyor of Norfolk-street, Strand, surrendered to take his trial on the coroner's inquisition, charging him with causing the death of Robert Thompson, his wife, and George Rowe, by negligence in the fitting of the gas-fittings. Mr. Ryland, Mr. Ryland, the counsel for the prosecution, said that, after reading over the depositions, he could see no case for going to the jury. Mr. Justice Cresswell fully concurred in that opinion; and the jury, under direction, returned a verdict of "Not guilty" on all the indictments. When Mr. Abraham entered the court in the morning, he was attended by the following gentlemen:—Sir Richard Bethell, Q.C., M.P.; Sir Charles Barry, R.A.; Mr. F Hardwick, R.A.; Mr. William Tite, Professor Donaldson, Mr. Thomas Hopper, Mr. John Shaw (official referee), Mr. J. B. Bunning, Mr. James Pennethorne (as Her Majesty's Works and Buildings), Mr. Ambrose Poynter (official referee), Mr. George Godwin, F.G.S.; Mr. Henry A. Hunt, Mr. George Fownall, Mr. H. Maltby, Mr. Benjamin Ferrey, Mr Thomas Little Mr. H. Holland, Mr. John Addison, C.E.; Mr. J. H. Hakewill, Mr. A B. Freed, Mr. E. Horne, Mr. W. Nixon; together with the undermentioned eminent district surveyors—Mr George Smith, Mercers' Hall; Mr. Samuel Angell, Mr. William Moseley, Mr. E. E Hakewill, and Mr. Henry Flower; all of whom were prepared to testify, in the strongest terms, to the care, experience, and ability of Mr. Abraham

Richard Pardington and *Joseph Wood*, the fireman and driver of the express-train that did so much damage at Hornsey, last September, were placed at the bar; but Mr. Justice Cresswell being of opinion that there was no case for the jury, and the counsel concurring, the defendants were discharged.

The two Lascars, *Ahalt* and *Ali*, were tried for feloniously cutting and wounding Robert Mills, on board the *Queen of the Tejus*, during an attempt at mutiny, were found guilty, and sentenced to transportation for fifteen years. This case closed the present sittings of the Court.

Important Sale of Autographs.—A very valuable and curious collection of English and foreign autographs was submitted to public competition last week. Among the most choice specimens sold were two holograph letters of Oliver Cromwell; they realised respectively £27 and £9. A letter signed by Henry VIII. fetched £4 17s., and was bought, as was understood, for the British Museum. A long letter of Martin Luther, in the Latin tongue, went for £7 10s.; and one of the Byron letters, a specimen of most perfect literary forgery, was knocked down for 10s.

The British and American Clippers.—The trial of speed between American and English clippers engaged in the China trade, has again been decided in favour of the latter. The English clipper ship *Stornoway*, which left Canton on the 15th July, arrived in the River on Saturday last; while the American clipper ship, *Challenge*, reached London on the 13th, and has not yet been reported. The *Caryolite*, which made the fastest trip last year, sailed from Whampoa on the 30th July, and may be shortly expected.

TOWN AND TABLE TALK, ON LITERATURE, ART, &c.

The question to whom public statues should be erected has formed the subject of conversation in other than artistic circles. Some would carry us back to Greek and Roman examples; and others, more prudently, narrow the ground, by trying the question on its own merits, and principally with respect to this country. "Is a public statue a public honour?" it is asked. "It should be," is the reply not unfavourably urged, in the bow-window of Whites'; "and no out-door statue should be allowed to be erected in London, but by the approbation of Parliament, and the consent of the Crown. A public statue may be made a public eye-sore. A committee of private gentlemen may meet, pass resolutions, subscribe, and occupy a public thoroughfare with a private statue of their own. Look at the statue to the Duke of Wellington on the Arch at Hyde-park-corner. Is not the eye of every person of taste offended at seeing such a statue on such a site? Does not every foreigner shrug his shoulders with surprise when he sees what barbarity we are guilty of in the very threshold of fashionable London! No honours on this side idolatry can be too great for Englishmen to pay to the Duke of Wellington. But surely we carried our admiration of the Duke on the other side of idolatry in the Duke's lifetime, when we made the principal object to be seen from his back drawing-room window a statue to himself, and the engrossing object to be seen from his front drawing-room window, another and still more imposing statue to himself. Our witty poet in St. James's-place has been heard to contend that statues should be erected only to the dead, and equestrian statues only to warriors who have gained great victories. What is to hinder a committee of Manchester men from erecting a statue to Mr. Bright in the heart of Westminster—but Mr. Bright's own good sense; and the sense, let us hope, of the press, in exposing the folly of such a proceeding? What is easier than to get up a statue to a public man? But it seems to me that the first thing needful is to secure the consent of the individual whom it is intended to honour. The marble statue to his Royal Highness within the vestibule at Lloyd's—set up to commemorate the laying of the first stone of the Royal Exchange by his Royal Highness—is, at least, in place; but a bronze out-door statue to the Prince, while the Prince is alive, seems most woefully out of place anywhere. Let the Prince continue to fulfil his numerous offices with the same skill and good sense as he has ever shown in them, and posterity—and that posterity his contemporaries—will perpetuate his person in brass and in stone;—and unborn ages will not complain of either the too early or the too tardy honours rendered to virtue and talent reared and turned to good account in so lofty a station. But let no busybodies presume to meddle in the matter without authority from the person most interested.

The case of Mrs. Hogg, the widow of the far-famed Ettrick Shepherd, the general distribution of Government patronage to literary men and the widows of literary men, has been once more a fruitful topic among authors and the friends of authors. We are not, we confess, admirers of a system of Government assistance to men who are able to assist themselves. Pensions to authors in the prime of life, in the vigour of their fancy, with sound constitutions and inquiring minds, are too often drawbacks to exertion. That they should be given to men who have done some great work, honourably and usefully now, and to be better known hereafter, no well-wisher to literature has been heard to deny, and in the House of Commons has been known to quarrel with. It is the distribution of the money that the country is contending with, for no one disputes the usefulness of authors who has read the modest and touching dedication of Scott, of the Waverley Novels, to King George IV.:—"The author of this collection of works of fiction would not have presumed to solicit for them your Majesty's august patronage, were it not that the perusal has been supposed, in some instances, to have succeeded in amusing hours of relaxation, or relieving those of languor, pain, or anxiety, and, therefore, must have so far aided the warmest wish of your Majesty's heart, by contributing, in however small a degree, to the happiness of your people."

Happiness, by their skill in narrative and word-painting, can smoothe the bed of pain and death, how much is due to them from the public to whom they have given more than has been, or can be, repaid to them. If much is due to a great author, surely something is due to his widow, who has struggled long but unsuccessfully with the world, and against whose fair virtue, or propriety of behaviour, not one word has been or can ever be breathed. On the 21st of this month the Ettrick Shepherd, he whose songs have added to Scottish patriotism and done honour to English poetry—will have been dead eighteen years. During these eighteen years his widow has struggled almost unassisted with a young family; and now in her declining years, when no longer able to work as before, she looks (and with justice too) for some assistance from the Government. the people of this country by the act of their own chosen Parliament, having given to the Government, for the time being, the privilege of distributing every year pensions to the amount of £1200 among people distinguished for literature, science, and the arts, and the widows and children of people so distinguished. We shall be curious to see the return of the next distribution. North Britons will, indeed, have a wrong if the widow of the Ettrick Shepherd is omitted in the next return.

Two discoveries of moment connected with the history of art in this country have become public during the present week. The love of Charles I. for pictures and statues, for painters and for sculptors, is well known. Not so that he actually employed Inigo Jones in building a pier at Blackfriars—where Vandyck lived when in England—to enable him to land and inspect the pictures of the great painter. Fancy her Majesty ordering Sir Charles Barry to make a road leading to the house of Sir Edward Landseer, in St. John's-wood, to enable her Majesty to alight and see the pictures of our great living painter. The other discovery relates to Sir Joshua Reynolds. The person whose influence induced Sir Joshua's father to make his son a painter, and sent him to London, was Mr. Cotolliffe, of Bideford, in Devonshire—a new name in the story of Sir Joshua. Mr. Cotton's forthcoming life of Sir Joshua will, it is said, contain many new curious passages connected with Reynolds's early residence in London, and the position of painters when Hudson and Hayman were lords in the ascendant.

The Blind Monarch and the Blind Dramatist.—We noticed some short time since that the blind dramatist, the veteran Monerieff, had been honoured with an animation from his august Majesty, the present amiable and highly-gifted King of Hanover, that, on his return from his visit to this country, to his own kingdom, there would be forwarded from the Court of Hanover, to the ill-fated dramatist, the Royal Hanoverian Gold Medal of Honour of the Arts and Sciences. This distinguished order of merit was originally instituted by his Majesty's illustrious father, Ernest Augustus. *Kamig von Hannover.* A few days back a King's messenger was despatched from the Court with the promise of honour. It is a massive gold medal; the value of it, as mere bullion, nearly £20. On the face of it is an exquisite, finished profile of the founder, with his title, &c.; on the reverse, encircled with a wreath of laurel, so entwined as to contain the name of the individual thus decorated, are the words "Fur Kunst und Wissenschaft."

Dismissal of Professor Maurice from King's College.—A painful sensation was created on Saturday morning, by an announcement on the part of Dr. Jeaf, that Professor F. D. Maurice's lectures on Ecclesiastical History, would be discontinued. It is understood that Mr. Maurice has been definitively removed from his chair by the council, in consequence of the doubts respecting his orthodoxy suggested by a volume of "Theological Essays" recently published. The students and departments, however, have taken up the matter very warmly, and will no doubt make a strong demonstration in favour of Mr. Maurice. The greatest excitement prevails in the college, and expressions of indignation and regret are heard on all sides *Morning Herald.*

THE CIVIL WAR IN CHINA.—H.M.S. "HERMES" IN THE YANG-TZE-KIANG RIVER.

NANKIN INSURGENT CHIEFS AND INSURGENTS.

Our diplomatic and naval authorities in China have taken great pains to preserve a strict neutrality during the late rebellion; and the Chinese Imperial authorities having industriously spread a report that the English were about to assist them with a naval and military force against the insurgents—and having, to give colour to this rumour, persuaded some sailors to desert from the *Salamander*—the *Hermes*, in the month of July in the present year, sent its boats up the Yang tze-Kiang River, with orders to discover the deserters, if possible, and bring them back to Shanghai, where the *Hermes* was then lying. This expedition, courageously undertaken with so small a force, was frequently fired at during its progress up the river, and was compelled to return without having succeeded in the object of its search. But the officers in charge of the boats brought back some important and valuable information relative to the position of the belligerent forces and the prospects of the civil war.

We have been favoured with the diary of Mr. Williams, the mate of the *Hermes*, which has not yet been published, and with some illustrative Sketches by the same gentleman, which, taken together, delineate, in an interesting manner, the aspects of the country and the scenes presented upon the Yang-tze Kiang during the insurrection. It will be observed that, while the diary relates exclusively to the expedition of the boats in search of the deserters, the Sketches were taken during the previous voyage of the *Hermes* up the Yang tze Kiang in April, when, with her Majesty's Plenipotentiary, Sir G. Bonham, on board, she sailed up to Nankin to assure the victorious rebel chiefs of the neutrality of the British nation. The Sketches include a view of the fire raft sent down by the Tartars on the night of April 27, 1853, off Nankin, with H.M.S. *Hermes* getting under way, and having the interpreter's boat in tow. Another Sketch represents the *Hermes*, on her return from Nankin, shelling the heights in front of Chin-kiang-foo, on the 3rd of May, the heights being crowned with stockades. The other Illustrations sufficiently explain themselves.

The Yang-tze-Kiang (or "Son of the Ocean") is a large river, which joins the sea a little to the north of Shanghai. It drains the central provinces of China, and is crossed by the Imperial Canal, by which it communicates with the Hoang-ho river and with most parts of China. The tide ascends it to the lake Po-yang, 450 miles from the sea, beyond which it is navigable for 250 miles. Woosung is a small maritime town 80 miles north-west of Chusan, strongly fortified by the Chinese during the late war, but taken by the British in 1843. Chin-kiang-foo, the furthest point reached by the boat expedition—is a fortified city 45 miles E.N.E. of Nankin. It was taken by the British, after a desperate resistance, July 21, 1842. With these preliminary explanations, we now proceed to give Mr. Williams's journal:—

At 5.30 p.m., Thursday, June 23rd, our small fleet of four sail shoved off from the Consulate jetty (Shanghai), and with a light breeze and strong ebb, stood down the river. Our party was thus divided; in the leading, or Commodore's boat, were Lieutenant Spratt and myself; this was a most ancient and leaky boat, whose appearance held forth little promise of comfort. In the second, were one corporal and private, of the *Hermes*, and two blue-jackets, and two Marines, of the *Salamander*, with two sets of irons. The third contained one of the inferior Mandarins of the Taoutai's suite (gold ball, 7th cl.) and his retinue; this was a most superior boat, not only in point of size, but being also fitted up with most excellent furniture. The fourth boat carried Mr Thomas Taylor Meadows, Government interpreter.

By night-fall the weather had become overcast, and on reaching Woosung the rain was so heavy and the night so intensely dark, that, to avoid separation, we ran into the creek, where we anchored for the night. Finding comfort and sleep out of the question, owing to the myriads of mosquitoes, we took to cigars, and passed a wretched night. Meadows finding himself incommoded by having his teacher in the same boat, here hailed another to convey him where the steel fleet to Bar Friday, 24th, at 9.30 a.m., breakfasted, and afterwards weighed anchor; stood out with the last of the ebb in order to get the flood setting up the Yang-tze, and, with a fresh breeze and cloudy sky, beat out of the Woosung river. Entering the main stream with a slant wind and strong flood, we made good way, keeping in with the left bank, with several other boats in company. At four, dined luxuriously off cold ham on board Meadows's boat, which being the most comfortable, we agreed to make our head quarters (i.e. spend the day and mess in). At five p.m. passed Harvey Point, banks very flat, and monotonous, plenty of clumps of trees

H.M.S "HERMES" SHELLING THE HEIGHTS IN FRONT OF CHIN-KIANG-FOO.

and a few straggling huts. Seven p.m. tide-turning came to, night very dark and dismal.

Saturday, 25th, at seven a.m., got under way, and, with a light breeze, attempted to proceed; but, finding we made no progress, came to again. One p.m., flood set in, up anchor, and proceeded. Six. Passed Lang-shan (Wolf-hill). The river is here seven miles broad. Observed the mandarin-boat stand towards a small junk coming down stream, and, when within a few yards fire at him. Knowing the buoying propensities of these gentlemen, when the opposing party is weak, and they think they are backed up, we steered for them, and came up just as the mandarin's headman was boarding her, with a cocked pistol in one hand and sword in the other. Turned him out, for fear he should shoot some one; and, searching the boat ourselves, found her smuggling salt, but quite unarmed. Let her go, and hauled up to course. Sunset.—To avoid separation during night, lashed our boats two and two. Nine, observed Pochan (Happy Hill) abeam. Daylight.—Still abeam of Langshan; tide having prevented our making progress.

Sunday, 26th. Easterly wind; weather overcast. Noon.—Keeping close in with the right bank; fair wind. Corn and paddy-fields close down to the water's edge; here and there a small creek and village. Day cleared up; same appearance for many miles. Sunset.—Lashed boats again; mandarin some way astern. Night squally.

Monday, 27th, 0.30 a.m., anchored in the Kiang-yin Canal. Six.—Mr. Meadows and ourselves proceeded up the canal for half a mile, to gather information. Stopped by a bridge, disembarked, and, after a walk of three-quarters of a mile, through suburbs, arrived at the wall of the city of Kiang-yin (Secret of the Waters). Entered by the north gate (which is placed in a fort abutting from the wall), and proceeded along the streets; but as it was yet early, and the morning drizzling, but few people were abroad. Visited the Temple of the City Jose (Chinh-wang-meaou), and the house of the Sheo-tai, or Literary Mandarin. Here we were shown the examination rooms in which the prizes are yearly adjudged, and where some thousands of candidates are examined in ethics, metaphysics, and laws, this being the course of Chinese study. From hence, to the Che-heau, or magistrate mandarin's house. Here we met a man, who told us that the military commandant of the town had gone to assist the imperialists at Chin-Kiang with 100 men, leaving 200 troops to defend the town, and the lorchas, we heard, were about Silver Island. This being all we could gather, we walked round two sides of the wall—a high and strong defence, in excellent repair, and surrounded by a moat. A great number of trees are inside the city, and a large extent of paddy fields, especially between the south and east gates. In the north-west side is a fine seven-storied pagoda, of great age, and of a conical form. The streets are broad, and, for China, clean, and have plenty of shops. Observed numerous bakehouses, where they have a novel method of kneading the dough by inserting a stick of bamboo into the wall across the dresser, on the other end of which a man sits, and, springing up and down, by his weight brings the stick heavily down upon the paste. Although the times are so disturbed, yet we saw no guards, either upon the wall or in any part of the city, and everyone seemed carelessly following their usual avocations. We were received with the greatest civility by the people; and although we were perfect novelties, yet their curiosity was unobtrusive. Returned to our boat, breakfasted, and rejoined the squadron. Mandarin still absent. Nine.—Weighed, and proceeded. Five p.m.—Entered Shayaon River, with fair wind and ebb tide. Observed *Mandarin* at anchor in river. Joined company. River four and five cables broad. Dark. Anchored off a small creek.

Thursday, 28th.—Morning wet and dismal. Weighed. After breakfast, cleared up, and weather became delightful. Making good way. Banks very pretty; and ahead Chooshan Hill and Pagoda. Wind dying away, tracked the boats along the banks. Five.—Re-entered the Yang-tze, and anchored at the foot of Chooshan. Landed at a battery of forty guns, posed of iron twelve-pounders and brass sixes, the latter having vaunting proverbs on them.—"Pacifier of the Barbarians," &c.; but, as their car-

TARTAR FIRE-RAFT, OFF NANKIN.—H.M.S. "HERMES" GETTING UNDER WAY.

NIGHT SCENE, OFF NANKIN.

riages will admit of little elevation, they would not be very serviceable, although they are all in good repair. The powder is kept in block houses in the rear. Embrasures large enough for two or three guns, and in two or three tiers, command the river. Found here a small camp of about 100 Manchoos and two small Mandarins in charge, being part of the late Imperial garrison of Chin-Kiang. Ascended the western summit of the hill, from which we had a magnificent prospect. To the south and west the country was hilly but to the eastward and northward lay, as far as the eye could reach, a long p...., unbroken by aught except small villages, surrounded by trees and by ..... tracts of paddy and corn-fields. The magnificent river, its waters glowing under the last rays of the sun, lay at our feet, its long reaches extending and expanding in the distance. About W.S.W. lay Silver Island; and we could, through our glasses, see the Taouise's fleet at anchor just below. To the southward again were visible the heights of Chin-Kiang, and we saw the western summit of the numbers of the two parties. On descending, finding tide against us, and no wind, we moored for the night. At midnight weighed to a light breeze; but tide proving too strong, came to again.

Wednesday, 29th.—Daylight. Weighed. Crossed the river, and tracked, and poled the boats. Stopped to rest and breakfast 9.—Weighed 1 o'clock p.m.—Passed Tum-too, where we saw a small fleet of war-junks, and about three miles beyond off the estuary of the Buddhist monaster of Silver Island. Found the Imperial fleet of lorchas, junks, and one schooner, compressing nearly seventy sail, lying on the other side of the island. Found about twenty of the priests of the lowest class only on the island. Dined, and ascended the hill, from which we had a fine view of both parties. Below us lay the fleet, and at the distance of about six miles were the walls of Chung-Kiang-too, connecting which, and the extreme hill of Kan-loo-sze, were a long line of walls and stockades. At the distance of about a gunshot were the Imperial camps, of which we counted seven, and in which lay about 15,000 men. Towards sundown they occasionally fired at each other, but I should imagine without great damage on either side. In the evening smoked our cigars and took tea in the monastery. The priests, we found, when the rebels came over and destroyed the josses, all the higher priests fled; but as they were only poor wretches, they went down on their knees, and had their lives granted to them, and existed by charity. Formerly sending a member over to the mainland to beg rice. Before turning in, we took a stroll through the cloisters, and sitting down on the steps of the principal entrance, between the two lions, watched the fire from the city walls. Had a yarn with Loynen ew, the mandarin's interpreter, on the Buddhist religion, and turned in. Plenty of mosquitoes.

Thursday, 30th.—Bathed, and ascended the hill. Camps and city keeping up a desultory fire. After breakfast went round to the fleet. Linqui, first-class mandarin, and controller of the whole forces, came into our boat, and had an interview. This man is a Manchoo, and by far the best specimen of a mandarin I ever saw—agreeable, affable, and courteous in his demeanour, with a handsome person. His dress consisted of a white linen frame, over which he wore a purple crape jacket, silk gauze trousers, turned into black velvet knee boots, on his head a light mandarin hat, of dark cloth, and the opaque red ball and peacock, with feathers. For permission to search the fleet he referred us to Lee-lan the Admiral, and having concluded his business, went off. To Lee-lan we next went, and were shown into his barge, where we were not kept many minutes before the Admiral made his appearance, accompanied by three mandarins, blue and white balled. We were very civilly received, and given cups of tea and sweetly-sugared water; and, after half an hour's interview, received permission to search the fleet, for which purpose a mandarin was allotted to each of us to assist. Lee-lan is a mandarin of the red ball (opaque), and a most confirmed opium smoker, to which probably his lean figure is attributable.

We commenced our search with the lorchas, of which there were about twenty; Mr. Spratt taking the inner, and I the outer. These vessels were all heavily armed and manned by a mixture of Portuguese, Lascars, and Chinese. They were mostly commanded by the former, who, on our visit, were generally engaged either in drinking gin or playing cards. We were treated civilly throughout; but after a thorough search but one Englishman could be found, and he was too stupid looking ever to have been in a ship of war. From the lorchas we went to the Imperial fleet of junks and Chinese lorchas. The crews of these vessels were all Chinese, and a more perfect set of cut-throats I never saw. They were armed with guns of all calibre, mounted on raised platforms. Their cabins were all mandarins, and received us with great respect. All had bamboos, about three feet high (on which to ..... boarding nettings) all round. After a most fatiguing search and ..... burning sun, and being unable to trace even a sign of the "deserters," we returned to Tantoo, whither Linqui had gone. To him we sent our cards, and were instantly admitted. Not having succeeded in tracing the "deserters" in the fleet, we wished to ascertain whether they might be serving in the camp, and for this purpose sought the interview. After a variety of compliments, eating, it was had to deduce any certainty from his expressions. He said, if we went he could not be answerable for our heads; and again, he could not give us leave; and having the immediate charge of the camp, and the mandarin who had that was away. After an hour's conference, we came to the conclusion that a search was out of the question; so we told him that it would be necessary for us to go to Cum-Kiang to-day, as the insurgents if they had seen anything of the men; but, as they were absconding, we looked to him to see that the fleet did not fire on us, either going or returning. He answered that fire, or not fire, he could not help it, and that he did not know anything about it. Having assured him, that in case we were fired at, we should look to him as responsible, we took our leave. In the evening we took a walk through the town of Tantoo, which is of considerable extent, and in about half an hour came to the "Grand Canal;" this great wonder is here very narrow, not exceeding 50 or 60 feet, but it is spanned by two fine stone bridges, within about half a mile, and crowded with boats. Although we had to make our way through great crowds, yet, as at Kiang yin, we were received everywhere with attention and civility. At dusk we made sail for Silver Island, intending to anchor there for the night, to be ready for a start to Chin-kiang at daylight. When within a quarter of a mile, we were fired at five or six times by a large fleet of junks, which had come down since the morning to blockade the passage, and seeing us coming down, had gone to quarters, and lighted their lanterns; but seeing us come to, and our boatmen all yelling out, and chin chinning Joss, they desisted from firing, and sent a small mandarin to see who we were. With fear and trembling this worthy came alongside, a sword in one hand and a lantern in the other; and having heard what we were, made off again; so we lay where we were. About midnight we were awoke by a tremendous shouting, and starting up, we saw all the junks getting under way, and standing up the river. Above Silver Island was a brilliant blaze, which we at first imagined to be the rebels attacking the fleet, but which we soon saw were fire-rafts. We moved amongst the rest, and running down stream for about a mile, anchored for the night.

Friday, July 1st.—Daylight.—Shifted berth without opposition to Silver Island. After breakfast Lieut. Spratt and Mr. Meadows took a boat, and went on to inform the mandarins that we were about to start for Chin-kiang. On their return they told us that the mandarins had begged them not to start till they had informed Lin-qui, which, they said, they would do immediately. I spent the day in the monastery. Saw the alligator pond, where they keep two alligators quite tame. An occasional fire kept up.

Saturday, July 2nd. No answer having come from Lin-qui, we determined to start. The Chinese struck work, demanded their wages (which was a pretty sure sign they did not expect to see us again), and ..... boatmen, and all ..... ashore, where we left them under the charge of two Marines, we to ..... the remainder, and shoved off. One of the war junks fired a shot, but we took no notice, hoisted our colours, and set off, passing the junks. We had a friendly sign made that we should lose our heads, and, indeed, we heard that 5000 dollars were offered for each. By dint of tracking we managed to get the boat along. Soon after a slant wind setting in, we made sail, and Kang-kiang-sze in with the shore, both to avoid the fire of the lorchas and Imperial camps; in about an hour came within range shot of Chin-kiang. We had been for some time expecting to see the flash of a gun from Jakooshan or Kauloonye, but as I fancy they saw our colours, they desisted. When within half a mile we had an adversary much nearer, so we ran the boat in. Mr. Spratt and Meadows landed, and walked away through the high grass. I remained in charge of the boat, keeping a good look out against an attack from the rebel camp. Heard them fire several guns, saw the party led up the hill by the rebels, and then admitted into the fort. Remained there two hours; in the meantime, a boat, with six rebels, came down to look at us; treated them civilly. Tried to work the boat up higher, but tide proved too stormy. Mr. Spratt and Meadows returned. Treated well; and told that they had not seen the men; also, that they did not like to come and carry away mast; that would very likely to kill us, and then say they did it. Moreover, they did not come to Shanghai, as they did not want to injure our trade. Were fired at by the camps, coming down the hill—one shot going into the boat, close to the party. We then returned to Silver Island, and were looked upon as prodigies of valour by the Chinamen. Servants and crew remained on board, squadron got under way, and we down the river. Passed Tamsoo, and came to under Choosban Hill. Took a stroll in the evening.

Sunday, July 3rd.—Daylight. Ascended the hill, bathed, and weighed. Entered the canal, and then got to some very broad sheets of water, known by the name of Kiang-yin. Nine p.m.—Anchored off the canal.

Monday, 4th.—Daylight. Hauled into canal to get mast repaired. Ascended the hill, and obtained a fine view of the city and surrounding country. Eleven. Cast off and made sail. Heavy sea and head wind; ran into a creek at sundown, and made fast.

Tuesday, 5th.—Weighed at daylight. Nine.—Ran into Langshan-creek, to await ebb. After breakfast, sent out for two wheelbarrows, they being the means of locomotion in this part; mounted Meadows and servant on one, Mr. Spratt and self on the other; wheeled away by one man in shafts, and another at a drag rope, at a great rate amidst the laughter of the crowd of villagers. Followed a raised path which led to a Pagoda, a distance from the creek of five or six miles. The country highly cultivated, and well watered by a chain of small canals, which spread like network amidst the fields. The villagers were hard at work with hoes, cutting out the weeds; but, as we passed, they ran forward to see the Barbarians, their eyes and mouths open with astonishment. For the most part, they were a fine, well-made race, burned to a dark brown by the hot sun. Most of the women had small feet, and brought out stools with them to sit on, whilst they worked. Their heads were an immense straw hat, to protect them from the sun. Passed through a small village, amidst the delighted shrieks of the boys, and the grinning and staring of the men and women at their children up to gaze; boys dragged their little brothers and sisters up, so as not to lose such an extraordinary sight; and we made a perfect nine days' wonder. 11.30.—Reached the foot of the hill. Entered a joss-house; ascended a flight of steps; then another joss house; and, finally, the pagoda itself, which is a quadrangular building of five stories. Wrote our names; and obtained a magnificent view all round. Descended; Chin-chinned the joss with some cash, and visited the tea-shops. Here another scene of amazement, as we sat down between two enormous gods, and drank our tea. Returned to our barrows; and, at change of tide, weighed, and stood up til the last, when we came to again.

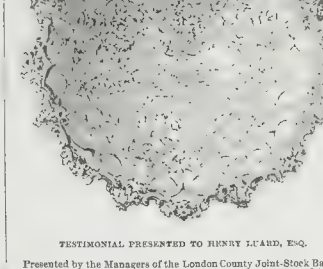
Wednesday, 6th.—Daylight, weighed. Beat out the tide; anchored; and, with the next ebb, made Woosung river.

TESTIMONIAL TO MR. HENRY LUARD.

It will be recollected by our readers that in the ILLUSTRATED LONDON NEWS for Sept. 4, we gave an Engraving of a superb testimonial recently presented to Mr. Sadleir, M.P., Chairman of the London and County Bank. We have now the pleasure of illustrating a like testimony of respect to Mr. Henry Luard, the General Manager of the above establishment.

The demonstration took place on the 18th ult., at the London Tavern, when three elegant and massive Silver Salvers were presented to Mr. Luard, from the managers and principal officers of the bank, as a token of their appreciation of his personal qualities, and attention to the best interests of the establishment, and all connected with it.

There were about thirty provincial managers, and nineteen officers and clerks from the chief office, present; and Captain Strong, the manager of the Oxford Branch, who took the chair, produced several letters of apology for absence, and then read the inscription on the Testimonial, which was as follows:—



TESTIMONIAL PRESENTED TO HENRY LUARD, ESQ.

Presented by the Managers of the London County Joint-Stock Banking Company to Henry Luard, Esq., its General Manager, in grateful recollection of his undeviating kindness and courtesy; also of his zeal, regard and respect for a superior, to whose financial ability and assiduous exertions the existing high standard and gratifying prosperity of the establishment may be mainly ascribed. October 19, 1853.

Chairman bore testimony to the admirable manner in which Mr. Luard had filled the important office of Manager; and to his undeviating kindness and unvarying courtesy. He presented the Testimonial, and expressed the wish that he might live long in the enjoyment of that feeling of respect now so cordially expressed by every officer of the establishment.

Mr. Luard received the spontaneous manifestation of esteem and regard as the highest compliment which could be paid him, and the most gratifying event of his official career. The standard he had established for his guidance, when twelve years since the directors of the London and County Bank honoured him with the appointment of General Manager, was to combine the utmost practical efficiency with the most gentlemanly consideration for every officer in the establishment. He was aware how far he had been from approaching that standard, and however gratified he might be by their indulgent review of his past services, he should be ungrateful not to acknowledge how greatly his partial success was attributed to their cheerful co-operation, to the efficient aid of his immediate staff—and most especially to the generous support of the board. He gratefully appreciated the enduring record of their kindness.

Mr. Green, manager of the Maidstone branch, moved a vote of thanks to the Chairman for presiding, which was seconded by Mr. Law, of the Knightsbridge branch, and carried unanimously.

In evidence of the progress of the London and County Bank, we may state that when Mr. Luard joined the board in September, 1841, the balances in town and country were only £480,000; they are now £3,386,000. The capital at the end of December, 1841, was £80,000; it is now £379,720. The rest in December, 1841, was £4000, it is now £44,990. At the end of 1841 there were only twenty three branches of the Bank, there are now fifty-eight.

FOREIGN DRIED FRUITS.—The Lords of the Treasury, having adverted to the great failure of the currant crop again in the present year, and to the high price of dried fruit, and being of opinion also that the revenue would benefit by the admission of the fruit at a duty which would conduce to its importation in large quantities, and that all the reasons which induced them in January last to admit German plums at the duty chargeable on prunes exist now even in greater force, their Lordships have issued a minute, directing that German plums shall be admitted during the present season, viz. up to Aug. 1, 1854, at a duty of 7s. the cwt. the same as is charged on prunes.

THE NEW STAMP ACT.—The following information will help to elucidate some of the difficulties respecting the new Act. The receiver of a promissory note at thirty days, two, or three months; or a banker's draft at seven or fourteen days' sight, to give a stamped receipt for the amount. Railway companies are obliged to give stamped receipts for fares above forty shillings, received in cash over the counter at the station. Auctioneers are compelled to give stamped receipts for amounts above forty shillings, for goods purchased at auctions. Farmers and cattle dealers are obliged to give stamped receipts for corn and cattle sold at fairs and markets. No stamped receipt must be given for monies paid on account of a bill delivered, not actually settled. Tradesmen are obliged to give stamped receipts for goods sold over the counter, such as grocers, drapers, &c. But in all these cases the person paying the money must ask for the receipt, otherwise there is no obligation on the person receiving money to give the receipt. One merchant can draw a draft on another merchant for the amount of an account without passing through a banker, provided the penny stamp is attached thereto, and an acknowledgment on the back of the draft will be a legal receipt. Letters by the General Post, acknowledging the safe arrival of promissory notes, bills of exchange, and other securities for money, are exempt from the stamp receipt duty; the law in this particular is the same as it was previously to the passing of the new Act. A receipt may be given on the back of a duly stamped draft for its contents.

ADVICE TO PERSONS SENDING NEWSPAPERS.—No newspaper will be forwarded from this country to the United States unless a postage-stamp be attached; and let us advise nobody to use covers for papers going abroad, but only to tie them into the usual shape with a piece of fresh cord, and write the address, and affix the postage-stamp, on the newspaper itself. Newspapers to our colonies, including Australia and Canada, are not now chargeable with any postage, but they must be put into a post-office within the United Kingdom within seven days of publication, otherwise they cannot be forwarded at all.—*Scottish Press.*

PEACE SOCIETIES.

HISTORY knows "Peace"-Agitators better than it likes them. They are non-suited not less by reason and common sense than by all the awards of national and political experience. Though Gibbon loves occasionally to parade his gorgeous rhetoric upon the wide and sterile theme of what are rarely enough termed "the arts of destruction"—a subject trodden smooth by the platitudes of many thousand years—yet it has fallen to the lot of few historians to place in a clearer light the consequences certain to befal every nation and every community who once permit themselves to be persuaded either that a resort to arms is the worst of evils, or that the maintenance of the needful amount of material and forcible defences is itself an immorality. So long as there are things upon earth at the same time both worth defence, and liable to attack, so long it is not a crime—but it is a duty—to provide the means of defending them; and so long, also, it is not the worst of evils to keep them by force; it is a worse evil to lose them by cowardice or by imbecility; it is a worse evil to surrender them to violence or to fraud. Never, perhaps, in the annals of mankind—save upon religious subjects—was there such an instance of the paralogism of reasoning from the abuse of a thing against its use—and against its use, too, where the use arises and operates solely in quelling the abuse—as throughout the representations of all these preachers of an impossible and Utopian fashion and category of peace. It is not an exaggeration, it is the sober truth, to say that what they announce is no attainable object; but is, simply, the terrestrial millenium. Mr. Cobden, in spite of his unquestionable good sense in most other matters, is, upon this theme, a mere Fifth-Monarchy man. Will he be so good as to attend to one or two plain considerations which we offer to him and to his adherents in this benevolent, but vain, wild, and infructuous eccentricity? Rapacious violence and armed aggression, we frankly admit, are great evils. But evils unresisted are greater than evils resisted; evils prevalent, dominant, unchecked, and victorious, are worse than the same evils quelled, or thwarted, or overawed, or held in repression, or counteracted. The worse a thing is, the worse it is that the force it possesses should be its own exclusive privilege. Are none but the wicked or ambitious to arm themselves? Are we to give to the disturbers of mankind a monopoly of material strength? Or, in the name of common sense, are there none left in the world who wish to do wrong? May we safely yield such a monopoly, on the ground that no longer any remain in this expurgated, civilised, and perfected condition of the human race, who would take advantage of the opportunity. Arts of destruction, indeed! And, pray, is there nothing still amongst us which it were well to destroy, and which it is absolutely necessary not to say desirable, to resist?

The two greatest and most civilised empires, or polities, which ancient times ever produced, perished in a most instructive manner. Old Rome got tired of military life—though Actium showed the nascent strength of indoctrinated Gaul what the discipline and valour of the ancient mistress of the nations could still, even in her decrepitude, accomplish. But the plan of buying off the Barbarians found favour in the counsels of the West. No war: terms, diplomacy—and, be it observed, diplomacy without that which gives to diplomacy its strength—without that silent, and often invisible, but well understood, Referee behind it, who makes admissible conditions, which seem costly if accepted—more costly if refused.

Before this, when the corrosions of effeminacy and the commercial placability of superannuated luxury were eating into the strength of the ancient giant, when all was gradually (but, as the French express it, *à vue d'œil*), steadily dissolving into ruin, in that sombre era—the era of which "ruit nox," is the best description—suddenly there arose, by dispensation of Providence, six great princes of the putative house of Cæsar, who saved the Commonwealth, and retrieved the Empire by nearly as many centuries. What were their qualities? What were the qualities of these predestined regenerators? They were in the midst of a maudlin, and sophisticating, and money-absorbed race, six "warlike," yet wise and moderate, rulers. They saved the state, and flung to an immense ulterior distance the long shadow of its history. In vain. The Peace Society of ancient Rome had the last move. The second example is still more striking, and refers to the second, and only other great and manufacturing polity, the only other permanent form of civilisation, of the ancient world. Long had the heritage of hardy discipline, with a dreaded name, availed the brilliant but effeminate "Romans" of the Eastern Empire. Every art of peace, and every manufacture and industry of commercial civilisation, then known, were known to that strange and gorgeous empire, which declined, in weakness, upon the seven hills of Constantinople. She, too, had learned to abhor war, and even to give premiums for bold and successful violence, to the rude barbarians who chafed around her frontier. Not a foray but won its jewel. A few great men, amid this treacherous and beguiling refinement, retarded the ruin of the enchantress. Belisarius, whose eyes she put out, gave her in the days of Justinian, a hundred and fifty years more of peaceful luxury, by his sword. "With a little iron," said a famous man, "all this gold is gained." With a little iron, too, all that gilding and glitter were preserved. The alloy in our coinage is no bad type of human destiny. Rome was better ransomed, in its primitive days, by the sword of Camillus, than it would have been by the ten times weightier amount of the precious metals which it providentially displaced. The gold of our industry and prudence requires the alloy of our valour for its durability. The Empire of the East, and all the Byzantine reflections of an elder, and more real glory, were hastening to extinction, when a curious manufacturing invention averted the catastrophe. But what invention? Alas! it was not a peaceful trophy, but, literally, the discovery of the "Greek fire," in the year 570, which assured her predominance, till another detestable invention, that of gunpowder, superseded the previous spell. Callinicus, the Syrian—and this is but simple fact—gave nearly 800 additional years of existence, immunity, and power, to the beautiful Sorceress of the East, who lay unassailable upon the seven hills of Byzantium, surrounded by those pale magical flames which were so long reputed to be invincible.

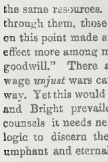
If we were to begin at the battle of Adrianople, in 378, and go

on to the storming of Constantinople, on the 29th of May, 1453, we might greatly augment and corroborate the plain and obvious lesson, which we wish to inculcate. China would easily yield us another suggestive theme. But all history is full of the same instructions; and we forbear.

The two leaders, or chief officers, of the Peace agitation are very remarkable personages. Mr. Cobden is inventive, energetic, acute; Mr. Bright is a man, naturally eloquent, who has, in addition, diligently cultivated his oratory by all the resources of art and reflection, and who continues to improve it every day by the same resources. But it is all useless. These two men—and, through them, those who have hearkened to their teaching—have, on this point made an irreparable mistake. They cannot hope to effect more among mankind than Christ effected, for "peace and goodwill." There always will be wars. It is well if those who wage *unjust* wars cannot count upon having everything their own way. Yet this would be a reasonable calculation if Messrs. Cobden and Bright prevailed in their present counsels; for in those counsels it needs neither much knowledge of history, nor much logic to discern the downfal of civilised nations, and the triumphant and eternal impunity of aggressive ambition.

OBITUARY OF EMINENT PERSONS.

THE HON. AND RIGHT REV. RICHARD PONSONBY, D.D., BISHOP OF DERRY AND RAPHOE.

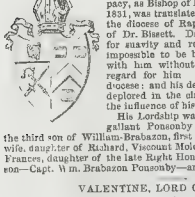


THE venerable Prelate died on the 27th ult., at the Palace, Derry, in his 82nd year. His Lordship, while he held the Deanery of St. Patrick's, was a very popular preacher In 1822 he was elevated to the Episcopacy, as Bishop of Killaloe and Kilfenora; and, in 1831, was translated to the See of Derry, to which the diocese of Raphoe was united, on the death of Dr. Bissett. Dr. Ponsonby was distinguished for suavity and refinement of manners: it was impossible to be brought frequently into contact with him without feeling personal esteem and regard for him He constantly resided in his diocese: and his decease will be long and severely deplored in the circle of those who came within the influence of his kindness and worth.

His Lordship was next younger brother of the gallant Ponsonby who fell at Waterloo—being the third son of William-Brabazon, first Lord Ponsonby, by Louisa, his wife, daughter of Richard, Viscount Molesworth. He married, in 1804, Frances, daughter of the late Right Hon. John Staples, and leaves one son—Capt. Wm. Brabazon Ponsonby—and three surviving daughters.

VALENTINE, LORD CLONCURRY.

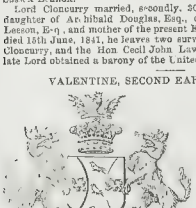
THE death of this popular and much-respected nobleman occurred on the 28th ult., at his seat, Maretino Biasarrock, near Dublin. A kind and generous benefactor to all dependent upon him, a sincere friend, a munificent and discriminating patron of art; ever ready, with his purse, his counsel, and his influence, to assist all efforts that he believed calculated to promote the welfare and prosperity of his native land; warm-hearted, liberal, and patriotic, Lord Cloncurry will be widely and deeply regretted, even amongst those to whom, in politics, he was opposed. From an early age he had taken an active and prominent part in public affairs, and his zeal and energy on the political questions of the day on the popular side, at a period when patriotism was not fashionable and perilous.



His Lordship was born on the 19th August, 1773, the son of Nicholas, first Lord Cloncurry, by Margaret, his wife, only daughter of Valentine Browne, Esq. He married, first, 16th April, 1803, Eliza Georgiana, youngest daughter of Major-General George Morgan, and by her (from whom he was divorced in 1811, and who married, secondly, in 1819, the Rev John Sanford) he had one surviving daughter, Mary Margaret—married first to the Baron de Robeck, and secondly to Lord Sussex Lennox.

Lord Cloncurry married, secondly, 20th June, 1811, Emily, third daughter of Archibald Douglas, Esq., of Darnock, widow of Joseph Lesson, Esq., and mother of the present Earl of Milltown. By her, who died 15th June, 1841, he leaves two surviving sons, Edward, now Lord Cloncurry, and the Hon Cecil John Lawless, M.P. for Cromwell. The late Lord obtained a barony of the United Kingdom 14th Sept., 1831.

VALENTINE, SECOND EARL OF KENMARE.



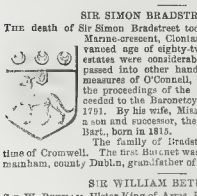
THE death of his Lordship occurred on the 21st ult.

Lord Kenmare—a Catholic nobleman, and the chief landed proprietor of Killarney, and a large estate in Kerry represented a family remarkable for its staunch adhesion to the old faith, and its unbending loyalty to the Royal House of Stuart By James II., after his abdication of the English throne. Colonel Valentine Browne was created Viscount Kenmare; and that title continued to be used by his descendants until 1798, when the then possessor, Valentine, called fifth Viscount, was made Baron Castlerosse and Viscount Kenmare, by patent from George III. He was subsequently, at the period of the Union, advanced to the Earldom of Kenmare His Lordship died 3rd October, 1812; and was succeeded in his honours by his son, Valentine, the nobleman whose death we record.

The late Earl of Kenmare was born 15th January, 1788, and married, 1st July, 1816, Augusta-Anne, second daughter of the late Sir Robert Wilmot, Bart. Not having had any issue, his Lordship is succeeded by his brother, Thomas, now third Earl of Kenmare.

SIR SIMON BRADSTREET, BART.

THE death of Sir Simon Bradstreet took place on the 25th ult., at Marine-crescent, Clontarf. He had attained the advanced age of eighty-two. At one time the family estates were considerable, but they have nearly all passed into other hands Sir Simon advocated the measures of O'Connell, and took a prominent part in the proceedings of the Repeal Association. He succeeded to the Baronetcy at the death of his father, in 1791. By his wife, Miss Murphy, of Dublin, he leaves a son and successor, the present Sir John Bradstreet, Bart., born in 1815.



The family of Bradstreet settled in Ireland in the time of Cromwell. The first Baronet was Sir Simon Bradstreet, of Kilmanham, county Dublin, grandfather of the gentleman just deceased.

SIR WILLIAM BETHAM, KNT.

SIR W. BETHAM, Ulster King of Arms, Knight Attendant on the Order of St. Patrick, and Keeper of the Records in the Castle of Dublin, died suddenly, at his residence near Dublin, on the 26th ult. He was the eldest son of the late Rev. William Betham, Rector of Stoke Lacy, co. Hereford, and was born at Stradbrooke, Suffolk. He married, in 1807, Elizabeth, daughter of the Rev. Cecil Bargrave Crampton, Rector of Headfort, co. Galway, uncle to Sir Philip Crampton, Bart., and leaves issue.

Sir William received the honour of knighthood in 1812, on being appointed Attendant on the Order of St. Patrick. He was an antiquarian writer of some repute.

CHESS.

TO CORRESPONDENTS.

INSTAT OMNIUM.—You were quite right in assuming—from the quarter whence it emanated—that the article it was impossibly untrue. In the few games played by M. Staunton with [illegible] the terms has had a decided advantage.

A CONSTANT READER. Your order [illegible] to schools might be laudable, if a copy of the "Chess-player's Handbook" published by Bohn, [illegible] were [illegible] means of Chess.

RELANDO. It shall be examined.

SPECTATOR. If amateurs would really only determine to discountenance all shutting play in public rooms, we should soon see an end to what is called an "professional players and with them of that annoying and illiberal [illegible] which, proceeds to the Chess committee. It is the supposed importance attached to Chess—arising by those who practice it sometimes scarcely in accordance with [illegible] which produces so much acerbity and [illegible] [illegible] [illegible]

THE PACHA AND HIS WIFE.

TURKISH PACHA AND HIS WIFE.

Our Artist in this beautiful subject gives, we believe, a truthful picture of the calm and indolent enjoyments of the harem. The Pacha, a man somewhat stricken in years, is enjoying the fumes of the narguilli, which are absolutely inhaled, and lend the senses into a happy state of dreamy obliviousness, whilst his young wife sings to him a wild Oriental melody, accompanying herself on the guitar. The presence of the young son of the couple completes the domestic happiness of the harem, or home sanctuary. We are indebted for the accompanying Sketch to the courtesy of J. Brown Young, Esq., 88th Light Infantry.

VIEW ON THE BOSPHORUS.

The picturesque scenery along the shores of the Bosphorus is of endless variety, and might occupy the most fertile pencil for months together without fear of falling into repetitions, or descending to the commonplace.

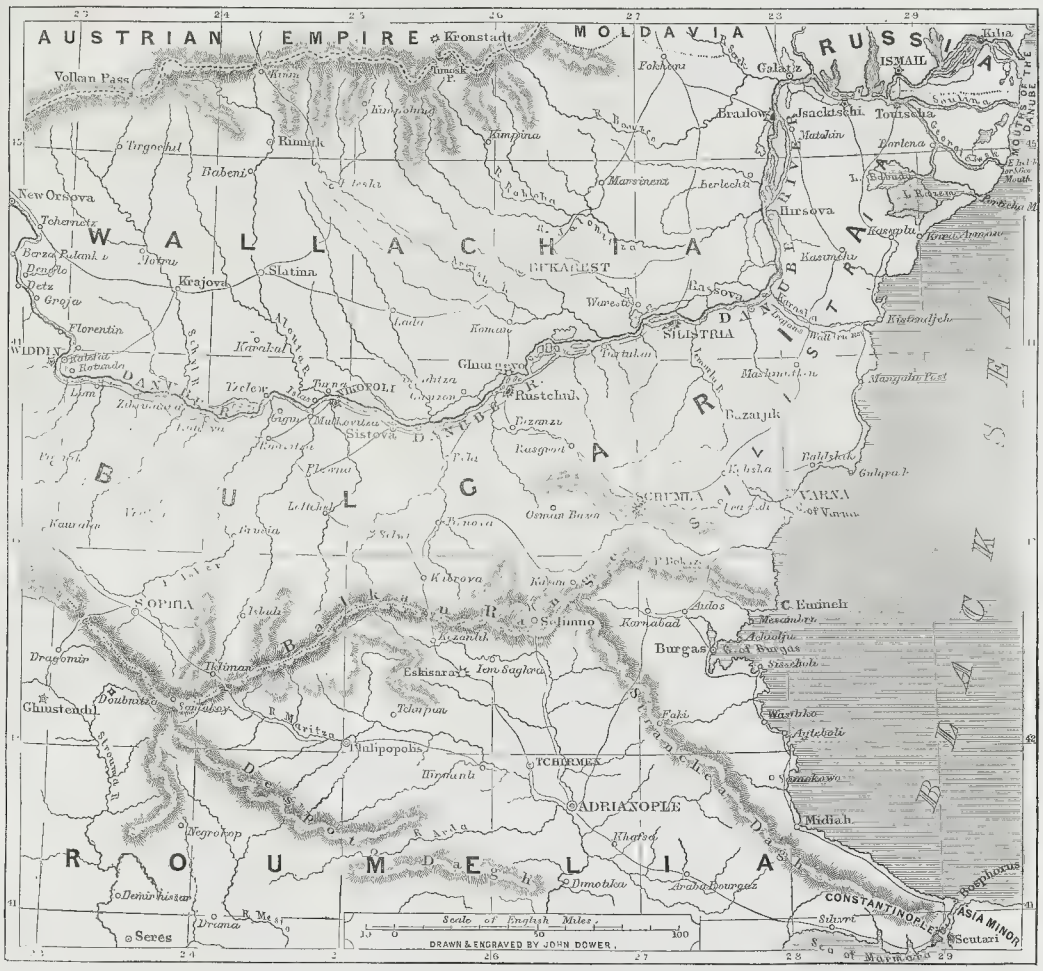
We this week present an Engraving of a charming view from the European side of the Bosphorus,—for which we have to thank an amateur artist, now travelling in the East; who, by the way, also favours us with Sketches of the State Caïques of the Sultan, and his Ministers, and that of the British Ambassador—also engraved in our present Number.

This view is taken from the Sultan's kiosk, situate in the "Valley of Heavenly Water," on the Asiatic shore, looking up the Channel in the direction of Constantinople. Immediately facing is the village of Baltaliman; and further to the left are the ruins of the Roumili-Hissar, or Castle of Europe, whose history is coeval with the final conquest of the Byzantine Empire by Mahomet II.

Mahomet I. had already, in the reign of Manual Paleologus, built the castle of Anatolia, on the opposite side of the channel, and Mahomet II. erected this building in 1451, i.e., two years before the conquest of Constantinople, to the great terror of the trembling Emperor. In vain did the latter lay before the barbarian, through an Embassy, all the grounds which a newly-concluded peace furnished him with. Mahomed dismissed him with this answer:—"That he was by no means to be compared with his ancestors; that what they had been unable to effect he could rapidly and easily execute; that what they did not choose to do he intended to do; that the next Ambassador who should be sent to him should be flayed alive." Mahomed had, in the beginning of the winter, driven together a thousand masons and a thousand lime-burners; and, before spring, the burnt lime from the opposite coast, the necessary supply of wood from Nicomedia and Heraclea on the Euxine had been collected by the time he himself arrived from Adrianople, to determine with accuracy the plan and the site of the new fortress. He traced the foundations conformably to the ludicrous idea that the circuit of the walls ought to imitate the Arabic letters of the word Mahomet, the name of the Prophet. Thus a tower came to stand in the place where, in the Arabic writing, the M (Mim) forms a ring; and the whole received the irregular and most senseless shape ever given to a fortress. To three of his Generals—Chalil Pacha, Tschakan, and Saritcha—he assigned the building of the three great towers which, at first sight, gave to the castle the appearance of a perfect triangle. To each of the thousand masons was assigned the task of building two yards, and a thousand workmen were associated with their labours, besides the enormous multitude who brought together stones, lime, and tiles, collected by the judges from all the districts of Anatolia. The castle was finished in three months, the walls being 30 feet thick, and high in proportion. On the tower built by Chalil Pacha, enormous guns were raised, which threw stone balls of more than 6 cwt.; and Firus Aga was raised to the command of the castle with 400 picked men, with the injunction to demand a toll from every passing ship.

On the waters of the Bosphorus are seen a Turkish frigate, a small Turkish steamer, and her Majesty's steam-frigate *Retribution*, besides smaller craft.

VIEW FROM THE ASIATIC SIDE OF THE BOSPHORUS.



MAP OF THE SEAT OF WAR, ON THE DANUBE.

MAP OF THE SCENE OF WAR ON THE DANUBE.

We this week present our readers with a Map of the present scene of operations on the Danube, compiled from the most authentic sources. The river seen between Moldavia and Russia above Galatz is the Pruth. In explanation of the strategic importance of the several positions, and of the present military arrangements in them, Major-General Sir Charles O'Donnell, who recently visited the Turkish head-quarters, gives a very clear and graphic account in a paper recently published in the *Naval and Military Gazette*, which we re-publish, slightly abridged:—

Although the present line of frontier of the Turks on the Lower Danube, from Widden to the Black Sea, is 460 miles, their immediate line of defence may be said to extend eastward along the southern bank of that river, from Widden to Tchernovada, near Hirschova, a distance of 250 miles, and thence along the embankment, called "Trajan's Wall," to Kustendjee, on the Black Sea, making it 36 miles longer—a distance altogether of about 286 miles.

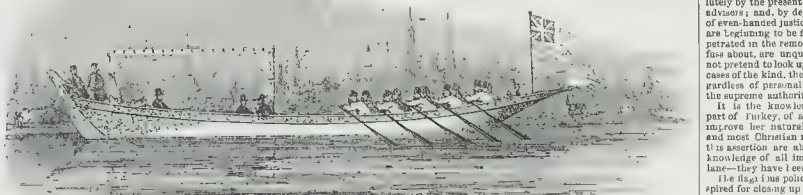
The principal points along this line are the fortresses of Widden, Rustchuck, and Silistria, which are all garrisoned, and have been recently repaired and strengthened. The Wall of Trajan has also been occupied and fortified; and detachments cover the intermediate distances, and complete and watch thoroughly the whole line. In rear of this line moveable columns are stationed at Plevna, Turnova, Osman Bazor, Rasgrade, and Bazarjik—by means of which, on the principle of triangular concentration, support can readily be given to the advanced line. A little in rear of these again is the strongly-fortified position, or entrenched camp, of Shumla, where is stationed the Reserve; and more to the eastward, on the Black Sea, is the fortress of Varna.

Shumla, called by the Turks Ghazi Shumla, is a place not only of historical interest as regards the contests between Christian and Moslem, but one of strategical importance from its position at the head of the valley which debouches into the Bay of Varna; and its situation near the

STATE CAIQUES OF THE SULTAN AND HIS MINISTERS, CONSTANTINOPLE.—(SEE NEXT PAGE.)

great pass of the Balkan, on the main route which leads from Rustschuck or Silistria to Constantinople, and consequently on the principal line of operations of the Russians. It is capable of containing a larger force within its *enceinte*, and was usually selected by the Turks as the place of assembly for their forces in their wars with their northern neighbours. The town, two or three miles long and one broad, is situate at the foot of a mountain, forming a sort of counterfort or semicircle round it, and contains 20,000 or 30,000 inhabitants, some large barracks, magazines, and stores. The greater part of the old intrenchments no longer exist; but the mountain protecting the town, always in itself difficult of access, is now, together with the town, rendered doubly so by the construction, in every direction, of new works upon European principles, consisting of forts, redoubts, flèches, and intrenchments—many of them of a permanent nature with stone revetments, casements, &c. These works are rather extensive, and generally speaking their sites have been judiciously selected, so as to cover all the ravines and approaches to the camp, and likewise the roads and valleys leading by it to the Pass of the Balkan, distant about thirty miles. These batteries are chiefly worked by a local force amounting to 800 men. The troops are encamped partly within the forts, partly on the heights, and partly on the plain within the *enceinte*.

Varna, distant from Schumla 60 or 70 miles, is a strong fortified town and port on the Black Sea, containing 15,000 or 20,000 inhabitants; and if their base along the Danube was cut off, they might, by means of their fleet, establish upon it a new base of operations. It is not a regular fortification, having been originally constructed upon the old Turkish principles of lines of ditch and rampart, flanked here and there with towers; but much pains have been recently bestowed here, as well as at Shumla,



THE BRITISH AMBASSADOR'S CAIQUE, AT CONSTANTINOPLE.

in strengthening the defences. New batteries and lines have been erected on the land side, considerably in advance of those of former existence, and even on the site of the Russian parallels, so as effectually to protect the town from that quarter; while heavy batteries have been formed on the sea face—some *en fleur d'eau*, and others more elevated *en barbette*. The cape on the opposite side of the bay has likewise been crowned with a fort.

There are several passes across the Balkan, some of them less difficult than others which are merely bridle-roads and paths. The principal are, 1. Trajan's Gate, to the westward, on the route from Widdin and Sophia to Philippopolis and Adrianople, which last town is distant from Constantinople about forty five leagues. 2. The Shipka Pass, on the road from Sistove and Tirnova to Adrianople. 3. The Great Pass of Shumla, on the road leading from Rustschuck or Silistria by Shumla to Adrianople. This last is the least difficult, and on the shortest and most direct line of operations from the Danube to Constantinople—a length of about 160 leagues; but it is probable that, under the anticipated circumstances (especially if the western coast of the Black Sea be not under the command of the Russian fleet), the invading army will not attempt this route, but take one or both of the other lines. These defiles, independently of their natural and artificial obstacles, present a succession of defensive positions favourable to the manner of fighting of the Turks, and ought to be passed by an invading force in the spring, for in summer the drought and heat are excessive during the day, and the cold and dews dangerous during the night. In the autumn and winter the roads are so cut up by the rains, frost, and snow, as to render them difficult of passage.

The plains of Roumelia furnish several localities for a battle-field; and here, possibly, will take place the eventful struggle between the Russians and the Turks.

The Turkish troops in Bulgaria, which, including the Egyptian contingent, amount to upwards of 150,000 men, well armed, equipped, and organised; and, upon the whole, in good order. Instructed by Europeans in the various branches of the military art, the Turks have totally given up their former system of warfare, and have made rapid strides towards efficiency in European tactics. Their marches and movements, chiefly of a simple nature, are made with steadiness and precision; and as for their performance of the natural and patent exercises, the troops of the Continent can surpass them. The cavalry is all light. The artillery is the arm in which they most excel; it is numerous, and seems to be well managed and understood. The equipment of the short mountain guns, which are carried on mules, is well arranged. This force is under the command of Omer Pacha, who enjoys a high reputation, and is very popular with the men. His experience and military knowledge, together with his activity, zeal, and exertion, point him out as a fit commander at so important a period. He has moreover, two valuable assistants in Achmet Pacha, his *Chef d'Etat Major*, and Ismael Pacha.

Provisions are in great abundance in Bulgaria; and the soldier is well fed, and paid with tolerable regularity. His medical wants and his comforts in camp and quarters are attended to very much on the Anglo-Saxon scale; in fact, not three per cent.

It is difficult to arrive at the exact state of the Russian army, but they are said to have at this moment (August, 1853) about 80,000 men in the provinces of Wallachia and Moldavia, and about 36,000 in Bessarab a. They have established their base of operations along the Lower Danube, occupying the northern bank of it, and having their head-quarters at Bucharest; with, it is supposed, pontoons ready to cross that river, which they would probably do in two or three columns. They have likewise a flotilla of gun-boats on the Danube. Ibabova, Nicopolis, Turtukai, and Silistria are the most favourable points of passage; the width of the stream at the two last-mentioned places being about 100 paces. There is a great deal of sickness in the Russian camp.

It will be interesting at the present moment to compare the operations now going forward, with the events in the last war, that of 1828: when, owing in great measure to the unprepared state of Mahmoud's new army, and the strategic errors of his generals, the Russians were enabled to "steal a march" to Adrianople. Without going back to narrate the earlier events of the campaign, we start from the time when the treacherous surrender of Varna, by Youssuf Pacha, gave the Russian General, Diebitch, the possession of the most important of the approaches to the Balkan. In February, 1829, Silistria, the siege of which had been raised at the termination of the previous campaign, was again invested. In June, the Turkish Seraskier, wishing to effect a movement from Shumla to Travadi, with a view of guarding that commanding point between Varna and the interior, was defeated in the Pass of Kulewtscha, and immediately retraced his steps to Shumla where he concentrated all his remaining troops, expecting the attack of the enemy in a position of which, as he thought, and he thought, and as, according to the ordinary rules of war, he was justified in considering, the ultimate fate of the war depended. In the meantime, however, the accidental explosion of a mine at Silistria, had placed that town in the hands of the Russians, who, having received with the troops thus placed at his disposal, to make a dashing movement through the redoubtable defiles of the Balkan. Whilst the Turkish Seraskier was awaiting his attack at Shumla, the Russian Commander despatched his troops by night south ward, in three bodies, commanded respectively by Generals Rudiger, De Pahlen, and Roth, in three different directions. Roth took possession successively of Messaria, Anticchs, and Bughas; whilst Rudiger carried by assault Aidos and Karnabat. These acquisitions at once threw the road to Adrianople, and to Constantinople itself, open to the invaders. In order to conciliate as much as possible the feelings of the Mussulman population, General Diebitsch issued a proclamation, in which he enjoined upon them not to abandon their homes, assuring them of the security of their property and lives, and the free exercise of their religion; the only condition being that they should immediately lay down their arms. This proclamation was not without effect; and the war from this moment lost much of the ferocity of character which had hitherto marked its progress

The Russian General was not tardy in following up his advantage. On the 11th of August Sellimno capitulated; and, in a week afterwards, the Russians were beneath the walls of Adrianople, which opened its gates without firing a shot. This startling event led to the signing of the treaty of Adrianople. We may observe that, in our opinion, it was an accidental achievement—one which, looking at the present very altered condition of the Turkish defences, is not likely to be repeated.

STATE CAIQUES AT CONSTANTINOPLE.

THE state caïque in which the Sultan is conveyed to the Mosques on Friday, is a magnificent affair all picked out with gold and gaudy colours, with a large figure of a peacock at the prow. At this point sits his Highness's sword-bearer; in the stern, beneath a splendid canopy, sits the Sultan, his body-guard being placed behind him. The barge is propelled at a swift rate by six-and twenty sturdy *caïjees*, pulling a stroke of thirty seconds' interval. The caïque appropriated to the Pachas on the occasion of these state processions is not quite so grand as that of the Sultan, but, very much in character. The various Ambassadors have also their state caïques, which they call into requisition when proceeding to an audience with the Sultan, or to attend a meeting of the Grand Council. We give a Sketch of Lord Stratford's caïque, which is the Landsomest and best appointed on the Bosphorus.

LITERATURE

KISMET; OR, THE DOOM OF TURKEY. By CHARLES MAC FARLANE. Bosworth.

Mr. Mac Farlane visited Turkey in 1827-8, and, after he came home, wrote two volumes of abuse against the Turks. He made another visit there in 1847-8, and published two more volumes, thicker than their predecessors, and filled with much more violent abuse. This gentleman now pursues the labour of love by publishing a small duodecimo volume, in which he compresses all the bitterest passages in his former works, together with many bitter things from the writings of others—the object of the whole being to establish a "Kismet" or Doom-sentence against "the effete, expiring Ottoman Empire;" and to prepare the world for the succession to its place of "the civilised, wise, and enlightened" power of Russia.

Mr. Mac Farlane—anxious to establish a character for impartiality—declares, at the very outset, "I should never have thought of going to Turkey in 1847, if I had not been induced to believe that since my sojourn there in 1827-8 the Government and the condition of the people had been greatly improved." He had heard some misgivings about a Tanzimut, or new constitution, establishing religious freedom, and equality of rights, and abolishing many old abuses, which filled with joy his fine philanthropic soul, and, he asseverates, "I went honestly in search of this improvement," but only in the same breath, "cruel, in every way, was my disappointment: I had not been a week at Constantinople before I saw good grounds to suspect that the boasted Tanzimaut was a sham and an imposition [an old Frank, whom he met on landing at Smyrna, before arriving at Constantinople, had perhaps prepared him for this painful suspicion, by assuring him "it was all *bosh*," "not worth more than *that*," knocking off the ash from his cigar]; and during the eleven months (in all) that I remained in the country, this mournful conviction was everywhere, and nearly every day, forced upon my mind, that Turkey was in an incomparably worse condition than that in which she stood when I left her in 1828. Those years had been not years of progress, but years of rapid, awful decline. In that interval the Osmanli Turks had lost not only their old fanaticism, but their very religion, and, with their creed and faith, their patriotism, has died out and is extinct."

We come across all this, and much more of the same kind, before we turn the third leaf of this spiteful little book; and fortunately so, for it at once betrays the *animus* of the writer, and prepares us to attach their due weight to the assertions and opinions which follow. Two pages on he lets out his Russian predilections, and asserts, "As far as the people are concerned, I am persuaded that even a Russian army, preserving good discipline and carefully abstaining from any insults to the women (there remains little or no religious feeling to offend) would not encounter, in any of the parts of Asiatic or European Turkey I visited, the slightest resistance from the Mussulman population, although the people are all armed." In short, the two or three hundred thousand troops which we are told have, within the last three months, flocked from all parts of European and Asiatic Turkey to the defence of the Danubian frontier, on the mere threat of invasion are a myth; the "fanaticism" of the Mussulman people, which has lately forced the Sultan, after long hesitation, to declare war against Russia, is all a delusion; and the whole of the Mahometan millions of Anatolia and Roumelia are prepared to submit, without a murmur, to the yellow-haired barbarians of the North "at sight,"—which is their "kismet," or destiny.

Our author, however, in a subsequent chapter, assures us that although "Russia may, and assuredly will, have a part of these dominions, she will never have or aim at the whole of them;" an assurance which, considering the air of authority which Mr. Mac Farlane assumes, and the reputation of authority which he enjoys (?) as being in the confidence of the Russian Government, will, doubtless, afford some consolation to the diplomatists of Europe, now so seriously engaged in watching, we cannot say controlling, the course of events in this quarter.

In short, as we have darkly hinted, Mr. Mac Farlane is the avowed advocate of the Emperor Nicholas in this little affair; and consents to play second fiddle to that poor bigoted old man, Count Nesselrode, who, in a recent profusion of "Notes," has astonished the world with his unlimited confidence in the ignorance of his readers. The "noble sentiments" and kindly professions with which Mr. M. set out upon his task are soon forgotten; the very intention with which that task was set about—that of ascertaining the actual condition of affairs in Turkey, after a brief experience of very recent reforms—is lost sight of; for whilst he adds nothing as the result of his own observations to what he wrote in 1847-8, he cites, as in confirmation or support of his then formed views, whole pages of abuse and condemnation from various hands who wrote and published long before the time when the reforms in question were even dreamed of:—*ex gr.* "an able writer in the *Quarterly Review* twenty-four years ago;" another ditto in 1833; Marshal Marmont, in his "Present State of the Turkish Empire," translated into English, 1839; Wm. J. Hamilton, Esq., 1842; Monsieur V. Fontanier, "who travelled or resided in Turkey by order of the French Government from 1829 to 1829, and who witnessed the introduction of most of the so called reforms" (the Tanzimaut, observe, was promulgated in Nov., 1839), and who "has left a deplorable picture of the state of the country and the vices of its Administration," Monsieur M. Blanqui, "who was despatched by the late Louis Philippe on a mission to Bulgaria and Constantinople in the summer of 1841," and "who draws a still more gloomy picture of Turkey in Europe;" and one Sandys, who made a journey to Constantinople as long ago as A.D. 1610, and in due course published his "Impressions de Voyage." These and many others, equally stale and innocent of the question, are the authorities whom Mr. Mac Farlane calls to his aid, when denouncing the failure of a new and reformed system of government, the first idea of which was only instituted in November, 1839, and which was not carried into practical effect, in its most essential provisions, till various subsequent periods. This is the sort of evidence upon which we are expected to pronounce the Tanzimaut "all bosh," "improvement hopeless," and, rallying with Mr. Mac Farlane to the war cry "Down with the Turkish Government!" prepare for "the expulsion of the Turks as a governing power from Europe and a good part of Asia Minor."

For our own part we are no apologists for the many shameful cruelties and abuses which have disgraced the rule of the Osmanlis down even to a period within the memory of the present generation; but, whilst condemning those acts, and the system under which they were almost unavoidably perpetrated, we feel bound to hail the promise of amendment so solemnly made under the present Sultan, and to encourage its realisation; nay, more, we are fain to observe with satisfaction that that promise, unlike the concessions of too many Christian monarchs, was not intended as a thing of words only, but an undertaking to be zealously and honestly carried into effect. Undoubtedly, the old machinery of government, through whose agency, or rather in spite of whose opposition, many of the new reforms have to be made operative, is a very bad one; and very much of the power and the supreme authority has much difficulty in making itself felt in distant parts of the empire; but these obstructions have been dealt with patiently and resolutely by the present Sultan, supported by the more enlightened of his advisers to a large degree, on the principles of religious toleration and of even-handed justice in which the Tanzimaut of Gulhana was conceived are beginning to be felt. The few instances of abuse and persecution perpetrated in the remote districts, which Mr. Mac Farlane makes so much fuss about, are unquestionably the exceptions, and not the rule (he does not pretend to look upon them in other light); and in these, as in all other cases of the kind, the wrong-doer has always been severely punished, regardless of personal influence, so soon as his offence became known to the supreme authorities.

It is the knowledge of these facts, and of other proofs, on the part of Turkey, of a desire to ameliorate her domestic condition, and improve her natural resources, which alarms and annoys her liberal and once Christian neighbours, Austria and Russia. Of the truth of this assertion are abundant proofs, which cannot fail of coming to the knowledge of all impartial travellers, even before—like Mr. Mac Farlane—they have been a week in Constantinople.

The long and thus policy by which Russia and Austria some years ago conspired for closing up the Danube, was especially intended to operate to the prejudice of Turkey, by the interruption of exports from the rich fields of Bulgaria to the capital; and, through it, to the western nations of Europe. Moreover, the quarantine regulations arbitrarily imposed by Russia, not only prohibited the vessels descending the Danube from the Black Sea from touching at any of the towns on the Turkish or right bank of the river, but also prevented all communication between the latter and the Turkish provinces of Wallachia and Moldavia on the opposite bank. Sultan Mahmoud projected the formation of a canal, or rather the re-opening of an ancient channel, between the Black Sea at Kustendjeh, and the Danube at Tchernavoda, opposite Rassova, which would have been the substitution of a direct passage of thirty, instead of a circuitous passage of three hundred, but was prevented carrying out his intention by the Court of St. Petersburg; and more recently, when the Turkish Government, with a view of establishing a direct means of intercourse between the capital and its rich European provinces, employed English engineers to make surveys for a railroad from Belgrade via Adrianople to Constantinople, the whole machinery of Russian and Austrian intrigue was set to work to prevent the carrying out of this important and useful design, and to poison the minds of the more susceptible members of the Divan with the apprehension that the only result of this project would be to place the country at the mercy of England, as it would enable the latter to march and take possession of Constantinople whenever she thought proper.

It is the misfortune of Turkey that, in her struggles for moral and social regeneration, she has to contend not only against the prejudices of her ancient enemies, but the jealousies of uncertain, obvious neighbours, who do not hesitate at any act of baseness by which they may foment treason and discontent within the proper dominions of the Porte. It is the misfortune of Europe, which, by the interests and the common law of nations, is bound to assert the inviolability of the territories of the Porte against wanton attack, that such men as Mr. Mac Farlane should be found ready, for the trifling perquisites of literary labour (supposing no higher motive than pecuniary reward to be in view) to "make the worse appear the better cause," and prejudice, so far as in him lies, the march of natural and political justice.

We have thought it right to say thus much in general denunciation of the odious purposes of the little volume. If we were to cite a third of the instances of extraordinary assertion in fact and opinion which we had marked, with the comment they would provoke, we should fill more than twice the space we have already occupied. Our readers, we are sure, will agree with us that examples may be much more usefully employed. We will, therefore, confine ourselves to two or three points only, which are worthy of remembrance of all. Mr. Mac Farlane laments the fall of the Janissaries, who, "if they made frail revolutions, sometimes made good ones;" he loves the old Turkish aristocracy, who, "albeit turbulent and lawless at times, did yet contain, and at all times, noble and improvable elements;" he sticks up for their military tenures, by which, "when the Sultan was engaged in war, they furnished him troops, equipped and mounted at their own expense, and sent some of the family to command," whereas the fact is notorious that the Janissaries had, during a series of ages, degenerated into a band of robbers; and that the holders of the military *fiefs* had long ago evaded the performance of the duties by virtue of which they held their lands, paying a small annual tribute of a few piasters, by way of compensation; and that, when the Sultan Abdul Hamed endeavoured to re-organise the *fiefs* upon their original footing, the opposition of the "noble and improvable" military feudatories was so strong, that he was soon obliged to abandon the attempt. It was under these circumstances that the formation of a regular disciplined army was resolved upon, an institution which Mr. Mac Farlane ridicules as an absurdity, but which, in the opinion of high military authorities from western Europe, has been well and creditably established. What its efficiency is a question which will shortly be decided, but which will not be affected by any observations of Mr. Mac Farlane.

Finally, Mr. Mac Farlane protests that, in the pending quarrel between Russia and Turkey, Russia is "not the aggressor"—that she has violated no treaty by the invasion of the Principalities, being driven reluctantly to it by the conduct of England and France in sending their fleets to Beshka Bay—notwithstanding the flagrant absurdity of this assertion, so crushingly and damningly exposed, when first promulgated by his aged friend, Nesselrode. True, in repeating the absurd lie he is backed by many observations of Mr. Mac Farlane.

Lastly, Mr. Mac Farlane protests that, in the pending quarrel between Russia and Turkey, Russia is "not the aggressor"—that she has violated no treaty by the invasion of the Principalities, being driven reluctantly to it by the conduct of England and France in sending their fleets to Beshka Bay—notwithstanding the flagrant absurdity of this assertion, so crushingly and damningly exposed, when first promulgated by his aged friend, Nesselrode. True, in repeating the absurd lie he is backed by many observations of Mr. Mac Farlane.

Let us take a familiar illustration. My next-door neighbour may invite whom he pleases, so long as his guests cause me no annoyance or danger; but, *if he brings in two big bullies, armed to the teeth, and threatens me and my family*, have not I a right to take possession of my next-door neighbour's premises, if I think that by so doing I may provide for my own safety and protect those who are dear to me?

Simply observing that the above "flashy" passage may be taken as a fair specimen of the author's fine Saxon style, we dismiss his book without further comment.

IRISH SUGAR.—The first annual meeting of the Irish Beet-root Sugar Company was held on Monday, when a very satisfactory report from the directors was read and unanimously adopted. The works have all been erected, and operations have commenced. The sugar produced has been pronounced extremely good; and the prices obtained in London, Dublin, and Belfast, "have proved beyond question that the sugar obtained from beet can compete successfully with the colonial produce of the cane."

PROVINCIAL INTELLIGENCE.

ST. MARGARET'S, NEAR RICHMOND.—The beautiful estate on the banks of the Thames, a short distance from Richmond-bridge, comprising the noble mansion built for the Earl of Kilmorey, and the picturesque park of nearly fifty acres, has just been purchased for the Conservative Land Society. The estate has a fine frontage, affording most extensive views of the Thames immediately opposite Richmond-gardens, and within a short distance of three stations on the South-Western Railway. It is proposed to ensure, as far as possible, the erection of first-class houses, in order to render the purchase a real public improvement to this charming suburb.

THE COAL TRADE.—SHIELDS.—The first sea tide that has happened for a fortnight took place on the 29th ult.; and, in consequence, an immense fleet left the north coal-laden. It was calculated that not less than 900 vessels had gone to sea since the 20th left the Tyne alone. A very unhappy feeling exists between the sailors and a considerable portion of the ship-owners of this port; and, if some arrangement be not come to, it will no doubt, lead to considerable embarrassment and unpleasantness during the winter months.

SINGULAR PHENOMENON AT ABERDARE.—A curious circumstance has just occurred at the Gadlys Iron and Coal Company's works, in Glamorganshire; when, as some workmen were sinking a shaft, at a distance of 88 yards below the surface, they came upon a most extensive mass or "blower" of explosive gas, which burst out of the solid rock. Its occurrence inspired further confidence for some time, but, at length, a plan was devised by which the explosive power was collected and carried to the surface. This was so managed, that, at a height of five yards from the ground, the gas was ignited, when it burst out into a flame three yards in length. At night this luminous mass attracts great attention, and can be seen from a great distance. Competent judges state that it will last for a great length of time.

"TEMPERANCE" EMIGRANT SHIPS.—A correspondent at Liverpool says the *Argo* has brought the news of the safe arrival at Melbourne of the *John Barrow*, the first of Griffiths, Newcombe, and Co.'s Temperance Line of Packets, with about 150 passengers. The commander, Capt. Cary, states that during the voyage no intoxicating drinks were taken by the passengers or crew, or even administered as medicine. He adds that not only were there no deaths on board, but not a single case of sickness. The passengers expressed themselves much pleased with the provisions and the conduct of the officers, and twenty of them, including the surgeon, signed the temperance pledge.

NEW CONVICT DEPOT.—It is said that one of the Inspectors-General of Prisons has been sent by the Government to inspect and report on Clare Island as a depôt for convicts under the new "Penal Servitude Act." This island was lately the property of Sir Samuel O'Malley, Bart., but now belongs to the Law Life Assurance Company. It is situated at the entrances of Clew Bay, and contains about 4000 acres, the greater portion of which is arable. The climate is mild and salubrious; and, from the bold character of its coast, except at the landing point, it offers very great advantages for the establishment of a convict depôt.

DIRECT HASTINGS RAILWAY.—A direct railway from Hastings into the heart of London is proposed. It will have a terminus almost under the shadow of St. Paul's cathedral, with subterranean branches to the General Post-office. It is proposed to enter the City over [illegible] to be erected between Blackfriars and Southwark. In its course out of London, the new line will traverse the miserable localities lying between Bankside and the Elephant and Castle, where the first station will be formed. Passing through the densely populated district lying between Walworth and Brixton—hitherto unprovided with railway communication—the line will proceed direct to Tunbridge, where a junction will be formed with the Hastings branch of the South Eastern Railway. An important feature in the undertaking is a short branch to the Crystal Palace at Sydenham, by which that national edifice will be brought within a nearer distance of the City than by any other railway, with the great advantage of a direct river approach. A meeting in support of the scheme took place at Hastings on Monday—the Mayor in the chair—when resolutions to carry out the proposed line were unanimously passed.

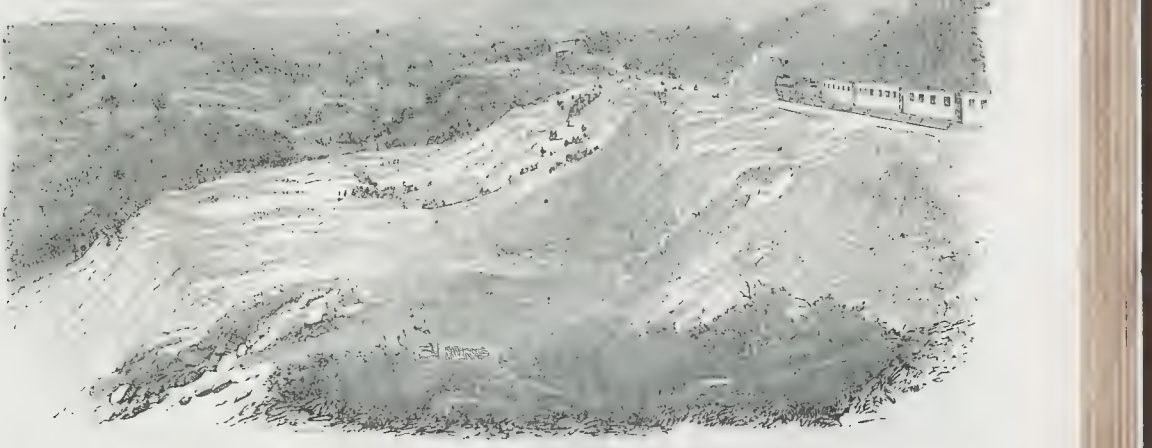
THE HEREFORD RAILWAY.—The opening of this railway was celebrated on Saturday week with the usual festivities. Mr. Ormsby Gore, M.P., chairman of the Shrewsbury and Hereford, the Hon. R. Clive, M.P., chairman of the Shrewsbury and Birmingham, Mr. Robertson, engineer; and Mr. Brassey, contractor for the line; Major Gore; Sir R. Jenkins, G.C.B., and other public gentlemen were among the visitors. With singular good fortune the occasion was favoured by a cheering sunshine. A procession was formed, which walked to the Shirehall, through the principal thoroughfares. There was afterwards a luncheon. The Mayor, in his speech, trusted the future was not a distant one, when, by more economical [illegible] Hereford would become a point to which the trade of Liverpool and Manchester on the north, the South Wales coal-fields on the south, and the manufacturing districts of mid and east England, would converge.

REMOVAL OF LAMPETER COLLEGE TO BRECON.—It is stated that there exists an intention, on the part of the Ecclesiastical Commissioners, to remove the college of St David, at Lampeter, from that town to Christ Church College, at Brecon; and likewise, that the portion of the diocese of St. David, in which the latter is situated, is to be severed from that see and annexed to the diocese of Llandaff. A committee was appointed during the last session for the purpose of making inquiries respecting Christ College, Brecon; and in their report to the Commons, they recommended that a clause should be inserted in a bill, prepared by them, empowering the Commissioners to effect this removal. It advised, and it is now affirmed that the Commissioners intend to use this power. This year a larger number of students have been admitted than for a number of years past.

CHARGE OF STEALING GAS.—Mr. Wayling, a surgeon-dentist, was indicted at the Bury St. Edmund's quarter session for having feloniously consumed 5000 cubic feet of gas belonging to the Bury Gas Company. The evidence went to prove that the prisoner had forced back the meter, but paid for all the gas registered. This, his counsel argued, was no larceny, inasmuch as the Gas Company voluntarily put into possession of the person they supply with gas, all the gas which passes through the meter, they could not in respect of that possession so acquired charge a larceny—there was no asportavit. The Court concurred in this view of the case; and the jury, under its directions, returned a verdict of acquittal. Gas companies, it appears, have a legal remedy in such cases by a different course of proceeding.

THE RECENT LAND-SLIP ON THE LONDON AND BRIGHTON RAILWAY.

THIS slip took place near the Balcomb Tunnel, on the 20th ult. The following details have been collected by the Artist of the accompanying Sketch: The land adjoining Binham's Wood, near Kemp's Farm, has been for some time giving signs of yielding; and the heavy rains subsequent to the formation of a new fifty-yard foundation. At eight o'clock on Thursday morning, Mr Fletcher, one of the contractors for the permanent way, was in the train from Brighton to London, when, feeling a jolt in the carriage, he looked out, and saw that both lines had sunk more than six inches. Guessing that a land-slip had occurred, he desired the engine-driver to stop; which he feared to do, as the express was close behind; accordingly, he drove on to Three Bridges Station. As soon as Mr. Fletcher reached Three Bridges Station, he took the pilot-engine back at the rate of sixty miles an hour, to prevent the express crossing; but was too late—the engine-driver having seen the slip, and passed over the line safely, at the rate of a mile an hour. Two other trains were allowed to pass over, Mr. Fletcher and three men having shored up the lines as well as they could; but the danger was now too imminent to permit this to continue. Before evening 100 men were on the spot; and, the whole mass of earth continuing to descend, prompt measures were immediately taken to secure one of the lines for traffic, that next Binham's Wood being useless. By means of shoring up the opposite side, and shifting the rails, that line is now tolerably secure, the trains passing over it very slowly. The full extent of the slip proved to be the sinking of 70,000 cubic yards of chalk, along 200 yards of the line, into the valley wherein stands Binham's Wood. Here it carried some large oak-trees, in a vertical position, ten yards from where they originally stood, and moving the wood *en masse*—earth, trees, and underwood—down towards a considerable brook which takes its course through Binham's Wood. This large tract of land moved three or four feet in a day, and, fearing that it would inevitably stop up the brook, it was deemed advisable to cut a new course, about 300 yards long, a task of considerable difficulty, on account of the timber, and the spreading of the roots. On Thursday evening week the trains on either side of the slip were stopped, and the passengers had to cross on foot by means of naphtha lights and fire-pans—or as they are technically termed, "devils"—the space was brilliantly lighted up. Great praise is due to Mr. Fletcher for his careful and admirable arrangements, and his unwearied exertions to secure, not only the safety, but, as far as possible, the convenience and comfort of the passengers. The line has been rendered secure for traffic: some further time must, however, elapse before this—one of the most extensive railway land-slips on record—will have been fully repaired.



SCENE OF THE RECENT LANDSLIP ON THE LONDON AND BRIGHTON RAILWAY.

THE BURMESE WAR.—DEPARTURE OF GENERAL GODWIN FROM PROME.

(From a Correspondent.)

On the 1st of August last the army of Burmah was brought on the peace establishment agreeably to the orders of the Governor-General. This was principally effected by recalling General Godwin to his divisional command in Sirhindh, the breaking up of his personal staff, the reduction or doing away with certain staff salaries and appointments, &c. General Godwin left Prome, on his way to Bengal, on the 23th of July. A day or two previous to his departure he issued the farewell order to the force, in which he took leave of all who had been under his command, paying the force a very high compliment, in telling them that "for a year and four months, whether in the field or in quarters, they had not given him one hour's trouble or anxiety; that their conduct had ever held an even and honourable course;" and pointed out the "singular fact that, though with troops of three distinct services under him, not the occasion of interest had come to his knowledge." All had been harmonious. Such circumstances increased the painful feelings he had at parting with his men, from whom he had never been absent a day, but had shared with them their toils in the field, and quarters in the [illegible]. To all in any way deserving his thanks they were gracefully and gratefully tendered, as a testimony of his warmest feelings towards his brother soldiers." The day previous to his departure he was receiving farewell visits, from morning till night, from all the European and native officers of the Prome force. It was, as he said, a very gratifying but very trying day to him. That day Sir John Cheape, in his orders, invited all the heads of departments to meet him, the following day, at about noon, to receive the General at the place of embarkation, for the "purpose of taking a final leave" of him. Accordingly, at about the appointed hour, a great concourse began to collect at the river side near the *Indus* steamer, which was moored close to the bank, with her steam up, and *flat*, ready to take in tow. Not only were Sir John Cheape and staff, and the Brigadiers with their [illegible] also present, with the heads of departments, but nearly all the officers of the garrison turned out, wishing to pay him this last and befitting mark of respect. The accompanying Sketch represents the scene as viewed from the Commissariat defences. In the distance, close Going, to the southward, is faintly visible; nearer, on the left of the sketch, is Nameau Point, where the General had a country bungalow; opposite is the White Pagoda, nearer, on the heights to the left, are the 40th Bengal N.I. Barracks, where Sir John Cheape also lives; and at the foot of the hills are seen the 64th Barracks, [illegible] distance are the Madras Horse Artillery [illegible] salute on the General's embarkation. On the side of these were crowds of soldiers, Sepoys, Burmese, and others; while near the point of embarkation are a Guard of Honour, composed of the 40th Bengal N.I. on the right; then the 67th Rifles and the Sikhs on the left—the whole under command of Major Minchin; while opposite are a considerable group of officers exchanging to the foreground, where, headed by Sir John Cheape and staff, they advance to meet the General [illegible] as they approach the river bank. The General was evidently unprepared to encounter the many he now assembled to meet him. Bowing to those around him [illegible] he came addressed his officers, and once more had them adieu, but apparently overcome by his feelings was unable [illegible] passing in amongst us, his hands were stretched out to all around him, [illegible]. There was hardly an officer who did not shake hands with him—all seemed by the pressure round him to be very desirous of [illegible]. Coming near Major Fraser, the commanding engineer, his valued ally, he was visibly affected; and, [illegible] him by the hand, [illegible] placed his hand on the Major's shoulder, in parting with him, spoke volumes. The whole guard of honour then next came under his notice [illegible] passed slowly along [illegible] parting salute of presented arms; beyond these, the great crowd [illegible] the esteem in which he was [illegible]. He then descended the bank, where he was met by Captain Hamilton, of the *Indus*, leaning on whom he passed along the platform which led on board; where no sooner had he gained the deck than the Hon. Company's flag rose in joint salute with the report of the first gun from the Horse Artillery. Quickly getting the flat attached, the steamer dropped from the bank; cheering off she went ahead; then, turning her head southerly, she passed us as we stood during the bank. It was then that many were heard saying "Now, Sir John; now, sir, give the time!" So, taking off his cap, the Brigadier-General led off such a cheer on cheer as Prome never heard before. Coming to the gangway, the General, uncovering, and placing his hand on his heart, stood bowing his acknowledgments, till the turning of the steamer took him from view. He received a hearty reception at Rangoon; and, at a public dinner they gave him there, he declared that the parting cheer his comrades gave him at Prome "was more gratifying to his feelings, and he considered a far higher compliment, than any honours that his country could bestow on him." The accompanying Illustration is from a sketch by Lieut. Ford.

CLOSE OF THE DUBLIN INDUSTRIAL EXHIBITION.

(From the Morning Advertiser.)

THE last scene of the splendid drama enacted in Dublin during the last six months, was brought to a close on Monday afternoon, and the Great Exhibition of 1853 is among the things that were. All is now silence to the general public in the exterior of the building, in which so many hundreds of thousands have derived instruction and amusement, and from which, it is to be hoped, will yet spring up one of the greatest permanences to Ireland and Irishmen. The attendance on Monday, notwithstanding the increased price of admission, was unprecedented in numerous. This was not to be wondered at; but it is, we confess, when it is stated that a large proportion of the visitors was composed of peasants and artizans. The most crowded period was from two o'clock, when the season-ticket holders flocked in to witness the closing scene, and take one final look at some of the favourite objects of the superb collection. It was announced that a ceremonial, accompanied by a grand musical performance, would take place at three o'clock; and long before that hour the great hall and galleries were

DEPARTURE OF GENERAL GODWIN FROM PROME.—(SEE PRECEDING PAGE.)

filled almost to suffocation, rendering it nearly impossible for those who had passed their time in inspecting the treasures of the place, to secure even standing room in the central part of the building.

The ceremonial was similar to that which took place at the opening of the Exhibition, in May last. The semicircular space beneath the great organ was converted into an orchestra, and accommodated upwards of 500 performers, under the able leadership of Mr. Joseph Robinson. A dais, covered with scarlet cloth, was erected in front of the orchestra, and thereon stood two handsome chairs for the accommodation of the Lord-Lieutenant and his Lady; and in the immediate vicinity of the dais were a large number of titled and distinguished personages, and several military bands which came to assist in the orchestral performances.

At a quarter before three o'clock, the cheering outside announced the approach of the Lord-Lieutenant and Countess; and immediately after their Excellencies entered by the grand entrance, preceded by Alderman Roe, Mr. Dargan, and the other members of the Exhibition Committee. As soon as they entered the Great Hall the military bands struck up the National Anthem, and the vast assemblage burst into one hearty and enthusiastic cheer, which made the walls and roof of the building ring again. The cheering continued at short intervals until his Excellency reached the dais, when still more vehement acclamations broke forth, no small proportion of which were evidently intended for Mr. Dargan.

His Excellency then took his seat on the dais, the Countess of St. Germans occupying the seat immediately on his left. The Right Hon. the Lord Chancellor, the Right Hon. the Lord Mayor, and the other distinguished personages, also took up the positions assigned them. Amongst those present we noticed the Provost of Trinity College, Lord Talbot de Malahide, Lord Massareene, Lord Ward, Lord Dunboyne, Sir Edward and Lady Blakeney, Sir Edward M'Donnel, the Earl of Bective, Sir John Young, the Marchioness of Londonderry, Colonel Pennefather, William Dargan, Esq., Viscountess Gort, Colonel Browne, Colonel Eden, the Attorney-General, Sir John Benson, the members of the committee, &c.

His Excellency the Lord-Lieutenant then arose from his seat, and Mr. C. P. Roney, the active and energetic secretary of the Exhibition, having been introduced by Alderman Roe, his Excellency desired him to kneel, for the purpose of receiving the honour of knighthood. Mr. Roney having obeyed the request, his Excellency touched him with a sword, and said, "Rise, Sir Cusack Patrick Roney," whereupon a loud and hearty cheer proceeded from the assembled multitude, who thus evinced their approbation of the honour conferred upon the talented gentleman. The worthy Knight was heartily congratulated by the chairman of the executive committee, Mr. Dargan, his brother secretary Mr. Deane, and several other friends. Lady Roney was subsequently introduced to the Earl and Countess of St. Germans, to receive their felicitations

His Excellency then came forward, and, in a clear distinct voice, said:—

I cannot declare the Great Industrial Exhibition of 1853 to be closed without expressing an earnest wish for the health, happiness, and prosperity of the man to whom we are all indebted for the instruction we have received from the many productions of art and nature which are contained within these walls. I also desire to acknowledge the liberality of the owners of these treasures for permitting them to be exhibited. Let me also pay a tribute of praise to the committee, the secretaries, and the other officers connected with it, for the zeal, the assiduity, and the intelligence with which they have discharged their many duties. Lastly, let me, in the name of this assembly, offer to Almighty God our heartfelt thanks for having blessed and prospered this undertaking. I now declare this Exhibition to be closed. His Excellency concluded by calling for three cheers for Mr. Dargan (Loud and prolonged applause).

A Voice.—A cheer for the Lord-Lieutenant (Loud cheers).

This part of the ceremonial being concluded, the National Anthem was performed by the organ and orchestra, assisted by the military bands; after which their Excellencies retired, at half-past three o'clock, accompanied by the committee to the grand entrance; and in the course of another hour the gay throng separated, and left the building—the entire ceremonial occupying only one hour.

CLOSE OF THE IRISH INDUSTRIAL EXHIBITION.—MR. RONEY RECEIVING THE HONOUR OF KNIGHTHOOD.

CAPTAIN M'CLURE, R.N.

ROBERT JOHN LE MESURIER M'CLURE, the discoverer of the North-West Passage, was born in the county of Wexford, in Ireland, in the year 1808. His father, Captain M'Clure, formerly of the 89th Regiment,

CAPT M'CLURE, R.N., DISCOVERER OF THE NORTH-WEST PASSAGE.

who served during the campaign in Egypt, under Sir Ralph Abercrombie, married Jane, only daughter of the venerable John Eyre, who, for a period of nearly fifty years, was Rector of the parish of Wexford, and Archdeacon of the diocese of Ferns. Captain M'Clure, the subject of this memoir, being originally intended for the military profession, was sent to Winchester School, then to Eton, and subsequently entered Sandhurst College. After pursuing his studies, he changed his mind, and expressed a wish to enter the naval profession, in preference to the army. He left Sandhurst, and was appointed midshipman on board the *Victory*, Lord Nelson's old ship. Captain M'Clure served in various parts of the globe till the year 1836, when the Government having determined on sending an expedition to discover, if possible, the North-West Passage, he volunteered his services, and was appointed to her Majesty's ship *Terror*, commanded by Sir George Back. The expedition remained out nearly two years at the North Pole. On her return home, the *Terror* was driven into Lough Swilly, on the coast of Ireland, in a disabled state, from injuries received by her whilst in the ice. From 1838 to 1842 Captain M'Clure was on active service, on board the *Hastings*, *Niagara*, and *Pilot*. In June, 1842, he was appointed to the command of the *Romney*, at the Havannah, where he remained five years. In the year 1848 Captain M'Clure volunteered to accompany Sir James Ross on a second expedition to the Arctic regions, having in view the double object of searching for Sir John Franklin, and the discovery of the North-West Passage, and was appointed first lieutenant on board the *Enterprise*. That expedition returned in November, 1849, when Captain M'Clure was raised to the rank of commander. In the following month the Government determined on again sending a similar expedition to the Polar regions, when Captain M'Clure a third time volunteered his services, which were accepted by the Admiralty, who gave him the command of the *Investigator*, in which vessel he sailed in March, 1850, from Sheerness, in company with the *Enterprise*, Captain Collinson. Previous to their arrival at the Sandwich Islands, they parted company, when Captain Kellett, commanding the surveying ship *Herald*, wishing the *Investigator* to remain till the *Enterprise* came up, telegraphed his commands to Captain M'Clure, whose reply appeared soon afterwards in the public journals, which we now copy:—

When her Majesty's ship *Investigator* reached the Sandwich Islands, on her way to Behring's Strait, she there fell in with her Majesty's surveying vessel *Herald*, Capt. Kellett, C.B. The *Enterprise*, Capt. Collinson, C.B., had not at that time made her appearance, and as the season was drawing on, Commander M'Clure expressed a most anxious desire to proceed. Captain Kellett seemed, however, desirous that he should wait the arrival of his consort, but at length consented that he should continue his voyage. Commander M'Clure lost no time, weighed anchor immediately, and made sail. Captain Kellett, however, on second thoughts, decided upon recalling him; but it was too late; the gallant commander of the *Investigator* could brook no further delay, and telegraphed in reply, "*Important duty—own responsibility, cannot stop*," and dashed on with an energetic determination to accomplish the object for which he had been fitted out.

Captain M'Clure expressed his determination, before leaving England, that he would either discover Sir John Franklin, or the North-West Passage, or never return. What dangers he has undergone, and what privations he and his brave followers have endured to redeem his pledge, his despatches to the Admiralty, now published, will show. We quote from a contemporary the following summary, in the spirit of which we heartily coincide:—

The results of the labour of our famous countryman cannot be estimated by the addition of geographical knowledge thus contributed, by the reduction of the labours of navigation, or by any commercial prospect which they appear to open up. For all practical purposes, this last-named task might never have been performed or undertaken. There are few seasons in which the North West Passage, though discovered, would be possible. The results of this expedition are of a more nature, they exhibit the conquest of human intelligence over the elements in their most appalling forms—they represent the successful conflict of mental energy with the powers of nature in that dread domain. The despatch of Commander M'Clure displays an amount of resolution, fortitude, and self-devotion, as honour is due to human nature as it is truly marvellous. We have read documents written in the presence of great peril, or under the shadow of an impending fate; such documents are to be found in ancient as well as modern history, and they extort our admiration, even in the case of those whose life to fame rests upon such displays of firmness; but the man who, in 74 degrees north latitude, far from all human assistance—uncheered by intelligence from home—disease and death his followers "sealed to the deep" with starvation staring him in the face—the man who, under such circumstances, can calmly commit his thoughts to writing, possesses enviable firmness. The man who is so collected under such circumstances, that he omits nothing which is necessary to be done, is still more to be admired—but he who not only does all this, exhibits all the firmness and sagacity, but who determines, moreover, in the midst of all, to go forward while *life lasts*, has attained the climax of heroism, acquires justly imperishable renown, as a bright example of the noblest qualities of our nature. Such a one has Captain M'Clure proved himself to be. The following extract from the despatch of this gallant sailor, attests the calmness and nerve, with which he contemplated being lost in the Polar regions:—

"After quitting Port Leopold, should any of her Majesty's ships be sent for our relief, a notice containing information of our route will be left at the door of the house on Whalers' Point, or on some conspicuous place. If, however, on the contrary, no intimation should be found of our having been there, it may be at once surmised that some accident has happened either from our being carried into the Polar Sea or shipwrecked on Barrow's Strait, and no survivors left. It should still be the case which I will not, however, anticipate—it will then be quite unnecessary to penetrate further westward for our relief, as by the period that any vessel would reach that part, we must, for want of provisions, all have perished. In that case, I would submit that the officer may be directed to return, and by no means incur the danger of losing other lives in *search of those* who then will be no more."

Such was the language of Commander M'Clure, as he was about to commit himself to the chances before him. Captain M'Clure and his brave followers have, however, devoted themselves to the service of a nation which knows how to value the noble qualities they displayed. All honour to the gallant Commander and his devoted band of followers, who have thus enlarged the domain of geographical discovery, at no little inconvenience, and no small risk of danger, to themselves.

CONSECRATION OF THE CHURCH OF ST. MICHAEL, CHERRY-BURTON, YORKSHIRE

THE foundation-stone of this church was laid on the 5th August, 1852, by Miss Burton, of Cherry-Burton, when coins of the year, with a written parchment, were embedded in the stone. A handsome silver trowel, with which the ceremony was performed, had previously been presented by the inhabitants of the village to Miss Burton.

The ceremony of consecration took place on Monday, the 24th ult., by the Archbishop of York, who also preached, assisted by the Archbishop's chaplain (the Rev. Canon Dixon). The service was taken by the Rev. Canon Wray, the Rural Dean, and the Rev. J. F. Hicks; most of the neighbouring clergy also attended. The funds necessary to defray the expense of this church, as originally designed by Mr. C. Vickers, has been raised by subscription from the neighbouring land-owners, a small rate raised by the consent of the parish, and the contributions of a few friends. Amongst other gifts to this church was the communion silver by the Rector, the Rev. R. Swann; the communion cloth by Henry Grimstone, Esq.; the cushions were worked by Mrs. and Miss Sand, and M. Burton; a handsome set of books by Captain and Miss Boghurst; carved oak alms basins by the Rev. E. Robertson; three handsomely-carved oak chairs (one of which formerly belonged to the Earl of Warwick), by the Rev. J. Major; the bells by Miss Burton, assisted by a few friends; also the font-cover and the second book for the communion-table, by Miss Burton. The cost of the churchyard wall and gate was defrayed, one-third by the parish, and the remainder by David Burton, jun., Esq., who, in various ways, by purse and personal exertion, has most materially aided in bringing the whole of this sacred work to a satisfactory conclusion. After the service, a collection was made of nearly £40.

The architecture of the Church is Early Decorated in character, and consists of nave, chancel, aisle, and vestry: the west end has a tower, and on the north side is a stone porch. The walls are built of a grey stone, which contrasts pleasingly with the warm colour of the sand-

NEW CHURCH OF ST. PAUL, CHERRY BURTON.

stone used for the dressings, windows, carving, &c. The interior is simple in its general character. The font is the one that belonged to the former church. There is also a handsome stone carved pulpit, a small quantity of stained glass, and some carved stall ends for seats in the chancel. The church provides 360 sittings, of which 246 are for the poorer inhabitants of the parish. The roof is open, and ceiled between the rafters, the woodwork is stained dark oak, and the whole interior effect is well adapted for the purpose of a simple village church. The entire cost of the works, including boundary wall, is about £2000. The works were executed by Mr. Myers, of Ordnance Wharf, Lambeth, under the superintendence of Mr. Horace Jones, architect, 16, Furnival's-inn, London—both of whom were present.

LIEUT. GURNEY CRESSWELL, R.N.

LIEUT. S. GURNEY CRESSWELL, R.N.—the bearer of the despatches of Captain M'Clure, announcing the important discovery of the North-West Passage—is the third son of F. Cresswell, Esq., of Lynn, one of the

LIEUT. CRESSWELL R.N.—FROM A PHOTOGRAPH BY TAYLOR.

Northumberland family of that name. He entered the navy early in life, and served under Sir Thomas Cochrane, in China and the East Indies; and, when quite a boy, was selected to steer Captain Lister's boat, on the desperate service of destroying the piratical forts at Mulcodoo Bay. The attacking party had to break through a boom of formidable construction, which detained them under the fire of the forts for nearly an hour, and cost them the loss of seven killed and fourteen wounded. For that successful service, Commander Lister received his post rank. The year following Lieut. Cresswell had the honour of serving on the staff of Sir Thomas Cochrane, at the taking of Brunei, and other piratical forts. On his return to England, in the autumn of 1847, he joined the *Excellent*, gunnery ship; and went from her into her Majesty's ship *Investigator*: she was one of the ships then about sailing in the spring of 1848, under Sir James Ross, on the search for Sir J. Franklin. This was the commencement of Lieut. Cresswell's Arctic career. The result of that unsuccessful attempt is well known. Her Majesty's ship *Investigator* returned to England in November, 1849; and on the 10th December of the same year, the subject of our memoir was again appointed to that ship as Second Lieutenant. She sailed on her present memorable voyage on the 10th January, 1850, went through the Strait of Magellan; and, stopping four days at the Sandwich Islands, eventually rounded Point Barrow on the 6th August, in the same year. Although the north coast of America had been previously traced by boats and land travellers, no ship had ever before sailed to the eastward of Point Barrow. As far, therefore, as navigation is concerned, from that point commence those discoveries by M'Clure, which have terminated in his completing the long-sought-for North-West Passage, and which have added his name to those of the most successful and daring navigators of the age.

After three tedious winters, Captain M'Clure (then frozen up in Mercy Bay) entrusted Lieut. Gurney Cresswell with his despatches; and sent him in charge of the sickly portion of the crew—in all 27—to make the best of his way to the *Resolute*, Capt. Kellett, at Dealy Island, which ship he reached, having travelled 170 miles in ten days, without any casualty. Here, as his party from the *Investigator* were found, on

PRESENTATION OF AN ADDRESS TO LIEUTENANT GURNEY CRESSWELL, R.N., IN THE GUILDHALL, LYNN.

medical examination, to be unable to continue their difficult journey of 300 miles to Beechey Island, they were replaced by a sledge-crew from the *Resolute*, with whom Lieut. Cresswell reached H.M.S. *North Star*, Capt. Pullen, at Beechy Island, early in June. Returning home in H.M S. *Phœnix*, Capt. Inglefield, he landed at Thurso on the 6th Oct., 1853; and deliver d his despatches at the Admiralty on the 7th of the same month; having circumnavigated America during an absence from England of three years and nine months.

The Portrait we engrave is from a Photograph by Mr. W. Taylor, of High-street, Lynn.

TESTIMONIAL TO LIEUTENANT SAMUEL GURNEY CRESSWELL.

On Wednesday, the 26th ult., the ancient borough of King's Lynn was thrown into excitement, from its being the day chosen to present to this gallant officer a Testimonial from the Mayor, Aldermen, and burgesses, indicative of their high sense of the importance of the things which he had been the bearer, and his own personal share in the discovery of the North-West Passage.

Three o'clock was the appointed hour, but long before that time the booming of cannon, the merry ringing of the fine peal of St. Margaret's, and the flags floating from tower and mast-head, betokened the approaching ceremony.

The Guildhall was prepared for the occasion, and most beautifully decorated, as our Illustration shows—the north end being covered by flags tastefully displayed, whilst in the midst appeared the Standard of Old England. Laurels were wreathed around them, and in the centre were the initials "S. G. C." formed in dahlias. Beneath these decorations, a platform was raised for the Mayor and Corporation, and the hero of the days surrounded with seats for ladies, and the immediate friends of Lieut Gurney Cresswell. Every place was occupied, and the mass behind the barrier swayed to and fro from the pressure behind them.

Soon after three o'clock silence was proclaimed by the town-crier and the procession entered the hall: the maces carried by the respective officers, and the sword of justice—the gift of which to the Corporation of Lynn is assigned by tradition to King John—borne before the Mayor, who, robed for the occasion, with Lieutenant Gurney Cresswell by his side in full uniform, immediately followed by the Right Hon. Lord Calthorpe, and Rear-Admiral: Sir W. Edvard Parry as his supporters, ascended the platform. The Mayor seated the young officer on his right hand. Lord Stanley, M.P. for the borough of Lynn; the Recorder of Lynn, Martin West, Esq.; and the Fisher of Mr. Cresswell, with the gentlemen of the Corporation, took their places around them. A large number of ladies were present, among whom were the mother of the gallant officer, the Hon Mrs Frank Cresswell, Lady Ffolkes, and Lady Parry. Once more silence was proclaimed, and

The Mayor rose and presented the address to Lieut. Cresswell.

The Mayor, in presenting the address, gave expression to the national feeling of pride, that upon an English ship, and upon British seamen, the great problem of the North-West Passage at last fallen; and to the local feeling of pride that a fellow townsman had held a rank in that gallant band which, amid unparalleled difficulties, and dangers the most appalling, had solved this great problem.

Lieut. Cresswell, in acknowledging the compliment paid him, gave a short historical account of former Arctic discoveries; following this by an interesting narrative of his own voyage, which he illustrated by reference to a large chart of the Arctic regions, which had been prepared and suspended in the hall for the purpose.

Three cheers were then given for Sir Edward Parry, who said it was now 28 years since he had the honour of receiving within those walls the freedom of the ancient borough of Lynn. He could truly say that, from that moment to this, he had never witnessed any occasion which had given him more delight and gratification than this. Those present had before them now about the oldest and about the youngest of Arctic navigators, and from his heart he rejoiced that the feelings of the old Arctic navigator were those of the highest gratification. He had come 200 miles, and would willingly have come 2000, to be present. It was delightful to hear the plain, intelligent, and modest account their gallant young friend had given of himself. (How little he (Sir E. Parry) thought, when he stood upon the western part of Melville Island and discovered Banks' Land in the distance (they called it 60 miles), that from the cape, which he named, after many difficulties, Cape Providence, there was 6 in the course of time one to ship the other way to meet him, and to be anchored in the Bay of Mercy. He called this a remarkable coincidence, and admired the feeling which induced Captain M'Clure and his companions to give that name to the place which had harboured them under circumstances of such extreme peril.

The accompanying Illustration of the presentation of the Address is from a sketch by Mr. Ladbroke, the well-known Norfolk artist.

At six o'clock a party of above 100 gentlemen sat down to a sumptuous dinner, given to Lieutenant Gurney Cresswel., in the Assembly Room. The Mayor was supported by the High Sheriff, Daniel Gurney, Esq., on one side, and Lieutenant Cresswell on the other, as the invited guest of the evening. We observed the following noblemen and gentlemen:—The Right Honourable Lord Calthorpe, Lord Stanley, M.P. for the borough (Lord Jocelyn, the other member for the borough, from not receiving his invitation till it was too late, was unable to reach Lynn in time), Rear-Admiral Sir Edward Parry, R.N.; William Bagge, Esq., M.P., Sir William Ffolkes, Bart., Sir W. Jones, Bart., A. Hamond, Esq., C. N. Rolfe, Esq., T. Fowell Buxton, Esq., Richard Bagge, Esq., Edward Everard, Esq., Francis Hutton, Esq., Francis Cresswell, Esq., Hay Gurney, Esq., the Rev. Canon Wodehouse; and almost all the clergy of the town and neighbourhood; Captain Caldwell, R.N.; Captain Astell; and many other gentlemen.

After the usual loyal and other toasts,

The Mayor gave, "The health of Lieutenant Gurney Cresswell;" which was enthusiastically received; giving, in the course of his remarks, an account of Lieutenant Cresswell's services

Lieutenant Cresswell, in returning thanks, said he wished to impress upon them that it was more owing to circumstances than any merits of his own that he stood in the honourable position in which he did that day. He might say, perhaps, that he was the child of fortune. Fortune had thrown him through the North West passage; and here he was to report, to a certain extent, the honours and benefits to which Captain M'Clure and the officers engaged in the ship were certainly entitled. After being engaged in a three years' search for Sir John Franklin, of course it was with deep regret that he (Lieutenant Cresswell) was obliged to return to his native country without being able to bring with him any certain tidings connected with his fate. From the incident he had just mentioned to day, respecting the destruction of the *Resolutions*, those present would be aware how very easily a ship might be crushed in the ice, and sunk. That might, probably, have been the fate of Franklin's ships; but there were many other modes in which a ship might be destroyed, and where no remains of it might be found. Lieutenant Cresswell resumed his seat, after warmly acknowledging the honour which had been paid him.

The health of Rear-Admiral Sir E. Parry having been drunk,

Sir E. Parry rose to return thanks, and was received with enthusiastic cheering, the whole of the company rising to do honour to the veteran Arctic hero. In the course of his remarks he said I spent many of the best years of my own life in services similar to that which Lieutenant Gurney Cresswell has been engaged. It is now thirty five years since I commenced upon the same field of labour, and it is thirty-four years since it pleased God to permit me, with two of our ships, to penetrate to the western end of Melville Island. That I was permitted to accomplish in a single season, and, considering the nature of that enterprise, there is no doubt I had a favourable season and was very much favoured in doing it, because, until the year 1852, from the time I speak of in 1819, although several efforts have been made, no one ever reached within 500 miles of the same spot. While this was going on, the north coast of America, from Behring's Straits, was being surveyed by officers of distinguished Arctic travellers. We have in the last our dear friend Franklin, Richardson, and Beedes, and Simpson, and Rae, and Beechey, and Pullen, and Hooper, and perhaps one or two others, whom I have forgotten. But you see there is a long list of gallant nautical men engaged in surveying that part of the coast of America, which you see before you on the chart. So that, in point of fact, when I reached the western shore of Melville Island, and saw Banks' Land sixty miles from it, which is laid down in my chart of that day, there then remained a considerable port on from the continent in parts to that point; it to be traversed. One dear young friend has had the privilege of accomplishing that (Applause); and I venture to say that there is no portion of the North-West Passage more difficult of accomplishment than that. I will say, too, that there never has been an instance in which so magnificent a navigation has been performed in a single season, as was performed by Captain M'Clure and his officers. Gentlemen, here is the Arctic discovery in so compressed form that one summer's voyage will do all the rest. It is between 9-0 and 10-0 miles from Point Barrow, which we consider may shortly be made in one season. We don't think so much of getting a little into the seas as we formerly did, but from Point Barrow along to Cape Parry—from which our friend struck off in the *Investigator* to the you see there Barney Island, and then upward to the Bay of Mercy where the *Investigator*. I am afraid, it to the ment confined is from 90- to 1000 miles; and I assure you, from the experience I have had of the navigation of those seas, it is a most marvellous navigation to accomplish. I believe no man can tell more of the difficulty of it than I can; and I repeat that there has been a haunt in the whole course of Arctic discovery equal to that which Captain M'Clure and his companions accomplished. The exploit then [illegible] achievement, the existence of the whole [illegible] ascertained beyond a doubt; and it is a [illegible] more should just have been enabled to reach from the westward to the [illegible] eastward, but could not reach, so that there we are met within sixty miles, and I only hope that the crowning triumph of getting completely through may be reserved for our gallant friend, Captain M'Clure (Cheers). It is the only thing I wish to see, in order to crown the triumph, not only to our officers, but to our country, which has done so much, and spent so much, and sent forth so many gallant men in order to accomplish this achievement. I fear there is little probability of the *investigator* getting out. I hope and trust she may. On the other hand, I do not fear for the safety of our people there. Happily and providentially, an expedition went out, and Captain Kellett, with the great considerable depth of provisions at Beechey Island. That was part of the plan ordered by the committee, of which I was a member. So that, humanly speaking, I really feel that the lives of the gallant men in either of these ships are perfectly secured virtually safe. I do not say there will be no casualties—I do not say they will bring all their ships home. I know how a ship may go like a nut between nutcrackers if she gets between the ice, and that may happen to any one of the ships, or all of them. But, at the same time, there they are; they have provisions; and it is a comfortable thing the feeling that men engaged in such a gallant achievement are personally safe from harm. While we are rejoicing over the return of our friend, and the probable return of his shipmates, we cannot but turn to those who are in a measure of suspense. It is a matter of anxiety and regret—that there has not been found a single token of our dear long-lost Franklin and his companions. Not only has that been the case in the expedition in which Lieutenant Gurney Cresswell has been engaged, but I understand it to be the case with Sir Edward Belcher, who has gone up to the Wellington Inlet; there I certainly thought there must be found, because at Beechey Island we knew Franklin passed the first winter when he went out. There we found three graves of his men; up to the present moment the only token we have received of him. I do consider it a most mysterious thing and I have thought of it as much as anybody. I can form but a single idea as to the probable fate of Franklin. I do not agree with our friend Gurney Cresswell in the probability of both ships having gone down and nothing been seen of them; for, although it is true that both ne might be seen of the ships themselves do not believe the men would all have perished at one moment. I think [illegible] that stuff and stamina in 120 Englishmen, that somehow or other they would have maintained themselves as well as a parcel of Esquimaux would. They would have found the Esquimaux, and there would have been something like a trace of them if they had been on earth The only thing which I can suggest is that—the Wellington Strait was discovered by myself on the 24th of June last year. It is a large opening from Lancaster Sound. When I was going up westward from Melville Island we saw Wellington Strait perfectly free of ice; and so I marked it on my chart. When I was next day to go north as long as I could get west; and therefore we ran past, and did not examine it. But it has always been a favourite idea of those who imagined the North-West Passage [illegible] that we know. was the favourite idea of Franklin; that we should bend, it he could not get westward, to go up Wellington Channel. We have it from his own lips. My belief still is that, after the first year, he did go up that channel; and that, having steam power (which I had not in my time), it is possible he may have gone up in a favourable season, or in a season altogether more different than a favourable and an unfavourable season in those regions. You cannot imagine the changes that take place in the ice there. I have been myself sometimes beset for five or three days together by the ice, in such a way that from the mast-head I could not see sufficient water to float that bottle in; and in twenty-four hours there was not a bit of ice to be seen. Nobody could tell why. I cannot tell why. And you might have sailed about as you may in your own river, as far as ice is concerned. Therefore, in a favourable season he may have gone up that channel, and, in unfavourable circumstances, have got so far to the north west that in an ordinary season he could not get back again. He (Sir Edward Parry) was ready to go in search of Franklin. And those who know Franklin know that he was not the man to look back if he believed the thing was still possible He was not a man to look back if he believed the thing was still possible He was a man to go beyond the reach of succour, for Sir Edward Belcher has not been able to get far up, and we have not been able to get the investigation completed. In speaking of Franklin, every one will feel sorrow for his probable fate. My dear friend Franklin was sixty years of age when he left this country; and I shall never forget the zeal, the almost youthful enthusiasm, with which that man entered upon that expedition. I was then a captain, and he was the first captain, Admiralty, sent for me, and said, "I see, by looking at the list, that Franklin is 60 years old. Do you think we ought to let him go?" I said, "He is a fitter man to go than any I can think of, if you choose to send him on the second appointment." He did go, and has been gone eight years; and, therefore, I leave to yourselves to consider what is the probability of the life of one excellent and valuable man. In the whole course of my experience I have never known a man like Franklin. I do not say it because he is dead—upon the principle, *de mortuis nil nisi bonum*; but I never knew a man with more energy, quickness, and promptitude. In my dear friend Franklin, with all the tenderness of heart of a simple child, there was all the greatness and magnanimity of a hero. He is recorded of that man that he never left a human being behind who was stinging him. But, whether that be true or not, it is a true type of the tenderness of his heart. I cannot sit down without alluding to another circumstance which must be a gloomy one for us to dwell upon, however be a matter of rejoicing, and that is the fate of that gallant and most distinguished young Frenchman, Lieutenant Bellot. I am sure I speak the mind will be ready to do justice to his amiability which led that young man on two occasions, as a foreigner, to enter into our own service with our pay, without emolument, without anything but humanity prompting upon his heart, to go forth in search of our brave Arctic voyagers. Gentlemen, when I was leaving home yesterday morning, it occurred to me that I could bring to you and show you—as every reminiscence, every memento of such a man is valuable—a daguerreotype of me, poor dear fellow! just before he left England, the handle being made of one of the boats of my old ship the *Fury*, which, after lying there twenty-six years, was placed up on Fury Beach. He sent me that little thing as a memento, and it will be handed down as a heirloom to my son, who, I hope, will value it as I do.

The health of Captain M'Clure, of the Members for the borough of King's Lynn (acknowledged by Lord Stanley), and of the Mayor, were then drunk

Appropriate songs and glees were introduced; and one song, written for the occasion, addressed to Lieutenant S. Gurney Cresswell, and sung by Mr. Mann, of the Norwich Cathedral Choir, elicited immense applause. The company then separated, after passing a delightful evening.

THE ARCTIC REGIONS.—There is a very general impression in naval circles that the discovery of the North-West Passage, by Captain M'Clure, will be followed up next year by the despatch of two steamers, the *Phœnix* and another of about equal size, to Wellington Inlet, to proceed through the ice as near to each other, the forward motion of the ice [illegible] as soon as it is otherwise liable to do [illegible] both vessels would also have [illegible] when entering unexplored channels, where two vessels are sure to meet each other, and the hope of rendering assistance to each other in case of any unforeseen accident occurring to the other. The ice of the Arctic regions is the accumulation of ages, and it is generally supposed that the Polar basin is formed in some layers, and certainly not to such an extent that would render it difficult for steam-vessels to keep a passage open by repeatedly breaking through the ice newly-formed; and the further the vessels penetrated beyond the true magnetic pole the warmer the waters is found to prevail, and it requires a remarkably low state of temperature to form ice on the surface of the deep waters of the Polar seas, which supply the ice that was brought home by the officers of the *Phœnix* from Banks' Land, far finer and closer than the porous pumice stone of the lava of Mount Etna. The cabbage is also found in a fossil description, and a number of mineral stones from Melville Island are remarkably heavy, whatever may be the nature of the metal of which they are composed, and appear to be worthy of the attention of the scientific; and they might also be found worthy of becoming a subject of commercial enterprise. It is singular that none of the officers of the *Phœnix* or of the vessels of the Arctic expedition have yet brought home with them the coins which were struck at the ships during the present year, and they were unaware of its existence until their return home.—*Morning Post*

ENGLISH UBIQUITY.—Mr. Hilliard, an American traveller, who has just published a book entitled "Six Months in Italy," observes that in a certain town of that country he found "ways within, one inch east of everywhere."—"Let pole last night," [illegible] in the pavement of England, there is even a record [illegible] pounds of English [illegible] in the air—French [illegible] bears an English [illegible] it is pretty sure to drop [illegible] in the harbour, with an [illegible] on a buoy. [illegible] I am; does anybody want anything of me?"

GENERAL POST OFFICE.—Minor Money-order Offices are to be [illegible] at the following places:—Beercrocch, Somersetshire, Nov. 7; Penfield, Sussex, Nov. 1; Lydd, Kent, Nov. 1; Milverton, Somersetshire, Nov. 11; Aryn, Clwyn, Nov. 1. On the 1st Nov. a Minor Money-order Office will be opened at Dalkey, county Dublin. Burford having been reduced to a sub office, under Cheltenham, is now served (as respects money-order advices) from that place.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The New York *Daily Times* states that Mr. George Law has effected a sale of a very considerable portion of his muskets to the Turkish Government, to be used in the war with Russia. They were to be shipped in a few days.

The number of visitors to the Dublin Industrial Exhibition on Friday week was 18,863; the greatest attendance that has taken place.

The *Princess Victoria* took fire on August 13th, in lat. 39 S., long. 136 E., and blew up, having 400 barrels of gunpowder on board. Crew saved. She sailed from London for Melbourne on 8th April.

In consequence of the representations lately made on the subject, the Treasury have notified that all ginger which has been imported from India, on the faith of being admitted at a duty of 5s. per cwt., as well as that now on the way, is to be delivered on payment of that rate.

Arrangements have been made for receiving at Vienna news from Wallachia and Bucharest in fourteen hours. Relays of horses have been established between Bucharest and Hermanstadt, from whence the telegraph will transmit the news

Coal freights in the northern ports are about 10s. 6d. per ton to London, and £16 a keel to Hamburg

The *Belfast Chronicle* says:—"How it may be with the constabulary in other parts of the country we cannot say, but in this district those of us force who can command the means, are, one and all, leaving for Australia."

It is proposed in Boston (U.S.) to give Kossta, on his arrival at that port, a public reception.

Father Gavazzi has left Sardinia in the city of Cincinnatti to a full house, without disturbance.

It is stated that the vacancy on the Scotch Bench, caused by the death of Lord Anderson, will be filled by Mr Inglis, the Dean of Faculty.

The number of committals in all Ireland decreased from 24,684 in 1851 to 17,678 in 1852—a decrease of 29·38 per cent.

The Eastern Counties Railway is being widened between Stratford and Bow, where the Backwall Extension forms a junction, in order to accommodate the increase of traffic expected on the opening of the Tilbury Fort line.

A letter from Marseilles, states that Cardinal Wiseman, after receiving the members of the Catholic clergy of that city, had embarked for Rome in the *Monabello*: and not for Greece, as has been stated

The income from coal during the year ending January 5 was £404,386: the interest on the public debt during that period was £23,687,996

A sixth incendiary attempt was made on the 17th ult., to burn the premises of Mr G. P. R. James, the British Consul at Norfolk, Va

It is a gratifying feature in connection with the shipping of the port of Hull, that there has been an increase of full 500 sail this year over that of the corresponding period in 1852.

A letter from Berlin, of the 25th ult., announces that Prince Adalbert of Prussia had returned there from the journey which he had taken to St. Petersburg.

They have got a new plaything at Paris, a very gigantic omnibus, to carry sixty persons

The Melbourne (Australia) letters allude to rumours of several [illegible] to announce that a large drapery firm, having several shops in the town had suspended, owing £76,000. Another draper, for an amount not mentioned, and an ironmongery firm for £150,000.

The Great Central Gas Consumers' Company had a meeting on Friday week, at the London Tavern. A dividend was declared at the rate of 7s per cent per annum for the half-year ending the 24th June.

In future, cheese imported for exportation will be estimated on an average the weight of one parcel being taken as an average of the weight of the rest. This will simplify and facilitate business at the Custom-house.

Coal has been discovered in the neighbourhood of Geelong (Australia). A shaft is being sunk, and boring is about to be carried on in search of more. The indications are very promising, and a company is to be formed to work the mines

The amount of Railway calls for the present month is over £1,113,226. The applications for foreign Companies: the Paris and Strasbourg new shares, on which a deposit of £4 is required, calls for one million alone.

The Queen has appointed the Rev. Walter Munro assistant and successor to the Rev. Alexander Cameron, in the living of Creich; and the Rev. John Mackenson to the living of Tomintoul.

A Mr. Goldhammer has astonished the people of Berlin by his experiments of his new discovery, which he recently he placed his apparatus on the balcony of the Hotel de Russie, and, directing the rays upon the Museum, distant 450 yards, lit up the whole vicinity, so that it was as broad noonday print

The first electric telegraph on the Australian continent will be laid down by the government of Victoria, which has just called for tenders for constructing a line from Melbourne to Williamstown, on the shore of the Bay.

Gold has been found at the crossing of the Colorado, also silver and copper; a tribe of Indians had been met with who used gold bullets for their guns.—*Times*.

Despatches from Admiral Dandas, Commander of the Mediterranean fleet were brought to the Admiralty by an officer on Monday night, and were forwarded to Sir James Graham, at Windsor Castle.

The municipal of Cadiz are anxious to have a railway established between that port and Seville; and the Count de San Luis, Minister of the Interior, who belongs to Cadiz, has promised to favour the project.

I have been twice decided, lately, by the police magistrates, that a cabman is not entitled to charge for one child as an extra fare

A permanent testimonial to the late Mr. Mineon is about to be erected in Cambridge, in the shape of a marble bust, which is to be offered to the Senate, with a view to its being placed in the University library.

The works for the London Necropolis and National Mausoleum are about to be begun at Guildford, the commoners having been arranged with and paid £5,000 for their rights. Lord Onslow was also arranged with for 2118 acres for the cemetery.

At Bantmann papers remarks that the permanent gallows at Launceston, built of brick and stone, was pulled down, as soon as the system of transportation ceased.

Sir Edmund Lyons had an interview with the Earl of Aberdeen on Tuesday, at his office in Downing-street.

The turn-outs at Preston were hoaxed last week by receiving a letter, dated "Boreland House, Chelmsford, October 24," signed "John Tyrell," and containing something in the shape of a cheque for £600, which it was thought was a donation from Sir John T. Tyrell, M.P.

A letter from Constance of the 24th ult. states that the vintage has commenced, and promises excellent results. In the upper valley of the Rhine the vines are in flower. It is hoped that the wine will be

The distinguished Swedish zoologist, J. Wanlberg, has again left for the Cape of Good Hope, to continue there his indefatigable investigations. He will be absent at least two years.

A discovery in numismatics has just been made in Bohemia. Three silver coins of Duke Wratislaus I. (father of St. Wenzel), bearing date 930, have just been found there. They are the most ancient coins in Bohemia

The numbers attending the Museum of Ornamental Art at Marlborough-house during October were as follow: 25 8-7 persons on the public days, and admitted free; 1466 persons on the students' days, and admitted to students on the payment of 6d. each: besides the registered students of the classes and schools

A letter from Tunis announces the sudden death of Mr. Heap, Consul of the United States at that place.

The tea market has been very brisk. The week's deliveries in London are 647,405 lbs.; being an increase compared with the previous week.

The construction of a new bridge across the Rhine at Cologne is to be commenced next year. The city of Cologne will contract a loan of one million and a half of thalers for the purpose.

The Rev. Messrs. Fletcher and Poore are set to carry with them and transmit to South Australia, fitted with every accommodation for worship as well as several houses. The chapel, we believe, will cost £1000.

The Russian merchants are doing an exc llent business in Fairlie-coon, of which large quantities are stored in the principalities. The send them across the Pruth

Electric telegraphic communication between Lymington, in Hampshire, and Osborne house, in the Isle of Wight, is nearly completed. The cable will run below the bed of the sea, and down the west

The Legislative body at Frankfort have forbidden the purchase of potatoes for distilleries and starch factories. The free import of grain into the Zollverein is prolonged to the 30th of September, 18 4

Mr. Leeman, of York, has purchased Newby-park from Mr. [illegible] son, of which large quantities are stored in the principalities. The property, for £180,000. The purchase is made on behalf of Viscount Downe, already a large landed proprietor in Yorkshire

On Saturday week, the Lord Mayor visited the Reformatory Institution for Adult Male Criminals, Great Smith-street, Westminster. He inquired minutely into the workings of the establishment, and passed some time in the workshops and probation-rooms.

THE FIFTH OF NOVEMBER.

FIFTH OF NOVEMBER.—"BUILDING THE GUY."

RECOLLECTIONS OF THE FIFTH OF NOVEMBER,

AND THE WAY IN WHICH IT IS GENERALLY "REMEMBERED."

SURELY there never was a phœnix so incombustible, as if the thread of his existence had been made of asbestos, as Guy Fawkes! You would imagine his life had been insured in the Phœnix Fire Office. Regularly once a year he rises from his ashes, parades through the streets in triumphal procession, attends several public meetings, at all of which he takes the chair; and then, when the evening closes in, he warms his toes over a friendly fire, cracks his venerable sides with a number of good things, and generally retires about ten o'clock, after having spent a very jolly evening, during which everything has gone off as pleasantly as possible. Where he retires to no one can tell; but the supposition is that he creeps in through one of the key-holes of the Houses of Parliament, and conceals himself in the dark cellar where he was originally discovered. There his ghost remains, burrowing, like a rabbit, in that phantom warren of gunpowder barrels, and he never emerges from the deep solitude of that *Arabia Saltpetræa* until a whole twelvemonth has passed over his painted head. During that time it is supposed he occupies his leisure hours in making squibs and laying in a goodly stock of crackers, that he may present them to the little boys, when he comes to the earth again. There seems to be some foundation for this supposition, for when Guy's pockets are searched, they are always found to be full of combustible materials; in fact not only his pockets, but every part of his person is crammed, almost bursting with them. His assiduity must be as great as his generosity, for his boots are heeled and soled with fireworks; his legs are primed and charged, like a couple of cannons; each of his arms is turned into a fire-arm, from the quantity of explosive things they contain; his stomach is converted, probably, into an immense factory for Roman candles; whilst his head, like the Dartmouth mills, is full nothing but gunpowder. All these gifts he distributes right and left during the brief period he illumines the world with his presence. For this reason the little boys love Guy, and are never tired of running after him. It is only necessary for them to hear his name, and they will take to their legs, and run through street after street till they find him. Then, once in his track, they will never leave him. They are proud to swell his juvenile escort, and to hold up his torn coat-tails. They are never tired of calling upon ignorant persons, whose recollections may be wrapped up in the fogs peculiar to the month, to "Remember, remember, the fifth of November!" and when they are fatigued of shouting themselves, they have always lungs sufficient left to call upon other boys to "Shout, boys, shout!" for them. In other countries, in Belgium and France, we believe it is St Nicholas who is the patron saint of children. The story goes that on the sacred day on which his memory is revered, he

FIFTH OF NOVEMBER CUT SO AT BRIGHTON

hangs up the chimney toys for the children he loves best, or slips sweetmeats under their pillows whilst they are asleep. In England we have but few saints. There is Saint Monday, it is true; but he is a drunken, disorderly saint, who only thinks of spending in a day the wages of a week; and his memory is often cherished the next day a great deal more by one head than the heart. In fact, a person's head frequently aches to think of him at all. This saint's effigy is fit to figure only on the signboard of a public-house, and the ashes he rises from are not those of a *jeu d'esprit*, like the one in which Guy Fawkes disappears rejoicingly every year, but rather the ashes of a pipe bowl that has been filled each time the spirited owner has thought fit to "wet his clay"—and filled, probably, at the expense of a meal taken from his family. Now Guy is no such smoking, bibulous, money-spending saint. He has a clay pipe, it must be confessed, stuck in his mouth; but we defy any one to say he was ever seen smoking it. All his smoking is done the last thing at night, and then it is done more to shed a glow and warmth round the circle that is hanging about his chair, than for any particular enjoyment he derives from it himself. Half a dozen puffs—the cheeks rising with the smoke—and his smoking is all over. Neither does he drink: we never recollect seeing Guy Fawkes with a pot or a pewter in his hand; neither do we remember—amongst the things we are annually called upon to remember on the Fifth of November—ever meeting with a portrait of him, drawn by Gilray, Seymour, Cruikshank, Leech, or Phiz—or, in fact, any one of the numerous artists he has so often honoured with a sitting—in which he has been portrayed with a drinking utensil of any kind in his hand. If he has been represented with a pewter, it has been drawn in the mildest form, and more for the purpose of collecting money than for spending any. Guy's habits are not, and never were, expensive. An old coat elegantly torn, and picturesquely slashed—hanging, brasier-fashion, over his arm; a waistcoat, that has evidently been one of the vested interests which a scarecrow—that staunch old agriculturist and Protectionist that, in conjunction with Sir John Tyrrell, has been the last to stand up in favour of the Corn-laws—has been obliged, from reduced circumstances, to surrender; a pair of boots belonging to the Odd Fellows; and a pair of trousers which it would be difficult to say what society they belonged to, for "sure such a pair were never seen, born to part by nature." His whole costume would not fetch, in exchange, the smallest pot of mignionette: you would not get the worst miserable painted canary, with the sparrow's feathers peeping through his wing, for the whole tattered lot. No, Guy's habits are not expensive. His only extravagance is a bundle of lucifers—for, like a man-craving mamma, he has always got a match in hand. This brimstone investment is his only outlay—not much, surely, for a man who comes through town, knocking at noblemen's houses, and waylaying gentlemen in the street, to collect his November dues, the produce of his yearly rents. These dues rain upon him in all directions, according to the locality he thinks of honouring. In the squares they fall in occasional big half-drops, not less than sixpences, and sometimes as big as shillings; and in humble streets, and in retired alleys, they come down in a perpetual shower of penny and halfpenny-pieces. This rental he does not spend upon himself, for it is extremely doubtful if he has any pockets, and, supposing it was dropped into his hat—the crown, which, like that of Hungary, is hanging on by the merest thread, threatening every minute to fall off the head that is carrying it—would not allow him to keep it to himself. So, in open generosity, Guy Fawkes does not receive a farthing of his numerous collections for his own individual use or enrichment. He surrenders them all—without deducting as much as would enable him to replenish his inner man at the nearest "shaving shop"—to his fellow retinue, who ring the air and the area bells with songs and solicitations in his treasonable honour. It is for these bountiful reasons that the boys love Guy Fawkes, and that the Fifth of November is always fixed off in his honour with the regularity of a Colt's revolver: it is for these reasons that he is a saint in their estimation, who is continually dispensing beer and hot suppers to them; that he is an idol in their eyes—a painted and wooden idol, if you like—but one which, instead of causing gifts and contributions from his worshippers, and expecting to be fed and supported, feeds and supports them, and strews their muddy path with bags of oranges and baked potatoes. St. Guy Fawkes cheers them with his liberal donations, and no wonder that the boys cheer him and huzza in return. He is the St. Nicholas of English children—filling their hearts and stomachs with warming things; he comes to them, like a second Fortune, mounted on a Catherine-wheel—a wheel that, in its progress, crushes no one, but rather, in a wheel of fortune, distributes prizes and no blanks to all those who have had a hand in turning it. His final not even, before his memory is shot once again into the historical coal-cellar, is one of cheerfulness, that casts rays of dazzling light on the last gleaming moments of his brief annual existence. He dies literally in "a blaze of triumph." Like Semele, he is burnt to a cinder with the consuming glory of his own triumph. Sardanapalus, compared to him, is a man of very moderate desires. Sardanapalus does not die under the pressure of defeat or beaten vanity; but, in the full flush and hurrah of victory, surrounded by all his valiant troops, who help to pile up the funereal pyre on which he mounts to perish, with all his wealth and all the clothes he has about him. His death is not so: one of vain-glorioueses, rushed into because he cannot help it, but is wilfully chosen to contribute to the amusement of those who have been his trusty body-guard during the day. His progress is like Nature's, during as it began, with a most glorious shining. Fireworks are the last things that burst upon his eyes. "Hip, hip, hurrah!" are the last fond words that break musically upon his ear. He dies the enviable death of a hero, not outliving his fame a single moment, and is carried into immortality on the top of a sky-rocket—an immortality, mind you, that does not live the space of a week, and then is put away into the old lumber-room of History; but an inextinguishable immortality, that can never be put out; an immortality that no goose that ever saw the burning of the Capitol can ever hope to renewed brilliance the next. It is most literally "*Guy Fawkes est mort! Vive Guy Fawkes!*" His throne is a blazing faggot, and Pluto himself could not sit with greater dignity upon it; his sceptre is an old cinder-box; and he is crowned every year with a diadem of squibs and crackers.

The mixture of political, or local matters, and Guy-Fawkism, has always been largely followed out at Brighton. The 5th day of November, as observed there, would put to shame the lukewarmness of the Londoners. They are strict observers of all the rites that should be paid to his flaming honour, and have long been distinguished as most ardent Guy worshippers. From the earliest daybreak, there is a procession in every street. You meet with Guys of all sizes, of all ages, and conditions. At times he is on horseback, and at others he is mounted on a donkey, followed by all the little boys and dogs of the town, bowing and barking together. Then there are other Guys carried in chairs, and on tubs, and between poles on the top of the sky-manner. Sometimes he is dressed up, to caricature an individual of the town, who has made himself unpopular. In this way was caricatured a certain Lord, who had made himself notorious in connexion with a well-known "black bottle." His opponent was caricatured in the same way. They were both mounted on donkeys, and fought a mock duel opposite the Colonel's house. But the great event at Brighton is the "tar-barreling" that takes place in the evening of the 5th. This tar-barrel has been the subject of many a fight between the authorities of the town and the fishermen. In 1817, an attempt was made to "put it down." The military were called out, and one person killed in the riot that ensued. Since then the amusement has been allowed—the authorities even going so far as to send the fishermen two or three tar-barrels, and a fixed quantity of wood, upon the understanding that they are not to carry the dangerous sport beyond a certain locality, called the Level. This sport commences at nightfall, amidst a general blaze of bonfires. When the crackers are cracking their loudest, and the rockets are blazing away in their highest, the tar-barrel is rolled on, and pitched in a blazing mass amidst the assembly. The fun then commences in real earnest. Some push it with their feet, others propel it with long sticks, until it becomes a regular game of fiery foot-ball. The amusement reaches its height when it bursts where it is the least expected, and great is the laughter if it takes an unsuspecting group by surprise. Whilst the tar-barrel is continuing its incendiary progress, the confusion of the scene is increased by a number of fire-balls being sent flying into the air, and falling upon the heads of the mob, collected round the Level. These balls are composed of old tarred ropes and oakum strongly bound together, and slung by a stout piece of wet rope, which is attached to them. The noise, laughter, and confusion of voices may be readily imagined; and the scene, when witnessed for a first night at Brighton, fixes itself into the memory in such strong colours of fire as never to be forgotten by the spectator in connexion with Guy Fawkes's Day.

HORACE MAYHEW

SCIENCE, ART, AND TRADE.—Some additional appointments have been made in the new Department of Science and Art in connexion with the Board of Trade. Mr. Norman M'Leod, late assistant-secretary to the Director of Convict Prisons, is named registrar; Capt. Owen, R.E., inspector; and, in connexion with the Committee of Council on Education, Mr. J. J. Mayo, assistant-accountant.

MUSIC.

ENGLISH OPERA.

We lately took notice of a current report that a dramatic company was in the course of being organised for the performance of English Opera in London; and that several of our most eminent singers—Mr. and Mrs. Stuart Reeves, Madame Clara Novello, Miss Louisa Pyne, Mr. Weiss, and others—were concerned in the enterprise. In expressing a wish for the success of the scheme, we alluded to the many failures that have already taken place, and mentioned several conditions as being necessary to prevent any new attempt from being only one failure more. These conditions, we apprehend, are resources ample enough to support a large and expensive establishment (for what the Duke of Wellington said about "a little war" may be applied to "a little opera"); an experienced, sagacious, and liberal management; and a completeness and excellence in every branch of the performances sufficient to make them rival the attractions of our foreign musical theatres.

Of this projected plan we have not any further intelligence; but another has been set on foot at the St. James's Theatre, which was opened on Saturday evening last for the performance of English operas. This step, it would seem, has been hastily taken; at least the public had very brief notice of it, and no information has been given respecting the parties concerned. The opera performed on that evening, was the English version of "La Sonnambula," followed by a ballet. The prima donna was Miss Lowe, a promising young concert-singer, but quite unable to sustain the impassioned character of *Amina*. The primo tenore, a Mr. Elliot Galer, showed himself to be, both as an actor and a singer, a mere novice. The only part adequately supported was that of *Count Rodolpho*, by Mr. Drayton, a performer qualified to hold a distinguished place in any musical theatre. The orchestra and chorus were sadly deficient, both in strength and quality; and there was a want of those accessories which render a scenic representation complete and satisfactory. As to the ballet—a kind of entertainment which is nothing if not rich and splendid—it was so poorly got up that it proved too much for the patience of an exceedingly good-humoured audience, and received very plain marks of disapprobation

We earnestly desire to see this great metropolis placed, in respect to our national opera, on a footing of equality with the principal cities of France and Germany in respect to theirs. Our present inferiority is as unaccountable as it is humiliating. Unwilling as we are, however, to discourage endeavours to improve our musical stage, we cannot approve of such endeavours as this: for such ill-considered and impotent attempts—while they are of no benefit to those who make them—prevent others from adopting measures really calculated for success, and likely to achieve it.

THE LONDON ORCHESTRAL UNION are engaged at present in giving a series of concerts at the principal towns in the midland and northern counties. The musical public of the metropolis know how much this association has done in raising the execution of orchestral music to the highest point of refinement. It has shown that great numerical strength is not an essential element of power, and that a band, in which every individual is a complete master of his instrument, will produce more real grandeur of effect than a less select body of three times the number. That this is the case has been admitted, without a dissenting voice, by all who have listened to the society's fine performances at the Hanover-square Rooms during the last two seasons. The provincial concerts are of the same classical character, and equally calculated to refine the public taste. At Derby, for example, last week the programme was selected chiefly from the works of Mendelssohn, including the delicious music in the "Midsummer Night's Dream," the Symphony in A major, and the Concerto for the Violin—the latter the sole work of its class produced by the illustrious composer. This piece—as difficult as it is exquisite—was played by Mr. Cooper—a performer able to dispute the palm with the greatest violinists of the Continent. The Society consists entirely of British artists: a circumstance which we mention, not because we approve of any principle of exclusiveness—for, in our opinion, the more that British and foreign artists are amalgamated the better—but simply because it satisfactorily shows the very great amount of British talent at present existing in the musical profession.

THE SECOND WEDNESDAY EVENING CONCERT, on Wednesday last, was, on the whole, better and more successful than the concert of the previous week. The directors did not commit the error of the last, for the first and most important part of the entertainment, a piece of no little merit and held in so small esteem as M. David's "Desert." With better judgment they chose Mendelssohn's beautiful music in the "Midsummer Night's Dream." It was, for unequally performed. The imaginative overture and the gay and brilliant Wedding March left nothing to be desired—the latter especially, which was encored with enthusiasm; but the vocal portion was less happy, the chorus being defective both in strength and precision. The part-song, however, "Ye spotted snakes," was very nicely sung by Miss Birch and Miss Poole. The second part, a miscellaneous selection of popular pieces, contained many pleasing things, but very little novelty. The appearance of Mr. Augustus Braham, the youngest son of our great vocal patriarch, was peculiarly interesting. This young singer has a very fine tenor voice, not unlike what his father's once was; and there were many little things in his manner that brought his father strongly to remembrance. He sang Bishop's ballad, "My pretty Jane," very charmingly, and was warmly encored. Another prominent feature was Mademoiselle Coulon's performance of the Andante and Rondo of Mendelssohn's Concerto in D minor. This young lady is a highly-accomplished pianiste: she wants nothing but a little more physical power to entitle her to a place among the most distinguished performers of the day. The rest of the concert was made up of well-known songs and ballads, sung by Miss Birch, Miss Dolby, Miss Isaacs, Miss Poole, and Mr. Lawler. These do not require notice; but we cannot omit to mention the appearance of a highly-promising young singer, Miss Ternan (a daughter of Mrs Ternan, the actress), who sang Dr. Arne's fine song, "Where the bee sucks," with a beauty of voice, and elegance of style, which delighted the audience.

DUBLIN, THURSDAY.—THE DARGAN BANQUET.—The grand banquet given by the exhibitors to Mr. Dargan and the Executive Committee of the Great Industrial Exhibition, took place last evening, in the King's-room, at the Mansion-house, on a scale of splendour and magnificence befitting the importance of the occasion. Mr. William Fry was in the chair. Nearly 600 persons of all ranks in society, representing the peerage, the professional classes, the merchants, and the traders of Ireland, assembled together on this occasion to testify their respect, esteem, and admiration with which they regard the great founder of that noble Temple of Industry. The Lord-Lieutenant sent a letter apologising for his absence, and expressing regret at not being present.

RAILWAY BREAKS.—Some successful experiments have just been made on the East Lancashire Railway with an improved kind of break patented by Mr. Newsill. It comprises two kinds of improvements. The break itself is more effectual in arresting the train by pressing against the wheels, to which there are grave objections; and by a very simple contrivance, all the breaks of a train are united, so that each person, having a break under his control, can apply the whole number The breaks are self-acting, while they are out of use they are prevented from action by a catch, the removal of which is sufficient to bring the train to a stand. During the trial recently made, it was found that a train going at the rate of twenty miles an hour could be arrested within eighty yards, and one going at forty miles an hour, down a gradient of one in thirty-eight, could be stopped within 180 yards: in both cases without a shock to the passengers.

NEW DOCKS AT JARROW.—The Improvement Commissioners of Newcastle have just received a report from Mr. Brooks, their engineer, setting forth that, although the application of the York, Newcastle, and Berwick Company is for docks at Jarrow, in connection with the railway, without regard to the increasing trade on the south side of the Tyne, it has additional claim on account of the beneficial effects which the docks on the river face will produce on the navigation. The proposed area of the docks is 122 acres.

MANCHESTER FREE-TRADE HALL.—The land on which the Free-trade Hall at Manchester stands, 32222 square yards, has at length been sold by Mr. Cobden to the new company, formed for the purpose of taking down the present building and erecting another. The lowest story is to be set apart for business purposes, to be let at 5*l.* per foot; the second is to be a large hall, capable of seating 4000 persons, or standing room for 10,000; and over this there is to be a concert-room to seat 600 persons, with suitable ante-rooms and other apartments. *Liverpool Mercury.*

CORK, WEDNESDAY.—A terrible flood is now raging in the western part of this city—rushing like a mill-race through the streets, flooding the houses, and suspending business of every kind. One fatal occurrence has taken place: the western pier, near Camden-quay, of Patrick's-bridge gave way, and carried with it some twelve or sixteen persons—every soul of whom was drowned! The whole south of Ireland has suffered greatly from inundations.

THE THEATRES.

PRINCESS'

There is a certain penalty which managers are liable to pay for the importation of foreign pieces. M. Bayard's drama of "Un Fils de Famille" had been translated for Mr. Kean's theatre last Christmas; but its performance was necessarily deferred, owing to the success of "Sardanapalus" and "Macbeth." Meantime, the enterprising lessee of the Adelphi anticipated its production under the title of "The Discarded Son." On Tuesday, however, the comedy appeared on this stage, as "The Lancers; or, the Gentleman's Son." It is evident that this version keeps closer to the original, and has less of broad farce in it than its rival. There are no characters written up for particular performers, and this is a merit scarcely to be over estimated. The whole, accordingly, is more elegant in its mode of treatment, and more pleasing in its general expression. The acting, too, is of a more refined character. Mr. Ryder, as the *Colonel*, is a disciplinarian, but a gentleman; Mrs. Winstanley, his veritable lady-sister—not a comic and eccentric parody of military tastes and phrases; and Miss Oscarde, as herself, as played by a Mr. David Fisher, an actor new to London, is a passionate and imprudent young man, whose exuberant temperament easily accounts for his injudicious conduct at the château. Mr. Fisher is an appreciable acquisition to the company. The scenery is beautiful, and the costumes are correct. The piece was eminently successful.

MARYLEBONE.

"Othello" was revived on Monday. Mr. Wallack's *Moor* was full of passion, grandeur, and effect, as thoroughly elaborated as it was finely conceived. Mrs. Wallack played *Emilia* with great power; and *Desdemona* found a pleasing representative in Miss E. Horton, a young lady new to the boards.

ASTLEY'S.

"The Fall of Phaëton," of which several weeks since we gave a full account, continues its successful career. The "Fiery Coursers of the Sun" are, indeed, beautifully studied, and the tableaux scene of the most ingenious ever constructed. Mr. Suter as *Momus* is the cool droll, very Mathews-like in style. The scenes in the circle are spirited and various; and the audience continues to be numerous and applansive.

LYCEUM.

On Monday this theatre opened, and depended for its success on the appearance of Mr. Wright, and a farce with a long title—a farce, in fact, in a farce—and thus called, "The Commencement of a Bad Farce, which, however, it is hoped, will turn out to be Wright at Last." The Parisian trick was tried of placing the favourite performer in the first instance in the pit, as one of the audience, for the purpose of interrupting his compeers on the stage. He is supposed not to relish the "bad farce" commenced, and to correct the purposed mistakes of the actors, who are defended by Mr. Charles Matthews, from the stage, in an angry tone of altercation, until Mr. Wright is himself called to the boards, and challenged to do something better. This something unfortunately proved to be quite as "bad," and did not escape sibilation. With more patience, it is yet possible that a future audience may discover that the piece has, after all, some merits; and thus "it may turn out to be Wright at last."

Mr. G. V. Brooke appeared at the Theatre Royal, Liverpool, on Monday evening last, in the character of *Othello*. The enthusiasm of the audience was great, Mr. Brooke being summoned several times during the progress of the tragedy to receive their congratulations.

Miss Glyn has been performing at the Theatre Royal, Newcastle, during last week, in the character of *Mrs. Haller*, in "The Stranger;" *Julia*, in "The Hunchback," and *Portia*, in "The Merchant of Venice."

Jullien has announced his last week but one at the Metropolitan Hall, New York. Thence he goes to Boston.

Private letters from the Austrian capital state that Mdlle. Wagner, who has been giving a series of representations at the German Opera, had not produced such an impre sion on the Viennese as her Prussian celebrity might have led to the expectation.

Calzadari made his début at St. Petersburgh on the 15th ult., and was most favourably received. Lablache, Ronconi, and Madame La Grange appeared with him, in Rossini's "Barbiere di Siviglia."

NATIONAL SPORTS.

NEWMARKET HOUGHTON MEETING.—SATURDAY, OCT. 29.

Handicap Sweepstakes of 15 sovs. each.—Bridesmaid, 1. Sister to Adeline, 2.
Sweepstakes of 10 sovs. each.—Nicotine, 1. Captain Flash, 2.
Match. 200.—Cimea, 1. Barbatus, 2
Houghton Handicap, Course, 1. Ephesus, 2
Sweepstakes of 200 sovs. each Pantaloon ch. colt, 1. Kaffir, 2.
Sweepstakes of 10 sovs. each.—Roseline, 1. Lizzie, 2.
Second Nursery Stakes.—Star of Surrey, 1. Punch-box, 2.
Sweepstakes of 10 sovs. each.—The Ae-ayer, 1. Bourra Tomacha, 2.
Sweepstakes of 5 sovs. each.—Mysterious Lady, 1. Lady Audrey, 2.
Match: 200.—Ariosto, 1. Caracara, 2.
Match: 200.—Speed the Plough, 1. Coalition, 2.
Selling Handicap Sweepstakes of 15 sovs. each. Hybla, 1. St. Spiro, 2.

Weather very favourable, attendance good, and sport abundant: in short, a better Houghton Meeting we never remember to have seen. Seahorse's performance proved him to possess first-rate ability. Lord Glasgow achieved good success—a circumstance which was evidently a source of great gratification to all present.

WORCESTER AUTUMN MEETING —TUESDAY.

Handicap Sweepstakes for Two-year-olds.—Indiana, 1 Czarina, 2.
Sweepstakes of 5 sovs. each.—Hope, 1. Wellsborne, 2.
Worcester Autumn Handicap.—Radcliffe Hare, 1. Little Davie, 2.
Selling Stakes of 5 sovs. each Hamlet, 1. Ada, 2
Scurry Handicap of 3 sovs. each.—Maria Bell, 1. Indiana, 2

WEDNESDAY

Free Handicap Hurdle-race of 5 sovs each.—Melon, 1. Sir Philip, 2.
Worcestershire Grand Annual Steeple-chase.—Bourton, 1. The General, 2
Selling Steeple-chase 5 sovs each; 50 added - Theodine, 1. Rein Deer, 2.

EPSOM AUTUMN MEETING THURSDAY

Beddington Stakes.—Ladybird, 1 Village Lass, 2.
Plate - £50.—Grub, 1
Autumn Handicap Little David, 1. Candlewick, 2.
Selling Stakes. Sabra, 1.
Benthall Plate.—Tobolski, 1. Georgy, 2
Paddock Stakes. Herbert, 1. Georgy, 2

FRIDAY.

Durdans Plate.—Mysterious Lady, 1. Nine ran.
Hurdle Race. Edward of York, 1. Steven, 2. Four ran.
Scramble Steeplechase. - Chesnut gelding, 1.
Autumn Steeplechase.—Sam Hood, 1. Nine ran.

POST-OFFICE LONDON DIRECTORY FOR 1854 (published by Kelly and Co., Old Boswell-court).—The fifty-fifth edition has just appeared. It is of necessity very bulky: as it extends beyond 2,000 pages. The type is new. The entire edition of 9000 copies, each 131 sheets, has been worked since the 20th of September, a marvel of steam printing. The volume has been increased by the introduction of a very large number of newly-built streets in the suburbs, occupied railway by stations; where places depend on railway communication, the nearest station and line and direction are stated; and to every station of the Electric, British, and South-Eastern Telegraph Companies a designating mark has been affixed. Rapid reference to the different portions of the work is greatly aided by printing upon the fore-edge of the leaves the names of each district, which also show the extent. Altogether, this is by far the completest directory yet produced, both as regards classification and typographical execution. The big book is in a binding of proportionate strength.

BURIAL BY TORCHLIGHT.—The remains of Lord Cloncurry were interred on Tuesday in the family vault within the demesne at Lyons. It having been observed as a family custom, his Lordship, previous to his decease, directed that a similar course should be adopted on the occasion of his interment; and his remains were accordingly interred by torchlight, at half-past seven o'clock, with much solemnity, in the family vault.

CALENDAR FOR THE WEEK.

SUNDAY, November 6.—24th Sunday after Trinity.
MONDAY, 7.—First Gazette published, 1665. Milton died, 1674.
TUESDAY, 8.—Halley born, 1656. Camden died, 1622.
WEDNESDAY, 9.—Prince of Wales born, 1841. Lord Mayor's Day.
THURSDAY, 10.—George Fox died, 1690. Martin Luther born, 1483.
FRIDAY, 11.—St. Martin. Half Quarter Day.
SATURDAY, 12.—Canute died, 1036. Leibnitz died, 1716.

TIMES OF HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING NOVEMBER 12, 1853.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, NOVEMBER 5th, 1853.

THE recent and still prevalent strikes, and the disgraceful riots that have been the result at Wigan, prove—among many other things—the ignorance that too generally exists among the working-classes upon subjects that it is most essential for their interest and happiness that they should be well informed. It seems to be an idea very widely diffused among them, that Capital and Labour are the natural enemies of each other: that Capital is a monster who, like the giant in the nursery tale, grinds the bones of men to make his bread; and that, if Labour do not continually act upon the defensive, and, when opportunity serves, upon the offensive, the grim ogre who owns the mill or the factory will either reduce him into slavery, or once and for ever eat him up. They do not seem to know, if we are to judge by their conduct, that without Capital, Labour would in vain ask to be employed, and that the now busy scenes of thriving industry would offer, what has been truly called the saddest spectacle under heaven, that of strong men able and willing to work, but finding no one to employ them. If they have some glimpses of this truth, they are but too often led astray in the intricacies of another error, which is that the rate of wages can be made to depend, when food is dear, upon the price of the necessaries of life. They have not been instructed in the veriest truisms of social and economic science, that the price of food is regulated by its abundance or its scarcity, and that the rate of wages is determined not only by the demand for the article which is manufactured, but by the abundance or scarcity of the hands that are skilled in manufacturing it. There is no recognised authority for teaching the people these facts and principles. It is true that the daily and weekly press endeavour to enlighten them from time to time; but, as the great bulk of the working classes never see the daily press, and have but little acquaintance with weekly newspapers that do not devote themselves almost exclusively to the collection of police garbage, the knowledge thus disseminated does not reach those whom it would most essentially benefit. Yet the working classes, as a body, have received as much school education as gives them a taste for reading. The day school or the Sunday school has done something for most of them, and if the leading facts and truths of social science were made accessible to them, it is highly probable that by degrees they would become quite as enlightened upon all these points as their employers are.

What then is the remedy for this state of things? Riots, such as those which have occurred at Wigan, may be prevented or punished; but strikes, and the insane warfare of labourers against their only friends, the capitalists, cannot be prevented, except by the diffusion of sound information. Strikes may be, and are, punished—not by the law of the land, but by the law of nature. The working classes who strike because employers will not and cannot give them wages which would annihilate profits, punish themselves; and after weeks, and sometimes months, of suffering, invariably give up the contested point, and return to work at such wages as the inexorable laws of political and social economy impose alike upon masters and upon men. The only possible remedy is knowledge. We see that a writer in the current number of the *Edinburgh Review*, in an article upon the Newspaper Stamp-duty, treats with contempt the assertion that the stamp on newspapers is a tax on knowledge. He considers the newspaper stamp as a postal arrangement only, and would have newspapers remain at their present price, although its effect is to shut out the daily papers from the perusal of the working classes. Were it not for the penny stamp, and the Excise-duty upon paper, it would be possible to publish large and excellent newspapers at a penny. If newspapers were reduced to that price—as we have the example of America to prove that they could be—the working classes would purchase and read them. Under the present system they cannot do so. Few even of the middle classes can afford the luxury of a daily paper; and when a man of moderate means, or one earning his daily bread by the sweat of his brow, wishes to be informed of of the daily events of his time, he has but too often to resort to the public-house to get a hurried sight of that expensive luxury, which he cannot afford to buy. These two taxes are, to all intents and purposes, a tax upon knowledge, and upon that very knowledge which a wise Government should deem it to be its duty and its interest to disseminate as widely as possible. We believe, with the writer in the *Edinburgh Review*, that at this time of day no man would advocate a tax upon knowledge, as such; and that neither the Excise-duty upon paper nor the Stamp-duty upon Newspapers will be retained because Government is afraid that the people should ever become too well informed. It is not our present purpose to enter into any detailed examination of the operation of the Newspaper Stamp-duty; though, if it were, we think we could easily show that the last argument on which it is supported is invalid, and that a twentieth part of the newspapers published throughout Great Britain do not pass through the Post-office at all. A penny press, freed of all Excise and other duties, would, we have no doubt, be quite as ably, impartially, and honestly conducted as a fivepenny or sixpenny press.

If the working-classes could buy their penny *Morning Chronicle* or *Times*, and read it at home to their families, instead of spending twopence at an ale-house to get a hasty glimpse of it, there would be no disadvantage to the state, none to the newspaper press, none to the working man, none to anybody, unless, perhaps, to the publican. As for the publican, there are sufficient inducements to draw people to his house without adding the newspaper to the number.

England glories, and with great reason, in its free press. We are convinced, notwithstanding the denial of the *Edinburgh Review*, that if it were as free from the exciseman and the officials of Somerset House as it is from the Censorship, the cause of public order would be largely benefited, and that its power and usefulness would be immeasurably extended. All social evils are the result of ignorance. If a Government cannot, through its own agencies, remove or diminish that ignorance, it is its duty to abolish all fiscal and other regulations which prevent others from undertaking a task which it is itself incompetent to perform.

THE venerable Corporation of London is on its trial before the country. We do not anticipate that much that is novel will be elicited by the able ex-Judge and his learned assistants, who are examining witnesses to its character. It is known not only to be antiquated, but to be effete; to have long resisted reform, and to have long stood in need of it; and to be guilty of many harmless absurdities as well as of many real nuisances. But all its defects and shortcomings are as familiar to the public mind as the Lord Mayor's lumbering coach, the civic barge, the cap of maintenance, or Gog and Magog. The inquiry is a mere matter of form. Nothing in this country can be condemned unheard, and the Corporation of London will have an opportunity of speaking in its own defence, and of giving the best reasons it can why sentence of abolition or of reform and extension should not be pronounced against it. In its day the Corporation of London has been a valuable body. It maintained the liberty of the subject against mediæval kings, when liberty had no other defenders than the sturdy burgesses of our ancient towns; and often successfully defied the illegal attempts of absolute Sovereigns to do injustice and violence upon its citizens. All these, and many other public services, are duly recorded in its annals; and there is not a living Englishman who has not cause to be thankful to the Corporation of London for its services in the popular cause in times now happily gone by. But the old City of London has outlived its uses. A new London, larger and wealthier, has clustered around it. The London of the days of Charles I. is a mere speck in the map of the modern metropolis. The Corporation has retained its name without the functions which made it respectable, and has stood like a shaky old ruin amid modern thoroughfares—venerable no doubt, and rather picturesque—but an obstruction to the traffic, to the ventilation, and to the general amenity and comfort of the whole neighbourhood. What the Corporation originally did for London when it was first established has now to be done for modern London, either by a new corporation or by an extension of the old. With a reform of all its well-known and proved abuses, the municipality of London should be made to include within its jurisdiction the whole metropolis. The city of Paris has given us an example of the manner in which the reform might be effected. We do not speak of the minor details—for French local government is a very different thing from the local self-government to which Englishmen are accustomed—but we might well take a hint from the French as to the mode in which reform could be effected. Paris is divided into ten *arrondissements*, each of which is governed by its own *maire*, all of whom act in concert with one another and with the Prefect, or chief Lord Mayor, if he may be so called, who is established at the Hôtel de Ville.

The division of the metropolis into Parliamentary boroughs affords an easily available basis for the new arrangement. Marylebone, Finsbury, the Tower Hamlets, Westminster, and Lambeth—to which might be added Greenwich, as well as Chelsea, Hammersmith, Kensington, and other populous districts not yet entrusted with the privilege of sending members to Parliament—ought to be erected into a federal union of municipalities along with the City of London: each possessing its own Mayor, and each being subject, for general and metropolitan purposes, to the superior authority of the Lord Mayor or other officer appointed in his place. This is the skeleton of the scheme that is required, and which, with the preliminary reform of the old Corporation, would give the metropolis the inestimable advantages of municipal unity. The nuisances of Lambeth would not then be allowed to poison Westminster. Streets would not be constructed with a view to the convenience of a mere corner of the City, without regard to the necessities of its out-lying extremities; the due supply of water and gas would be matters of general concern; sewerage and drainage would be conducted upon an effective scale; and public improvements of all kinds would be elevated out of the mire of jobbery in which they are now plunged. But the subject is a large one, and we shall doubtless have frequent occasion to return to it before the Commission has closed its labours, and pronounced judicially that doom which common sense has long since recorded against the "City."

WHATEVER be the issue of the struggle now actually commenced between the Sultan and the Czar on the banks of the Danube, we do not think there will be found much in what may be termed "the literature of the Eastern Question" which will redound credit to the "intelligence" of the age, or materially assist any future Gibbon who may undertake the history of this momentous European crisis. The whole progress of the negotiations—at least, from the moment when they were taken to Vienna—has exhibited nothing but a succession of blunders and cross-purposes; mistakes so palpably stupid, that any country attorney would have been ashamed to have committed the like, or any similar, in the conduct of the commonest County-court case; and the consequence has been, that the Sultan, after patiently leaving his case to the disposal of the diplomatic wisdom of Europe, with the hope of their bringing it to a peaceable adjustment, has been compelled, after nearly six months' waste of time, to come forward and act for himself, just as if he had been left to his own devices all along.

It is a hard thing for Turkey to have had to sacrifice so much time, and to waste so much of her precious resources during so long a period, out of deference to the purely European interests involved in the quarrel, and then to have to resort to fighting at last; but to Europe at large the loss and damage are greater still, in proportion to the extent of territory, and the vast commercial relations paralyzed by the doubts and fears of this long wasted season. Much has been said, from time to time—when the public ardour against Russian aggression has become a little too noisy and too much like earnest—of the terrible costliness of war. Sage journalists, who talk very big one day of cutting out and cutting off every ship and every fort in the Russian dominions within reach by water conveyance, next day sit down to calculate the expense of this amusement, and tell their readers within a fraction what will be their respective shares of it. Surely this is not the light in which a great question of right and wrong, a question of large European polity, should be tried. The state of the "till" is not the only consideration which should regulate dealings between nations. But, even in the veriest shop-keeping and Money-market sense, we would ask the advocates of "Peace at any price" to look back upon the commercial history of the last six months, and consider whether a patched-up and precarious peace may not be more ruinous than a brisk campaign?

We have spoken of the "literature of the Eastern Question" as being most unsatisfactory. That "literature" has hitherto been that of the periodical press—notably the daily journals. And certainly there cannot be two opinions upon the shallow tone—the slovenly, hesitating, vacillating style—in which this great question has been dealt with by it day after day; forcing the conviction upon the bewildered reader that his would-be instructors have no defined opinions of their own in the matter, nor any data to guide them in the formation of an opinion, but what the chances of the day may bring forth. For what else are we to think of the *Times*, which, after having, in the course of six months, put forth every variety of irreconcileable statement in fact, and every shade of conflicting opinion—on the 17th of October, calmly sets forth upon the editorial task of the day, by propounding that "the chances of peace or war in Europe appear to oscillate with almost equable variation from day to day." Chances! Is a diplomatic negotiation all matter of chance?—are there no steps nor stages of induction—no fixed or determinable points whatever to mark the progress of the business, after being six months on hand? And this notion of a game of chance is the more serious when put forth by the avowed Ministerial journal—the organ of that Ministry to whose wisdom and clever management Abdul Medjid is told to surrender the destinies of his Empire. We say "avowed Ministerial journal," and, certainly, it is so self-avowed, and the Ministry have never disavowed it. On the 8th October, a few days previous to the publication of the article last quoted, appeared a leader in the same journal, having especial reference to the meeting of a Cabinet Council, which had been held on the preceding day, an article which concluded with the following passage—a passage, by the way, quite as uncertain and vague in meaning as those which the same journal had all along been in the habit of printing, and only important because it fixed all this unhappy want of purpose upon the Ministry, and gave it as the result of their solemn deliberations, *at which the writer must necessarily have been present*.—

"So long (says the Ministerial writer in the *Times*) as there is a fair chance of a peaceful and honourable solution, it is worth any amount of talking and writing. If it cannot be attained by these means, England must not hesitate to use others more cogent. That is the view of her Majesty's Ministers—the *unanimous* view, and we do not see what there is to say against it."

Well, the Sultan has at length found that "any amount of talking and writing" is vain and useless in this matter; and, after long forbearance, makes a declaration of war; and now the Ministerial organ, whilst admitting that the Sultan was fully justified in so doing, and that it is only a wonder he did not do so earlier, pretends astonishment that the Sultan should be as good as his word, and that Omer Pacha should obey the commands of his Sovereign, by resorting to arms for the purpose of driving the Russians out of the Danubian Principalities, which they have hitherto persisted in wrongfully occupying; and then all the old stupid vocabulary of disparagement, as "rashness," "madness," "folly and fanaticism," is launched against the Turkish Government for resorting to the "bloody arbitrement of battle"—battle which is further denounced as "a useless and objectless battle." The *Times* further pretends that at the moment of this "untoward" proceeding, the question so long talked and written about was on the very point of being "settled" to the satisfaction of all parties. Abdul Medjid can believe this if he pleases; and chew the cud of bitter reflection upon it at his leisure. Meantime, all we have to ask of the Ministerial journalists of the day, is, that, in justice both to the Sultan of Turkey and to the public of Europe, they will deal more in matters of fact than in matters of chance; and that, when speculating upon the results of this great European question, now in open contention, they will be guided by something more than the idle rumour or idle prejudice of the day.

NEW ROYAL YACHT.—Her Majesty has decided that the new Royal Yacht—for the use of herself, Prince Albert, and the Royal family—shall be named the *Windsor Castle*. She is to be built of wood, with paddle-wheels; to have engines of about 650-horse power; and her burthen is expected to be 2600 tons.

ROYAL FAMILY BIRTHDAYS IN NOVEMBER.—Thursday last was the birthday of her Royal Highness Princess Sophia. On the 9th (Lord Mayor's Day) will be the birthday of the Prince of Wales, 1841, and that of the Princess Royal on the 21st, 1840.

NEW QUEEN'S COUNSEL.—Mr. Temple, of the Northern Circuit; Mr. Edward James, of the Northern Circuit; Mr. Montagu Smith, of the Western Circuit; and Mr. Grove, of the North Wales and Chester Circuit, appeared in court on the first day after term, and were called within the bar, and took their seats as her Majesty's Counsel.

THE TURKISH QUESTION.—MEETING AT NOTTINGHAM.—On Tuesday evening a meeting was held in the Exchange Hall "to take into consideration the recent acts of aggression on the part of Russia towards Turkey," and to memorialise her Majesty on the subject of our foreign policy. The large room was crowded. The chair was taken by the Mayor.

NEW ORGAN AT STEYNING CHURCH.—On Saturday afternoon last, a selection of sacred music from "Elijah," the "Creation," and the "Messiah," was performed with admirable effect upon the above new instrument, built by Mr. Hedgeland. The vocal performances were likewise very successful; a distinction more especially awarded to the singing of Miss Phillips, a daughter of Mr. Henry Phillips.

RIOT AT BLACKBURN.—The town of Blackburn was disgraced by a riot on Tuesday, on the occasion of the election of councillors for St. Peter's ward. The authorities were conscious of their inability to cope with the insurgents, and no effort was made, the whole day, to put down the riot. The mobs were headed and led on by respectably dressed men, apparently the overlookers at the mills. The town next day was quiet, but uneasy.

POSTSCRIPT.

HOSTILITIES IN ASIA.

The following telegraphic despatch has been received from Vienna:—

CONSTANTINOPLE, Oct. 25.—Hostilities have commenced in Asia. A serious engagement took place on the 21st. The fleets lie at Lapsaki, in the Dardanelles

A refugee tumult has taken place at Pera.

The *Oesterreichische Correspondenz* reports that the Russians have repulsed the Turks in Little Wallachia. This requires confirmation.

Prince Birbey and his son arrived yesterday at Hermannstadt, on his way to Vienna.

The new course of negotiation which, at the date of the last advices, had been opened at Constantinople, was believed, up to the arrival of the above despatch, to offer the prospect of a peaceful termination of the Eastern question. The impression produced in some quarters is, that the commencement of actual conflict puts an end to pacific negotiations. But this is not the view taken upon the Exchanges of London and Paris of the latest efforts of the diplomatists, if we may judge by the buoyancy of the Funds.

A new Note, which had received the sanction of the Four Powers, had been adopted by the Sultan, and was supposed to have been favoured by an anticipative expression of welcome from the Emperor of Russia, testifies to so general a concurrence in favour of peace by the several Powers, that the negotiations for the settlement of the question are believed in the most influential quarters to have been resumed with decided prospects of success.

Letters from St. Petersburg of the 22nd ult. announce that Prince Paskiewitsch was admitted to an audience on the preceding day, to take leave of the Emperor on his departure to resume the command of the Russian army in the Danubian provinces.

The combined fleet of France and England only quitted Besika Bay at daybreak on the 22nd. The wind was blowing tremendously, and by nine a.m. became a complete hurricane. Two ships, although having their anchors up, could not get out of the bay. The steamers were useless as tugs, and after beating about for some time, the French Admiral, with three line-of-battle ships, anchored close to Gallipoli; Admiral Dundas, with the *Britannia* and *Furieux*, at the First Castle; and the *Albion*, *Retribution*, and *Vengeance* at the Old Castle. The remainder of the two squadrons sought refuge in different roadsteads in the Dardanelles.

FRANCE.

General Baraguay d'Hilliers left Paris on Wednesday for Marseilles. The following are the names of some of the officers who accompany the General to Constantinople:—Lieutenant-Colonel Dieu, and Captains Foy and Klopin, of the Imperial staff corps; Major de Beurmann, of the Artillery, and Major Jourjon, of the Engineers. General Baraguay d'Hilliers and his staff, are to sail from Marseilles for Constantinople on board the *Promethée* steamer.

The price of Government securities underwent various fluctuations at the Bourse on Wednesday. The three per Cents opened at 72f. 65c., and fell to 72f. 45c. They rose again, and reached 72f. 40c., at which they closed for the end of the month. The four-and-a-Half per Cents closed at 99f. 60c.

GERMANY.

VIENNA, October 31. Baron Prokesch has gone to Berlin for the purpose of inducing the Prussian Government to join Austria in a declaration which may define the position of the two Powers in the Oriental Question, and to prefer this declaration at the sittings of the German Diet. It appears, however, that Prussia refuses to pledge herself to anything, even to a declaration.

Nov. 2.—Metalliques, 90⅞; Exchange on London, 11.09.

A deputation of the Hebrew community have waited upon the Emperor, for the purpose of laying an humble petition at the foot of the throne, in support of those rights in virtue of which Austrian subjects of the Jewish persuasion could legally acquire real estate (or immovable property) up to a very recent period, when a provisional enactment was published which deprived them of those rights. The Emperor promised to re-consider the subject.

SPAIN.

Our accounts from Madrid are of the 28th ult.

The Council of Ministers had not yet come to any decision relative to the Northern Railway question. The exigencies of M. Salamanca retarded its solution.

The postal convention between England and Spain had been concluded.

A burial-ground has been granted to the Protestants.

PORTUGAL.

By the *Tagus* we have news from Lisbon to the 29th ult. The Government have refused to prohibit the exportation of grain, Portugal not being threatened with a scarcity. Mr. Isaac Carruthers, the President in Lisbon, has been unfortunately killed by the accidental discharge of a fowling-piece. The railway made no perceptible progress, and the fate of the Fonte Arcada line, still dependent upon the sanction of the Cortes when next they meet.

THE CIVIL WAR IN CHINA.

Private letters, received by the Overland Mail, via Marseilles, place us in possession of further particulars respecting the progress of the rebellion in China. The rebel army was said to have reached Tien-tsin, the seaport town of Pekin, distant on the Peiho; and news of the taking of the capital was daily expected. At Shanghai the Triad Society men were beginning to be troublesome. There were said to be 8000 of them in the city, and they contemplated a rise very shortly.

At Amoy there had been much bloodshed; but letters from that place state that an early termination of the struggle between the rebels and the Imperialists was looked forward to. The approach of the mandarins had been repeatedly announced; but so much delay had occurred that it was for some time believed they had abandoned altogether the idea of recapturing the city. At daylight, however, on the 26th of August, a fleet, consisting of 20 Canton and 14 Amoy junks, drove in sight, and shortly after noon arrived off the 200-gun battery. An ineffective cannonade was kept up until evening. The same afternoon another fleet, consisting of forty or fifty junks and large boats, came round the west side of the island, where the passage is very narrow, and destroyed several villages on the main land, known as rebel villages.

At Canton matters were comparatively quiet, but in the surrounding neighbourhood much disaffection was springing up. Two villages, situated a few miles only from the north-west side of the city walls, had lately been waging war against each other, and the result had been a considerable loss of life. The mandarins at length succeeded in quieting matters, but it was thought this would only be for a time. The latest accounts received of the detachment of the rebel forces which was traversing the Kiang-si province southward was, that they had reached as far as Kang-chow, a large city, not far distant from the hilly range dividing the Kiang-si province from that of Kwantung, and to which the Meiling Pass, where the Governor-General of the two Kwangs has for some time past had a considerable body of troops for the purpose of checking the further progress of the rebels southward. It was, however, scarcely expected that the latter would be repelled, as they had the prestige of repeated victory on their side.

LOSS OF THE DALHOUSIE.—The inquest on the body of Mrs. Underwood, which was picked up a few days since off Dymchurch, has closed with a verdict of "Found drowned;" the jury thinking that no useful end would be served in prolonging the inquiry. Mr. Wing, and Mr. Leake, identified the remains of the deceased lady. Nothing has been seen or heard of the spar to which Miss Underwood, Captain Butterworth, and several others were lashed. The exact position of the wreck continues undiscovered. Lloyd's agents have communicated with the fishermen, boatmen, and others, requesting them, if possible, to ascertain its locality. If Reed is right as to the bearings with Beechy-head, and the probably distance off the coast when she went down, there is little doubt that she foundered in about 30 fathoms. From the circumstance of several packages of goods, which were stowed in her main hold, having been picked up, it is believed that portions of her deck must have given way. The opinion generally come to as to the cause of the sinking of the ship was, that a port-hole had been accidentally left open. It is said that the decks were not at all overloaded; that she had not more than fifty tons between decks; and that more than ordinary care had been taken in stowing her.

BOILER BURST AT BLACKBURN.—A very shocking accident occurred, on Wednesday morning, at Blackburn, by the bursting of a boiler used in the cotton-mills of Mr. W. Hesketh, whereby at least six persons have been killed, and several others very severely injured.

The new church at Little Tew, Oxon, was consecrated on Thursday week by the Lord Bishop of the diocese, and dedicated to St. John the Evangelist. The site for the church was given by Eton College, who, together with the Rector and Fellows of Exeter College, have contributed liberally to the funds.

THE COURT.

The past week has been distinguished by a brilliant round of hospitalities at Windsor Castle. On Friday, the 28th ult., her Majesty held a Chapter of the Order of the Thistle, for the installation of the Duke of Atholl; the Earl of Haddington and Lord Panmure as Knights Brethren. The occasion was celebrated by a grand banquet the same evening in the Waterloo Chamber.

On Saturday last his Excellency the Portuguese Minister and the Countess Lavradio, Lord John Russell, the Earl Granville, and Viscount Hardinge, arrived at the Castle on a visit to her Majesty. The Duke of Cambridge, the Duke and Duchess of Atholl, the Marquis of Abercorn, the Earl of Aberdeen, the Earl of Haddington, the Earl of Elgin, the Earl of Mansfield, the Earl of Mulgrave, and Lord Panmure, took leave of her Majesty, and left the Castle to-day.

On Sunday the Queen and Prince Albert, the Prince of Wales, the Princess Royal, the Princess Alice, and the King of the Belgians, the Ladies and Gentlemen in Waiting, and the domestic household, attended Divine service in the private chapel of the Castle. The Belgian Minister, Earl Granville, the Marquis of Breadalbane, Lord John Russell, and Viscount Hardinge, were also at the service. The Hon. and Rev. G. Wellesley officiated. The Duke and Duchess of Brabant, the Count of Flanders, and the Princess Charlotte of Belgium, the ladies and gentlemen of their suite, and the Portuguese Minister and Countess de Lavradio, went to the Catholic Chapel at Clewer.

On Monday the Queen, with the Duchess of Brabant, drove out in an open pony phaëton. His Royal Highness Prince Albert, with his Majesty the King of the Belgians, accompanied by Earl Granville, went out shooting. The Duke of Brabant and the Count of Flanders, attended by Baron Prisse and Colonel Wylde, went to Woolwich, to witness the evolutions of the Artillery, and view the Royal Arsenal. The French Ambassador and Countess Walewska, Madame Van de Weyer, the Marquis of Lansdowne, the Earl of Elgin, Lord Elphinstone, Lord Ragian, Major-General Grey, the Hon. Sir Edward Cust, and Sir James Graham, arrived at the Castle, on a visit to her Majesty.

On Tuesday the Queen and Prince Albert, accompanied by the king of the Belgians, and attended by the Countess of Desart and the Gentleman in Waiting, left the Castle at half past ten o'clock, and proceeded by a special train on the South-Western Railway to the private station at Nine Elms, where carriages were in readiness to convey the Royal Party to the Crystal Palace at Sydenham. The Duke and Duchess of Brabant, the Count of Flanders, and the Princess Charlotte, arrived there nearly at the same time, and joined her Majesty. After minutely inspecting the progress of the works, the Royal party returned to Nine Elms Station, and proceeded to Windsor in a special train, which arrived at twenty minutes before five p.m.

On Wednesday the Queen took an early walk in the Home Park. The Prince Consort, and the King of the Belgians, and the Earl of Elgin, went out shooting in the forenoon, attended by Lord Canning and Lieut.-Colonel the Hon. A. Gordon. His Excellency the French Ambassador, and the Countess Walewska, the Marquis of Lansdowne, the Earl of Elgin, Lord Elphinstone, Lord Ragian, and Sir James Graham, left the Castle; and the Duke of Newcastle, the Prussian Minister and Madame Bunsen, and Viscount Palmerston, arrived on a visit to her Majesty.

We regret to learn that serious apprehensions are entertained as to the state of health of the Princess Nicholas Esterhazy, whose return to this country, in consequence of long indisposition, has been recommended by her German physicians. The Countess of Jersey and Lady Clementina Villiers have arrived in town, and are in close attendance on the Princess, whose removal to Torquay will take place as early as practicable.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Archdeaconry*: The Rev. H. H. Jones, to Demerara, and Rural Deanery, George Town, Demerara. *Honorary Canonries*: The Very Rev. S. Hood, D.D., Rev. J. P. Perowne, and Rev. H. M. Mapleton, to the collegiate church of Cumbrae. Rev. J. Drummond, and Rev. T. Pell, jun., to Peterborough Cathedral. *Livories*: The Rev. J. Milner, to Elton, near Stockton-upon-Tees; Rev. W. H. Edwards, to St. Botolph, Cambridge; Rev. J. N. Piell, to Newton Toney, Wiltshire; Rev. T. Garrett, to Yore, Jamaica; Rev. J. F. Colls, to Laindon, with Basildon annexed, Essex; Rev. W. E. Buckley, to Middleton Cheney, Northamptonshire. *Vicarages*: The Rev. D. J. Jones, to Llanarth and Llanina, near Lampeter; Rev. C. Prankard, to Abbington; Rev. R. Wilde, to Kilsallaghan, diocese of Dublin; Rev. G. Wilson, to Lowick, in the Chapelry of Lindewisbach, Radnorshire. *Incumbencies*: The Rev. W. Landford to Bicton, Shropshire; Rev. H. Meeres to St. Bartholomew's Church, Rochester; Rev. G. Armitage to Silverdale, Staffordshire; Rev. F. T. Gregory to St. Mary's Church, Lambeth-butts; Rev. J. Richards to Betws, Carmarthenshire; Rev. J. Hirst, to Eastwood, Yorkshire; Rev. E. T. Rowell to St. Stephen's, Leeds; Rev. R. Spindler, to St. Germans, Cornwall. *Perpetual Curacy*: The Rev. F. H. Leonard to Landevand, Monmouthshire.

RESIGNATION OF THE VICE-CHANCELLOR OF CAMBRIDGE.—The Vice-Chancellor (the Rev. the Master of Corpus Christi College) resigned his office on Wednesday, his academical period having expired. His successor (the Rev. Dr. Geldart, Master of Trinity Hall) was elected the next day.

THE BISHOPRIC OF JERUSALEM.—The following important document has been published:—"Whereas certain clergymen have addressed a memorial to the Oriental Patriarchs and Synods, praying that the Anglican Bishop in Jerusalem is accused of having exceeded the proper objects of his mission, and of conducting schism into the Eastern Churches: and whereas some of the names affixed to the said document are the names of persons who hold official stations in the United Church of England and Ireland, and it might be supposed—at least in foreign parts—that a censure of the Bishop, as having acted without due authority from his Church, would not be made by persons who were themselves acting without such authority; therefore we, the Metropolitans of the United Church of England and Ireland, deem it expedient to make this public declaration that the said memorial does not in any manner emanate from the United Church, nor has any person authorised it as that Church to pronounce decisions. We are induced to take this step—first, in order to guard against the danger which might arise to our own Church from the example of the irregular and unauthorised proceedings of the memorialists; and, further, because we sympathise with our brother, the Anglican Bishop in Jerusalem, in his arduous position; and feel assured that his conduct, under the circumstances in which he is placed, will be guided by sound judgment and discretion.—J. B. CANTUAR, T. EBOR, JOHN G. ARMAGH, RICHARD DUBLIN. Nov. 1, 1853."

The Bishop of Durham intends holding a general ordination at Auckland Castle, on Sunday, the 18th of December.

In consequence of a severe attack of illness the Bishop of Norwich has been compelled to postpone his confirmation tour.

SHOCKING MURDER.—A dreadful murder has been committed at Barnham, four miles from Windsor. Mary Ann Ferguson, the housekeeper of a farmer named Goodwin, of Barnham Abbey farm, was left on Tuesday evening in the house by herself. On the return of her master, at seven o'clock, from visiting a friend, he found his cashbox left as usual, and a strong smell of fire: on going up stairs to her bedroom, he found the poor creature dead, and her legs nearly burnt off. It is surmised that the villain, having foully murdered, set him down stairs, had taken the body upstairs, and set fire to it in her bed-room. At first it was believed that nothing had been stolen from the house, but Mr. Goodwin has since discovered that some valuable rings, a gold pencil-case, and other articles, were taken from his bed-room. No distinct clue has yet been obtained to the guilty parties.

ACCIDENT AT ASTLEY'S.—A supernumerary, named George Palmer, who had to fire a gun behind the scenes during the performance, very foolishly put the muzzle to his mouth, to blow a few grains of the powder to a gas jet. He was cautioned as to the danger, but he persisted in the amusement; and, drawing his breath in, drew the gun to the touch-hole, and the piece exploded, dreadfully mutilating his face and head. He was taken to the Westminster Hospital, but died the next evening.

GREEN FRUIT.—Arrivals of oranges have been received from Faro and Madeira. A cargo, per *Lady Rebora*, from the latter place, sold as a public sale, realised a fair price. Several cargoes of black Spanish nuts have arrived; opening figure, 60s. per barrel. Barcelona neglected, the high price checking consumption. Lisbon grapes becoming scarce, and the stock is considerably less than has been the case for many seasons past.

A PROMPT CAPTURE.—On Wednesday Mr. Beswick, chief superintendent of police at Manchester, received a letter from Mr. F. O'Neil, of the police at Dublin, informing him that Thomas M'Grane had absconded from that city with a large sum of money, and that he was likely to visit Manchester. Mr. Beswick immediately sent M'Donald another constable to the Liverpool railway station, to wait for the arrival of the train. The train came in, and with it M'Grane, who, to his great surprise, was instantly apprehendrd, and marched off to the police station. Taken quite aback by the sudden termination to his flight, he confessed his guilt, and produced two bag—some containing gold, and the other £5 in silver. He was sent back the same evening to Dublin.

LATEST INTELLIGENCE.

TURKEY AND RUSSIA.

We hear from the seat of war that Bucharest and all the towns in the Principalities have been placed in a state of siege. Martial law had been proclaimed, and correspondence with the Turks prohibited on pain of death.

The first general engagement was expected to take place at Krajowa, which is defended by Russian troops from Kalafat. Ten thousand more men are expected there, and the Hulan regiments with artillery. Cossacks are piqueted for the transmission of orders and news. At Krajowa, it is said, "great masses of troops are being concentrated. The vanguard, consisting of 3000 horse, which was before stationed at Slatina, is proceeding in forced marches to Krajowa.

An Austrian paper states that the Russians had repulsed the Turks; but this requires confirmation.

The Turkish fleet in the Bosphorus weighed anchor on the 25th for the Black Sea. The English and French fleets were on the move to the Bosphorus.

All the journals of Vienna and Berlin confirm the intelligence of the passage of the Danube on the 31st, and give the text of the proclamation of Omer Pacha, which terminates by reminding his soldiers that the dust on which they tread is the ashes of their ancestors—and calling upon them to swear to combat to the last drop of their blood for the maintenance of the throne of their beloved Sultan.

The accounts from Vienna are that the Earl of Westmoreland had received from Constantinople an assurance that the representatives of the Four Powers had succeeded in their efforts to bring the Divan to pacific sentiments, and that positive orders had been sent to Omer Pacha not to commence hostilities. Austria resumes the part of mediation, having received assurances that the Emperor of Russia has no desire to encroach on the integrity of the Ottoman Empire, or to attack in any way the sovereign rights of the Sultan.

The Austrian Government, failing to raise a loan in London, has, it is said, contracted a loan with the Imperial Bank and other great financial establishments of St. Petersburg.

There was a rise on the Paris Bourse on Thursday. The Three per Cents closed for cash at 74f. 30c.

TESTIMONIAL IN HONOUR OF LIEUT. BELLOT.

A meeting of the admirers of the late Lieutenant Bellot, of the French Navy, was held at two o'clock yesterday (Friday), at Willis's Rooms, to testify the appreciation of Englishmen of the gallant conduct of a Frenchman who devoted himself to the cause of science and humanity, and who, in his self-devotion to those objects, lost his life. The chair was taken by Sir Roderick Murchison. Letters were read from the Mayor of Rochefort, from the Admiralty, and from M. Drouyn de L'Huys to Count Walewski (the French Ambassador), lamenting the death of the gallant Frenchman, and expressive of their great estimation of him. Among those present were Colonel Boyle, M.P., Mr. Chisholm Anstey, Lieut. Halkett, R.N., Sir David Dundas, Sir James Graham, Sir E. Parry, Colonel E. Sabine, &c. The following were the resolutions proposed:

1. That the meeting, composed of various classes of Englishmen, being anxious to mark their deep sense of the noble conduct of Lieutenant Bellot, of the French Imperial Navy, who was unhappily lost in the last Arctic expedition in search of Sir John Franklin, resolve that the requisite measures be adopted forthwith for promoting a general subscription for the purpose of creating a monument to the memory of [illegible] to be placed in the Royal Hospital, Greenwich.

2. That the surplus of the subscription, after defraying the cost of the monument, be invested for the benefit of the members of the family of Lieut. Bellot.

3. That it be an instruction to the sub-committee to communicate with the municipal authorities of other ports of the United Kingdom, with the naval commanders, in order to render the subscription general, and public [illegible]

4. That the following gentlemen be a sub-committee to carry out the objects of the meeting:—The Right Hon. the Earl of Aberdeen, Sir J. Graham, Admiral [illegible], Lieut. Sabine, Captain Fitzroy, Commander [illegible], and Inglefield, with the Rev. G. C. Weldon, and Mr. Norton Shaw, Secretaries.

The hon. chairman, in opening the proceedings, dwelt upon the past history and gallant services of Lieutenant Bellot, and his disinterestedness in accompanying an English expedition in search of Sir John Franklin, in search of whom the gallant lieutenant had unhappily lost his life. The resolutions were received and agreed to with the greatest enthusiasm. The meeting was crowded to excess, and hundreds were outside anxious to gain admission, but could not.

Among the names of subscribers to the meeting are:—Sir R. Murchison, £25; the Earl of Ellesmere, £20; the Earl of Aberdeen, £25; the Earl of Clarendon, £25; Sir J. Graham, £25; Lord Overstone, £25; C. J. Mare, Esq., £10; Lady Franklin, £25, and Miss Cracroft, £5; Lord John Russell, £20; John Barrow, Esq., £20; the Marquis of Lansdowne, £20; and other noblemen and gentlemen; in all, exceeding £1000.

THE NEW CATTLE-MARKET.—On Thursday the Lord Mayor visited the extensive works now in progress at Copenhagen-fields, Islington, for the New Metropolitan Cattle-market. The whole of the works were considered to be in a satisfactory state, with the exception of Mr. Wilson's—the contractor for the general levelling of the ground, the brick-work of the sewers, the drainage of the market, forming the roads, and building the boundary wall of the great enclosure—who has as yet not been able to finish more than two-thirds of his engagement.

THE LISBON DUTIES.—Mr. Oliveira, M.P., having recently made an extensive tour in the South of France and Germany, has for some days past been at Manchester, consulting the leading commercial firms and the Free-trade party, with a view to obtain their co-operation in his intended motion for a reduction of the wine duties on the re-assembling of Parliament.

THE ANTI-STATE CHURCH SOCIETY.—This Association held its triennial conference on Thursday. Referring to the last general election, the committee congratulated the Conference on the fact that forty Protestant Dissenters had been returned to the present Parliament. The conference was next congratulated upon the voluntary extinction by the Government of the *Regium Donum*, and upon the passing of the bill empowering the people of Canada to deal with the Clergy Reserves. The report concluded with a recommendation of a meeting invidious ecclesiastical distinctions. The various other legislative measures affecting the interests of Dissenters were alluded to; and the general success of the friends of that body in Parliament was urged as a ground for encouragement, and as a reason for further exertion.

COMMON COUNCIL.—At a Court held on Thursday, some notice was taken of the evidence given before the City Commissioners by Mr. Acland and Mr. Travers, and their statements generally denied; but it was admitted that 300 copies of the newspaper that gave the most favourable account of the proceedings of the Common Council were occasionally purchased. It was agreed that some ground on the western side of Old Change should not be let for three months, as it might be required for a new bridge from that neighbourhood to the Surrey side of the Thames. It was also determined "to maintain the condition of London-bridge, as to the expediency and practicability of constructing a way for foot-passengers on the eastern and western side, leaving the whole of the width of the bridge for carriages." It was likewise agreed that it was desirable that measures should be adopted, under the authority of the Court of Common Council, to apply to Parliament, authorising the establishment of a free library, and free circulating library and museum; and that, previous thereto, the Lord Mayor should be requested to convene a public meeting of the merchants, bankers, and other inhabitants of the City, to procure their aid and support to such an undertaking." &c.—After the transaction of other business, the Court adjourned.

The Master of the Rolls has appointed Mr. William Wright, of the Chancery bar, to the office of Clerk of the Insolvents, in the place of Mr. David Drew, deceased.

The expedition organised by Lady Franklin, in search of her husband, has been given up for this season, owing to a disagreement among the officers.

We hear General Buckley has made a most triumphant canvass through the city of Salisbury, where his high character gave him deserved popularity.

The Wellington Pier at Yarmouth has been opened. It is completed to a distance of upwards of 900 feet.

THE South-Eastern and Continental Steam-packet Company has been formally dissolved.

SCOTTISH RIGHTS.—A very great meeting was held on Wednesday evening, at the Music-hall, Edinburgh, in favour of the objects of the "National Institution for the Vindication of Scottish Rights." Lord Eglington was the chairman; he addressed the assembly at great length, and proposed the following as the basis on which this association is founded:—

"That Union between Scotland and England recognises the supremacy, asserts [illegible] and provides for the preservation of the national laws and institutions so [illegible] attempt to subvert or place those institutions under English control, under [illegible] ing economy, would deprive Scotland of the benefit of local action, [illegible] an infraction of the true spirit in which that treaty was

This was carried in the midst of most vociferous cheering. Sir Archibald Alison (the historian), Mr. Baillie Cochrane, Sir J. Walker Drummond, and several other gentlemen addressed the meeting; and five resolutions were carried, amidst the greatest enthusiasm, embodying the sentiments expressed by the noble chairman.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, NOV. 3.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Shelter Readings.	Thermometer. Lowest Readings.	Mean Temperature of the Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.
	Inches.	°	°	°	°			Inches.
Oct. 28	29.873	62·0	53·1	56·2	+ 9·0	86	S.W	0·93
„ 29	29.849	57·0	47·0	49·6	+ 2·6	79	S.W.	0·04
„ 30	30.046	55·0	40·0	46·5	— 0·3	90	S.W.	0·09
„ 31	29.956	58·2	37·1	46·6	— 0·3	85	S.	0·01
Nov. 1	29.805	61·2	43·4	51·1	+ 3·3	89	S.W.	0·00
„ 2	29.876	60·5	42·8	52·2	+ 4·3	77	S.S.W.	0·05
„ 3	30.077	57·0	41·3	50·2	+ 4·3	94	E	0·00

Note.—The sign + denotes above the average, and the sign — below the average. The numbers in the seventh column are calculated on the supposition that the average humidity of the year is represented by 100. The rain recorded as above on the 28th fell for the most part before midnight on the 27th.

The reading of the barometer increased from 29.59 inches at the beginning of the week to 30.09 inches by October 30; decreased to 29.93 inches by the afternoon of November 1; increased to 30·13 inches by the morning of the 3rd, and decreased to 30·08 inches by the end of the week. The mean for the week, at the height of 82 feet above the level of the sea, was 29.986 inches.

The mean daily temperature of the 28th was 56.2°, and is the highest mean temperature recorded on that day since the year 1831, when it was 59·9°. During the time the daily temperatures were above their averages, viz., from the 21st to the 29th, the excess of temperature was 7·9°.

The mean temperature of the week was 9·0° above the average of the corresponding week during 38 years.

The range of temperature during the week was 25·8°.

The mean daily range of temperature during the week was 16·4°.

Aurora Borealis was seen during the evening of the 31st.

For the month of October the mean reading of the barometer, at the level of the sea, was 29.733 inches.

The highest temperature during the month was 68·9°, and the *lowest* was 29·8°. *The range of temperature during the month* was, therefore, 36 1°. The mean of all the highest temperatures by day was 59·4°, and of all the lowest by night 44°. *The mean daily range of temperature during the month* was, therefore, 15·4°.

The mean temperature of the month was 51°, being above the average of thirty-eight Octobers by 1·1°.

The mean temperature of evaporation was 49·2°.

The mean temperature of the dew point was 47·1°.

The mean degree of humidity of the air was 87, complete saturation being represented by 100.

The fall of rain during the month was 4.3 inches, making a fall of 27.4 inches since January 1.

JAMES GLAISHER.

HEALTH OF LONDON.—The number of children born within the metropolitan districts during the week ending October 29, was 1617; of these, 817 were boys, exceeding the average of the eight corresponding weeks in the years 1845-52 by 112; and the number 800 is exceeded by 1000 in the week ending November 5, the average of which is 1105. The number of deaths registered in the week was 1144, showing an increase of about 100 on the first three weeks in October. In ten corresponding weeks, in the six preceding years, the number of deaths were 1080, 966, 948, 977, 945, 1115, 837, 945, 861, and 1090 in 1852. The average of these is 974; which, if raised in proportion to increase of population, would be 1071. These 10 weeks, in which the mortality is 73 in the pre-ent return on the corrected average, arising chiefly from the epidemic; the progress of which has been recorded during the last two months, and which has now extended to the metropolis, and is widely distant, between Hammersmith and Whitechapel. Of the deaths 592 were males, and 552 were females. The deaths at three periods of life were distributed as follows:—Under fifteen years, 379; at fifteen and less than sixty years, 382; and at sixty and over, 170. They were distributed over the metropolis as follows:—In the west districts, population 376,477, there were 163 deaths (from cholera, 16); north districts, population 490,266, deaths 215 (from cholera, 3); central districts, population 263,—, death 109 (from cholera, 1); east districts, population 485,522, deaths 257 (from cholera, 24); south districts, population 616,635, deaths 385 (from cholera, 82). Zymotic diseases caused 344 deaths (their average is 242); of these one only is referred to small-pox; measles carried off 21; scarlatina, 44; hooping-cough, 61 (its average is 39); diarrhœa, 41 (its average is 23); cholera, 96. The number of deaths to this disease in the preceding twelve weeks were 6, 19, 10, 18, 7, 16, 29, 47, 66, 45, 44, and 85 respectively; and, therefore, is on the increase. Typhus carried off 50. To dropsy, cancer, and kindred diseases, 45 deaths; to tubercular diseases, 169; to those of the brain and spinal marrow, to those of the heart, &c., 34: and the numbers to those four diseases are about their averages. To diseases of the lungs, &c., 200 (exceeding its average by 31); to those of the stomach, liver, &c., 107 (average 97); to premature birth, 38; to age, 36; to sudden death, 5; to burns and scalds, 5; to hanging, 5; to drowning, 1, and to fractures, 6. The classes of diseases at present in excess are those of the organs of respiration and zymotic diseases; all the rest are about their averages. It will be seen that the increase in zymotic diseases is chiefly due to cholera, the deaths from which increased from 16, at the beginning of October, to 96 in the last week: 54 males and 42 females sunk under the disease: 22 died under 15 years of age; 49 between 15 and 60; and 15 at 60 and upwards.

PREPARATION OF LIFE FROM SHIPWRECK.—On Thursday a meeting of the General Committee was held at the offices, John-street, Adelphi. Mr. Thomas Chapman, F.R.S., presided, and the meeting was fully attended by other highly respectable gentlemen. Mr. Lewis, the secretary, having read the minutes of the previous meeting, the silver medal of the Institution was voted to coastguard chief-boatman, W. H. Trudgeo, and £8 8s. to himself and crew, for having, with the Bridehaven new life-boat, saved the crew of the sloop *Margaret*, of Bideford. Several other awards were apportioned to deserving parties; and appropriate votes were passed concerning the late Captain Ellice, R.N., and Mr. George Lyall, ex M.P. for London, by whose lamented deaths the institution had lost zealous coadjutors. The thanks of the committee were also unanimously voted to the Corporation of London, for their handsome donation of £210, in aid of the funds of the society.

THE EVANGELICAL ALLIANCE. The sittings of the Evangelical Alliance Conference are over. The concluding session was held on Saturday at the offices in the Adelphi. The audience was very small, the numbers present at any one time not exceeding forty. Admiral Harcourt, in the absence of Sir Cullen Eardley, occupied the chair. The main business to be transacted was the appointment of the time and place for holding the next conference, and Birmingham was fixed on, for the first week in October, 1854.

THE CITY CORPORATION COMMISSION held their first meeting on Friday week, at the official residence of the Prime Minister in Downing-street. The representatives of the public press were not admitted. The proceedings were, it is understood, of a formal nature. The Commissioners were engaged in consultation up to two o'clock; and sat again on Tuesday, at twelve o'clock, when Mr Acland volunteered a good deal of evidence. On Wednesday, Mr. Ingram Travers, the whole clerk, was examined; and then Mr. Acland again. It is supposed they will sit every Tuesday, Wednesday, Thursday, and Friday, at twelve o'clock, for some weeks to come.

CITY MONUMENT TO THE DUKE OF WELLINGTON.—We are given to understand that the Wellington Statue Committee, of Guildhall, of which Mr. John Wood is chairman, have selected the models sent in by the six following sculptors as those entitled to the premium of 100 guineas each:—Adams, Behnes, Bell, Foley, Smith, and Thomas. The number of models before the committee was thirty. The committee have not yet determined upon the selection of a model to be monument, and it is not known whether any one of the above-mentioned artists is to be engaged to carry into execution the great work.—*Morning Chronicle*.

STOCK EXCHANGE DELINQUENT.—Mr. William Le Grand, a broker on 'Change, has failed and disappeared, taking with him several of a money confronted to him for the purchase of stock. Henry Earl Levell gave him £605 10s. for investment in the Three per Cents.; James Lightfoot authorised him to sell £370 18s. 6d. Three per Cents.; and Philip and Ann Newberry, a saving couple in Surrey, gave him over a thousand pounds, the earnings of their lives, to buy annuities. In all these cases Le Grand kept the money. He is to be prosecuted, if found, and his securities are to be held responsible.

MIDDLESEX HOSPITAL.—On Thursday, at the quarterly court of this charity, it was stated that, by the adoption of a new system of registration, better arrangements of patients had been effected, and a greater attention secured to ventilation, &c., and that erysipelas, hospital gangrene, and pyæmia, had, in consequence, almost disappeared from among the patients, of which there are at present 200 in the hospital.

ROYAL PATENT BENEVOLENT INSTITUTION.—On Thursday a meeting of the governors of this society agreed to two resolutions—one recommending the discontinuance of the provident business, as, by the provisions of the Savings' Banks Annuity Act, the Commissioners for the Reduction of the National Debt will, free of charge, contract with servants for Government Annuities; the second recommended with due deference to the opinions of Prince Albert expressed against an amalgamation of the two societies, the transfer of the Benevolent branch, namely, the Registry and Servants' Home, to the care of the General Committee. [illegible] Institution in case either event

THE ILLUSTRATED LONDON NEWS

On Thursday the Zoological Society had its monthly meeting at the society's house, Hanover-square; Mr. Broderip in the chair. Messrs. W. Cary, E. L. Barbe, W. Corry, jun., E. Tress, and J. S. Leakey, were elected Fellows: and Earl Granville, Earl Bruce, the Rev. W. Fallodield, Mrs. Moseley, and Messrs. J. M. Stanley, T. Jackson, C. H. Latouche, and J. S. Willes were proposed as candidates for the Fellowship. The total number of visitors to the gardens during the current year had amounted to 385,436, making an increase of 80,522 over the whole twelve months of 1852.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The Consol Market has been in a very excited state during the whole of the week, and prices have been subject to numerous and extensive fluctuations. The advance in the quotations may be fairly stated at one per cent 2½ having been touched for the Three per Cents. Very large quantities of Stock have been purchased on account of the public; consequently, the supply—notwithstanding that the Bank has continued to lend Stock to the Jobbers has been limited. The rumour to the effect that the Chancellor of the Exchequer is about to fund £4,000,000 of Exchequer Bills, has had very little influence upon value. The "backwardation" in prices has been heavy—the difference having been as much as from ¼ to ⅜ per cent.

There has been about an average demand for money. In Lombard-street, first-class bills have been readily done at ½ below the minimum of the Bank of England; but corn and wool acceptances have been regarded with some suspicion. In most quarters, the supply of cash is large.

The imports of the precious metals have been good, and several parcels of gold have been forwarded to the Bank, instead of being immediately re-shipped to the Continent. From New York we have received 1,210,000 dollars; from Portugal, 200,000 sovereigns; from Australia, about £70,000. In addition to those supplies, about £55,000 has come in from Mexico and the West Indies.

A notice has been issued by the Bank of England, stating that the directors are authorised to pay off the dissentients to the conversion of the various petty stocks known as New South Sea Annuities Three per Cents, 1751, and Three per Cents, 1853, which will fall due on the 5th of January next. The total to be called is £2,380,001; and the portion to be converted, £704,939. Four per cent discount will be charged, and no sums of stock of less than £100 will be paid off.

Numerous fluctuations took place in the value of Consols on Monday and business was unusually active. The Three per Cents rated from 93¾ to 94⅛; Ditto, for the Account (fixed for the 10th inst.), 93⅞ to 94⅛. The Three per Cents Reduced were 92⅞ to 93⅛; New Three-and-a-Quarter per Cents, 94⅜ to 95⅜; Long Annuities, 1860, 5 5-16; Ditto, 59 years, 1859, 5 5-16; India Stock, 247; South Sea Stock, 113; Bank Stock, 212. Exchequer Bills were firmer, at 1s. to 4s. premium. India Bonds were dull, at 2s. dis. to 2s. prem. Tuesday being a close holiday, no business was transacted in the Stock Exchange. On Wednesday Consols were in steady request, yet prices, owing to the warlike news from Turkey, took a downward tendency, the Three per Cents having been done at 93⅞ to 93⅝; India Bonds were 1s prem. to 2s. dis. South Sea Stock, 113; ditto, Old Annuities, 99⅞. The market opened briskly on Thursday, and the Three per Cents were first quoted at 94⅛ to 95 for Money; but the arrival of news that the Turks and Russians had come to open hostilities, produced a sudden fall in prices to 94⅛ ⅜ for Transfer. However, the market closed steadily at 94⅝ to 95 for Money, and 94⅜ to 95 for the next Account. The New Three-and-a-Quarter per Cents were 95⅛ to 96⅛; and the Three per Cents Reduced, 93⅜ to 94. Bank Stock was firm, at 216; India Stock, 250 and 253. Exchequer Bills were 2s. to 8s.; and India Bonds, 2s. dis. to 1s. prem.

On the whole, Foreign Bonds have moved off steadily. There has been an arrival of 26,134 dollars, on account of the Mexican Mint. The most leading quotations have been:—Brazilian, Small, 98; Buenos Ayres, Six per Cents, 58; Grenada, Deferred, 8½; Mexican Three per Cents, 26½; Peruvian Deferred, 5; Portuguese, 4 per Cents, 40½; Russian, 5 per Cents, 99½; Spanish Three per Cents, 45; Spanish New Deferred, 21½; Span. ish Passive Converted, 4½; Spanish Committee Certificate of Coupon, not funded 5 per cents, 15; Venezuela, Five per Cent Converted, 103; Ditto, Four per Cents, 84½. A Turkish functionary is now on his way to London to negotiate a loan of £2,000,000 sterling for the Sultan.

The Foreign Railway Share Market has been rather flat at New York, still show a tendency to draw bullion from this country.

Miscellaneous Shares have met a limited demand. Hungerford-bridge, 12; Waterloo, 22½; Australasian, 45; Insurance, 85; Argosy-Life, 23; County, 127; Globe, 145 to 146; Guardian, 69 ex div.; Imperial Fire, 87½; Ditto, Life, 20; Pelican, 45; Phœnix, 15½; Royal Exchange, 249; Sun Fire, 80; Ditto, Life, 22; Alliance, 7; East London, 103; Southwark and Vauxhall, 89¾ ¾; West Middlesex, 113; London Dock, 109; Canada Six per Cent Bonds, 111; Crystal Palace, 3½; Ditto, New, 1½ ⅛; City of Glasgow Steam Packet, 4; Peninsular and Oriental Steam, 70; Ditto, New, 37 to 36½.

Railway Shares have continued firm, and the quotations have been on the advance. The quantity of scrip in the market has been comparatively small. The total "calls" for the present month are £1,326,226; against £623 629 ditto in November, 1852. The calls for the seven months of this year are £10,390,000, against £7,261,260 ditto last year. The following are the official closing prices on Thursday:—

ORDINARY SHARES.—Caledonian, 20¾; Caledonian, 63; Chester and Holyhead, 16; East Anglian, 4⅞; Eastern Counties, 19⅛; East Lancashire, 64⅝; Edinburgh and Glasgow, 81; Great Northern, 82½; Ditto, A, 20⅞; Ditto, B, 26; Great Southern and Western (Ireland), 102; Great Western, 81¼; Lancaster and Carlisle, 83; Lancashire and Yorkshire, 64⅞; Leeds Northern, 19⅜; London, Brighton, and South Coast, 104; London, Chatham, and Dover, 15⅛; London and North-Western, 103½; Ditto, Fifths, 12¾; London and South-Western, 7[illegible] Ditto, £20, 20; Ditto, £40, 21; Manchester, Sheffield, and Lincolnshire, 29¾; Midland, 53¼; Newcastle and York, Extension, 4; North British, 2½; North Staffordshire, 11¾; Oxford, Worcester, and Wolverhampton, 21; South-Eastern and Dover, 39¾; Ditto, New, 4¾; Vale of Neath, 84; Ditto, New, 4¼; York and North Midland 20½.

LINES LEASED AT FIXED RENTALS.—East Lincolnshire, 141; Hull and Selby (½ shares), 27; Midland Bradford, 9¾; Wear Valley, 39½.

PREFERENCE SHARES. East Anglian, 3⅝; Eastern Counties, 1½ prem.; Ditto, New Six per Cent Stock, 13⅜; Great Northern Five per Cent, 119½; Ditto, Five per Cent, redeemable at 10 per cent, 107½; Ditto, Four and a-half per Cent Scrip, 10½; London and Brighton Six per Cent, 142; North British, 107; Oxford, Worcester, and Wolverhampton, 102½; South Eastern, 24.

FOREIGN.—East Indian Extension, 2; Great Indian Peninsula, 6½; Grand Trunk of Canada, 6⅞; Great Central of France, 8⅜; Luxembourg, 5⅜; Madras, 1¼; Namur and Liege, 7⅞; Northern of France, 18⅜; Paris and Lyons, 26⅝; Paris and Strasbourg, 24; Sambre and Meuse, 6⅜; West Flanders, 4; Wisbaden 2.

Mining Shares have been rather dull. On Thursday, Imperial Brazilian were 6¾ to 8; English and Australian Copper Smelting Company, 4¾; Mexican and South American, 6⅜; Rhymney Iron, 28 to 27; Santiago de Cuba, 4¾; and United Mexican, 2¾ to 3.

Friday Evening.

The Market for Consols has been flat to-day, and prices have had a downward tendency. The Three per Cents have fallen to be 94⅜. India Bonds are 1s. dis. to 4s. prem.; Exchequer Bills, 2s., 5s., 1s., and 4s. prem. Long Annuities, 1860, 5 15-16. Foreign Bonds and Railway Shares have commanded very little attention.

THE MARKETS.

CORN EXCHANGE, Friday.—The quantity of English wheat on [illegible] to day's market was somewhat [illegible] increase, and for [illegible] quality the prices [illegible] were fully as much as those obtained the first day of last week. Foreign wheat [illegible] was in good request, and [illegible] prices were fully supported. Barley [illegible] came in, that article was heavy, and [illegible] parcels were rather easier to purchase. In floating cargoes very little business was transacted [illegible] one money was done, and prices were [illegible] dear. Other kinds met a dull inquiry. Malt moved off slowly, yet prices were well supported. We had a good consumptive inquiry for oats, at extreme quotations. In the way of beans and peas [illegible] Flour was heavy sale.

ARRIVALS.—English, wheat, 1690; barley, 5616; malt, [illegible]; oats, 1[illegible]; flour, 2[illegible]; foreign, wheat, 6[illegible]; barley, 6[illegible]; oats, 1[illegible]; flour, 6[illegible] sacks.

[illegible] Kent, red, 60s to 71s; ditto, white, 65s. to 74s; Norfolk and [illegible] ditto, white [illegible] ditto, 38s. to 40s; grinding barley [illegible] Chevalier, 31s to 33s; Lincoln and Norfolk malt, [illegible] Chevalier, 71s to 73s; Yorkshire [illegible] ditto, 68s to 70s; Scotch oats, [illegible] ditto, new, 30s. to 32s; ditto, old, [illegible] ditto, new, 32s. to 37s; ditto, old, [illegible] 45s.; grey peas, 40s.; maple, 42s.; white boilers, [illegible] ditto, new, 40s. to 42s.; ditto, old, [illegible] quarter. Town-made flour [illegible] per sack. Seconds, [illegible] 38s. to 40s. per 280 lbs. [illegible] per barrel.

[illegible] for most kinds of seeds, the demand has been less active than [illegible] week. In prices [illegible] Mediterranean and [illegible] ditto, [illegible] ditto, [illegible] ditto, [illegible] ditto, [illegible] 49s. to 51s 10s [illegible] to 21. 10s. per ton [illegible] ornamental [illegible] 6s. to 6s. 6d. per [illegible] ation bread in the metropolis [illegible] 6d. to [illegible] 6d. [illegible] 6d. to [illegible] 6d. [illegible] 6d. to [illegible] 6d.

THE ILLUSTRATED LONDON NEWS.

No. 653.—VOL. XXIII.] SATURDAY, NOVEMBER 12, 1853. [PRICE, WITH A SUPPLEMENT, SIXPENCE.

THE GAINS AND LOSSES OF THE RUSSIANS AND TURKS.

THE war which Russia has provoked is actively raging, both in Europe and in Asia. Although we know not what credit is to be attached to the rumours that every day sets in motion of defeats or victories, sustained or achieved by one or other of the belligerents, and although the world has been informed upon authority claiming to be sufficient, that the Czar is averse from negotiation of any kind, and is determined to risk all upon the uncertain issues of an armed conflict, it is not premature to review the position of both parties, and to define what either has gained or lost by the events of the last few months. That the Turkish armies be defeated in Wallachia will matter but little in the retrospect we desire to make; or that the Sultan should hold his adversary in check, or chastise him for his aggression, are contingencies that will not materially influence the judgment of those who survey the question in all its length and breadth, and, taking their stand upon the present, look both before and after. Mere battles, whatever their immediate results, and whatever vigour they may lend to the robber ardour of the Russians, or the honourable patriotism of the Turks, cannot, to any appreciable extent, falsify the estimate which the world will form of the past conduct and actual position of the principals in the pending struggle. Let us then—disregarding as of little moment the marchings and counter-marchings of rival commanders, the sagacity and the imprudence, whichever it may be, of Omer Pacha in endeavouring to expel the invader from the provinces which he feloniously occupies—consider calmly what the Czar has either gained or lost by his wanton disturbance of the peace of Europe; and what the Sultan on his part has suffered or achieved from the acts of his invader, from those of his allies, or from his own exertions.

The gains of the Czar are easily stated. He has acquired possession of Moldavia and Wallachia as a burglar may gain possession of another man's house. He holds them upon the same tenure against the world and against the law, and only retains them until it shall be convenient to the world and to the law to eject him either by force or by persuasion. He himself can scarcely indulge in the hope that he will be allowed to make them his own. At the utmost he must either evacuate them in the spring or be expelled by those great nations whose interest and whose duty it is to maintain the ancient boundaries of Europe; or he must wage a war against the most powerful coalition of modern times, in a cause that his conscience must tell him is a wrongful one. This then is, up to the present moment, the utmost extent of his gain. A victory over the Turks will add nothing to it, and will not even strengthen him in his possession.

His losses are not so readily to be calculated. The loss of innocent human life is probably valued by him, and by all such potentates, at marvellously little; but there are other losses which ambitious sovereigns can more readily appreciate. After the events of the year 1848, when Germany, Austria, and Italy seemed to have gone mad with the French; when thrones were tottering and crumbling in the dust; when the ermine and the purple were dragged through the mire of the streets; when the oldest empires seemed unstable; when the wildest theories found favour; when nothing that was venerable and useful was secure; and when Licentiousness, usurping the name of Liberty, seemed on the point of throwing the whole Continent into anarchy—the Emperor of Russia was considered by many as the only hope of European society. The falling Potentates of Germany and Italy looked to him for counsel and support. His prudence and moderation were universally extolled; and his power, as the great Conservative of peace and order, was respected and lauded by all who looked upon the lawless dominion of a mob as the greatest curse that could afflict a civilised community. In such men's eyes the Czar was the representative of law and justice; and even in this country, which had no such evils to dread, the moral influence of his character was as high as the public respect for the magnitude of his resources, and the splendour of his empire. But all this has passed away. The Emperor of Russia has lost his reputation. The prestige of his name has dwindled into nothingness. He is no longer the champion of order, but the public enemy of Europe. He is no more the preserver, but the destroyer. The greedy ambition which has been inculcated into the minds of the monarchs of his race, ever since the days of Peter the Great, has betrayed itself too openly, and too nefariously, to allow mankind to doubt any longer whether to rank him as friend or foe. Russia has ceased to be the arbiter of Europe. Even Austria, saved by the Czar from dismemberment, if not from annihilation, has refused to be a party to his projects. The astute Catherine found accomplices for the plunder and partition of Poland; but the wilier and abler Nicholas can find no accomplices

GREAT GUN AT CHANAK KALEH SI, THE CASTLE OF THE GOVERNOR OF THE DARDANELLES (SEE NEXT PAGE)

for the partition of Turkey. Austria dares not join him; and Prussia, ambitious though she be, is afraid to lend a hand in a second attempt to blot out an independent country from the map of Europe. The Czar endeavoured, not simply by diplomatic negotiation, but by personal persuasion and cajolery, to enlist them in his cause, and to make them sharers in the expected plunder. But either the wickedness was too flagrant, or the risks appeared too great; and both stood aloof from him. Such a failure and loss as this is but poorly compensated by the precarious possession of the coveted provinces of his neighbour. Nor is this the sole loss that has accrued. It is not only the confidence and friendship of former allies that he has forfeited, but he has raised a host of enemies on his wide frontier, and has done much to prove that the dread inspired by the Russian name was but a bugbear, after all; that the mighty giant had feet of clay; that his power was, at the best, unwieldy; and that Europe and Asia had but to look him steadily in the face to be convinced that, although his weight of inertia was great, and might be fatal to his assailant, his capacity for active mischief was comparatively small. Enemies the most alien in character and in religion, and actuated by motives the most dissimilar, have started up at the first rumour of hostilities, and are eagerly awaiting the opportunity to assail him. While the two greatest nations in Europe have combined against him, a whole swarm of oppressed and plundered neighbours in Asia arm themselves for the day of revenge and retaliation. The unsubdued tribes of the Caucasus take courage; and Persia aspires to regain the provinces of which she has been despoiled. The Mahomedans are everywhere in arms. Even the Christians in Moldavia and Wallachia, whose unhappy country has been made the battle-field of his bad ambition, have learned to detest the name of the Czar, and to long as ardently as the Turks for his expulsion and punishment. This is the sum total of Russian achievements up to this time.

Far different has been the case of Turkey. Aggrieved, insulted, and wronged, she has as yet lost nothing. Every day's delay has been the means either of cementing the friendship of her allies or of enabling her to calculate and to employ her resources. Instead of contributing to the world the spectacle which even her best friends were sometimes afraid she would exhibit, she has proved herself no contemptible antagonist for the mightiest nation of the Continent. In the time of her apparent adversity all her latent strength and energy have been developed. A state that twenty-five years ago was crippled, maimed, and disheartened, left without a fleet, and almost without an army, has started into renewed life under the provocation of insult. She has raised an army that in the opinion of competent judges, is almost equal in numbers and superior in efficiency, discipline, power of endurance, and true courage and patriotism, to that of her rival, and has equipped and manned a fleet which might wage, single handed, no unequal conflict with the fleet of her enemy in the Black Sea. The spirit of her people has everywhere been aroused; and there are no sacrifices, either of blood or treasure, of which they are not capable. Every day's discussion of the case between her and her antagonist has but proved Russia to be more wickedly in the wrong, and Turkey to be more honestly in the right; and the moral forces of Europe have so unanimously arrayed themselves in her support, that it has become by no means improbable that Turkey, instead of affording the last stepping-stone to Muscovite ambition, will prove the rock against which Russian power will split, and be shivered to pieces. The world has been too long blinded by a vague terror of this semi-barbarous power. Turkey will—in all likelihood very speedily afford us the means of forming a more correct estimate both of the strength and the weakness of a state whose pretensions have become so insufferable and so dangerous.

THE GREAT GUNS OF THE DARDANELLES.

Our Engraving represents one of the great guns at Chanak Kaleh at the residence of the Governor of the Dardanelles: which Castle was represented in a view we published some weeks ago of the Asiatic shore of the Strait of the Dardanelles. In the works of this Castle there are 171 embrasures, and 102 guns mounted.

The size of these guns may be judged of from comparing the portrait are of one of them which we give, with the stature of the sentinels who guard it; and from the additional fact that, from recent accounts, six of our midshipmen crawled into it. The diameter is 26 inches. This gun traverses at the centre, and traverses on a fixed raised platform. It is adapted with granite shot, which, in loading, are placed in slings, and then raised to the muzzle by a tackle and crane. The weight of the shot is 800 lbs; that of charge of powder, 110 lbs.

We are obliged for the Sketch, from which our Engraving is taken, to Lieut. M. O'Reilly, of her Majesty's steamship *Retribution*; to whom we are indebted for the View on the Bosphorus, and the sketches of Safe Caïques given in our last.

Our Trade and Commerce.—The satisfactory results which the Trade and Navigation returns have so invariably disclosed for many months past are seen to be unexpectedly increased in the nine months just concluded, we have exported articles of British produce to the value of £66,387,729, being, in round numbers, over twelve millions and a half in excess of the exportations of the corresponding period of last year, and about thirteen millions and a half over those of 1851. Contrasting last month with the predecessor of last year, a very remarkable increase is shown in some of our staple articles of produce. Thus, cotton manufactures, hardware and cutlery, from £393,000 to £ [illegible], woollen manufactures, from £169,000 to £186,000; iron (bar, to [illegible] and rod, from £ 3,000 to £383,000; wrought, from £177,000 to £317,000, and other descriptions in the same proportion; lead from £19,000 to £27,000; silk stuffs from £55,000 to £100,000; and machinery from £ [illegible] to £72,000. As regards our imports, the principal articles of consumption, animals for food, cocoa, coffee, spirits, silk, tea, tobacco, and wine will be found substantially in the same proportions, or exhibiting a slight increase. As might be anticipated, however, it is under the head corn that the great increase on imports is found. The importation of wheat has increased from 317,000 to 4,830,000 quarters, and of flour from 283,000 to 1,630,000 quarters. The returns relating to all grain also appear to show a satisfactory state of security in our commercial affairs; and the general prosperity indicated, will be observed with much gratification by all who have witnessed the progressive prosperity with which, for the last six years, we have been so happily blessed.—*Aberdeen Free Press, Oct. 26th.*
